During 1961 there were two distinct phases in the development of the domestic economy. In the spring and early summer demand and output grew fairly rapidly. Most sectors shared in this increased demand. Fixed investment and Government expenditure continued their upward trend, the pace of personal consumption quickened somewhat and exports rose during the first quarter. These increases in demand led, naturally enough, to a rise in production. The Budget provided for a large surplus on revenue account but was not otherwise intended to have any pronounced effect, either in stimulating demand or restraining it. Pressure on sterling developed after the revaluation of the German and Dutch currencies; exports ceased to rise, and the pressure of home demand on resources grew with the consequent increase in costs and prices. Had it not been for the Basle arrangements by which European banks agreed to hold sterling, the outflow of funds would have been even more serious. As it was, the reserves fell by £265 million.

Measures to strengthen the United Kingdom economy, to restore confidence in sterling, and to improve the balance of payments were announced in the so-called 'Little Budget' of July 25th. Some of these measures were immediately operative. Bank rate was raised from 5 per cent to 7 per cent, a large drawing was made from the International Monetary Fund, and the wage and salary 'pause' was instituted.

In the months following these special measures the pressure of demand on resources eased considerably. Personal consumption fell, fixed investment reached a peak in the third quarter and thereafter fell. Public expenditure continued to rise, however, and exports continued roughly unchanged. The index of production ceased to rise after the middle of the year and was actually falling in the closing months. Confidence in sterling was however regained, the balance of payments situation improved considerably, some of the debt to the I.M.F. was repaid and before the end of

[1] *Economic Survey 1962*. (Cmnd. 1678.) H.M.S.O. Price 3s 6d.

the year, some reduction in Bank rate occurred. Although retail prices continued to rise during the year, costs in manufacturing industry were not rising nearly so fast as in the early part of the year.

During the year as a whole industrial production rose by a little over 1 per cent and averaged 114 (1958=100). The gross national product in 1961 is estimated at a little short of £23,500 million compared with just over £22,100 million in 1960. Of this rise of 6 per cent, only 1½ per cent is a real increase, the remainder is due to a rise in prices. Total investment in 1961 was substantially higher than in 1960 and was equal in value to 19 per cent of the gross national product, possibly the highest rate achieved since the end of the war. Both public and private investment rose during the year; the rise in investment in manufacturing industry was particularly rapid, being no less than 20 per cent higher than in 1960.

Exports in 1961 were at a record level and were 3½ per cent higher in money terms than in 1960. Sales to Western Europe increased steadily but those to North America were lower. Imports declined during the year and were £143 million, or 3 per cent lower, than in 1960. The deficit on balance of payments declined from the amended figure of £288 million for 1960 to an estimated deficit of £70 million in 1961. Invisible earnings declined to the lowest figure yet recorded – £65 million. The fall in invisible earnings compared with 1960 is due in the main to an increase in Government expenditure overseas.

Income from employment was more than £1,000 million higher than in 1960 – an increase of about 7 per cent; gross trading profits of companies fell from around £3,600 million to £3,400 million. Not all the increase in personal incomes was spent, private savings rose from £1,600 million to nearly £2,100 million. The number of persons in employment rose by 184,000 in the year; even so, there were widespread shortages of skilled labour throughout the year. There is some evidence that output per head at the end of 1961 was no higher than at the beginning of 1961. Cuts in the working week appear to have had a depressing effect on output.

The *Survey* suggests that world trading conditions in 1962 are favourable to exporters in the United Kingdom and an increase in the level of exports is expected over the next few months. Production should also begin to rise again before long. Some of the spare capacity which now exists in industry should be absorbed and the pressure of demand on resources will be higher than at present. As regards imports, the *Survey* says: 'A further improvement in the balance of payments on current account seems likely in 1962. Imports will build up again as output and stock-building rise but experience suggests that this may not start for some time.'

The Government reaffirms its intention to keep increases in incomes within the increases in output; only in this way, it is stated, can exporters take full advantage of the opportunities before them. In this connection the *Survey* has this to say: 'If this policy is applied and the rate of increase of money incomes in 1962 is kept within reasonable limits, our competitive strength will increase; and the nation as a whole will benefit from a more stable cost of living.'

The importance of the National Economic Development Council is stressed and some of the tasks it can perform in the national interest are defined as follows:

'(*a*) to examine the economic performance of the nation with particular concern for plans for the future in both the private and the public sectors of industry;

(*b*) to consider together what are the obstacles to quicker growth, what can be done to improve efficiency, and whether the best use is being made of our resources;

(*c*) to seek agreement upon ways of improving economic performance, competitive power and efficiency, in other words to increase the rate of sound growth.'

These aims, state the *Survey*, provide the only sound basis for sustaining economic growth. It is only to be hoped, therefore, that they will be realized.

Taxing Capital Gains

THE CHANCELLOR OF THE EXCHEQUER left no doubt in his last Budget address that certain profits at present tax free should be brought within the existing system of taxation, though he then recognized practical objections to a conventional capital gains tax. Later, in his 'Little Budget' statement in July, he served due notice in these words:

> 'The activities I want to see taxed are of two kinds. The first kind are those seeking short-term profits, which are more in the nature of speculation than investment; for example, short-term transactions in shares and securities. The second kind are, in effect, trading activities – often in real estate – but cloaked in such a form as to escape liability under the present law.'

So whatever else the CHANCELLOR has in store for us on Monday he seems certain to break new ground by introducing some form of tax on short-term capital gains. Just what form this tax will take, what rate or rates will be imposed, whether it will be retrospective in application, whether losses will be allowed as a set-off, what exemptions, if any, will be granted and so forth, must remain in doubt for the moment. But there is no need for anyone to remain in doubt as to the administrative, economic and legal considerations involved, for all these problems are fully discussed in a masterly and at the same time extremely topical book on the whole field of capital gains taxation published this week.[1] Moreover, the author, MR A. R. ILERSIC, actually goes as far as to foreshadow the lines the tax might be expected to take – and its economic consequences.

The author reminds us that there is nothing in the Income Tax Acts to prevent capital gains being taxed as trading profits. Why, then, have such 'profits' been left untaxed? Part of the answer seems to be due to the fact that losses would have to be set against ordinary income, with dire consequences for tax revenues in the event of a depression, as the United States Treasury experienced during 1930–32. But the real reason, no doubt, is the lack of comprehensive information upon which assessments can be raised. It is not enough merely to pounce upon those taxpayers who do return sufficient information. That simply penalizes honesty. Either all taxpayers should make a full return and all should be charged, or none at all. MR ILERSIC puts forward an ingenious scheme for coping with this dilemma while, at the same time, meeting the CHANCELLOR's avowed intentions.

The book describes in detail the experience of the United States and of Sweden in administering their particular forms of tax, comparing them with United Kingdom law, both as it is, and as it might be under various alternative proposals.

The case for taxing capital gains at all really rests on two main arguments. First, because the gains accrue in the main to a wealthy minority, the present unequal distribution of wealth is perpetuated. Secondly, a minority of the community which by virtue of their ownership of capital already enjoy high incomes, receive further tax-free increments in the form of capital gains.

On the other hand, there are some who would argue that such a tax would be extremely complicated to administer, besides being harmful to a free enterprise economy dependent upon private saving and investment. Nevertheless, there may be some lessons to be drawn from United States procedure, since there they have managed to live with a capital gains tax for close on half a century. So some form of the tax at least is practicable, while the economic effects are evidently not so harmful as the critics allege.

It is interesting to note that despite the comprehensive definition of 'capital assets' in the United States, the main source of capital gains is stock exchange transactions, and it has been estimated by the United States Treasury that about three-quarters of all gains are derived from this source. Moreover, if American experience is anything to go by, the yield from such a tax is likely to be disappointing. Published figures reveal that between 1948 and 1958, the United States capital gains tax brought in no more than 3 per

[1] *The Taxation of Capital Gains*, by A. R. Ilersic B.COM., M.SC.(ECON.), Staples Press, London. 21s net.

cent of the total yield of the income tax. In terms of the United Kingdom income tax this would represent about £50–£80 million per annum. As MR ILERSIC laconically observes:

> 'When putting the case for taxing capital gains it is better that it rest on considerations of equity rather than on spurious "estimates" of the relief the tax may provide the ordinary taxpayer.'

On this issue, revenue needs are subordinate to the claims of social justice.

Armed with the facts and arguments in this book, the most the long-suffering taxpayer can hope for is to fight a spirited rearguard action against the predatory arm of the Inland Revenue; for capital gains seem fated to remain in the fiscal limelight for many years to come.

Training for the Profession— Fact and Fantasy

by R. J. CARTER, B.Com., F.C.A.

Secretary of the Chartered Accountant Students' Society of London and of the Union of Chartered Accountant Students' Societies

THE Parker Report has led those concerned with the future of the profession to give much thought to the methods of producing the accountant able to fulfil the requirements he will have to meet in the conditions of the years to come. Naturally, there has been a great deal heard in favour of extending the academic element of training. Pressure has come from the universities and the technical colleges and schools who would like the academic share to be increased, and also from students who think they see easier ways of learning their professional skill and a relaxation of the heavy burden involved in acquiring the necessary knowledge and experience within a limited time.

The views expressed are the author's personal opinions and have no official significance

Basic Factors

There is much apparent weight in the arguments which have been marshalled on the academic side but if useful conclusions are to be attained, it is surely necessary to begin with a balanced assessment of the position as a whole.

The first thing to be determined is the nature of the work which the profession will be called upon to provide if it is to justify its continued existence; then to decide the best methods of training the applicant for admission so that he conforms to the requirements and can bear efficiently his share of the burden of sustaining the position and reputation of the Institute in the business world.

The basic fact that is quite clear from any review of the conditions under which the profession works, is that the only justification for its existence is the continued provision of useful service to undertakings engaged in business. Any inquiry into the facts will also show that the majority of accountants spend their working lives ministering to the needs of small and medium-sized undertakings, either as practitioners or as industrial accountants. Inevitably much more is heard of the work done for the very large undertakings, but work of this calibre is in the hands of a small minority of the profession who have attained to its highest ranks. The reputation and the continued existence of the profession is firmly based on the services its members provide for the ordinary business of medium size.

It seems likely that these conditions will continue in the foreseeable future and if all businesses became large ones (an unlikely development), the profession would dwindle until it consisted of a few high-powered members and a larger number of semi-seniors.

In the light of these hard facts what is the nature of the services for which the profession will be asked? Obviously it is such down-to-earth

work as providing accountancy information called for by the Companies Act and other legal regulations, settling figures for taxation and giving such guidance and information as can be usefully obtained by the intelligent application of facts revealed by accounting records – all this for small and medium-sized undertakings.

Basic Training

In selecting applicants for admission to the profession the essential basic consideration is therefore that they have attained the necessary technical skill which will enable the professional body admitting them to assure the business public of their ability to perform such accountancy functions as these. The fundamental element in this skill is the practical experience – the 'know-how' of the day-to-day exercise of the craft of accountancy and the contacts with those who will use its products. Without it, the job cannot be done; the needs of the business man cannot be met. Unless the training for admission provides the 'know-how' which can only be attained by practical experience, the profession will lose the reputation upon which it depends for its existence.

Parallels are often drawn between legal and accountancy training. But whereas a man may become a very good lawyer after a purely academic training without any practical experience at all, no amount of theory without practical experience will produce an efficient accountant. An example of this is seen in the U.S.A.; in that country it appears that professional qualifications in accountancy are obtained by degree courses at universities containing almost no practical experience. As a result, when the 'qualified accountants' enter the real world of business, the professional firms to which they go have to put them through a course of practical training to fit them to perform the actual functions of qualified accountants. It is just as impossible to produce an accountant by academic training alone (even with the use of 'business games', imaginary exercises and visits to business undertakings) as it is to learn to be a cyclist by lessons in the back garden. The back garden may be a good place to learn to balance on a bicycle but the real cyclist only emerges after experience in traffic.

The Institute has always insisted that the practical skill needed to provide the accountancy services required by the ordinary client must be a paramount condition of admission to the professional qualification. The importance of this practical qualification cannot be too heavily stressed in face of the proposals, so often made recently, that it be depreciated by substituting more of the academic training. There can never be a conclusion to the argument about how long is the period of practical training necessary, since practical experience does not come in regular doses or in controlled sequence like laboratory illustrations. But that does not detract in any way from the vital need that the candidate acquire the real 'know-how' in full measure sufficient to enable him to satisfy the needs of his clients or employers.

Technical Schools and Colleges

The colleges and schools of technology seem to have only a minor place in the training for the practice of accountancy. They can provide efficient tuition for such practical crafts as engineering because the conditions of an engineering shop can be fully duplicated in the school workshop. But an 'accountancy workshop' is merely a shadow of the real thing for it can only provide examples of the materials and equipment used but no experience of the important personal contacts and relationships which constitute the principal practical problems of the professional accountant, whether he be in practice or in industry. An 'accountancy workshop' may be a helpful facility for beginners in book-keeping but it has the same function in the training of a professional accountant as the anatomical specimens of the medical student. Nobody would contend that a medical student who had only advanced as far as dissecting specimens and had no experience of a real patient, would be qualified to call himself a practitioner. In any case, the accountancy student meets the real thing during his office work so he does not need an artificial example.

What then have the technical colleges and schools to offer in the training of practical accountants? Their only advantage is oral tuition in the theory and background of accountancy to replace the present system of correspondence courses. It is generally agreed that oral tuition usually gives a more complete and individual method of tuition than a correspondence course. But this advantage is bought at the cost of much more time consumed and the extra time would have to be found either by extending the period of training (quite an unacceptable proposal) or by reducing the amount of practical experience available to the student. Since practical experi-

ence must be the basic element in the training of the accountant who is to be qualified to meet the needs of his clients or employers, the result of any alteration of training methods towards more oral tuition must inevitably be a lower standard of qualification in the essential skill of the candidate for admission to the Institute.

There is the further point, emphasized by the Parker Report, that correspondence tuition provides the candidate with most valuable training in self-organization and self-discipline which is lost if he can rely on the goading of personal tutors instead of his own initiative alone.

If the policy of the Ministry were to develop departments of commerce (including accountancy) as adjuncts to technical colleges whose main function is tuition in technological subjects, what hope is there of proper tuition for professional accountancy students under the conditions of a side-line in a technical school? The most that the technical schools can do is to provide tuition in the technique of book-keeping which is the elementary skill the accountancy student must acquire before he can start his training in real accountancy. Even this should be under the close supervision of the Institute through its practising members, so that the practical aspect of the subject is protected from the degrading influence of merely getting past the examiner.

The Function of the Universities

All that has gone before is not to be read as inferring that the universities and the more academic side of the profession do not have an important part to play in the future of accountancy. The universities can make a vital contribution to its progress in two ways where no other body is able to help. The first is the application of fundamental research to the problems which arise in any advancing profession. The only point here to be kept in mind is that after academic research comes practical application, just as the application of research in a chemical laboratory often calls for much adaptation before the chemical engineer can organize an industrial production process.

The second contribution which the universities can make to the profession is that they can train the mind of the student so that he has a far more efficient implement in his head when he comes to his professional training and is therefore much better able to get the most out of that training and to become in the end a much better accountant. This is a benefit which any good university course can confer on its students, whatever the subjects studied. But it needs an adequate time; the so-called 'academic year' sandwiched into accountancy training is not a university course in any real sense. It is also obvious that the university course should come after the student leaves school and before he starts his training for practical accountancy. With that arrangement he will move smoothly from school learning to university mind-training and then on to acquire the practical skill of his profession. But it is important that both the student and his university teachers realize quite clearly that at the end of his academic training he still has to learn most of the facts of real life. They are not encountered inside the university's artificial atmosphere of imaginary examples and controlled experiment, but only when he is exposed to the harsh winds and heavy weather of real business life. On leaving the university he is far from being a qualified accountant. Accountancy is a craft, not an intellectual exercise. The qualified accountant must have acquired practical 'know-how' which can only be gained in one school, the long, hard road of day-to-day practical experience. An intelligent and trained mind will be a priceless help in acquiring the skill and in applying it in the profession but it is no substitute for the skill itself.

Justification for the Continuance of the Profession

There will always be a useful place in the development of the profession for those who have the gift and the training to apply the scientific mind in the calm of the academic atmosphere to the fundamental theoretical problems which must occur in any field of knowledge. But the only real function of the active accountancy profession is to provide a service to undertakings engaged in the rough and tumble of business life. No airy-fairy practitioner or theoretical industrial accountant can meet the hard requirements of these conditions. If the profession is to maintain its service to the business man, it must therefore continue to give the major emphasis in its training methods to practical experience, and resist the present pressure to substitute academic study. If it fails to do this, it will cease to be a useful contributor to the needs of the community and, quite rightly, it will die – with its head in the clouds.

Directors' Reports — their Form and Content

by R. S. WALDRON, F.C.A.

EVERY year, shareholders in limited companies incorporated in Great Britain receive a document from the company. It consists usually of a booklet containing the following specific items:

(1) notice of the annual general meeting;
(2) directors' report;
(3) balance sheet and profit and loss account;
(4) auditors' report; and
(5) chairman's statement (sometimes detached; sometimes excluded).

While the form of notice convening the annual meeting is incapable of great variation, much has been written and stated about published accounts and auditors' reports, and the form of the chairman's annual statement or review mainly follows the taste of the individual concerned. Other information is often included in the annual report, such as details of directors, secretary and other executives, auditors, etc.; and many companies of standing give the names and business of their subsidiaries. (There is a strong case for enforcing the publication of such information by all companies owning subsidiaries – and even to the publishing of details relating to associated companies too, as has been urged from some quarters in evidence to the Jenkins Committee, though neither the pros nor cons of that matter are relevant to this article.)

It is, however, noticeable that one item amongst those listed above has not been dealt with extensively by those who write on accounting matters, namely, the directors' report. Not only, indeed, is this neglected as a subject of discussion, it is also very often drafted in a manner quite contrary to the requirements of law.

Statutory Requirements

Section 157 of the Companies Act, 1948, states:

'(1) There shall be attached to every balance sheet laid before a company in general meeting a report by the directors with respect to the state of the company's affairs, the amount, if any, which they recommend should be paid by way of dividend and the amount, if any, which they propose to carry to reserves within the meaning of the Eighth Schedule to this Act.

'(2) The said report shall deal, so far as is material for the appreciation of the state of the company's affairs by the members and will not in the directors' opinion be harmful to the business of the company or of any of its subsidiaries, with any change during the financial year in the nature of the company's business, or in the company's subsidiaries, or in the classes of business in which the company has an interest whether as a member of another company or otherwise.'

In spite of this reasonably clear direction as to the content of a directors' report, it is true to say that while most conform with the requirements relating to dividends and reserves, many do not comply with the law in other aspects. In the course of a random examination of one hundred annual reports of public companies, the following classification was made in regard to the directors' reports:

(i) Number summarizing the profit and loss account (or the consolidated profit and loss account)	63
(ii) Number incorporating some material part of the accounts (as permitted by section 163 of the Companies Act) ..	3
(iii) Number complying fully with section 157	33
(iv) Number in which report was combined with the chairman's statement ..	1

If an examination were made of the form and content of similar statements relating to private companies, there is little doubt that the preponderance would be still more in favour of those in group (i) above. It seems apparent, therefore, that the emergence in recent years of the desire – particularly amongst those responsible for designing accounts of smaller companies – to improve the design and presentation of accounts, does not appear to have extended to directors' reports as well.

Secretary's Dilemma

If we turn from directors' reports to chairmen's statements, however, we do perhaps find one reason why this is so. More and more of such statements are being circulated to members with the annual accounts. This is, of course, entirely natural and logical, since only a small proportion of shareholders do, or are able, to attend annual

meetings because of distance, work and other valid reasons. In these circumstances, many chairmen's statements do a useful job in a convenient way by reviewing the year in retrospect and in looking towards the future.

So far as many public companies are concerned, therefore, the result is that matters which fall within the compass of the directors' report are instead dealt with by the chairman in his annual review. This, then, is the dilemma of the company secretary: in preparing a draft for approval by the board, is he to deal faithfully with these matters in the directors' report, as in fact required by law, and in so doing, perhaps deprive his chairman of much of the material needed for his review; or is he to compromise with the requirements of the Companies Act and prepare for his board the 'usual' statement?

The Stock Exchange Gazette some while ago commented on this matter in an article praising the report and accounts of S. Smith (England) Ltd. 'This', it was stated, 'is indeed a directors' report and not just the recital of facts which are merely a repetition of what appears in the profit and loss account and balance sheet.'

What, then, is to be done about this state of affairs? Must we for ever resign ourselves to a report which serves no useful purpose and adds nothing to the accounts themselves? It is suggested that a new approach to this subject may be achieved by studying the purpose of the directors' report as laid down in section 157. It will be observed that the report is to deal not merely with reserves and dividends, but with 'the state of the company's affairs [and] any change . . . in the nature of the company's business, or in the company's subsidiaries, or in the classes of business in which the company has an interest. . . .' Nor is this all. It is also made clear that information along these lines is to be given so as to enable the members to obtain an 'appreciation of the state of the company's affairs'. In other words the whole exercise is to assist in the interpretation of the accounts. This is undoubtedly where the majority of deficient directors' reports fall down. And, of course, there can be no objection in including additional information so long as the statutory requirements are met. In fact, in one instance known to the writer, the chairman's statement is combined with the directors' report – under the latter title, of course.

Perhaps it is fair to observe at this point that in many cases (especially where private companies are involved) no changes of the kinds referred to in the Act may have occurred, the 'state of affairs' being fully dealt with by the accounts themselves. Is it then to be assumed that no report need be issued? The answer to this question is surely 'No'. There is no proviso excusing the directors of the obligation to attach a report on a company's state of affairs to all annual accounts; moreover, it can be said that the omission of any comment on whether changes have occurred or not, is at least ambiguous. It is therefore suggested that in the absence of any change of a nature defined in section 157 (2), the directors' report should contain a definite statement to this effect, e.g. 'No changes have taken place during the year under review in the nature of the company's business (or in its subsidiaries) or in the classes of business in which the company has an interest'.

Additional Information

It is obvious that a report on the lines indicated above need not conflict with nor detract from the chairman's statement. Rather, in this form, does the report become complementary to the accounts themselves, providing essential background information for members.

On the other hand, the chairman's statement should be supplementary; giving additional details which, while interesting and enlightening, are not necessarily essential to an understanding of the accounts. It could, perhaps, be put that the directors' report is retrospective in character, while ideally the chairman's statement to a material degree might be prospective.

Information additional to that required by the Companies Act to be included in a directors' report, but which may be found in the reports of some of the more progressive companies, include the following:

(1) goods produced;
(2) orders received;
(3) changes in capital structure;
(4) capital expenditure;
(5) reasons underlying specific reserve appropriations;
(6) changes in and re-election of directors; and
(7) continuation in office of auditors and remuneration thereof.

Of the above examples, those mentioned at (6) and (7) are, of course, invariably found in directors' reports, whereas those at (1) to (5) are exceptional. It is to be hoped that before long they will not be so rare, and that we may even see them becoming accepted and normal features of directors' reports.

Law Reform

It is not, of course, possible to anticipate what recommendations may be made by the Jenkins Committee, but it may safely be assumed that the form and content of directors' reports will certainly not be ignored. Meanwhile it is of interest to note that the Australian Uniform Companies Bill of 1961 includes the following new provisions with regard to directors' reports:

(1) reference is to be made to new activities and assets;
(2) information is to be given regarding reserves;
(3) details are to included of any options granted over unissued shares; and
(4) there is to be attached to the accounts (though not necessarily as part of the report), a statutory declaration by the company secretary verifying to the best of his knowledge and belief the correctness of the balance sheet and profit and loss account.

Penalties

Having examined the legal requirements of section 157 of the Companies Act, 1948, relating to directors' reports, to what penalties may directors be liable for non-compliance? The penalty provisions are contained in subsection (3) which states:

> 'If any person being a director of a company fails to take all reasonable steps to comply with the provisions of subsection (1) of this section, he shall, in respect of each offence be liable on summary conviction to imprisonment for a term not exceeding six months or to a fine not exceeding £200:

Provided that:

(*a*) in any proceedings against a person in respect of an offence under the said subsection (1), it shall be a defence to prove that he had reasonable ground to believe and did believe that a competent and reliable person was charged with the duty of seeing that the provisions of that subsection were complied with and was in a position to discharge that duty; and
(*b*) a person shall not be liable to be sentenced to imprisonment for such an offence unless, in the opinion of the Court dealing with the case, the offence was committed wilfully.

The reference in proviso (*a*) to 'a competent and reliable person' could reasonably apply to the company secretary or accountant or, in cases where the task was delegated to him, the auditor, though it may be open to doubt whether such 'a person' would cover a firm of auditors. In any event the mitigating factors as regards directors are patently liberal; and so far as the writer is aware no prosecutions under subsection (3) have yet been made.

It may finally be observed that although the directors' report is to be attached to every balance sheet laid before a company in general meeting, section 158, which specifically requires the auditors' report to be circulated to members with the accounts, does not require the similar circulation of directors' reports. Moreover, the directors' report is excluded from the description of 'a document annexed or required to be annexed to a company's accounts' under section 163. On the other hand it is to be attached to any accounts attached to an annual return under section 127.

Conclusion

To sum up, therefore, it appears strangely enough that a directors' report need not be circulated to members with the accounts, but only laid before the annual general meeting. But since it is an almost universal practice to attach the report to the accounts despite the lack of legal requirement to do so, and because as has been seen earlier in this article, it is a concomitant of the accounts, it seems reasonable that in any reform of the law, the directors' report should be included among those documents which are required to be attached to the accounts for all purposes.

Another point which would appear to require tightening up is the way section 157 (1) is interpreted. At present, some reports reproduce the whole of the appropriation portion of the company's profit and loss account (and often, of the consolidated profit and loss account despite the fact that strictly those are not the figures called for – for the Act clearly says 'the company's affairs', not the group's affairs), while others merely refer to the figures given elsewhere in the accounts. Apart from the question as to which method may be regarded as 'correct', it does seem to be both logical and desirable that, on the one hand, comparative figures should be given if details of the appropriation are included in the report; and on the other hand, that the reference should be adequately 'keyed' by stating precisely where in the accounts the information may be found.

Finally, although the directors' report is not one of the documents upon which the auditors are required to report to the members, it is quite normal for it to be submitted to them for scrutiny and comment; and if it should in due course become a document required by law to be attached to the accounts, it will automatically come under the official scrutiny of the auditors, thus necessitating a change in the wording of their report.

The Accounting World

TOPICS OF PROFESSIONAL INTEREST FROM OTHER COUNTRIES

CANADA

Merger of Accounting Bodies

IN our issue of February 4th, 1961, we referred to a proposal for a merger of The Association of Certified Public Accountants of Ontario with The Institute of Chartered Accountants of Ontario. General agreement had been reached at that time between the committees of the two bodies on the desirability of the merger. However, following a ballot of members the proposal was defeated.

We now learn that as a result of a new poll recently conducted among members of the Institute, the required two-thirds majority has been obtained by a vote of 2,108 in favour of integration, as opposed to 424 against the plan.

As a result of this decision, and providing the amendments are enacted at this session of the Legislature, members will be asked to pass the necessary bye-laws at the Institute's annual meeting in May.

Members were also asked to vote on (and have voted in favour of) a request to the Government of Ontario to amend the Public Accountancy Act for the purposes of:

(*a*) excluding from the definition of 'public accountancy' those activities which can be performed with relatively little or no training in public accounting;

(*b*) providing for a single qualifying body to be created by the union of The Institute of Chartered Accountants of Ontario and The Certified Public Accountants Association of Ontario; and

(*c*) providing that the standard for qualification for a licence should be the Final examination of the Institute, and not merely the Intermediate examination as at present.

If legislative approval is given to the amendments, it is understood that the Institute will grant suitable partial exemptions from its course of study to an applicant who is a member of a recognized, non-practising association and who completes the prescribed course of instruction and examinations of that association, providing the applicant has acceptable education, background and obtains experience in public practice.

Capital or Revenue Expense?

A LONG-AWAITED judgment has been given by the Supreme Court of Canada in *Minister of National Revenue v. Haddon Hall Realty Inc* (62 D.T.C. 1001), the appeal dating from November 1959. The Supreme Court has reversed the former surprising decision of the Exchequer Court and has held the cost of replacing refrigerators, venetian blinds, and stoves, in an apartment house, to be a capital expense and so not deductible for tax purposes.

The Exchequer Court judgment, which itself reversed that of the Tax Appeal Board, caused a flood of appeals to the Board for deduction of similar expenditures which it was forced to allow. Miss Gwyneth McGregor, reporting this case in the *Canadian Tax Journal*, comments that some of these taxpayers will undoubtedly be re-assessed, but some will escape because the four-year limit fixed by the Income Tax Act has expired.

UNITED STATES

Misstated Inventories

THE firm of Peat, Marwick, Mitchell & Co became auditors of the Londontown Manufacturing Co, Baltimore, in May 1961 and had not been able to observe physical inventories, as is required in the United States, before May 31st, 1961. It indicated this fact in the company's prospectus issued in connection with a public offering of 150,000 shares on October 4th, 1961. Shortly before the end of 1961, learning that the earlier inventories had been understated, the firm insisted on full disclosure to the Securities and Exchange Commission.

Amended registration statements to be issued by the company will reveal the following particulars as to comparative earnings figures:

12 months to February 28th	*Prospectus*	*Corrected*
1957	·12	·13
1958	·23	·30
1959	·32	·53
1960	·76	·77
1961	1·40	·93
3 months to May 31st, 1961	·41	·32

The inventory understatements gave artificially low per-share earnings from the fiscal year 1957 through to 1960 and artificially high ones for the fiscal year 1961, the last to be reported in the prospectus. In a recent memorandum issued by the accounting firm it is stated:

'We did, of course, check prices, extensions and footings of the earlier inventories, but as we were not the auditors when these inventories were taken we had no means of determining the correctness of quantities, especially in the absence of cost records and perpetual inventories.

'While the company made excellent progress in sales and profits, we did feel that the results for the year ended February 28th, 1961, were out of line. However, this was largely attributed by the company to a move to a new plant location which had occurred in January 1961, the reduction of certain less profitable items, and increased prices in certain lines.'

Pension Planning and Unauthorized Practice of Law

A LONG statement by the American Bar Association's committee on unauthorized practice of law, in regard to pension and profit-sharing plans, was reproduced and commented upon in a recent issue of *The Journal of Accountancy*. 'It came as something of a shock', it is stated, 'to find that the committee appears to believe that only lawyers should be allowed actually to participate in the development of plans for clients.' While it is assumed that the statement represents only the views of the committee and not of the American Bar Association, it is feared that it may encourage local bar associations to take action in the Courts to enforce it.

The comment goes on to say that it is common sense that lawyers and C.P.A.s should co-operate in the interests of common clients. Exclusively legal questions should be handled by lawyers, but pension and profit-sharing plans are a good example of matters which arise from legislation but which involve many considerations not exclusively legal in character. C.P.A.s may well be the first to get their clients interested in such plans, but lawyers are always brought in for their development and completion.

Why, asks the *Journal*, was this matter not discussed by the National Conference of Lawyers and C.P.A.s before issuance of the statement by the Bar Committee?

SOUTH AFRICA

Budget Proposals

IN what he described as 'a Budget of national security', the Minister of Finance, Dr T. E. Dönges has asked for a defence vote of nearly £60 million – over 60 per cent more than last year. To pay for this and other items he proposes increased taxes on beer, wines, spirits, petrol and diesel oil, and import durties on certain non-essential goods. He also proposed to abolish the discount of 10 per cent of the normal tax payable by individuals, and the discount of 3 per cent of the tax (other than the provincial portion) payable by companies.

The Minister pointed out that the rate of income tax, both for individuals and for companies, had remained basically unchanged for the past ten years. Moreover, in the year ahead, he must provide for the repayment of the 1957–58 savings levy, the cost of which was greater than the yield from the withdrawal of discounts. After taking into account a surplus of £2½ million from last year, the revenue account for 1962–63 would show neither surplus nor deficit.

Concessions include an extension of investment allowances to cover the introduction of new machinery or equipment up to June 30th, 1965 and to new buildings which are commenced by that date up to one year later. He also announced that to encourage the export drive, exporters who increased their turnover would be granted special tax allowances in respect of expenditure (other than capital) incurred in the development of export markets.

Gold and foreign exchange reserves, now standing at over £150 million, had shown a spectacular recovery from the figure of £71 million in June 1961. This was due to reductions in imports and the outflow of private capital, and to improvements in exports and gold production. While it was not yet possible to abolish exchange controls, the Minister proposed to relax control over 'blocked Rand' by permitting holders to subscribe to a special issue of five-year non-negotiable 5 per cent Government bonds. These would be repayable in five annual instalments which would be freely transferable in foreign currencies on the expiry of each instalment.

INDIA

Indian Institute's New Committee

THE growth of business, the decentralization of management and the adoption of modern business methods which necessitate specialization in some form or other by the accountant have resulted in the setting up by the Institute of Chartered Accountants of India, of a Professional Development Committee.

The new committee will determine the extent to which the knowledge of members as regards these developments requires to be supplemented by research and various courses of training. Matters which will receive special consideration are:

(i) To define the objectives of the accounting profession;
(ii) To lay down the accounting postulates and principles, having regard to the changes that have occurred in the conditions under which business nowadays is being conducted;
(iii) To determine the extent to which auditing procedures were required to be enlarged having regard to changes in different laws, and in the climate of public opinion;
(iv) To determine the manner and form in which guidance should be provided to members in regard to professional matters;
(v) To consider the different ways in which the profession could assist and help the Government in the promotion of its plans and programmes;
(vi) To lay down the standards of professional conduct and competence in different fields of professional activity;
(vii) To determine what programmes of development should be carried out at the different levels i.e., the Council of the Institute, the Regional Councils and members generally, and to lay down targets in this regard for the next three years.

The committee, which is comprised of nine members, is under the chairmanship of Shri S. N. Desai, F.C.A., President of the Institute of Chartered Accountants of India. It will be the responsibility of the committee to draw up the necessary programmes and to watch over and guide their progress.

Weekly Notes

THE BUDGET ON TELEVISION

THE Institute of Chartered Accountants in England and Wales has granted the use of the Oak Hall in Moorgate Place as a temporary television studio on Budget Day. The Oak Hall will be one of a number of outside broadcast locations in a two-and-a-half-hour programme to be presented on the afternoon of Budget Day by Independent Television News and Associated-Rediffusion. Other locations will include a foreign exchange dealers' room in the City and a shipyard workers' canteen in Sunderland.

In the Oak Hall some thirty representatives of City institutions, including three members of the Council of the Institute – Mr H. A. Benson, C.B.E., F.C.A., Mr D. A. Clarke, LL.B., F.C.A., and Mr J. E. Talbot, F.C.A. – will hear up-to-the-minute reports of the Chancellor's speech, and will be available for interview by Mr Reginald Bosanquet of I.T.N. on the implications of the Budget proposals.

There will also be informed comment from the studio newsroom in Television House, where the guest speakers will be Sir Frederic Hooper and Mr Frank Cousins, general secretary of the Transport and General Workers' Union.

ALMOST BALANCED

THE first of the trio of White Papers which precede the Budget, that on the balance of payments[1], is a good deal more encouraging than was at one time expected. Following overall deficits on the combined current and capital accounts of £384 million and £490 million in the two previous years, the 1961 overall deficit of £62 million is indeed satisfactory. Last week's note in this journal on the balancing item in these accounts, i.e., the net total of errors and omissions needed to balance the trading accounts, is underlined by the fact that for 1961 the balancing item at £81 million exceeds the actual deficit shown in the accounts. The estimates of this item for the two previous years have been revised to £21 million and £306 million. Undoubtedly, the most cheering aspect of the current account is the reduction of the deficit on visible trade account to only £135 million, compared with £391 million in 1960. This is due to an increase of £156 million in visible exports coupled with a reduction of £100 million in visible imports.

A sad feature of the accounts is the continuing decline in the surplus achieved on the invisible trade account. From £219 million in 1959 to £103 million in 1960, it has fallen to a mere £65 million in the past year. The main contributory factor to this disappointing result is the continuing rise in Government outlays overseas. The long-term capital account reflects the continuing increase in foreign investment in the United Kingdom which in 1961 totalled £208 million; in contrast with a reduction from £205 million to £152 million in the total invested by the United Kingdom overseas. A major factor in the improvement on the capital account was the receipt of a number of once-and-for-all payments such as the £131 million in respect of the Ford shares, and repayments of loans from Western Germany and France, plus a small loan from Switzerland, which together contributed a further £90 million.

While any improvement, however modest, in the United Kingdom external position is welcome, the full extent of the problem can only be appreciated by continually bearing in mind the target set by the Treasury of an overall surplus of £450 million. Recent Press comment on the White Paper seems to have overlooked this point.

[1] Cmnd. 1671. H.M.S.O., price 2s 6d.

THE FISCAL YEAR 1961–62

THE fiscal year ended on March 31st with an overall deficit on revenue and expenditure account of £211 million. This was £142 million more than the Budget forecast last April. The source of the deficit is on the expenditure and not on the revenue side.

Total receipts were £140 million higher than estimated. Expenditure increased by £282 million. There was a surplus of £410 million 'above the line' which was £96 million less than originally expected, but the shortfall of £621 million 'below the line' was £46 million higher than was forecast.

Ordinary revenue totalled £6,646 million and ordinary expenditure was £6,235 million. Income tax receipts were close to estimate but surtax and death duties both exceeded the Budget estimate and so did Customs and Excise receipts. The increase of 10 per cent in purchase tax last July was expected to produce an additional £130 million but receipts were well below expectation.

On the expenditure side there was an overall rise in ordinary expenditure on the supply services and the cost of servicing national debt increased significantly owing to the prevalent high level of interest rates.

MOVEMENTS OF PRIVATE CAPITAL

ACCORDING to the *Bulletin for Industry* for March, put out by the Information Division of the Treasury, the outflow of private investment from this country has averaged nearly £350 million a year in the last three years. Over the same period the inflow of private investment has increased from less than £200 million in 1959 to over £400 million in 1961. This last figure is, however, swollen by the large Ford transaction last year which accounted for £130 million. The net flow over the last three years

has thus changed substantially on private capital account. There was a net outflow of £146 million in 1959, a net outflow of £99 million in 1960 and a net inflow of £49 million which would have been a net outflow of £81 million last year but for the Ford deal.

Taking the long-term capital account as a whole, the balance changed from a net outflow of £499 million to a net inflow of £8 million over the last three years. The big change has thus been helped by the decline in the outflow of funds from Government and other official sources. The big increase in investment from abroad partly reflects the growth of overseas investment by the United States. Another factor is the high level of economic activity in Britain and the comparatively high level of interest rates in this country since the middle 1950s has also probably played a part. In the early 1950s much of the outward flow of private capital was to the sterling area countries. More recently the rapid rate of growth of the European Common Market has attracted United Kingdom investment. Most of the outward flow of private investment is direct and not portfolio investment. Portfolio in non-sterling securities is allowed only through the medium of the switch markets.

BRITAIN INTO EUROPE?

SINCE the discussions concerning the basis for Britain's entry into the European Economic Community have not yet reached the stage when specific proposals may be laid before the public, the latest pamphlet from the Institute of Economic Affairs on the *United Kingdom Commonwealth and Common Market*[1] hardly adds to the sum of information already available in the flood of published material of recent years. However, the authority of its author, Professor James Meade, should ensure a wide readership for this particular contribution to the debate if only because of his fuller treatment of the economic issues, in particular agriculture. Professor Meade's thesis is that, as long as Britain is assured that the E.E.C. will be liberal in its outlook and trading policies, she should join. The implication of this argument is that if certain leaders in the E.E.C. still have visions of Europe as *la troisième force* in world politics, then it is likely that their economic policies may suffer.

On the issue of British agriculture, Professor Meade points out that the concern should be primarily for the domestic consumer, since E.E.C. food prices are high enough to give British farmers a living, although British horticulture would sustain very severe competition. Much more serious is the problem of the Commonwealth primary producer who, at present, enjoys preference in the United Kingdom market. Professor Meade does not believe that the present *ad hoc* proposals put forward to meet this problem are adequate. In his opinion, because of the potential food surpluses throughout the world, an agreement with all other primary producers is necessary. This will necessitate co-operation on a world basis and in this context Professor Meade is at pains to stress that American co-operation would be endangered if the E.E.C. is too 'inward-looking' in its economic policies.

Professor Meade proposes that there should be flexible exchange rates, while support for any individual currency should be available from a joint use of member countries' reserves. This is a highly debatable argument, not least in view of Britain's post-war economic record. If agreement on these issues is not possible, then in Professor Meade's opinion Britain should remain outside the E.E.C. for the time being, concentrating its efforts to achieve a general reduction of trade barriers within the North Atlantic union.

NEW STYLE P11D FORM

AN employer has to make a return by May 5th of expenses, payments and benefits provided by him in the preceding income tax year for directors or for employees whose remuneration (including benefits) is £2,000 or more per annum. The Inland Revenue provide a special form for this purpose, for each individual director or employee concerned, designated form P11D. For the years up to April 1961, P11D was a very modest form indeed, measuring some eight inches by four and containing no reference to such unpleasant matters as penalties for failing to make a return, or making an incorrect one.

The new form P11D, issued for the purpose of returns for the year ended April 5th, 1962, is a much more formidable document, taking up seven or eight times the space of the old one, and containing a very prominent reminder of penalties. There is an extensive list of the kind of benefits which may be provided, including holidays, sporting facilities, private medical treatment, education of the individual's family, etc., entertainment, and expenses of private domestic staff. It follows that an employer who conveniently forgets some of the advantages enjoyed by its principal director will find it less easy to explain away any omissions.

TWO FARMS, ONE TRADE

WHEN the Legislature made farming profits chargeable to tax as trading profits in 1941, difficulties were foreseen as to the place of assessment where the farm was scattered or lay in two separate income tax parishes. Accordingly it was provided that (Finance Act, 1941, section 10 (3)):

> 'All the farming carried on by any particular person or partnership or body of persons shall be treated as one trade, and he or they shall be assessable and chargeable in respect of the profits or gains thereof in any of the parishes in which any part of his or their farmland is situated:
>
> 'Provided that nothing in this subsection shall limit any right to make any assessment and charge in the place of ordinary residence.'

When this provision was substantially repeated in section 152 of the Income Tax Act, 1952, it was

accompanied by a side-note saying 'Special provision as to place of assessment etc. in the case of farming'.

The Revenue have for long argued that section 152 did not entitle a farmer to take it at its face value, but Mr Justice Wilberforce has now held that the Revenue were wrong in this (*Bispham v. Eardistan Farming Co (1919) Ltd*).

From 1919 to May 3rd, 1956, the company farmed land in Worcestershire and incurred losses. From January 31st, 1956, it farmed land in Scotland at a profit. It claimed to bring forward large amounts of losses and capital allowances, relating to the Worcestershire land, to set off against the Scottish profits, relying on the plain words of section 152 to establish that there was one single and continuous trade. The Revenue resisted the claim on the ground that section 152 was to be given a special and limited meaning, which did not include making one trade out of two. It merely dealt with the place where the assessment was to be made and that for this purpose, and this purpose only, section 152 allowed the Revenue to treat all farming, carried on by the same person and at the same time, as one trade. The Revenue argued also that to give the section the meaning which the company contended would be to confer an advantage on farmers as against other taxpayers.

His lordship said that there was no onus on the taxpayer to furnish reasons why he should be treated differently from other taxpayers. The section gave rise to no absurdity and it was of value to the Revenue as well as to the taxpayer. Any limitation of the scope of the section as suggested by the Revenue could only apply if the section expressly so provided.

A TAX FORUM?

THE appearance of a 400-page volume of proceedings of the 1961 conference of the Canadian Tax Foundation is a reminder of the remarkable success of this body since its establishment in 1945. Its purpose is to serve as an independent tax research organization, governed by a board of members nominated by the Canadian Bar Association and the Canadian Institute of Chartered Accountants. Its present membership comprises nearly 4,000 individuals and corporate bodies. Its annual conference is well attended; there were over 1,000 members this year to hear the sixty-four papers on topics of direct concern and interest to the tax practitioner. The conference reports apart, the steady flow of published material of high quality is especially impressive. The Foundation's own staff produce a bi-monthly journal as well as a series of papers and notices on particular fiscal topics such as the Budget, municipal taxation and summaries of Commonwealth and foreign tax systems. Some of these publications are substantial pieces of research as, for example, the third edition of Mr J. Harvey Perry's study of *Taxation in Canada* which has recently appeared.

Apart from the work of its own staff, the Foundation commissions external experts to prepare special reports on particular topics and, at the same time, has sponsored research at Canadian universities. The first two fiscal theses from this particular source are especially good; they are *Business Financing and Taxation Policies*, by C. F. Owen, and *Erosion of the Personal Income Tax Base in Canada and the U.S.A.*, by I. J. Goffman. Apart from this published material, the Foundation supplies speakers for conferences and meetings all over Canada. The success of this organization prompts the thought as to whether, despite the excellent work done in the tax field by various professional bodies in the United Kingdom, still more might be achieved by such a specialist foundation.

NOT REALLY PRIVATE

ACCOUNTANTS whose custom it is to make general use of envelopes printed with the word 'Private' or 'Confidential' may be interested in the following which is reproduced from the latest issue of *The Stock Exchange Journal* (Winter 1961–62).

Company Announcements

'Cases sometimes arise in which registrars and secretaries of companies in accordance with their undertakings transmit to the Stock Exchange important information meant for general publication in envelopes marked 'Private', notwithstanding the fact that the letter containing the information must for obvious reasons not be so marked. Such information might for example be the date of a board meeting at which the declaration or recommendation of a dividend is to be considered.

'This practice may result in delay in the opening of such letters and in the communication of their contents to the House and the general public. It is hoped that those concerned will see that in future such information is not sent in envelopes marked "Private".'

It might perhaps be added that the Stock Exchange is not the only place where the use of such envelopes for non-confidential matter can occasion delay. It is not unknown for a notice sent for publication in *The Accountant* to miss an issue, because the envelope printed 'Private' has been reserved for the personal attention of the editor.

IRISH EXPORT EXPANSION

THE trade statistics of Ireland for the year 1961 show that the Irish Government's policy of encouraging foreign manufacturers to establish factories in the Republic is certainly resulting in a marked expansion of exports. Over the ten years 1952 to 1961 total exports have increased by nearly 80 per cent from £101·6 million in 1952 to £180·3 million in 1961. Over half this increase has occurred in the last three years, since in 1959 the figure was only £130·6 million.

Of the total exports in 1961 31 per cent consisted

of live animals, 35 per cent of food, drink and tobacco and 26 per cent of other raw materials and manufactured goods; in 1952 the corresponding figures were 32 per cent, 50 per cent and 13 per cent (the balance in each year consisting of re-exports). However, there was some decline in the rate of expansion of exports of 'other raw materials and manufactured goods' in 1961, the total rising by only 6 6 per cent compared with a rise of 18 per cent for exports as a whole. This partial return to the former balance between agricultural and industrial exports will be welcomed by Irish farmers who have argued for some time that if the money spent on encouraging industrial development had been spent on agriculture, the results achieved would have been even more impressive. In practice, however, as has happened in other countries, industrial growth, by drawing agricultural labour from the land, is no doubt forcing greater mechanization and efficiency on the farmers.

The main categories of manufactured goods exported are textiles, clothing and footwear, and cutlery, hardware, implements and machinery which together totalled £23·4 million or nearly twice the total exports of other raw materials and manufactured goods ten years ago.

This is My Life . . .

by An Industrious Accountant

CHAPTER 118

WE really only fully appreciate the advance of the profession in the last half-century when we check on the outlook of an earlier age. I had an insight into this evolution recently, when I found a popular encyclopedia of 1913 tucked away in the recesses of my bookshelves. The present generation, as I find from inquiries, has little knowledge of this highly useful book of reference, and less appreciation of the prestige and influence it earned for itself in the early part of the century.

My volume is an impressive edition of 1,070 pages, lavishly furnished with full-colour paintings and maps. In fact, it had everything that its era could ask. Starting with an ample English dictionary, there follows a section of general information treating some 6,000 different subjects; then comes a biographical dictionary of prominent people, past and present. It was here, as I perused, that I became conscious of something missing. There were royalties and saints, politicians and generals, authors and actresses . . . even a sprinkling of outstanding industrialists . . . but no accountants.

I went through a mixed compendium of English monarchs (starting with Egbert), London clubs, Atlantic steamers, classical quotations, sports records. Then came a world gazetteer and atlas, and a chronological list of events starting at 2234 B.C. in Chaldea. Nineteen hundred and eight was fascinating. It recorded mutinies, assassinations, legal verdicts, royal visits, naval disasters, but no Company Consolidation Act. Nineteen hundred and twelve was full of provocative abbreviations, but no reference to Finance Acts or cost-of-living indices. It gave way to long sections devoted to gardening, poultry, cookery, health, sports, toilet, the nursery. . . .

But what was this? On page 903 commenced the dictionary of business, the opening illustration of which had something nostalgic about it. The silver-moustached boss at the table littered with ancient telephone, lamp, baskets, etc.; the deferential dark-coated clerk standing with a sheaf of papers, the safe and the rolltop desk against the wall. Then came twenty pages of commercial terms . . . acceptance, actuary, allonge . . . yes, and even a few short lines about accountants, including 'there is nothing to prevent anyone setting up as an accountant'. The auditor is put in his place gently but firmly in the twelve lines he receives, thus:

> 'It is no part of his duty, however, to criticize the actions of principals, or to concern himself with the prudence or imprudence of the transactions disclosed by the books. His chief duty is to ascertain the true financial position of the business and get out a balance sheet in which this is accurately set forth.'

Shades of the *Royal Mail* case! At least we've broken out of that ancient straight-jacket.

The remaining definitions follow a trend of general trading, legal and stock exchange custom such as . . . making-up price, mandamus, manifest . . . there is little of accounting as such. Nothing appears under taxation or surtax. Income tax is dismissed tersely with

> 'the personal impost charged on the income of individuals, first imposed by Pitt in 1798, to meet the heavy cost of the war with France'.

Business taxation clearly was unimportant.

The book soon shakes free of such sordid trade trivialities and gallops off gaily to photography, motoring, and pets, for seventy pages. So much for the comparative values of work and play. It's rather amusing to look back on our progress since those far-off golden days . . . I haven't seen a modern edition. I wonder what coverage we now enjoy; I must look it up some time.

Finance and Commerce

Ilford

COMPANY accounts have an added interest, of course, when the peruser is acquainted with the company, and many readers – especially those with an interest in photography – will know the name of Ilford Ltd, whose accounts provide this week's reprint. Ilford have a close association with Imperial Chemical Industries. In collaboration with I.C.I., the Ilfocolor roll film for amateur colour photography has been developed, and in its research work Ilford has the very valuable assistance of the Dyestuffs Division of I.C.I. The association further extends to a holding by I.C.I. of the 20 million 5*s* Ordinary shares of Ilford.

Two calls on these shares on April 1st and October 31st in the year under review made them fully paid, bringing the issued ordinary capital up by £640,000 to £5 million and the share premium account by £1,280,000 to £3,200,000.

As one of the conditions for granting a quotation for the shares, the Stock Exchange asked for an amendment to the article of association relating to borrowing powers. While it is not, perhaps, unusual for amendment of a 'borrowing' article to be effected to comply with a stock exchange requirement, shareholders are generally told that it is purely a formal matter. And the resolution goes through without anyone questioning the whys and wherefores.

Borrowing Powers

Ilford shareholders, however, are taken below the surface. Under the existing article, which is one in common use, Mr J. P. Philipps, the chairman, points out in his statement with the accounts the board may not, without the consent of a general meeting, borrow money which will make the aggregate of the company's and its subsidiaries' borrowings exceed the company's issued share capital.

Ilford has been informed, however, states the chairman, that the solicitors to the London Stock Exchange have advised that if the company itself borrows no money, but all the borrowing is done by its subsidiaries, this restriction would not be operative.

Alteration of the article is therefore proposed 'so that the board must exercise all rights of control over its subsidiaries with the intention of securing that the aggregate amounts of borrowing by the company and its subsidiaries outstanding at any time shall not, without the previous consent of a general meeting, exceed the aggregate of the company's issued share capital and the consolidated capital and revenue reserves' as shown in the last consolidated balance sheet but subject to certain adjustments and exclusions.

NOTES TO CONSOLIDATED PROFIT AND LOSS ACCOUNT

	1961 £	1960 £
I. Trading Profit has been arrived at before charging United Kingdom taxation on profits but after taking the following into account:		
Charges and provisions for:		
Depreciation (See Note 1, Schedule C, on page [418])	469,714	338,571
Directors' Emoluments:		
Fees	5,250	5,563
Remuneration for services and contributions paid by the Company under assisted Pension and Life Assurance Schemes	65,682	63,101
Pensions of past Directors	1,688	25,851
Audit fees—Ilford Limited	2,500	2,500
Subsidiaries	5,952	4,953
	550,786	440,539
II. Dividends and Interest arise from:		
Investments in and loans to Associated Companies	154,864	125,962
Other Investments and Receivable Interest	26,512	37,916
	181,376	163,878
III. Taxation—United Kingdom Taxation on profits for the year		
Income tax:		
1962/63 including tax deducted at source	454,270	537,707
Transfer to Taxation Equalisation Reserve	63,000	111,500
Profits tax	149,373	164,681
	666,643	813,888
Less Relief for Investment Allowances	105,500	170,980
	561,143	642,908
X. Dividends paid or recommended, less tax, on:		
6 per cent Cumulative Preference Shares	6,983	6,983
Ordinary Shares:		
5 per cent Interim Dividend already paid (1960–5%)	139,242	123,725
12½ per cent Final Dividend as recommended (1960–12½%)	348,104	309,312
	494,329	440,020

NOTES TO CONSOLIDATED BALANCE SHEET
31st October, 1961

I. Details of Share Capital are given in Schedule A on page [418]

III. Details of Revenue Reserves are given in Schedule B on page [418]

	1961 £	1960 £
VI. British Government Securities		
Cost	—	50,174
Market Value	—	49,649
VII. Dividends, less Tax:		
6 per cent Cumulative Preference Shares accrued	3,491	3,491
Ordinary Shares—12½ per cent Final Dividend as recommended	348,104	309,312
	351,595	312,803

VIII. Details of Fixed Assets are given in Schedule C on page [418]

Additional Notes

	1961 £	1960 £
1. The total estimated contractual commitments for capital expenditure amounted to	277,000	394,000

2. Market rates at 31st October, 1961, have been used throughout these accounts in the conversion of currencies.

These are set out in the resolution and consist mainly of the inclusion of capital issued since last balance sheet date, and exclusion of sums set aside for future taxation and of amounts attributable to minority interests.

Latest Trend

The Ilford accounts themselves are presented in revised form. Directing shareholders' attention to the new form, Mr Philipps says that this has been adopted so that the accounts should 'accord with the latest trend'. They have also included photographs illustrating some of the uses of the company's materials. Photographs are, of course, the alpha and omega of the company's business.

Profits, it will be seen, were under pressure during the year. Turnover was up, but unfortunately the latest trends are not followed by the company to the extent of stating exactly what turnover amounted to. Whatever it was, the increase was insufficient to offset increases in manufacturing and overhead expenses, including substantially increased research expenditure, heavier depreciation charges and 'unforeseen delays in getting into production with our new range of colour products'.

More than half the reduction of £235,000 in group profits before tax, it may be noted, was due to the increase of £131,000 in depreciation. If all goes well with the new colour products, and if the cost rise can be contained, the current year should show improved earnings.

Realms of Silver

In his statement, the chairman also translates the decision of the United States to suspend sales from Government stocks of silver into terms of prices for photographic film. While this American decision last November resulted in a 10 per cent jump in the price of silver, Mr Philipps says it is still too early to know whether the higher price will bring out more of the metal from Government and private hoards in other parts of the world, or whether Ilford will have to get used to paying an increased price for what, in the form of silver nitrate, is one of the company's most important raw materials.

A higher price, he considers, would be a serious blow to the whole photographic trade at a time when the Ilford company itself is 'doing everything possible to reduce the cost of photography for both the amateur and professional'.

ILFORD LIMITED

SCHEDULES TO AND FORMING PART OF THE BALANCE SHEETS

31st October, 1961

	1961 £	*1960 £*
SCHEDULE A. Share Capital of Ilford Limited:		
Preferential Capital—Authorised and Issued: 190,000 6 per cent Cumulative Preference Shares of £1 each	190,000	*190,000*
Ordinary Capital—Authorised: 22,000,000 Ordinary Shares of 5s. each £5,500,000 *£5,500,000*		
Ordinary Capital—Issued: 20,000,000 Ordinary Shares of 5s. each, fully paid	5,000,000	*4,360,000*
Total Issued Capital	5,190,000	*4,550,000*
SCHEDULE B. Revenue Reserves		
General	3,800,000	*3,650,000*
Contingencies (See Note 1)	1,309,224	*1,254,245*
Taxation Equalisation (See Note 2)	610,000	*547,000*
Supplementary Pensions (See Note 3)	74,597	*100,000*
Unappropriated Profit of Ilford Limited	239,309	*231,317*
Per Ilford Limited Balance Sheet	6,033,130	*5,782,562*
Unappropriated Profit Retained in Subsidiaries	319,060	*233,061*
Per Consolidated Balance Sheet	6,352,190	*6,015,623*

Note 1. Contingencies Reserve		1961 £ / *1960*
Balance 31st October, 1960		1,254,245
Add Surplus on disposal of Fixed Assets	48,405	
Surplus on liquidation of Subsidiary Company	6,346	
Profit on realisation of Investment	288	
		54,979
Balance 31st October, 1961		1,309,224

Note 2. Taxation Equalisation Reserve	
Balance 31st October, 1960	547,000
Add Transfer from Profit and Loss account	63,000
Balance 31st October, 1961	610,000

The Taxation Equalisation Reserve represents income tax on the excess of initial and annual allowances granted for income tax purposes over depreciation charged in the accounts.

Note 3. Supplementary Pensions Reserve		
Balance 31st October, 1960		100,000
Less Cost of Supplementary Pensions during year	53,903	
Less Taxation relief thereon	28,500	
		25,403
Balance 31st October, 1961		74,597

SCHEDULE C. Fixed Assets

		At 1934 Valuation and Net Additions at Cost	Accumulated Depreciation	Net Book Value

		9,862,054	2,357,835	7,504,219
		9,102,637	*2,081,968*	*7,020,669*
Goodwill at Cost, Less Amounts Written Off	1961			137,871
	1960			*167,796*
				7,642,090
				7,188,465

Note 1. Depreciation.

An alteration in the basis of provision for the depreciation of fixed assets of compared with the previous year has resulted in an increased charge as £39,520 in the accounts for the year under review.

Stock Exchange Statistics

THE London Stock Exchange's annual analysis of the market value and interest on quoted securities[1] shows an increase of almost £1,200 million to £33,242 million in the value of all quoted securities in 1961. High interest rates meant a reduction of £500 million in the market value of loan capital and of £100 million in the value of preference capital so that the whole of the overall rise was applicable to ordinary shares.

Interest and dividends on quoted securities at £1,870 million rose by 5·9 per cent, compared with a rise of 14·5 per cent in 1960. It is estimated that not more than £740 million of the total figure found its way into personal disposable income. The balance is accounted for by taxation, the incidence of duplication, in which interest and dividends formed part of the income of companies whose own dividends are included in the total, and the payment of interest and dividends to Government departments and institutional investors.

The increase in ordinary dividends last year at 6 per cent was the smallest annual increase in ten years with the single exception of 1958.

[1] *Interest and Dividends upon Securities Quoted on the Stock Exchange, London, 1961.*

CITY NOTES

THE trend of stock-markets in the approach to the Budget hardly suggests a widely-held opinion that the Chancellor has either the scope or the inclination to be particularly open-handed on Monday.

The current tendency is to look for a holding operation which will leave the Chancellor room for further manoeuvre later in the year. The only certainty in the Budget is the appearance of a capital gains tax about which the City has worked itself into a lather of dread anticipation. Such being so, there appears to be scope for the City to indulge in its familiar exercise of regarding anything that the Budget may bring in capital gains tax terms as 'not as bad as expected'.

If the Budget is a standstill affair there will be considerable danger of last July's restrictions being maintained for too long. It is much easier to restrict than re-expand. There is undoubtedly a case for raising the head of steam in industry. Industrial production, overall, has been static for far too long.

Although Bank rate has come down from 7 per cent to 5 per cent, largely as an external measure, all the other July regulators which were introduced remain in force. While, therefore, the City hopes that the Budget will point to some dismantling of these controls there is doubt as to whether this will be so.

The Expanding Profession

SCOTTISH INSTITUTE'S ANNUAL MEETING

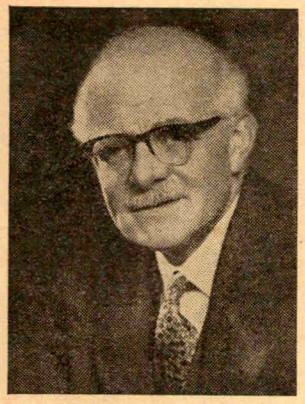
The annual general meeting of The Institute of Chartered Accountants of Scotland was held at Chartered Accountants' Hall, 27 Queen Street, Edinburgh, on March 28th, with the President, Mr Graham A. Usher M.B.E., T.D., C.A., in the chair.

The admission to the Institute of forty-three new members, whose names are shown at the end of this report, was approved, and following the adoption of the accounts of the Institute for the year 1961 and the annual report of the Council for 1961–62, Mr Usher delivered his presidential address.

President's Address

In the course of his address the President said:

'This has been another very busy year in the history of our Institute and it well bears out the remarks I made when I took office last year when I said that there were many problems to be dealt with and that the responsibilities would be heavy.



'Today I propose to speak firstly about the general development of our profession, including the ever-widening scope of services we supply and the increase in our responsibilities not only to our clients but to the public at large, and secondly I propose to refer to some of the steps which our Institute has taken, and is taking, not only to keep abreast of the present situation, but to keep ahead and to give the lead which for so long has been expected from the Scottish chartered accountant.

'In the early days of our Institute, our immediate aim was to turn out into the world an accountant who was a well educated man and soundly grounded in the main principles of accountancy. After he had qualified it was he, and he alone, who upheld the proud position of Scottish accountancy. He could go almost anywhere throughout the world and set up in practice himself, because you will realize there were no other bodies of accountants in existence at that time. Those good old days when the qualification of C.A. automatically opened all doors have unfortunately largely gone. As time went on accountancy bodies were set up in countries abroad and, of course, in England and Wales as well as in Ireland, and the hand of our members is to be seen in the development of many of them.

'In the United Kingdom our profession is not "closed". Members of the recognized accountancy bodies are eligible for appointment as auditor under the Companies Act, 1948, and although it is not always appreciated, so are accountants from overseas who satisfy the Board of Trade that their qualifications are suitable. I understand that there are in fact over 500 people with overseas qualifications recognized for this purpose.

Existence of Barriers

'In some other countries the position is different: the profession is "closed" and qualification to practise depends on membership of an appropriate accountancy body.

'In many overseas countries our members have rights and privileges equivalent to those which we in this country extend to the 500 overseas accountants to whom I have referred, but in some other countries various barriers nowadays exist to the exercise by our members of full practising rights – indeed, in some countries no recognition at all is given for purposes of qualification to practise to the long and arduous training which our members have undertaken.

'It is obvious that individual members are not in a position to stand up to foreign accountancy bodies or, for that matter, to foreign discriminatory legislation. It was therefore essential that our Institute should come forward in support of the interests of our members, for you must remember that we who practise in Scotland form a minority, though a very important minority, of our Institute, but whether our members are in practice here or abroad or are in commerce or in industry, the Council of the Institute has their future continually before it. In the course of our conversations with overseas institutes, we have naturally got to know many of them well. We must not forget that the accountancy profession likes to look upon itself as an international one and it is as much in the interests of foreign institutes that their members should be able to practise freely throughout the world as it is for our members to do so.

Accountant's New Role

'Turning to some of the services which we render, there is no doubt that the old days are past when the auditor was the watch-dog who merely barked at the end of his chain. The role of the practising accountant has gone far beyond the rather negative one when to a considerable degree it was that of guardian of the interests of others from the unscrupulous, but certainly not from the inefficient. To the private individual, to the smaller businesses, or to the large companies, the accountant is now a great source of guidance on an ever-widening range of subjects. For instance, under the general heading of management accountancy, and this also affects our members employed in industry, the accountant has a great deal to contribute. Too much of this work has been left in the past to firms of management or industrial consultants who can certainly not have the same intimate knowledge of companies as is possessed by those who were acting as auditors of or accountants to the businesses concerned. Is it looking very far ahead to suggest that the roles of auditor and, within certain limits, of management consultant may one day be combined and possibly required by statute? Already in certain Scandinavian countries it is the duty of the auditor not merely to report that the accounts show a true and fair picture, but also to report on the general conduct of the business during the year. I can well imagine certain directors of companies in this country holding up their hands in horror at any such development, but after all is there anything so very radical about it? At present we find industrial consultants and experts in management accounting being called in to make these reports, the only difference being, of course, that their reports, though in greater detail than I envisage here, are made privately to the directors and not disclosed to the shareholders. It seems that the experience in Scandinavia is that it does not cause undue difficulties between auditor and director, because after all there it is a statutory duty to make these reports and further the fact that such reports have to be made does not worry the well-run and efficient company, while it does keep the less efficient company on its toes.

'At this point I would stress the necessity that when you

are dealing with people in commerce and industry, you must keep a sense of proportion. Nothing does more harm to the relations between the profession and the business world than the auditor who insists upon accounts being altered for some relatively minor adjustment of, say, £30 or £40, when in the same accounts there may be items running into tens of thousands of pounds for such things as work in progress, stock, provisions for claims, etc., some of which are bound to have a considerable element of estimation in them

'Our Responsibilities'

'Next I would turn to the question of our responsibilities. For a good many years now solicitors in England have had to produce annual accountant's certificates in relation to their accounts. In Scotland solicitors may in certain circumstances require to produce accountant's certificates to The Law Society of Scotland. Within the last few days, the Council of the London Stock Exchange proposed to require its members to obtain annual reports by accountants on their affairs. We hear of proposals to require estate agents to produce accountant's reports each year. It is, I think, a great tribute to our profession that we should be called upon to undertake responsibilities such as these to safeguard the interests of those engaged in others of our great professions and those whom they serve. Not that it stops there: accountants' reports and certificates are required for many other purposes – even in the realms of chance we are now required to report annually on the accounts of bookmakers in connection with the horse-racing betting levy scheme.

'These, then, are some of the developments which are taking place and I shall now give an outline of the steps which have been taken, and which are being taken by the Institute to deal with them. In order to keep the training of our apprentices up to the highest standards, as you know we reorganized our whole programme and methods a few years ago. We are one of the few professions where a practical apprenticeship still exists and we are convinced that it has many great advantages which we would not be prepared to see disappear. We give our apprentices a training from which they can look at industry from the top downwards. Our apprentices have the opportunities of seeing into a wide and varied range of businesses and industries, instead of, as is the case with so many industrial apprenticeships, only seeing how one particular company works. We realized, however, that part-time study in the evenings was insufficient to cover the great variety of subjects and the theory which has to be learned, nor was it generally possible for an individual master to provide within his own practice the full range of practical experience nor all the theoretical instruction which was essential. We therefore instituted compulsory attendance at a university on a full-time basis for one complete session of three terms and, in addition, at all the main centres we provide Institute classes which give the instruction required by our apprentices during the four years when they are not at the university. Our syllabus tends to get wider as the years go by, and amongst other things the importance of instruction in management accounting and in estate duty is very much before us. Now that a full and wide education is so generally appreciated and more readily available than in the past, I would not be at all surprised to find that in the not too far distant future virtually all young chartered accountants would in fact also be university graduates, having completed a full degree course of three years at a university followed by an apprenticeship of, say, three further years.

'With a view to keeping our Institute well in the lead, we appointed the Special Committee on the Institute's Future Policy. One of the committee's main recommendations and one which we are proposing to accept is that we should now set up a Research Committee to consider the ways and means of keeping in the forefront of accountancy thought. We are satisfied that these days in a rapidly expanding profession such as ours indeed is, there is no room for an Institute which is not prepared to be continually examining and developing all avenues of progress and change in accountancy matters.

Mr Usher concluded his address with a word of appreciation of the assistance and guidance of the Secretary of the Institute and his staff.

OFFICE-BEARERS for 1962–63

As announced in Weekly Notes in last week's issue, Mr James C. Stewart, C.A. (Glasgow), was elected as President and Mr W. L. Milligan, B.A.(CANTAB.), CA., J.P. (Edinburgh), as Vice-President for 1962–63.

Members of the Council for 1962–63 were elected as follows:

Members practising in Scotland: Mr T. S. Aitchison (*Hawick*); Mr J. M. Cowie (*Glasgow*); Mr J. A. Crawford (*Edinburgh*); Mr J. G. W. Davidson (*Aberdeen*); Mr G. D. H. Dewar (*Glasgow*); Mr James R. Gellatly (*Dundee*); Mr John Grant (*Aberdeen*); Mr James Haldane (*Edinburgh*); Mr William Halliday (*Glasgow*); Mr W. D. Johnston (*Elgin*); Mr Robert Kemp (*Glasgow*); Mr Festus Moffat (*Falkirk*); Mr G. C. Patterson (*Edinburgh*); Mr Andrew Rintoul (*Glasgow*); Mr J. M. Ritchie (*Edinburgh*); Mr R. J. Scott (*Glasgow*); and Mr W. Forster Simpson (*Dundee*).

Members practising in the United Kingdom outside Scotland: Mr T. G. B. Matheson (*London*) and Mr W. K. M. Slimmings (*London*).

Two members not in practice: Mr John Black (*London*) and Mr I. W. D. Macdougall (*Glasgow*).

ADMISSIONS TO MEMBERSHIP

Forty-three members were admitted to the Institute as follows:

Adamson, R. A., Glasgow
Anderson, J. W., Aberdeen

Begg, J. C. B., Edinburgh
Birch, R. F., Edinburgh

Cameron, J., Glasgow
Carter, R. H., Glasgow
Charles, P. I., London
Craig, J. D., Edinburgh
Cross, G. N., London
Cunningham, J. B., Dundee

Dawson, N. G., London

Ellis, F., London

Finlayson, G. L., London
Forrest, D. L., Glasgow

Gair, M. M., Glasgow
Gilchrist, I. ., Glasgow
Gouck, R. G S., Dundee
Grant, C., Dundee

Heath, J. D. J., Edinburgh
Hodgson, P., Glasgow
Howat, H. S., Glasgow

Jory, R. P. L., London

Keeley, M. A., Glasgow
Kelly, E., Dundee
Kerr, J. P. A., Glasgow
Kesson, D. F., Glasgow

Laird, D. R., Glasgow
Lambie, J., Glasgow

Marshall, A. ., Glasgow

O'Neill, C. P., Glasgow

Philip, I. G., Edinburgh
Porter, J. B., Newcastle upon Tyne

Qureshi, S., Glasgow

Rankin, H. C. D., Glasgow
Recordon, P. L. W., London
Ritchie, A., Greenock

Shaikh, Y. M., Edinburgh
Shaw, I. D., Edinburgh
Simpson, N. L., Aberdeen
Sproul, R., Glasgow
Stuart, K., Glasgow

Vinestock, D. D., Edinburgh

Waters, P. G., Glasgow

EAST ANGLIAN SOCIETY OF CHARTERED ACCOUNTANTS

DINNER AT COLCHESTER

One of the most important functions of accountants was to stop people like himself from behaving foolishly with money, said Mr J. V. Sheffield, chairman of Norcros Ltd, proposing the toast of 'The Institute of Chartered Accountants in England and Wales', at the annual dinner of the East Anglian Society of Chartered Accountants at Colchester on March 30th. And for this function, in his view, they were paid far too little.

Problem of Size

Responding to the toast, the President of the Institute, Mr P. F. Granger, F.C.A., referred to the service which the Institute renders to its members and which, he said, was complicated these days by its size. The Institute membership, said Mr Granger, now stood at over 35,000; of this figure 10,500 were in public practice in the United Kingdom, and another 4,000 were overseas; 18,500 were employed within the profession or in industry. Something like 3,000 articled clerks were registered each year. 'We run up against this problem of size all the time', said Mr Granger, 'and one of our main difficulties is to ensure that we continue to look after the individual.'

Mr Granger referred to the investigation which was being conducted into the needs of small practitioners, which was engaging the attention of the Institute and district societies all over the country. A great deal of work in regard to this had already been done, he said, but there was of course a great deal more to do.

The toast of 'The Guests' was proposed by the Vice-President of the East Anglian Society, Mr A. K. Shepherd, F.C.A., and responses were made by the Mayor of Colchester and by Mr P. C. Benham, M.B.E., T.D.

Mr E. A. Bland, D.S.O., F.C.A., President of the Society, was in the chair, and music was provided during the dinner by the Band of the Staffordshire Regiment.

Taxation Case

A full report of the case summarized in this column will be published, with a Note on the Judgment, in the 'Annotated Tax Cases'.

Lazard Investment Co Ltd *v.* Rae

In the Court of Appeal – March 13th, 1962

(Before the MASTER OF THE ROLLS (Lord EVERSHED), Lord Justice UPJOHN and Lord Justice DIPLOCK)

Income tax – Shares held in overseas company – Distribution by that company of shares in another overseas company – Whether income arising from overseas possessions – Income Tax Act, 1952, Schedule D, Case V.

The appellant company, an investment-holding company, held 2,000 shares in a United States company (Certain-teed), which in turn held shares in another United States company (Bestwall). Both overseas companies were incorporated in Maryland. Up to July 1956, Certain-teed carried on the manufacture and selling of asphalt roofing material and also the manufacture and sale of gypsum and paper products. In that month the gypsum and paper side of the business was transferred to Bestwall in exchange for 715,145 shares in the latter. Certain-teed then decided to distribute these Bestwall shares among its own members, and in August 1956 the appellant company received 666⅔ Bestwall shares in respect of its holding of 2,000 shares in Certain-teed.

The law of Maryland authorized any corporation of that State to declare a 'partial liquidating distribution' to its stockholders, and enabled the distribution to be effected by the transfer of a portion of the assets of the distributing company. The distribution was not to impair the company's stated capital. Certain-teed did not declare a dividend in order to make the distribution in question, and the 666⅔ Bestwall shares was a part of Certain-teed's capital assets.

It was contended on behalf of the respondent that the 666⅔ shares in Bestwall formed a receipt of the appellant company taxable under Case V of Schedule D as income arising from a possession out of the United Kingdom. It was contended on behalf of the appellant that the shares represented a return to the appellant of a part of the capital of Certain-teed, and that the shares were not a taxable receipt. The Special Commissioners decided in favour of the appellant.

Held (reversing the decision of Mr Justice Plowman): The 666⅔ shares in Bestwall did not represent taxable income of the appellant.

THE ASSOCIATION OF CERTIFIED AND CORPORATE ACCOUNTANTS

Extracts from the Report of the Council for 1961

The following are extracts from the annual report of the Association for the year 1961 to be presented at the fifty-seventh annual general meeting to be held in the Queen Mary Hall, Y.W.C.A. Building, Great Russell Street, London WC1, at 12 noon on Tuesday, April 17th

Council and Committee Meetings

During the year eight Council meetings and 152 committee meetings were held. There were also thirty-four meetings of joint committees, delegations, etc.

Membership

The number of new members admitted during the year was 340; 4 were readmitted, and 185 associates were advanced to fellowship. The membership of the Association at the end of the year was 11,006, consisting of 2,663 fellows and 8,343 associates.

Students and Graduates

The number of students and graduates on the register at December 31st, 1961, was 9,241. During 1961 there were 2,196 new registrations and 7,028 renewals.

Revision of Examination Regulations

Further amendments to the examination regulations were necessitated by important developments in commercial education in Scotland.

In 1959 the Secretary of State appointed the Scottish Technical Education Consultative Council, consisting of representatives of industry, commerce and education, to advise him on the development of vocational further education in Scotland.

That Council reported in March 1961, following which the Secretary of State set up a new body, to be known as the Scottish Council for Commercial Education, to take over the functions of the former National Committee (Scotland) for Commercial Certificates and to be responsible for the development of commercial education in Scotland. The Association is represented on the new council by Mr R. Archbold, of Edinburgh, and the Secretary of the Association is a member of the Professional Studies Committee.

The syllabus of the Senior Commercial Certificate has been revised so as to include, as far as possible, all the non-specialist subjects of professional Intermediate examinations and the Association, in common with other professional bodies represented on the new council, has agreed in principle to the granting of exemption at the Intermediate examination on a subject-for-subject basis to holders of the Senior Commercial Certificate.

A further development in Scotland which becomes effective in 1962 is the introduction of the new Scottish Certificate of Education, which replaces the Scottish Leaving Certificate. The standard of the Scottish Certificate of Education at ordinary grade will be equated to that of the G.C.E. at ordinary level, and the Council of the Association has decided to grant exemption from the Preliminary examination on similar terms.

The Council of the Association has also decided to permit students to prepare for the Intermediate examination by means of a two-year course of full-time study at an approved educational institution. At present this will be optional and students remain free to pursue the more traditional method of preparation by part-time study, if they so prefer. The requirements as to the practical experience necessary for admission to membership remain unchanged.

Association of Chief Financial Officers in the Hospital Service

The Association of Chief Financial Officers in the Hospital Service in England and Wales expressed to the Council a desire to award an annual prize of five guineas to the student in the hospital service who achieved the best performance at the Association's Final examination each year. The Council indicated its appreciation of this suggestion, which it accepted with gratitude. The first award will be made in respect of the year 1961.

Branches and District Societies

The President and Secretary once more had the pleasure of visiting those branches and district societies holding annual dinners, as well as a number of others at which less formal social occasions had been arranged.

So far as concerns district society activities generally, unhappily it cannot be said that the Council's repeated exhortations to members have as yet produced much perceptible effect.

This does not, however, in any way diminish the Council's gratitude to district society officers, some of whom must often feel that they are fighting a losing battle against apathy and indifference. Their efforts are greatly appreciated, as also is the support of those members who realize that their obligations to the Association do not cease with the payment of their annual subscription.

In an effort to improve the position, the London District Society is making an experiment in which some of the larger provincial societies may well be interested. It is intended to organize the outer London area into a number of local centres, if possible with the co-operation of local colleges of commerce. The first such centre has been set up at Bromley and others are proposed at Harrow and Kingston upon Thames. Members interested in assisting and supporting the new centres are asked to communicate with the Honorary Secretary of the London District Society.

Premises

Up to June 1961 the Association enjoyed the benefit of a pre-war lease at 22 Bedford Square. The lease expired at that time and a renewal has since been granted by the trustees of the Bedford estate. This is for a period of ten years only and, it need hardly be said, is at a very considerably increased rental.

It is not possible, however, to regard this as providing any remedy, except in a limited and temporary sense, for the Association's problem of accommodation. The growing activities of the Association and necessary (but so far impracticable) additions to the staff make it impossible to contemplate remaining at 22 Bedford Square for very long without seriously impairing the secretariat's ability to discharge its functions adequately.

Renewed steps are therefore being taken to seek other premises at which it is hoped that the Association will be able to offer both to its members and staff amenities appropriate to its size and standing. In this connection the attention of members is drawn to later paragraphs of this report.

Eighth International Congress of Accountants, 1962

The Eighth International Congress of Accountants will be held at the Waldorf-Astoria, New York, from September 23rd to 27th, 1962. The theme of the congress is 'Auditing and Financial Reporting in the World Economy'. Full details of the programme were published as a supplement to *The Accountants Journal* in June 1961.

The Association is arranging charter flights at a cost of £56 return per person, London–New York–London, for the benefit of members who wish to attend. Further details can be obtained from the Secretary at 22 Bedford Square, London WC1.

European Congress of Accountants, 1963

Following the Seventh International Congress of Accountants in Amsterdam in 1957, Mr Kraayenhof, the President of that congress, took certain steps to ascertain the views of European accountancy bodies generally on the desirability of organizing a European congress of accountants on similar lines to those of international congresses. The question arose because in 1952 and 1957 members of the accountancy bodies in Europe had been able to attend in large numbers at congresses on an international basis, but in 1962 the congress is to be held in New York and it is likely that the next following international congress in 1967 will also be held outside Europe. This means that only a limited number of European accountants will be able to attend an international congress until 1972 at the earliest. For this reason it was felt that there would be great advantage in holding European congresses between international congresses in order to maintain those contacts between accountants in Europe which since the war have grown so rapidly and have proved so beneficial.

Mr Kraayenhof's suggestion received universal approval and from his inquiries it seemed clear that there was a definite and general feeling that it would be particularly appropriate if The Institute of Chartered Accountants of Scotland, the oldest accountancy body in the world, could be persuaded to undertake the organization of the first such congress.

The Scottish Institute was good enough to accept this suggestion and following discussions it has been decided that a European congress will be held in Edinburgh during the week commencing September 8th, 1963. A Congress Policy Committee has been appointed on which the Association is represented by Mr J. E. Harris, and at the first meeting thereof Mr Alexander McKellar, immediate past president of the Institute, was unanimously elected President of the Congress. Mr E. H. V. McDougall was appointed Congress Secretary.

Further information as to congress arrangements will be issued to members from time to time, and it is hoped that the Association will have a strong representation in Edinburgh.

Research

The Technical Research Committee, its sub-committees and panels, held forty meetings during the year.

The Taxation subcommittee continued work on two studies on back duty and double taxation relief and commenced a new study on estate duty. The subcommittee also assisted the Council in the preparation of a memorandum on Revenue procedure for submission to the Select Committee on Estimates, and of a memorandum to the Chancellor of the Exchequer containing suggestions on the Budget and proposals for the simplification of the present taxation system.

The Management Accounting subcommittee continued work on a study dealing with management accounting for the small business. Members of the subcommittee also took a leading part in the week-end school on Management Accounting.

The Electronic Data Processing subcommittee completed work on its third study entitled *Electronic Data Processing III – The Planning and Installation of a Computer*, which was published in April 1961. The subcommittee subsequently commenced work on its fourth study entitled *Electronic Data Processing IV – Management Control and Auditing*, which it is expected will be published in the summer of 1962.

The Universities and the Profession

Changes in the special degree courses at Leeds, London, Manchester and Southampton were approved by the councils of the accountancy bodies represented on the joint standing committee, and details of the revised courses are included in the current issue of the handbook published in September 1961. Copies may be obtained from the Secretary of the Association on request.

A successful conference at Burwalls, the hall of residence of the University of Bristol, from September 22nd to 24th, 1961, was attended by members of the joint standing committee, representatives of the local joint committees and representatives of the universities. A varied programme included sessions dealing with domestic matters and the training methods of the Law Society and the Institute of Chartered Accountants of Scotland, respectively. The final session was devoted to a discussion on the recommendations of the Parker Report. During the domestic session the President of the Association spoke on training schemes in industry approved by the Association . . .

Practising Certificates

Following the special resolution at the last annual general meeting of the Association, steps have been taken to provide all members in practice with practising certificates. All such members should by now have received these, and any who have not should communicate with the Secretary at once.

The Council desires to emphasize that no member of the Association is permitted to engage in public practice whether whole-time or part-time, unless he has first obtained from the Association a certificate authorizing him to practise.

Increase in Membership Subscriptions

In an earlier part of this report reference was made to the renewal of the lease at Bedford Square and to the fact that this does little to remedy the Association's difficulties of accommodation. The Association is the second largest body of accountants in the United Kingdom, with an increasing membership and a growing register of students. It is hardly necessary to remind members of the extent to which the activities of all professional bodies have multiplied over the last decade. Nor are these activities any longer restricted to purely domestic affairs. The present report, for example, will give members some idea of the Association's commitments in this respect, and it would be unrealistic to suppose that they will not increase.

These and other obligations cannot be discharged properly unless the Association has adequate staff and accommodation, and in the Council's view it is essential that the Association's headquarters should be not only adequate to house that staff, but also appropriate to the standing and activities of the Association. Moreover, members themselves are entitled to expect facilities for reference, research and consultation which they cannot at present enjoy.

The Council is always reluctant to suggest an increase in membership subscriptions, but it is perhaps not inappropriate to mention that the current level of those subscriptions is only slightly more than twice that of 1939. Bearing in mind increases in cost of a very much greater extent which affect every conceivable aspect of the Association's work, members will no doubt agree that the increase so far over pre-war rates has been exceedingly modest and that even with the addition now proposed, the percentage increase will still be noticeably below that affecting almost all goods and services. The last increase in membership subscriptions was approved in 1956 and, while in the year under review it has been possible to maintain the surplus at about £5,000, this represents a far greater achievement than the accounts perhaps suggest. The Council accordingly recommends the acceptance of the resolution.

Resignation from the Council

Provost W. Macfarlane Gray, O.B.E., J.P., resigned from the Council with effect from September 13th, 1961.

Provost Macfarlane Gray was admitted to membership of the Corporation of Accountants in 1933, and was already serving as a member of the Council of the Corporation at the time of the merger with the Association in 1939. He continued to serve on the Council of the joint body, and was elected President of the Association in 1954, the Association's Golden Jubilee Year. He presided over the jubilee celebrations with great distinction and was re-elected President for the following year. In 1958 he was elected Provost of the Royal Borough of Stirling and was re-elected for a further term of three years in 1961. In the same year, he was awarded the O.B.E. in recognition of his public services.

The Council has accepted Provost Macfarlane Gray's resignation with great regret and desires to record its appreciation of his outstanding services to the Association over the course of the last twenty years, and to express its sincere good wishes for his future health and happiness and that of Mrs Macfarlane Gray.

WEEK-END SCHOOL AT CAMBRIDGE

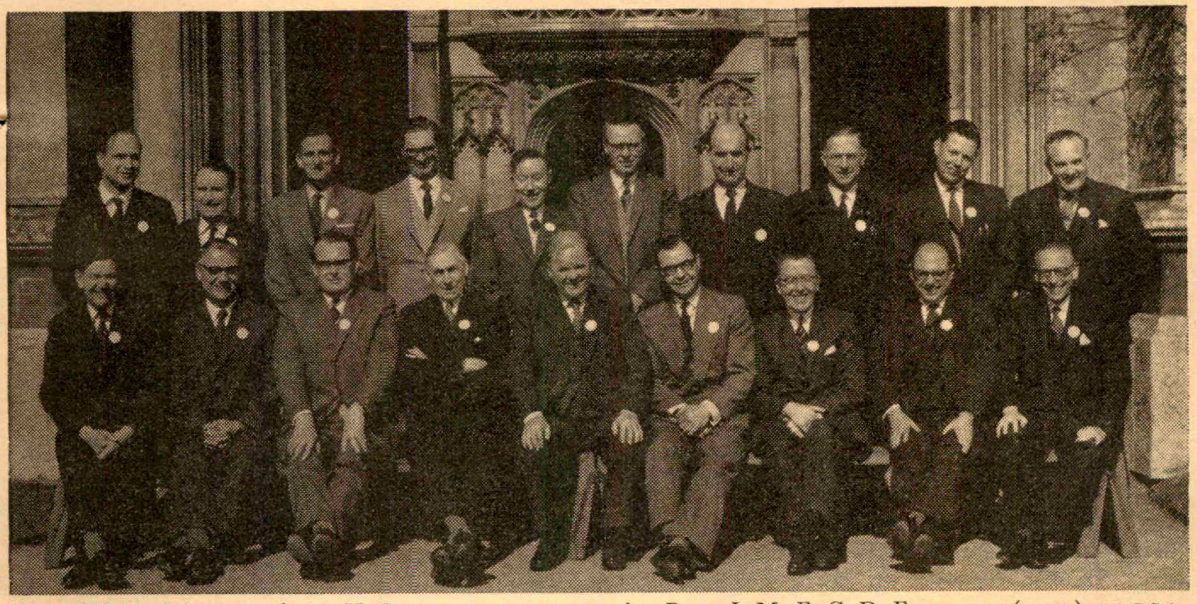
A very successful residential course was held at St John's College, Cambridge, last week-end by The Association of Certified and Corporate Accountants. Nearly one hundred members attended.

The President of the Association, Mr G. L. Barker, F.A.C.C.A., welcomed those attending at an informal sherry party in the Old Music Room on the Friday evening.

There were four business sessions and papers were presented on 'The accountant and the Common Market', by Mr H. Shearing, A.A.C.C.A., principal lecturer, Ealing Technical College; 'Some aspects of management and statutory auditing', by Mr L. A. Hill, A.A.C.C.A., manager, Methods and Procedures Division, Shell International Petroleum Co Ltd; 'The relationship of the accountant to his client and the Inspector of Taxes', by Mr A.W. Nelson, A.A.C.C.A.; and 'Education and training for the profession', by Mr E. C. D. Evans, B.SC.(ECON.), F.A.C.C.A.

Except for the first session which took the form of a general discussion, the pattern of the course followed that adopted in previous years. During the first part of each session those attending dispersed for group discussions. At the conclusion of the discussions and after a break for refreshments, members reassembled in the Debating Chamber of the Cambridge Union Society where the author of the paper, assisted by members of the panel, answered questions submitted by the group leaders.

On the Saturday evening a guest night dinner was held in Hall at which the President of the Association took the chair. Among those present were Mr A. M. P. Brookes, M.A., Junior Bursar, St John's College, Cambridge; Mr J. G. W. Davies, O.B.E., M.A., Secretary, University of Cambridge Appointments Board; Dr N. F. M. Henry, PH.D., Steward, St John's College, Cambridge, and Professor J. R. N. Stone, C.B.E. SC.D., P. D. Leake Professor of Finance and Accounting.



From left to right, seated: Mr H. SHEARING, A.A.C.C.A., *author Paper I;* Mr E. C. D. EVANS, B.SC.(ECON.), F.A.C.C.A., *author Paper IV;* Mr R. Notes and Notices

PROFESSIONAL NOTICES

MESSRS C. PERCY BARROWCLIFF & Co, Chartered Accountants, of Middlesbrough, Newcastle upon Tyne, Leeds and Wakefield, announce that Mr WILLIAM LESLIE PAUL STIRLING, A.C.A., was admitted a partner as from April 1st, 1962.

MR ROBERT C. BENNETT, A.C.A., announces that from April 1st, 1962, he has taken into partnership Mr PETER STOPPARD, A.C.A., who has been associated with the firm for eight years. The practice continues to be carried on at Bristol and Chipping Sodbury in the style of ROBERT C. BENNETT & Co.

MESSRS BROWN, FLEMING & MURRAY, London, announce that Mr P. N. G. PRICE, A.C.A., was admitted into partnership on April 1st, 1962.

MR JOHN CLAPTON, F.C.A., of Mitre Chambers, 75 New Street, Salisbury, Wilts, announces that Mr RONALD N. MILLAR, A.C.A., has been admitted into partnership as from April 1st, 1962. The firm's name will be CLAPTON & MILLAR.

MESSRS DAVIE, PARSONS & Co, Chartered Accountants, of 18 Finsbury Circus, London EC2, announce that Mr C. M. WENBORN, A.C.A., has been admitted into partnership as from April 1st, 1962.

MESSRS DAY, SMITH & HUNTER, Chartered Accountants, of Star House, Maidstone, announce that as from April 1st, 1962, Mr DAVID REVELL SMITH, F.C.A., has been admitted as a partner. The style of the firm remains unchanged.

MESSRS DELOITTE, PLENDER, GRIFFITHS & Co, Chartered Accountants, of London, announce the formation of an associated firm under the same name at 1 King John's Chambers, Bridlesmith Gate, Nottingham. The partners in the associated firm are Mr R. T. M. MCPHAIL, Mr C. ROMER-LEE, Mr D. D. RAE SMITH and Mr S. P. WILKINS of the London firm, and Mr K. A. BUXTON, Mr H. T. SCOTHORNE, Mr T. M. PRAGNELL and Mr J. H. HEWITT of Messrs MELLORS, BASDEN & MELLORS, Chartered Accountants. The latter firm continues to practise at the same address without any change in its constitution.

MESSRS FORRESTER, BOYD & Co, Chartered Accountants, of 26 South St Mary's Gate, Grimsby, announce that as from April 1st, 1962, they have taken into partnership Mr JOHN MARTIN KEILY, F.C.A., who has for a number of years been a local partner in their Louth branch office.

MESSRS HUGHES & ALLEN, Chartered Accountants, of Kingsway House, 103 Kingsway, London WC2, announce the admission of Mr PATRICK VIVIAN LE NEVE FOSTER, A.C.A., as a partner of the firm as from April 1st, 1962.

MESSRS KEENS, SHAY, KEENS & Co, Chartered Accountants, Bilbao House, New Broad Street, London EC2, and branches, announce that Mr ALBERT JOHN PEDLEY, F.C.A., retired from the partnership on March 31st, 1962, and that Messrs PETER PHILIP KEENS, A.C.A., and LAWRENCE ARTHUR WARD JORDAN, A.C.A., who have been members of the staff for some years, were admitted to the partnership on April 1st, 1962.

MESSRS KERSHEN, FAIRFAX & Co, Chartered Accountants, of 26 Dorset Street, Gloucester Place, London W1, announce that Mr MARTIN B. KERSHEN, A.C.A., who has been with the firm since 1954, was admitted as a partner from April 1st, 1962.

MESSRS LAYTON-BENNETT, BILLINGHAM & Co, Chartered Accountants, of 23 Blomfield Street, London Wall, London EC2, announce that Mr ARTHUR PATRICK MILLS, A.C.A., who has been a member of their staff for some years, has been admitted as a partner in the firm as from April 1st, 1962.

NOTICE TO SUBSCRIBERS

New and up-to-date wrapper addressing equipment now installed in the new offices of *The Accountant* in the Strand, London, may also be utilized for other purposes, including subscription renewal notices and readership analysis. Meanwhile the task of cutting and checking the thousands of new address stencils has been a major one for the staff of the subscription department; and the fact that the new equipment has had to be installed and in operation between the publication of two weekly issues was an added complication.

Wrappers addressed by the new system will come into use with next week's issue of *The Accountant*. While every endeavour is being made to avoid inconvenience to readers any subscriber receiving an incorrectly or inadequately addressed wrapper is asked to correct and return it to *The Accountant*, 151 Strand, London WC2, without delay.

JOHN FOORD & COMPANY
56 VICTORIA STREET, LONDON, SW1 Telephone: Victoria 2002 (3 lines)
REVALUATION OF ASSETS
WORKS, FACTORIES, PLANT & MACHINERY, Etc.

MESSRS G. A. LEVY & CO, Chartered Accountants, of 120–121 Newgate Street, Holborn, London EC1, announce that Mr MALCOLM JOHN GEE, A.C.A., has been admitted into partnership with effect from April 1st, 1962. The partnership will continue to be carried on in the name of G. A. LEVY & CO.

MESSRS MACLEAN & LINDSAY, Chartered Accountants, of Glasgow, announce that they have joined their practice with Messrs MANN, JUDD, GORDON & CO, Chartered Accountants, Glasgow, in whose name the practice will be continued. Mr DONALD P. LINDSAY, C.A., has been assumed a partner of MANN JUDD GORDON & CO and Mr ANDREW W. MACLEAN, C.A., will be available to act in a consultative capacity.

MESSRS MANN, JUDD, GORDON & CO, Chartered Accountants, of Glasgow, announce that Mr JOHN AITKEN, C.A., Mr WILLIAM HARDIE, C.A., and Mr DONALD P. LINDSAY, C.A., have been assumed partners of the firm.

MESSRS KEITH PATERSON & CO, Chartered Accountants, of 139 Norfolk Street, Sheffield 1, announce the retirement from the firm and from active practice on March 31st, 1962, of Mr KEITH PATERSON, F.C.A. Mr PATERSON has been in practice with the firm for thirty-six years, and has been senior partner since March 1928. He will remain available for consultation by appointment with the continuing partners, Mr HARRY ROBINSON, F.C.A., and Mr ROBERT HEWARD GIBSON, F.C.A. The name of the firm will remain unchanged.

MESSRS PEAT, MARWICK, MITCHELL & CO announce that Mr DONALD BLACK, C.A., retired from the Hong Kong partnership as from March 31st, 1962.

MESSRS RICKARD & CO, Chartered Accountants, of 20 Southampton Place, London WC1, announce that they have opened an office at 187A High Street, Romford.

MESSRS AUSTRAL, RYLEY & CO, Chartered Accountants, of Central Chambers, Bearwood Road, Smethwick 41, Staffs, announce that Mr A. T. PITT, A.C.A., and Mr C. B. RYLEY, A.C.A., have been admitted into partnership as from April 2nd, 1962. The firm's name will remain unchanged.

MESSRS SHELVOKE, PICKERING, JANNEY & CO, Chartered Accountants, of 36 Cannon Street, Birmingham 2, announce that Mr P. R. JANNEY, A.C.A., has been taken into partnership as from April 2nd, 1962. The firm's name will remain unchanged.

MR H. S. SUSSMAN, A.C.A., announces that he has commenced to practise under the style of H. S. SUSSMAN & CO, Chartered Accountants, at 3 Grosvenor Street, London W1, as from April 2nd, 1962.

MESSRS TAYLER, HOUNSFIELD & CO, Chartered Accountants, of Coventry House, South Place, Moorgate, London EC2, announce that as from April 1st, 1962, they have taken into partnership Mr J. G. GOODIN, A.C.A., who has been a member of their staff for some years, after serving his articles with them. The name of the firm will remain unchanged.

MESSRS TEMPLE, GOTHARD & CO, Chartered Accountants, of 7 and 8 Norfolk Street, Strand, London WC2, announce that Mr ROGER C. MUNYARD, A.C.A., has been admitted to the partnership as from April 1st, 1962. The name of the firm remains unchanged.

MESSRS WARNER, BEARMAN & CO, Chartered Accountants, of 16 Wimpole Street, London W1, announce that Mr HAROLD SIDNEY SUSSMAN, A.C.A., retired from the partnership on March 31st, 1962. The style and address of the practice is unchanged.

THE INSTITUTE OF COST AND WORKS ACCOUNTANTS

President's Luncheon in Liverpool

The President of The Institute of Cost and Works Accountants, Mr F. M. W. Hird, F.C.A., F.C.W.A., gave a luncheon party yesterday (Friday) at the Adelphi Hotel, Liverpool. Those present were:

Lieut-Col P. G. R. Burford, T.D. (*secretary, The Liverpool Chamber of Commerce*); Mr J. B. Charnock, F.C.W.A.; Mr J. M. Kuipers (*manager, Ford Motor Co Ltd, Halewood*); Judge Laski, Q.C. (*Judge of the Crown Court, Recorder of Liverpool*); Mr W. C. Meacock, A.C.W.A.; Mr Bertram Nelson, C.B.E., J.P., F.C.A. (*Vice-President of Council, University of Liverpool*); Mr F. Nuttall, F.C.W.A.; Mr R. T. Rickers, F.C.W.A.; Lieut-Comdr G. K. Rylands, R.N.(RETD.), O.B.E., J.P.; Mr Geoffrey L. Tillotson, J.P. (*chairman, Tillotson & Son Ltd*).

IN PARLIAMENT

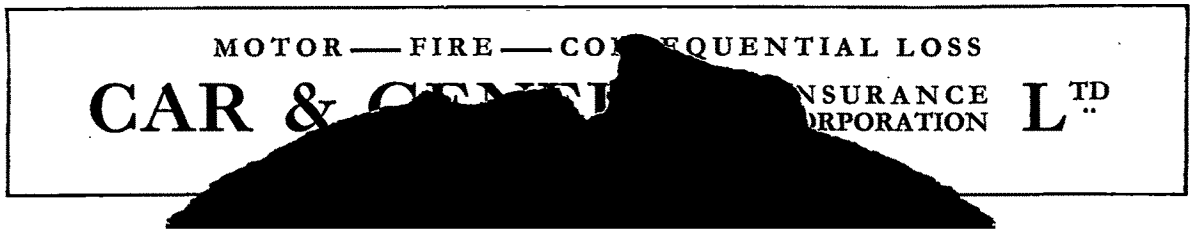
Graduated Pension Scheme

Mr FRANK ALLAUN asked the Minister of Pensions and National Insurance the latest number of employees who have contracted out of the Government pension scheme.

Mr BOYD-CARPENTER: The number is 4,437,703.

Mr HOUGHTON asked the Minister of Pensions and National Insurance what will be the procedure in his Department after the expiry of the income tax year on April 5th regarding the recording of graduated contributions, and the notifications to insured persons of contributions paid; what will be the approximate number of contributors involved; and whether he will make a statement.

Mr BOYD-CARPENTER: The Inland Revenue will send employers' P.A.Y.E. returns to my Department's Central Office at Newcastle upon Tyne for entry of the employees' graduated contributions in their individual insurance accounts; these will be maintained on an electronic computer. When the recording process is



complete, each employee shown as having paid graduated contributions will be sent a statement of account and explanatory leaflet. The number of contributors cannot be precisely forecast but is likely to be of the order of eleven million.

Hansard, April 2nd, 1962. Oral Answers. Col. 21.

WAR DAMAGE COMMISSION

Sir Alexander Johnston, G.C.B., K.B.E., has been appointed Chairman of the War Damage Commission as from April 1st, following the retirement of Sir Robert Fraser, K.C.B., K.B.E. Sir Alexander will continue as Chairman of the Board of Inland Revenue.

ENGLISH CHARTERED ACCOUNTANTS IN SCOTLAND

The fourth annual general meeting of the Association of English Chartered Accountants in Scotland was recently held in Edinburgh. The Chairman, Mr M. G. Wittet, F.C.A., reported on the activities of the Association during the past year, and the following were elected to office and to the Executive Committee for the ensuing year:

Chairman: Mr M. G. Wittet, F.C.A.

Secretary: Miss D. M. Vaughan, B.A., F.C.A.

Committee: Mr A. Adamson, F.C.A.; Mr H. C. Clarke, F.C.A.; Mr S. F. Cross-Rudkin, F.C.A.; Mr N. H. Macdonald, F.C.A.; Mr W. H. Palmer, F.C.A.; Mr W. T. Turner, F.C.A.; Mr K. E. Young, F.C.A.; Mr F. S. Mycroft, F.C.A.; Mr J. S. Masterton, F.S.A.A.; Mr T. Robertson, A.C.A.

Mr W. T. Riddle, M.A., F.C.A., was reappointed Honorary Auditor.

CITY DISCUSSION GROUP

The next meeting of the City Discussion Group of Chartered Accountants will take place on Wednesday, April 11th, at the Tiger Tavern, 1 Tower Hill, London EC3, at 6 for 6.30 p.m. The topic for discussion will be 'Aspects of European accounting', introduced by Mr D. E. F. Green, M.B.E., F.C.A.

THE INSTITUTE OF INTERNAL AUDITORS

Birmingham Chapter

The next meeting of the Birmingham Chapter of The Institute of Internal Auditors will be held next Thursday, April 12th, at 6.30 p.m., at the Chartered Auctioneers' and Estate Agents' Institute, Regent House, St Philip's Place, Colmore Row, Birmingham 3. Light refreshments will be available from 6 p.m. The speaker will be Mr K. Bradley, A.A.C.C.A., of the Associated Octel Co Ltd, who has entitled his paper 'Octel-auditing'. Information regarding the activities of the Chapter can be obtained from the Hon. Secretary, Mr R. C. J. Lucas, West Midlands Gas Board, 39/41 Hagley Road, Birmingham 16.

DEVELOPMENT OF INTERNAL AUDITING

A small booklet entitled *Concepts, Objectives and Activities of Internal Auditing* has been issued by the London Chapter of The Institute of Internal Auditors. Compiled from a similar publication written for the Institute of Internal Auditors in the United States, the booklet briefly reviews among other matters, the evolution of internal auditing and its development as an important control for management, and sets out a statement of responsibilities of the internal auditor.

GRIMSBY AND NORTH LINCOLNSHIRE CHARTERED ACCOUNTANTS

The eighth annual report of the Grimsby and North Lincolnshire Branch of the Hull, East Yorkshire and Lincolnshire Society of Chartered Accountants, presented at the annual meeting held on March 19th, records a total membership at December 31st, 1961, of eighty-four.

The report states that regular meetings were held during 1961 when addresses were given on topics of general interest such as 'Farm valuations', 'The work of the T. & R. Committee' and 'The provincial brokers' stock exchange'. Appreciation is expressed to Mr C. M. Strachan, O.B.E., F.C.A., who resigned from the Council of the Institute (*The Accountant* of October 21st, 1961) during the year and who devoted unfailing interest to the affairs of the Society since his election to the Council in 1949. The report records with pleasure the appointment of Mr R. G. Slack, M.A., F.C.A. (*The Accountant*, November 11th, 1961), President of the Society, as his successor on the Council.

The annual dinner held at the Royal Hotel, Grimsby, on November 9th, was attended by 131 members and guests and the branch organized the district society's golf competition for the Beardsall Cup which was held at Torksey in September.

The following officers and committee have been elected for the ensuing year:

President: Mr A. A. Beardsall, F.C.A.

Chairman: Mr G. R. Watson, F.C.A.

Vice-Chairman: Mr J. R. Gregory, F.C.A.

Deputy Chairman: Mr W. McWilliam, F.C.A.

Hon. Treasurer: Mr A. Buckton, F.C.A.

Hon. Secretary: Mr W. S. Warrs, F.C.A., 20 Carlton Road, Grimsby.

Hon. Librarian: Mr G. D. Falconer, F.C.A.

Committee: Messrs M. G. Bain, F.C.A.; E. M. Fisher, F.C.A.; R. B. Heaton, F.C.A.; F. Sellar, A.C.A.; G. R. Smith, F.C.A.; G. B. Standaloft, A.C.A.; L. S. Wrightson, F.C.A.

Ex-officio Members: Messrs N. Townend, F.C.A., and R. G. Slack, M.A., F.C.A.

The Budget

THIS year's Budget has few surprises but a number of disappointments. It is economically a patchwork affair, but politically a shrewd performance. In terms of fiscal reform there is a promise of better things to come, but for the time being no great spring cleaning is to take place. Instead, as has so often happened before, only a few worthless antiques are to be thrown out.

It must be a long time since the proposed tax changes overall were expected to have as little effect on the pattern of the previous year's revenue and expenditure. On the basis of existing taxation, the above-the-line estimated revenue for 1962–63 is £6,807 million (compared with last year's outcome of £6,645 million). Expenditure will be £6,364 million (compared with £6,235 million). This will give a surplus above-the-line of £443 million. Below-the-line net payments are expected to be £507 million (against £621 million in 1961–62). This means that the borrowing required over the entire Budget will be £64 million (£74 million after tax changes) compared with last year's estimate of £69 million.

As an instrument of economic policy the Budget is therefore destined to play almost an identical role with last year – if all goes according to plan. To quote THE CHANCELLOR OF THE EXCHEQUER: 'I see no diminution in the public pressures to put additional burdens on the Exchequer.' What are the economic prospects leading up to this conclusion and strategy? Last week the *Economic Survey* turned out to be an exceedingly drab document and the inference drawn from it was that the CHANCELLOR had reserved a full review of the economic situation and forecast for the Budget. So he has, but it is rather thin fare. Having briefly reviewed the success achieved since the summer of 1961 in defending the pound, the balance of payments and the economy as a whole, he turned with hardly less brevity to the future.

Export prospects are good if our prices are right and this applies to invisible exports as well as visible ones. Capital investment in the public sector is expected to rise and so is that in service industries. Private investment in housing should go up but investment by manufacturing industry is expected to decline. This will be a modest fall from a peak figure, however, and the expected level of total capital investment is scheduled to increase through 1962.

Expenditure by public authorities and the Government is expected to rise and there may be renewed investment in stocks later in the year. Personal spending will go up aided by hire-purchase and it may have risen by as much as 4 per cent by this

time next year. There is therefore expected to be a big advance in home demand over the next twelve months. Since the Government is prepared to condone it this means not only that there is a significant margin of industrial capacity at present not used, but that up to a point the policy of damping down the home market is to be modified.

This is clearly a policy of calculated risk and it must be said that it suits at present both the advice of most of the experts and the mood of the country. This is something of a by-election Budget. Success in surmounting the risks hangs on restraining pay increases and on stimulating exports. The CHANCELLOR was much more convincing about the first of these than about the second. He said quite firmly on Monday: 'We cannot afford to have a second general round of increases in the later months of 1962.' The pay pause is therefore still a live issue. MR LLOYD will have no truck with export incentives but will rely on lower interest rates for export accommodation. This was probably the weakest part of the Budget. Few will agree that manufacturers will be persuaded as never before to sell aggressively in export markets when home demand is rising and the only immediate incentive is better payment facilities.

On simplification of the tax system, a single corporation tax to replace the present income tax and profits tax has reached the draft stage and is due to be discussed with the professional bodies concerned. The CHANCELLOR made a passing reference to the complexity and burden of the present tax system on accountants. In next year's accounts the defence estimates will appear in a simplified form similar to the change already made to the civil estimates. A new monthly financial set of statistics is to be made public next month.

The proposed tax changes are discussed in the second part of this article. At this point only a few points of general economic and fiscal interest are considered. Schedule A tax is to be ended in the Finance Bill of 1963. The CHANCELLOR has promised that the new rating valuations will not be used for Schedule A so far as owner-occupiers of residential property are concerned. The burden will doubtless go on the broad shoulders of industry and trade. The tax on speculative gains is no better and no worse than expected. Its revenue merits are negligible as the CHANCELLOR has admitted. Its political value may yet be considerable. Two points are worth making about it beyond that. The principle of a capital gains tax has now been recorded for inclusion in a Finance Bill. The CHANCELLOR's guileless remark that it will yield little revenue has to be taken with reservations. The principle is there and the Inland Revenue can cast a speculative net over the fiscal sprat. The mackerel could come later. Secondly, by the simple device of making gains part of the general burden of income tax and surtax the principle is enshrined that the wealthier the operator the more he pays.

The proposals on direct taxation will cost £8·5 million this year. The sums involved on indirect taxation are rather larger. The CHANCELLOR says that he wishes neither to add to nor draw from purchasing power on this occasion. The payroll tax is not to be added to his armoury this year. But the 10 per cent surcharge on purchase tax is to be consolidated into the new rates of indirect taxation and the power renewed for the new fiscal year. The principle of the use of a regulator between Budgets, which was the most interesting innovation of last year's Budget, has thereby been retained. The public, of course, now sees it being used in the dual role of regulator and fiscal jack. It has been turned into a revenue device and so the ways of economic policy are justified to the needs of the Exchequer.

But the CHANCELLOR can be avuncular, too. His decision not to raise the duty on tobacco seems based on the principle that a little bit of what you fancy never does you any harm. For once, some people's fancy and the CHANCELLOR's interest in terms of revenue are in harmony. The duties on hydrocarbon oils are retained to the advantage of the coal industry.

On purchase tax, the CHANCELLOR has given a clear hint that he prefers to widen its base than to introduce a turnover tax. He has therefore made a start towards bringing rates on various consumer goods into line and is imposing a tax on new items, notably confectionery. He is doubtless less impressed with the favourable effect a smaller consumption of certain sweets might have on young people's teeth than on the ripeness of the adolescent pocket for a share of the tax burden.

TAXATION CHANGES

As far as taxation is concerned, this is a Budget of bits and pieces which are likely to cover many pages of the Statute Book without making any really appreciable difference to the revenue of the State. The CHANCELLOR accompanies his oft-expressed yearnings for simplicity with proposals which can only be expressed in complicated language and which make direct taxation more than ever a matter for experts.

Speculators' Short-term Realized Gains

The long-threatened tax on capital gains, or whatever one likes to call it, has at last appeared. It is a remarkably damp squib. It will yield nothing in 1962–63 and the CHANCELLOR makes no forecast of yield thereafter. Indeed, he frankly puts his proposals forward as being in the hope of meeting criticism of the absence of a capital gains tax, rather than in any belief that any revenue will be produced. Since the administration of the tax will in any case cause a tremendous expenditure of highly skilled labour, this shadow-boxing seems to be an unnecessary luxury.

The new tax is to constitute a new case of Schedule D of the existing income tax. Case VII will extend to realized gains on the resale of land after it has been held for less than three years. This will hit the man who, in the words of the CHANCELLOR 'buys land in the hope of a quick speculative profit through sale to a genuine developer'. Perhaps MR LLOYD, or his advisers, have not heard of *Cooke v. Haddock* (39 A.T.C. 244); or perhaps they are merely hoping that the vast majority of the electorate have not heard of that case.

Case VII will also extend to profits on the acquisition and disposal of stocks, shares, securities, commodities and other property (including interests or rights in such assets) where the acquisition and disposal take place not more than six months of each other. Nothing has so far been said about earned income relief.

There are of course exceptions. An owner-occupied house, if it is the owner's principal residence, will escape. Movable property such as pictures, furniture, personal belongings and motor-cars are excluded as not being worth the complications involved. One might say the same about the whole tax. Incidentally, does anyone outside the trade sell a car for more than it cost him? A person who resells fixed assets which he has used in his own business will not be chargeable. This covers factory buildings and plant and machinery, and the exemption will come as a surprise to many for it has been strongly argued that such profits ought to be included in the ordinary taxable business profits, as being part of the trade.

Persons not resident in the United Kingdom will not be chargeable under Case VII. Nor will personal representatives, or beneficiaries, in respect of sales of property which came to them on a death. The charity exemption will be extended to cover Case VII. Where property is the subject of a gift, if the donee disposes of it then the statutory three years, or six months, will be measured from the date of acquisition by the donor. However, this dispensation is subject to certain conditions which have not yet been revealed.

Among the many special matters relating to the speculative gains tax which will have to be dealt with in the Finance Bill, MR LLOYD singled out for mention the problem of bonus and rights issues. A bonus issue by itself will still not attract tax. Moreover, if the bonus shares are sold they will be regarded for Case VII purposes as having been acquired by the seller when he acquired the 'parent' shares, i.e. for the purpose of the six months rule, he will be regarded as having held the bonus shares longer than he has held them in fact. A similar rule will be applied to shares acquired under a rights issue. It would seem that if a person buys rights in the open market, then exercises those rights, and then sells the shares so acquired, the six months will be measured from the purchase of the rights, not from the later purchase of the shares. However, the CHANCELLOR'S words on this aspect were not very clear.

Manipulation of the statutory time limits of six months and three years by means of option transactions will not apparently be allowed. A person who acquires an option to buy property will not be treated as having bought the property

until the actual purchase. On the other hand, if he grants an option to a potential buyer, he will be treated as having sold at the date of grant of the option. This is one indication of the 'careful drafting' of which the CHANCELLOR is boasting in advance. Certainly the draftsman has not hurried.

Another example of the elaborate nature of the new provisions is in relation to the well-known device of putting property into a company formed for the purpose and then selling the shares of the company. The advantages of this device would normally be increased in relation to Case VII. By putting land into a company, the speculator could prima facie reduce the vulnerable period from three years to six months. However, special provisions will be aimed at bringing the shares into charge if they are sold within the three years, provided that the company has not held the land for more than three years. Even so, any appreciation in the value of the land which was referable to a period prior to April 10th, 1962, would not be taxed.

Needless to say, it is not the gross profit on the acquisition and disposal which will be taxed. Allowance will be made for all 'proper and relevant expenditure' incurred by the seller. Moreover, losses (as created or increased by such expenditure) will be available for set off against Case VII income of the same or subsequent income tax years. It follows that there will be wide scope for manipulation. A share speculator who finds some of his purchases falling will no doubt sell within the statutory six months; thus providing himself with losses which will be available for set off in any future year. Where a speculation has prospered, he will naturally tend to retain the shares until the statutory six months have expired. Small wonder that the CHANCELLOR declined to give any estimate of yield for such a tax, which seems more like an elaborate arrangement to allow for people who are so disposed to make voluntary contributions to the Exchequer.

Not only will the Case VII yield be small, the very existence of the new case will hamper the Inland Revenue in imposing tax under Case I on transactions which have the indicia of trading. Once the statutory six months or three years have passed, the Inland Revenue are likely to feel somewhat inhibited from raising a Case I assessment. One advantage will be the reduction of uncertainty as to whether the Inland Revenue will treat a particular transaction as trading.

The promise not to make the new tax retrospective has been honoured. Property acquired before April 10th, 1962, can safely be sold at any time without attracting Case VII tax. Where a stock exchange 'bear' has sold stock prior to buying it, if the sale took place before April 10th, the profit on the transaction will not be taxable. An unexpected aspect of the new tax is the power which the Inland Revenue will have to submit names to brokers, estate agents, banks, and other persons acting for clients in chargeable transactions. These agents can be required to report details of transactions effected by them on behalf of the clients named. This new power, like the tax itself, represents the thin end of what could be a very thick wedge, when the next 'tough' Budget comes along.

A corollary to the proposed speculator's tax is a new impost under Case VI of Schedule D directed against the dealer who avoids tax by putting each deal through a different company (with investment objects) and selling the shares in the company, rather than the property in which he is dealing. One would have thought that the definition of trading, combined with the principle established in *Associated London Properties Ltd v. Henriksen* (23 A.T.C. 226), might be enough by itself to ensure that such dealers were fully taxed, without further complicated legislation.

Repairing Cracks in the 1960 Act

The phrase 'careful drafting' used by the CHANCELLOR about the Case VII provisions could hardly be applied to the drafting of the 1960 Finance Bill, particularly the provisions which finally emerged as sections 21–23 and 28 of the Finance Act, 1960. Some of the more obvious cracks in the structure are to be patched up but not retrospectively. Broadly speaking, the anti-avoidance legislation in sections 21–23 is confined to transactions in shares, while section 28 is confined to transactions in 'securities', which are defined to include shares. It is possible to have interests in companies which are neither shares nor securities, but which, by a judicious drafting of the articles of association, carry as much value as shares or securities would normally carry. It seems that the intention is to broaden

the definition of shares and securities in order to catch transactions in such interests.

Not surprisingly, the drafting of section 28 of the Finance Act, 1960, contains other flaws. A means of avoiding the section has been found in the provisions concerning subvention payments, and in the law relating to liquidations. Transactions can also be split between husband and wife in a way which avoids the section.

The taxation of the profits of building operations can still be avoided where what is in reality a single transaction is split between two persons. One of them acquires the freehold of a site ripe for building on. He contracts to grant a lease to a person who is going to buy a building which is to be erected on the site. The other party to the split transaction is a builder who erects the building and, of course, pays tax on the profit which may be artificially restricted. The premium which the purchaser pays to the freeholder, and the proceeds of sale of the reversion to the freehold with the building on it, escape tax. New provisions, which promise to lack nothing in complexity, will try to thwart this and similar devices, and correct the other drafting flaws with effect from April 10th, 1962.

Profits Tax

The Budget brings no relief from the present very high rate of profits tax. On the other hand, the CHANCELLOR has now committed himself to seeking a way of unifying profits tax with income tax in a single corporation tax, even if this should result in a combined rate which is less than the standard rate of income tax. The CHANCELLOR announced that the Inland Revenue had gone a considerable way towards framing a scheme for this unification. Some complex technical problems remain and MR LLOYD has asked the Inland Revenue to enlist the help of 'some of the professional bodies with which they are accustomed to review technical issues of this kind'. The discussions of the Revenue's draft scheme will of course be confidential but clearly the accountancy bodies will be asked to help.

In the meantime, companies having Case VII profits will have to pay profits tax on them as well; likewise where there is Case VI liability under the proposed anti-avoidance provisions in relation to land transactions.

Capital Allowances and Loss Relief

There is to be a liberalization of the provisions for set off of trading losses against other income, under section 341 of the Income Tax Act, 1952. At present, capital allowances can be added to the loss but they are the capital allowances of the tax year in which the loss is incurred. It is proposed, broadly speaking, that the capital allowances of the following tax year may be taken, i.e. the allowances based on the same basis period as the one in which the loss is incurred. Thus the capital allowances will be allowed a year earlier. More than a half of the benefit of this concession (£6 million in 1962–63) will in fact go to the British shipping industry.

Schedule A begins its Exit

We have long argued that the Schedule A tax on owner-occupiers ought to be abolished, the schedule itself being replaced by a tax on rents as such. The Royal Commission supported the retention of this tax, on the ground that to abolish it would discriminate against people paying rent. They did not carry this logic to the point of taxing people on the annual value on any other kind of property, such as motor-cars, furs, or jewellery. We pointed out that although the Government accepted the principle of taxing notional income from non-existent rents, they did not carry their conviction so far as to base the Schedule A assessments on owner-occupiers on the true annual value. Instead, and without any statutory authority in relation to new property, the Schedule A assessments have been based on 1936 values. This has meant that the gross annual value has been so small in relation to the expenditure on repairs that the already minute assessments were being altogether wiped out by maintenance relief, where the owner was intelligent enough to claim, which relief is of course calculated on the real present-day cost of repairs, not on what repairs might have cost in 1936.

Next year, there will be revised rating assessments which will be on true annual values, not on purely hypothetical values of June 1939. Under present law such revaluation would be followed by a Schedule A revaluation, which, as the CHANCELLOR said, could treble or quadruple the burden on owner-occupiers. At last we have a CHANCELLOR who has the courage openly to

recognize the absurdity of the situation the Government have got themselves into. As he says, unless the Schedule A is charged on current values it is difficult to find a firm basis for the tax. Moreover, people have to plan ahead; they have to decide whether or not to appeal against new assessments. In order to end uncertainty the CHANCELLOR gave an undertaking not to use the 1963 rating valuations for Schedule A purposes, in the case of owner-occupied residential property. On the contrary, proposals will be introduced next year for bringing this tax to an end. The cost of complete abolition would be some £50 million a year and therefore MR LLOYD could not promise abolition at one fell swoop in 1963–64. Nevertheless, Schedule A would eventually go, starting presumably with a reduction for 1962–63. Perhaps the CHANCELLOR was not uninfluenced by recent criticisms of the high cost of collection.

Business Expenses

We mentioned in a 'Weekly Note' in last week's issue an administrative stepping up of the war against unjustified business expenses. Before taking any legislative steps the CHANCELLOR is waiting to see what will result from the new inquisitorial form which is being sent to companies and employers in respect of directors and higher-paid staff. The new form and its scrutiny is bound to take up a good deal of administrative time with no assurance of a much greater yield of tax. There is certainly something to be said for a simple general embargo on, say, entertaining expenses, notwithstanding that this may cause difficulties for some exporters. Apart from its revenue advantages, such a move would have social advantages, and help to clean up business morality.

Tax on Small Investment Incomes

The CHANCELLOR has made welcome concessions to people living on small investment incomes. At present, under section 15 of the Finance Act, 1952, as last amended in 1955, an individual with an income not exceeding £300 is in effect given the two-ninths earned income relief, notwithstanding that his income is not earned. The value of money has fallen considerably in the last seven years and the CHANCELLOR proposes to increase the £300 to £400. A single person with an investment income of just £400 will pay £22 less tax.

There are of course marginal provisions. At present, if the income does not exceed £405, the individual is entitled to have his tax bill restricted to the sum of

(*a*) the tax payable on an income of exactly £300; plus

(*b*) two-fifths of the amount by which the actual income exceeds £300.

Under the new proposals for marginal relief, the maximum income will be £550 and the tax will be restricted to the sum of

(*a*) the tax payable on an income of exactly £400; plus

(*b*) one-half of the amount by which the actual income exceeds £400.

The above changes concern people under 65 years of age, and of course are not confined to individuals who have to support themselves. They extend to children enjoying income settled on them by persons other than their parents. Where the taxpayer or his wife is 65 years or more, he is entitled to the more generous relief conferred by section 13 of the Finance Act, 1957, as last amended in 1959. At present such persons are entitled to total exemption if their income does not exceed £275 (£440 if married). These figures are to be raised to £300 and £480 respectively.

The present marginal relief provisions apply where the income exceeds the statutory maximum by less than £55. The relief consists in restricting the total liability to nine-twentieths of the excess. Under the new proposals the marginal relief will be available where the excess over the statutory maximum is less than £75. These provisions are doubly welcome in that at one and the same time they reduce the burden on the people who are most deserving of consideration and they free the income tax machine of numerous small and unremunerative cases.

Grossing-up Untaxed Income

A flaw has soon been found in section 17 of the Finance Act, 1961. This section itself was enacted to remove an anomaly. Under the double tax relief provisions, a taxpayer pays, broadly speaking, the higher of the two taxes, United Kingdom

or foreign. Some overseas territories give complete exemption from income tax in certain cases, as, for instance, the so-called 'pioneer' reliefs. The object of such reliefs tended to be frustrated by the fact that the tax foregone by the foreign territory was in effect collected by the United Kingdom. Section 17 provided for the assumption, in double tax agreements, that the tax foregone by the overseas territory had been paid. Dividends paid out of such income, which *ex hypothesi* has not borne any foreign tax and may have borne little or no United Kingdom tax, nevertheless require to be 'grossed-up' for United Kingdom tax purposes. This, according to the CHANCELLOR, would lead to a wrong result. It is proposed to remedy it in the Finance Bill. Of course, this is not the only anomaly arising from grossing-up in particular, and double tax relief in general.

Estate Duty

One wondered how long the immunity of foreign land and other immovable property from British estate duty would be allowed to persist, particularly in view of the rush to acquire real property in places like the Bahamas and the Channel Islands where there was an intense demand for 'Jersey mortgages', even though they yielded a very low rate of interest. The blow has now fallen, or rather will fall when this year's Finance Act becomes law about the end of July. Those who have acquired assets of this kind while remaining domiciled in Great Britain will have to think of some new way of avoiding estate duty, unless they can count on dying by the end of July. Oddly enough, the closing of this gap is estimated to produce only £2 million in a full year. The change has perhaps been precipitated by Press criticism, rather than the necessity to protect the Revenue.

In contrast with income tax, the existing provisions for avoiding double estate duty are somewhat rudimentary. It is proposed to set off, against British estate duty on foreign property, the foreign estate duty paid on it. This relief will apply to all kinds of property not merely immovable property. Accordingly the rules regarding the *situs* of property, particularly intangible property like debts and life policies will become more important than ever. The new relief will cost only £1 million in a full year.

United Kingdom negotiators have reached agreement with French ones for a comprehensive scheme of avoidance of double estate duties which takes account of the peculiarities of the French system. Legislation is necessary for the purpose of ratifying this and similar agreements and is to be introduced in the Finance Bill.

Last, but not least, the CHANCELLOR has taken the very sensible step of raising still further the minimum amount on which estate duty will be payable. This goes up from £3,000 to £4,000 and accordingly removes some 18,000 estates a year from the estate duty field, with the consequent saving of time and trouble both in the Inland Revenue and outside. The rates of duty in the range £4,000–£5,000 comes down from 2 per cent to 1 per cent; that in the range £5,000–£6,000 from 3 per cent to 2 per cent.

Stamp Duties

The vociferous attack on conveyance-on-sale stamp duties, particularly in relation to share transfers, has not moved the CHANCELLOR. The 2 per cent duty remains in full vigour. However, there is another *ad valorem* duty which is very complicated and gives rise to argument which its yield hardly justifies. Accordingly the five shillings per cent 'settlement' duty is to be abolished as from August 1st. Owing to the scope of 'voluntary disposition' duty, the duty on settlements is largely confined to marriage settlements and settlements of Government stock or cash. The settlement duty was extended to unit trusts in 1946 and this is to remain, but there is to be relief where the unit trust fund decreases and then increases again. In the case of unit trusts the duty will correspond to the capital stamp duty of 10*s* per cent on companies. The net effect will be to reduce the yield by only £30,000 per annum. This may however be increased if ingenious schemes for avoiding voluntary disposition duty are facilitated.

Tithe Annuities

Annuities payable by landowners under the Tithe Act, 1936, are some 110,000 in number and yield a little over £2 million per annum. As the cost of collection is high, there is to be legislation for compulsory redemption on the next sale of the land after October 1st next. This brings the

annuities into line with land tax, and will help to keep down the number of Civil Servants.

Indirect Taxation

The cumulative effect of the changes in direct taxation is estimated to be a reduction in yield by some £8½ million. It is not proposed to make this up by increased indirect taxation. Nevertheless, the whole system of indirect taxation is to be somewhat recast. The 10 per cent surcharge, as such, has been removed but there are compensating increases for alcohol and tobacco so as to maintain the same weight of tax on these much taxed commodities. Discrimination against cigarettes on health grounds has been rejected in view of the possibilities of evasion by rolling cigarettes in the home. Moreover the CHANCELLOR has shied away increasing tobacco tax in general.

On the other hand, sweets, ice-cream, chocolate biscuits, soft drinks and cider are to come into the purchase tax net, at 15 per cent. At the same time the top rate of 50 per cent (which with the surcharge was 55 per cent) is being reduced to 45 per cent, partly as a fillip to the motor-car manufacturers, who have not enjoyed such a low rate for many years. The proliferation of purchase tax rates is somewhat checked by a provision to replace the 12½ per cent and 5 per cent rates by a single 10 per cent rate. Thus carpets, floor coverings and cooking utensils join with clothing and furniture. The net effect of the changes, including the dropping of the 10 per cent surcharge introduced in July 1961, is indicated by the following figures:

Goods	*Expenditure*	*Tax Decrease*			*Tax Increase*		
	£	£	*s*	*d*	£	*s*	*d*
Motor-car ..	850	48	0	0			
Motor-car ..	600	34	0	0			
Television Set ..	65	3	5	0			
Carpet	50	1	3	0			
Furniture ..	100				2	17	6
Suit	12					7	6
Suit	20					12	6
Cutlery, Hardware ..	20		8	6			

The reduction of purchase tax on conventional luxuries like cars, television sets, gramophone records and cosmetics, combined with the increase of purchase tax on conventional necessities like kitchen hardware, is at first sight somewhat strange. It is however part of a long-term plan towards a standard flat-rate tax on nearly all goods, no doubt with one eye on the Common Market. The former international preference for a turnover tax at retail points is now weakening in favour of a purchase tax at wholesale points. Very high rates of purchase tax such as formerly obtained have a distorting effect on industrial production, and have even put some firms out of business. It is in this context that the case for a tax on sweets and soft drinks takes on a more convincing aspect, for these commodities are really luxuries, albeit widely spread. Moreover, the growth in prosperity has greatly increased the consumption of sweets and soft drinks and this in turn has had a damaging effect on the health of the nation's teeth, particularly children's teeth, as dental statistics show. A reduction in the cost of ordinary sugar by a halfpenny a pound helps to increase the disparity between that commodity and sweets and should assist the satisfaction of the craving for sweet food at the meal table, rather than between meals, with a consequent beneficial effect on dental health.

Another purchase tax loophole is to be closed. At the moment a manufacturer of chargeable goods is not required to register with the purchase tax authorities unless he either sells or lets out on hire more than £500 worth of chargeable goods in a year. This means that a manufacturer who makes chargeable goods for his own business, without letting them out on hire, can make chargeable goods to any extent without having to pay purchase tax on them. The same limit of £500 is now to be applied to such manufacturers.

As indicated above, sugar is to cost less by a halfpenny a pound. This is achieved by repealing the excise duties on sugar, molasses, glucose and saccharin. In the case of customs duties on these commodities, and on coffee and cocoa, there are reductions which mean in effect that only imports from countries outside the Commonwealth bear duties and these duties are very small. They are not Revenue duties but to protect British Commonwealth industry. The net result is that the duty on foreign coffee, for instance, goes down from 14*s* per cwt. to 9*s* 4*d* per cwt.

The betting duty and the television advertisement duty are to remain at the rates prevailing before the Budget, i.e. 11 per cent and 33 per cent respectively; the surcharge being replaced by an increase in the basic rate.

Registration of National Charities

THE registration of charities under section 4 of the Charities Act, 1960, has been carried an important step further by the latest order[1] made on April 2nd by THE HOME SECRETARY and THE MINISTER OF EDUCATION under subsection (10) of that section. This order, the third to be made, not only brings London within the area of compulsory registration together with those of the Home Counties not within the earlier orders, and East Anglia and Sussex, but also applies to charities 'whose work is carried on otherwise than for the benefit wholly or mainly of some particular part or parts of England and Wales', that is to say, what are commonly referred to as general or national charities. These last constitute a class of charities of great importance.

The geographical area of registration now covers, roughly speaking, England south of the Wash. Subsection (4) of section 4 permits charities to be excepted by order or regulations from the requirement to register (paragraph (*b*)), but the only excepting orders so far made are one excepting voluntary schools with no permanent endowment but their premises[2], one excepting charities for the advancement of religion, including those for the relief of ministers and former ministers of religion and their families, from the duty to register until January 1st, 1963[3], and another excepting funds, not representing permanent endowments, which are being accumulated for the purpose of local units of the Boy Scouts Association and the Girl Guides Association and which produce an income of more than £15 a year[4].

The purpose of the temporary exception from registration accorded to religious charities is to enable the Charity Commissioners to continue their discussions with the religious denominations about those charities to be permanently excepted by order or regulations. The exception does not apply to denominational charities for secular purposes: for example, a church hall is not within the exception. The fact that a charity is not required to be registered does not mean that it cannot obtain registration, for subsection (2) of section 4 provides for voluntary registration, and trustees may well think it wise to avail themselves of this provision with a view to obtaining more easily income tax relief and also relief from rates under the Rating and Valuation Act, 1961.

Charities within the first of the registration orders should have been registered by June 22nd, 1961, and those within the second by December 22nd, 1961. The latest order requires registration not later than September 22nd next. It appears, however, that registration has been slow, and that there are many trustees who are in default. This is regrettable because, as we pointed out in a leading article in our issue of June 10th, 1961, the central register of charities plays a vital part in one of the primary objects of the Charities Act, that of fostering co-operation between charity and the statutory welfare services.

The Charity Commissioners and THE MINISTER OF EDUCATION for their part are making remarkably rapid progress in the process of registration. With the making of two more orders, one in the autumn of this year covering the Midlands and Wales, and another in the spring of 1963 covering the northern counties, registration will have been extended to the whole country well within three years of the coming into force of the main provisions of the Act. But the Charity Commissioners cannot write to trustees calling upon them to apply for registration, for the simple reason that there are very many charities the existence of which is not known to them – THE MINISTER OF EDUCATION's task is in this respect less difficult – and the Commissioners must, therefore, rely on trustees fulfilling their duty to apply. In so applying they will in no way court interference in the administration of their trusts, but they will help to make the Act work and so further the public benefit which is the essence of charity as that term is understood in English law.

How to Decimalize the Currency

by WILLIAM PHILLIPS, F.I.A.

THE purpose of this article is not to discuss whether the British monetary system should or should not be decimalized. The instructions to the Government's committee of inquiry, under the chairmanship of Lord Halsbury, do not include the consideration of that question, its terms of reference are limited to considering, on the assumption that the currency is to be decimalized, what is the best way of doing it; and this article is purposely limited to the same subject.

More than a hundred years ago when the decimalization of this country's currency was first given serious consideration the issue was a comparatively simple one: should it be to retain the £ and abandon the penny, or keep the penny and introduce a new coin of a hundred pence? The issue had hardly changed when the question became a live one again at the beginning of the present century. Even then it was still possible to argue that the scientists and technologists were supporters of decimalization.

No Support from Science

The position now is very different; for now the supposed support for the decimal system by the scientist and the technician has gone for ever, killed by the electronic computer. The author of a paper presented to the Institute of Actuaries in January 1936 advocated the adoption of octonary numeration for scientific and business purposes, coupled with binary arithmetic, for the great mass of figures recorded and manipulated by the scientist and business man.

A quarter of a century having rolled by, there are now eminent mathematicians and astronomers who are convinced that sooner or later all scientific computations will be made in the binary scale of notation with an octonary scale input and output[1], that scientists and technicians will not only work in eights and powers of eight, but will keep all their records in that scale of notation, and use only constants and logarithms so expressed. Apparently it was not until some date in the 1930s that two old ideas fused in a realization that figures expressed in the octonary scale automatically convert into the binary scale, and vice versa, *on sight*. Hence the design of the first crude electronic *computer*, following Dr Wynn Williams's 1931 proposal of an electronic *counter*.

Again there are those who believe that when education is properly developed in Britain, school children will be as adept at working in the scale of notation twelve (which Professor Aitken has shown is so well suited for ordinary commercial purposes[2]), and in the scale of notation eight (which they will certainly need if they are to become scientists or technicians), as the best of them are at present in working in the scale of ten. However simple appeared the problem confronting our forefathers, now the decimalization of the British currency should, nay must in the name of sanity, be designed in the light of the world in which it is to survive, if the cost of its establishment is not to be money thrown away.

Reasons for Decimalizing the Currency

While we are not to discuss whether to decimalize, it would be helpful in deciding how to decimalize to know why we are to do so. In the first place it has been said that it would facilitate international trade. Assuming the £ is kept, whether as the unit or as an exact multiple of some new unit, this requirement would seem to be satisfied if we decimalized down as far as the present threepenny piece (under a new name). It can hardly be argued, even by the most ardent, that anything less than the price of the cheapest daily newspaper or the cheapest bus or tube ticket can possibly enter into international trade.

Next it must be admitted that the British £ is very much out of line with other countries' units, in which respect, however, the South African 10s (Rand) is little better. In any case to abandon both the £ and the penny would seem an unnecessarily drastic way of solving the problem of which of them to abandon.

Does Decimalization Necessarily Displace Penny?

Since the writer acquired a competent housekeeping shopper by marriage nearly thirty years ago, he has made vastly more purchases from

[1] See, for example, the views of Professor Aitken, F.R.S., expressed by him in *The Listener* of January 25th, and the recently expressed opinion of Professor Hoyle, F.R.S., set out in a letter in *The Times* of December 28th, 1961.

[2] *The Case Against Decimalisation*, Oliver & Boyd Ltd, Edinburgh, 1962.

shops in countries using decimal currency than from shops in Britain. He says without fear of contradiction that everywhere that he has had decimal currency transactions the British are envied the facility they enjoy by having twelve pence in the shilling. This embraces the United States and Canada, and two countries behind the Iron Curtain, and most of the other countries in Europe, each with a different decimal currency, all handicapped by not having something equivalent to twelve pence in the shilling.

The reason for this envy is that so many small articles are packed by the dozen, and the price of one in pence is the price of a dozen in shillings. If anyone suffers from the delusion that cakes of soap are packed in cartons of ten in France, that eggs are packed in boxes of ten in Holland, that bottles of lager are packed in crates of ten in Denmark, he need but reflect upon the shape a container would be which held ten, and only ten, of anything commonly sold either singly or in quantity.

Halving and Doubling

One turns now to a point on which there is widespread misapprehension, the belief that all the countries mentioned have a pure decimal system. This is simply not true. The natural tendency of human beings in all parts of the world to think in halves and quarters has, after all these years of overseas decimalization, proved irresistible. The United States and Canada each has a coin for half a dollar, admittedly somewhat rare, and a 'quarter' which is exceedingly common. It is true that it can be, and is, written as $.25, especially when associated with figures for one or more dollars, but it is always spoken of as a 'quarter' and never called twenty-five cents (nor, incidentally, a quarter-dollar), perhaps because it is shorter to call it a quarter.

The countries geographically nearest to Britain all have currencies which, basically, are built up of one hundred little units to the large unit, but they all halve and double. Austria has coins of 5 and 50 groschen and notes of 20, 50 and 500 schillings; Denmark has coins of 2 and 5 ore and 2 kroner; there are 4 Dutch cents to the stuiver, 4 Dutch kwartje to the thaler. France has 2, 5, 25 and 50 'new' centime coins, 5 and 50 'new' franc notes; Germany 2, 5 and 50 pfennig and 2 and 5 DM coins, 5, 20 and 50 DM notes; Italy 5, 20 and 50 lire coins and 500 lire coins and notes; Spain 5 and 50 centimo, 2½, 5, 25 and 50 peseta coins, 5, 25, 50 and 500 peseta notes; Sweden has 25 and 50 ore and 2 kronor coins, 5 and 50 kronor notes. In technical terms the binary scale of numeration with which the human race began centuries before anyone could count up to ten, or even five, is so deeply embedded in everyone that there is no escaping it.

A Lesson from France

There is another lesson which we in Britain may learn, this time from France. To the confusion of everyone, not least the French themselves, there now circulate in France two forms of note; one, for example, labelled '1,000 francs', the other labelled '10 NF' (new francs). Both are, of course, of precisely the same value; but such is the confusion that after all these months, articles in the shop windows of France are still being doubly priced – in francs and 'nouveaux francs'. *All this confusion could have been avoided by printing both values on all the new notes for a limited period.*

Choice of Unit

Thus two principles for the new British currency would be, first, that during introductory years the new notes and coins should bear more than one notation; and secondly, that a decimal currency does not, apparently cannot, preclude the use of coins of half a unit, and one-quarter, and even one-eighth, and notes of two, five twenty and fifty units, or some of them. A third principle is now suggested, namely, that in chosing a new unit for Britain it would be well to choose one which is not too wildly out of line with other countries' conception of a convenient unit.

The Dutch florin is but a tiny fraction less than the British florin, the French new franc is worth about 1*s* 5*d*, the German mark about 1*s* 9*d*, the Swiss franc about 1*s* 8*d*. Obviously we in Britain can only come into line, and only approximately because exchanges vary, with no more than one of these countries which are geographically nearest to us. If we come into line, as near as may be, with Holland, by choosing as our unit, the florin, which is of so nearly the same value as the thaler, it will stand at a not too large a premium as compared with most continental countries, and the English shilling, or half-florin as it would be called (and would probably soon become known as 'a half'), would very closely approximate to the Danish krone. Furthermore, the florin would correspond very closely to the American dollar in one sense, in that it purchases about as much in Britain as the Americans' dollar purchases in the United States.

The selection of the florin as the unit would have the advantage, in the view of many, that the

old records in pounds sterling would not become out of date – a result much to be desired for more than purely sentimental reasons. One does not have to be a mathematician to realize that if the profit of Tin Tacks Ltd was £1 million in 1962, and F10 million in 1963, it has neither reduced nor increased its annual profit.

The writer's specific suggestion, then, is that from an appointed day, say January 1st, 1963, all notes issued in Britain should be doubly notated, thus:

F100	£10
F50	£5
F10	£1
F5	10s

and all coins trebly notated thus:

Florin	Two shillings ..	Fl
Half	One shilling ..	Fo.5
Quarter ..	Six pence ..	Fo.25
Eighth	Three pence ..	Fo.125

The 'FID.DEF.', it is respectfully suggested, could be put on the same side of every coin as the 'DEI GRATIA'.

If the experiment proved successful, the second of these notations, the present values, would eventually disappear. The half-crown and the halfpenny would be withdrawn from circulation (declared by law to be worth, respectively, one florin and nothing after January 1st, 1964) and follow the noble, the groat, and the farthing, and many another coin, into oblivion.

The foreign trader and the visitor to Britain from overseas need not be troubled by the fact that, for our own private purposes – an internal secret if one cares so to regard it – we in Britain have retained the penny, worth one-third of an 'eighth'. Thus we should still be able to do what no other decimalized country can do, profit by the fact that the price of an article in our (private) penny would be the price of a dozen in 'halves' – which, like the North American 'quarter', would certainly remain in widespread use. The idea of the florin as the British decimal unit, introduced in the way suggested, has been termed an experiment, and it is one which would cost practically nothing. If it succeeded it would be retained; if it failed it could be abandoned at no loss to anyone. But the half-crown and the halfpenny would in any event remain abolished!

The writer does not preclude the possibility of a new unit of measure being invented and called, say, a 'tenth', namely, a tenth of a florin, equal in value to 2·4*d*, and it would be a nice touch, and not untypical, if though invented as a notion it were never coined.

Rates as Preferential Debts

by W. H. D. WINDER, M.A., LL.M.

A GENERAL rate levied by a local authority is not, to the legal purist, usually to be considered a 'debt', as it is not recoverable by action. It is, however, sufficiently a 'debt' on which to found a bankruptcy petition for the purposes of section 4 of the Bankruptcy Act, 1914, this point being settled by the Court of Appeal in the case of *Re McGreavey* ([1950] Ch. 269). And whether or not it is, according to general legal principle, a debt, it is something which is expressly given priority in the distribution of the property of a bankrupt and in the liquidation of a company. The peculiar characteristics of a rate as compared with other debts specified in the statutory lists of preferential claims give rise to special problems. One of these problems is concerned with the bearing of the Rating and Valuation (Miscellaneous Provisions) Act, 1955, section 1 (7), on the insolvency legislation.

The amount of a rate assessed for a particular rating year may be reduced by a subsequent alteration of the valuation list. If such an alteration is proposed by a ratepayer there are statutory provisions which postpone recovery of the rate, or part of the rate, until the proposed alteration has been settled. How is the normal twelve months' priority period in a bankruptcy or liquidation affected in such circumstances? Some differences of opinion seem to exist among trustees in bankruptcy, liquidators and local authorities. It has been questioned whether postponement of recovery because of a proposed alteration reduces or increases the amount of the preferential claim which would have been valid if there had been no such postponement or proposal.

'In the distribution of the property of a bankrupt there shall be paid in priority to all other debts', the Bankruptcy Act, 1914, section 33 (1), tells us, ' (*a*) All parochial or other local rates due from the bankrupt at the date of the receiving

order, and having become due and payable within twelve months next before that time.' Section 319 (1) (*a*) (i) of the Companies Act, 1948, is in similar terms.

'Due and Payable'

The import of these words in relation to the rating system was considered in the case of *In re Airedale Garage Co Ltd* ([1933] Ch. 64) which decided, to put it broadly, that an alteration of the valuation list increasing a rate has a retrospective effect, and the difference is therefore payable as if it were arrears of the original rate. The precise question before the Court was whether the priority given by the Companies Act to rates becoming due and payable within twelve months next before the appointment of a receiver is extended by the Rating and Valuation Act, 1925, to include additional rates payable in respect of the twelve months, or some part thereof, under assessments made at a date subsequent to the receiver's appointment. The Court of Appeal held that the priority did extend to the addition.

A proposal to alter a valuation may not be finally settled until well after, perhaps several years after, the original rating year. The time lag is likely to be long in view of the provisions of section 1 of the Rating and Valuation (Miscellaneous Provisions) Act, 1955. And if it is long, then the final settlement is likely to be made after the expiration of the twelve months ending with the date of the receiving order or with the relevant date under the Companies Act. The final settlement in the case just cited was not made after the expiration of this period but final settlements at the present day are likely to be made outside that period. Often they will be well outside it.

Section 1 (7) deals with the recovery of certain excess rates in certain cases in which a proposal to reduce the value ascribed to property has been made by the ratepayer. If the value in a new valuation list exceeds the old value and the hereditament has not been substantially altered since its value was last previously determined, and '(*c*) a proposal for the alteration of the list, so as to reduce the value so ascribed to the hereditament, is served on the valuation officer before the end of the year beginning with the date on which the list comes into force, then' the following consequence ensues:

> 'Until the proposal has been settled, the amount recoverable in respect of rates levied on the hereditament for that year, or for any subsequent year, shall not (in the case of any such year) exceed the total amount of the rates (including any special rates) levied on the hereditament for the last year before that list came into force.'

Can it be said that the amount eventually recoverable has priority in bankruptcy or liquidation if the date on which it becomes recoverable by virtue of the above enactment is within the twelve months immediately before the receiving order or relevant liquidation date? The better answer would appear to be, No, that there is no such priority for the amount as such. The amount would appear to be attributable to the earlier rating years. This conclusion seems to follow from the explanation given in the case of *In re Airedale Garage Co Ltd* of the words 'due and payable' as used in the Bankruptcy Act and the Companies Act. These words are different from the word 'recoverable' in the Rating and Valuation (Miscellaneous Provisions) Act, 1955.

Retrospective Revaluations

It was decided in that case that the duty cast upon a receiver appointed by debenture-holders to pay rates then due from the company and 'having become due and payable within twelve months next before' his appointment in priority to other debts applies to a subsequent increase in the rates resulting from an appeal being allowed against the de-rating of part of the company's premises. This was so because by section 37 (10) of the Rating and Valuation Act, 1925, the resulting amendment of the valuation list was to 'be deemed to have had effect as from the commencement of the period in respect of which the rate was made' and to be recoverable 'as if it were arrears of the rate'. This provision is now to be found in words to the same effect in the Local Government Act, 1948, section 42 (1). The reasoning of the Court of Appeal in that case must be applied to this, the current, Act.

It was explained that by the terms of the rating statutes the liability in respect of rates is 'thrown back to the period during which the duty to pay rates accrued'. This is so even though, as Lord Hanworth, Master of the Rolls, said, 'it is true that it was not measured finally until a date which was subsequent to the twelve months' preferential year'. He added that certain principles are quite clear and that 'one is that a rate duly made and published is immediately payable', and he continued as follows:

> 'Sir John Jervis, Chief Justice of the Common Pleas, in deciding *Davis v. Burrell* ((1851) 10 C.B. 821) said: "When a rate is duly made and pub-

lished, it is the duty of the parties assessed to seek out the collector and to pay it", and he contrasted that duty so imposed upon them with the position under the statute 43 Eliz. c. 6, which provides that before recovering rates by distress it is necessary to make a personal demand; but there is no such requirement in order to set up the direct liability of the ratepayer to the rating authority. The other members of the Court say the same thing. That case was referred to in *Kershaw, Leese & Co Ltd v. Stockport Overseers* ([1923] 2 K.B. 129) by Greer, J., as establishing quite clearly the principle that as soon as the rate is properly made and published it has become payable by the ratepayer.'

The conclusion was that the increased assessment had to be appropriated to the rating period in question, and to that period alone, and 'although ascertained at a later date, it none the less belongs to and is founded upon the liability to rates during that period and no other'.

The Court of Appeal refused in express terms to give a restrictive meaning to the retrospective sections of the rating Acts. It was specifically held that they did not have effect only for the purposes of those Acts but had effect also for the purposes of the preferential debts provisions of the Companies Act. 'They were to have effect upon debts for rates as a whole,' said the Master of the Rolls, 'and where one finds that the debt has been appropriated to a particular period one must deal with it as such, *and see whether in that character it falls within the limitations*' (*italics inserted*) of the section of the Companies Act. The same approach would, of course, apply to the priority of debts section of the Bankruptcy Act.

It may be mentioned that the case of *Kershaw, Leese & Co Ltd v. Stockport Overseers* (*supra*) was decided before the modern retrospective provisions were introduced by the Rating and Valuation Act, 1925. The case seems to have given rise to some misunderstanding of the present law. The headnote to the case reads:

'When a person assessed in a valuation list gives notice of objection to the sum at which he is therein assessed, and the valuation list, and consequently the rate, are altered as a result of the objection, the rate does not become due and payable by such person until it has been so altered.'

This was the law on the pre-1925 statutory wording, that is, before section 37 (10) of the Rating and Valuation Act, 1925, and (replacing it) section 42 (1) of the Local Government Act, 1948. The decision is not applicable at the present day.

Amount 'Recoverable'

Because of the retrospective effect of a revaluation the whole rate, as amended, is or was due and payable in the original year or years but is none the less only 'recoverable' under the Rating and Valuation (Miscellaneous Provisions) Act, 1955, when the proposal for the alteration of the list is finally settled. The question arises whether this quite clear and specific provision for recovery qualifies, for insolvency purposes, the result which would normally follow from applying the 'due and payable' test retrospectively. If recovery is possible only from a date which falls within the twelve months down to the date of the receiving order, it is not surprising that some authorities are inclined to argue that there is a preferential claim in such circumstances for the 'surplus' amount, as it may be called. The surplus must be attributed to the earlier years and is, or was, due and payable then, but from the creditors' point of view it is the right of recovery which really matters.

The Act of 1955 is very precise as to when a proposal is settled, thus making, for the first time, the amount recoverable. Section 1 (8) reads:

'For the purposes of the last preceding section a proposal shall be taken to be settled when an alteration is made in the valuation list so as to give effect to the proposal, or to an agreement made in consequence of the proposal, or when the proceedings on an appeal against, or a reference to arbitration relating to, an objection to the proposal (including any proceedings in consequence of such an appeal or reference to arbitration) are finally determined, or when the proposal is withdrawn, whichever first occurs.'

It is submitted, however, that there is a real distinction between the two notions of payable and recoverable, that this distinction is recognized for general legal purposes, and that it must be applied to the insolvency legislation so as to deny preferential claims to the postponed surplus. It often happens that an ordinary debt is payable, perhaps even payable under the order of a Court, but is not presently recoverable, perhaps because the Court has specifically suspended the normal recovery process.

In interpreting the words 'due and payable' in the Bankruptcy Act and the Companies Act in the light of the Court's explanation in the *Airedale* case no violence is done to the meaning which must be put upon 'recoverable' in the Act of 1955. It is the former expression which is the operative test for a preferential claim and the latter which is the test for enforcement of the claim in other ways.

Weekly Notes

AS SEEN BY OTHERS

THE latest report on the state of the United Kingdom economy from the Organization for Economic Co-operation and Development[1] is one of the most informative and useful documents to have appeared from that source. Instead, as has been the case in the past, of dealing primarily with the experiences of the preceding twelve months, this latest report traces the development of Britain's economy since 1950, dealing with each facet in turn, and contrasting the performance of each sector of the economy with those of the E.E.C. (Common Market) countries. As such, it is an invaluable source-book for those who care to discuss these issues.

The report does not attribute the relatively poor economic performance of Britain to any single cause, but rather to a combination of interlocking factors. It stresses, for example, the lack of labour mobility in contrast with the E.E.C. countries which can draw upon pools of unemployed, or under-employed agricultural labour. It notes that the trade unions in the United Kingdom have been more militant and that, in consequence of the shortage of labour, employers have tended to hoard labour. The report lays special emphasis on the fact that Britain has throughout devoted a smaller proportion of its national income to productive investment than other countries, and suggests this may have been due to the Government's 'stop-go' economic policy and the persistent rise in costs.

The survey draws attention to the well-known weakness of British export trade, that too high a proportion of our exports are aimed at declining markets. It concludes that the primary aim of British economic policy must be to strengthen the balance of payments and suggests that it is 'unlikely that in 1962 it will be possible very substantially to relax the measures now restraining the growth of internal trade'.

NATIONAL INCOME ESTIMATES

SINCE the Blue book on National Income and Expenditure is published in the late autumn, it is nowadays customary to publish before the Budget a White Paper containing preliminary estimates of these important aggregates. The latest White Paper[2] shows that at £23,446 million the gross domestic product in 1961 was 6 per cent higher than in the previous year, the rise being the same as that a year earlier. But in real terms the actual increase last year was only 2¼ per cent compared with 3 per cent in real terms the year before. At current prices consumers' expenditure totals £17,302 million, which is 4¼ per cent up on the previous year, but in real terms a mere 1½ per cent. Fixed investment in 1961 totalled £4,530 million, an increase of 7¼ per cent in real terms. Income from employment rose from £15,102 million to £16,258 million on the year, an increase of 7¾ per cent. But company profits, at £3,374 million, were £200 million lower than in the previous year, a fall of 5½ per cent.

The experience of 1961 is in sharp contrast with that of the previous year when incomes from employment and profits both rose by 7½ per cent apiece. Of special interest is the fact that nearly one-half of the net increase in personal incomes after tax was saved, a continuation of the striking increase in personal saving which has been a feature of recent years. Thus, while in 1956 saving amounted to less than 6½ per cent of personal income after tax, in 1960 the proportion was nearly 8½ per cent and last year it reached 10¾ per cent. Nevertheless, personal consumers spent £17,302 million on goods and services, of which £2,269 million went on alcoholic drink and tobacco. It is noteworthy that this particular item rose 8¼ per cent on the year, while the personal expenditure on durable goods, due no doubt in part to hire-purchase restrictions and the general uncertainty, fell by 5 per cent to £1,286 million. In contrast, corporate incomes and undistributed income of companies before replacing capital assets both fell, for the first time since 1952.

BELOW THE LINE

IN the near century which has elapsed since the present form of the Budget accounts was introduced, the items below-the-line have grown from half a million pounds to over £600 million. Below-the-line expenditure consists of repayable advances and other expenditure which Parliament has specifically authorized the Government to meet from borrowing. Last year the Chancellor introduced a new pre-Budget White Paper which was intended to provide information about this below-the-line expenditure. The second of such papers, which covers 1962–63[3], states that the total expenditure below-the-line has declined from £621 million in 1961–62 to £507 million in 1962–63.

The most important borrowers remain the nationalized industries, which account for over 80 per cent of the total borrowing, and among them the Electricity Council with £179 million and the British Transport Commission with £139 million are the most important. The National Coal Board, it is of

[3] *Government Expenditure Below the Line, 1962–63.* Cmnd. 1680, H.M.S.O., 1*s* 6*d*.

interest to note, will borrow nothing in 1962–64 as compared with £26 million last year. Loans for overseas assistance are expected to rise in 1962–63 by £15 million to £76 million, and a rise of £70 million is expected in the interest charged and received on below-the-line advances. This fortunately is a self-balancing item, but serves to draw attention to the wider effects of a high Bank rate.

PROMISE TO PAY 'ON OR BEFORE' NOT A PROMISSORY NOTE

A CLAIM on an alleged promissory note has been dismissed by the Court of Appeal on technical grounds. In *Williamson v. Rider* (*The Times*, March 23rd) a document was dated January 9th, 1956, and was apparently signed on August 14th, 1956. The only thing which distinguished it from an ordinary promissory note was that the maker promised to pay £100 not 'on' December 31st, 1956, but 'on or before' December 31st, 1956. The definition of 'promissory note' in section 83 of the Bills of Exchange Act, 1882, requires the promise to be to pay 'on demand or at a fixed or determinable future time'. By a majority of two-to-one the Court of Appeal held that the insertion of the words 'or before' prevented the document from being a promissory note within section 83. Leave to appeal to the House of Lords was refused.

It is interesting to note that for the purposes of stamp duty the document was nevertheless a promissory note. Section 33 of the Stamp Act, 1891, provides that, for the purposes of that Act, the expression 'promissory note' includes any document or writing (except a bank-note) containing a promise to pay any sum of money.

LABOUR STATISTICS GALORE

AS promised in the recent White Paper on Incomes Policy, the first issue of the publication devoted to statistics of 'Wage rates, earnings, hours of work and other conditions of employment, manpower, prices, production, profits and other relevant subjects' has now appeared.[1]

It is a substantial publication which contains little that is really new in the way of statistical data. Its main merit is that it brings within the compass of a single publication all the information which anyone having anything to do with labour matters could possibly want. Not merely are there detailed analyses of wage rates and earnings, as well as hours of work, by separate industries but there are also regional comparisons for each industry. Data relating to earnings and wage rates are expressed both in money terms and also in the form of indices which facilitate the comparison between different industries. In short, the publication is based on the information contained in recent years in the *Ministry of Labour Gazette* but in such a form that comparisons are possible.

A substantial and interesting section on company finance, some of which has appeared in *Economic Trends* gives the reader an analysis of earnings, taxation and other appropriations for a wide range of industries over a number of years, in most cases since 1950. There is a comprehensive section on employment statistics with an analysis by occupation and region. A final section is devoted to the main indices of retail and wholesale prices since 1956 together with the changes in the import and export price index since 1954. A brief summary of the index of industrial production for a wide range of industries completes the volume.

STAMP DUTY ON BLANK TRANSFERS

ON April 6th, Mr Justice Wilberforce gave judgment for the Crown in the stamp duty case *Fitch Lovell Ltd v. C.I.R.* (*The Guardian*, April 7th). The company had submitted for adjudication a number of blank transfers executed at its request by the shareholders of a company which was the subject of a takeover by Fitch Lovell Ltd. The consideration received by the transferors was some 30*s* per share and it was part of the bargain that Fitch Lovell Ltd should be entitled to receive notices of meeting of the company, although Fitch Lovell Ltd was not on the register of members. At an extraordinary general meeting the company altered its articles in such a way that the shares in question became of very small value and Fitch Lovell then sold them at about one penny each to its associated company. A document executed by the associated company, to which the blank transfers were attached, was charged with duty on the penny consideration, as being a conveyance on sale of those shares. The Crown also claimed duty on the blank transfers, calculated by reference to the consideration moving from Fitch Lovell Ltd (30*s* per share). Fitch Lovell Ltd claimed (*a*) that the blank transfers were not 'conveyances on sale' in that they did not vest the legal title in the shares in Fitch Lovell Ltd and (*b*) that in any case the duty payable was confined to that on the document effecting the subsale, in accordance with section 58 (4) of the Stamp Act, 1891. His lordship rejected both contentions.

TO DECIMALS IN FIVE YEARS

THE National Association of British Manufacturers think that conversion to a decimal system could be complete within five years. This opinion is given in their report to the Committee of Inquiry on Decimal Currency. The Association was asked to comment on the most convenient and practical form, the incidence of cost and the time and phasing of the change-over.

The Association is in favour of a change to the

decimal system and thinks that the five-year period would include a two- or three-year preparatory period. While the change is taking place they think that both currencies should be in operation. A five-year period would avoid, in their opinion, the possibility of a double operation for firms which have bought machines immediately after the war and which would be due for replacement or renovation in the near future. They think that £128 million to £135 million is a fair estimate of the cost of replacement or conversion of accounting machines but there would be a significant cost beyond this which they cannot compute.

They favour making 10*s* the basic unit to be called the 'noble' or 'royal'. The pound would be worth two 10*s* units and the cent, which would replace the penny, would be worth 1·2 pence. There would be ten cents in a shilling which should be retained. They think that the ½ cent should be retained but it should not be used for accounting machine purposes. They quote the experience of South Africa where the 10*s* cent system has been adopted and Australia and New Zealand where it has been recommended.

This is My Life . . .

by An Industrious Accountant

CHAPTER 119

AS articled clerks, we used to be a race apart; our hands against all men and all men's hands against us. We worked hard, we studied for our exams with judiciously-gauged diligence, we were loyal one to another. But we preserved our integrity and dignity against soulless seniors and patronizing partners by making it clear that we were no hired hacks; we had paid for our apprenticeship; we were free citizens. If we sauntered out to morning coffee on a Saturday when work was slack, we did so as of right; we paced the causeway like young Capulets swaggering through Verona. Our regular table was reserved downstairs in our favourite café; the junior partner used to fancy that café, but he moved out when we moved in.

The perennial trouble in those days was always money, or rather the lack of it, since our tastes outpaced our wallets; a tendency which, indeed, the passage of time has not cured. We sought remedies in practices hallowed by generations of articled clerks before us. Our office upheld the prestige of its staff by permitting first-class rail travel on out-of-town audits; we travelled third-class and pocketed the difference. We had a daily 'away allowance' envied by many of our colleagues; it, too, permitted a differential. How often have we lunched frugally on chocolate and apples, rather than table d'hôte, that the consequent saving might be spent more enjoyably in nocturnal revelry.

As my colleague, Ned, said in lordly style, when I found him replenishing his cigarette case from the full casket in our firm's conference room before a board meeting: 'A lawful perquisite, no less. It's been charged out to the client as entertainment expenses in the petty-cash book, so we're entitled to a share.' I couldn't follow his logic, but he sounded satisfied.

I worked out a profitable scheme once when I was due to travel to a Bradford audit. An uncle travelling northwards took me three-quarters of the way before his route diverged; he dropped me at a bus stop in the February dusk, before vanishing away westwards. I stood there, suitcase in hand, watching the golden lines of headlights speeding in unison north and south. A few soft snowflakes drifted down, eddying ballet-like in the light breezes, coating the trees behind the hedges in glittering crystals and dappling the pathway. The moors beyond stretched away into obscurity. It was like a Rembrandt painting; accountants should always appreciate the aesthetic beauties of Nature, especially when they've made a substantial profit on their bus fare.

My bus roared up ten minutes later, sharp on time. It was full. It passed without pausing. A glimpse of crowded seats, of the conductor motioning refusal . . . it was gone. The next was due an hour later.

It was quite some minutes before my dazed brain recovered from the shock and groped for a solution. The road stretched dark and bleak for miles on either side, only a few remote lights indicating houses here and there. No use to walk on; there might well be a chance of catching a bus on a different service. The snow was falling steadily now, ugly wet lumps that covered me like a snowman; the darkness around became slowly peopled with ghosties and ghoulies and long-leggity beasties. I might as well have been in a wilderness for all the human contact I could make in my extremity. The cars raced by, heedless of my desperately waving hand, though I stepped into the roadway to try to stop them. People are extraordinarily selfish sometimes. The heavy suitcase nearly ruptured my shoulder muscles, its soaked base witnessing my mistake in putting it down previously. My feet froze slowly; pleurisy or pneumonia, or both, loomed ahead. That profit would be a small return on investment, assuming I survived to collect it.

Well, I survived all right, though it was the chilliest hour in all my experience. Since then, my reimbursement slips have always been supported by hotel bills and tickets, and I enjoy the prescribed standard of living to the limit. Even articled clerks learn sense in the fullness of time.

Finance and Commerce

Provincial Issuing House

ONE financial development of recent years is the spread of issuing house business beyond the limits of the City of London. A number of the provincial cities now have their own issuing house organizations and one of them, Birmingham Industrial Trust Ltd, provides the subject for this week's reprint. These are its second accounts.

The company dates from the end of 1959 and has as its chairman, Mr Evan Ag. Norton, a Birmingham solicitor with a long list of company appointments, including membership of the Birmingham Committee of Lloyds Bank. Deputy chairman is Mr W. G. A. Russell, F.C.A., the Birmingham accountant whose appointments include the chairmanship of Glynwed Tubes Ltd. Other members of the board include names prominent in business and industry in the Midlands and a representative of Lazard Brothers & Co, the London house with which the company is connected. The £500,000 capital was provided by professional and business interests in the Birmingham area.

In a way, the sponsoring of share marketings is the culmination of issuing house work. 'We have', says Mr Norton, 'made advances to and raised funds for private companies which, with our help and guidance, are likely to be floated within the next few years. We have also been able to fulfil our role as financial advisers to our clients both generally on everyday financial matters, and specifically in connection with acquisitions and mergers.'

Trustee Work

B.I.T. Investments Ltd, the consolidated subsidiary, is, as its name implies, an investment-holding company. A 'nursery' subsidiary is a normal feature of issuing house operation: a separate company into which can be placed investments – some quite long-term – which may, in due course, be the subject of a share marketing.

Company registration is what may be termed a 'side line'. This year there is an alteration of the memorandum to enable the company to carry on trustee work: 'to act as trustees of wills, settlements and trust deeds of all kinds and as executor and administrator and to carry on the business of a trust and investment company in all or any of its branches and departments, and to issue or grant annuities and to guarantee the performance of contracts', in the words of the new sub-clause.

The report includes a page of 'Issue business in 1960 and 1961', showing the offers for sale, placings and rights issues conducted by the company, the companies, their capital, shares marketed, their price and total market value.

It is a line of business in which the accountant has an important function. A tremendous amount of investigation work is involved before a company's shares can be put on the market.

Alliance Trust

MINOR but interesting changes have been made this year in the accounts of The Alliance Trust Co Ltd, one of the Scottish investment trust companies that in three-quarters of a century has built up a portfolio with a market value of over £64 million.

Mr Alan L. Brown, the chairman, points out that in the revenue account, estimated double taxation relief on the current year's income is shown as an addition to gross revenue and not, as previously, as a deduction from United Kingdom taxation.

To avoid distortions from one year to another, Mr Brown says further, it is intended to include in the revenue account only such adjustments for previous year's taxes as may seem at a normal level and likely to recur. Exceptional adjustments, as for example on a change in the standard rate of income tax, will appear in the appropriation account.

In the ten-year summary of results which appears for the first time, earnings figures have been adjusted to the new basis and thus differ in some years from the figures published at the time.

Alliance now holds some 225 sterling ordinary and 120 dollar common stock investments. The number of its ordinary stockholders, it is interesting to note in following investment trends, rose in the year from under 7,000 to over 8,000.

Looking Back

IN a way, audit experience is timeless. Company law may change but the principles do not. And the difficulties of a past generation of auditors add their experience to the present.

This justifies a look-back on the affairs of the Fish-Oil and Guano Company whose directors, apologizing for their delay in issuing a report, blamed it in part on the refusal of the auditors, Messrs Stokes Brothers & Pim, to pass the accounts as originally submitted to them.

The directors maintained that the company's position was correctly shown in the balance sheet as originally drawn up and therefore printed it together with the accounts compiled by the auditors.

These facts are taken from *The Financial Times* feature 'Sixty Years Ago'. What the argument was all about is now lost in the mists of time. But it does help to harden the conviction – if ever it should be necessary – that there can come a time when a resolute stand on principle is necessary.

It was once written in *The Accountant*, of a deceased member of the profession, that he kept prominently on his desk a reminder of his watchword: 'If it is right, there is no other way.'

CITY NOTES

HAVING feared the worst the City was prepared to view the Budget – and particularly Mr Selwyn Lloyd's version of a capital gains tax – as a lot better than expected. Just how the speculative gains tax will affect the market can only be guessed at present.

The tendency will naturally be for shares to be held longer – on the basis that a speculator becomes an investor if shares are held for six months and a day. There will also be a tendency to sell shares which show a loss rather than nurse them for recovery.

It is in the new issue market, however, where the effect of the gains tax will be felt most. The 'stags' of new issues are likely to be frightened away and new issue underwriting may not be the sinecure that it normally is.

The tax aspect on rights offers may also enforce a change in industrial capital raising with an increasing emphasis on convertible loan stocks offered on a straightforward and not a rights basis.

The gains tax apart, the stock-market took the Budget in its stride, but the absence of any definite growth incentive from the Chancellor could make the equity market vulnerable to discouraging profit and dividend figures still to come. It remains to be seen to what extent the market is prepared to discount an election budget in a year's time.

Stock Valuation Reconsidered

SIR, – I read with interest the article on stock valuation by Professor Staubus in the March 10th issue of *The Accountant* and while I would support him on a number of points, I consider that he has introduced an unnecessary and erroneous complication into his argument.

Professor Staubus suggests that the most informative method of valuing inventory is one which takes future cash flow into consideration as much as possible. He then proceeds to distinguish between two types of stock, on the basis of the opportunity cost concept used by economists. This would require us to value stocks whose absence would result in loss of sales at their net realizable value, and those whose absence would cause us to purchase them later at replacement cost. Practical application of such a procedure would not be possible, as no objective method of differentiating between the two types of stock exists.

The whole concept of opportunity cost is, however, irrelevant. While it provides a useful tool for making decisions about the future and for evaluating past actions, it does not necessarily act as a measure of future cash flow. Once an item of stock-in-trade has been purchased the measure of the future cash flow arising from that purchase is the sale price of the stock, and therefore net realizable value is the only relevant method of measurement. The fact that purchase could have been postponed ceases to be important once the decision to purchase has been made.

This modification simplifies the arguments put forward in the article without invalidating any of the major conclusions.

Yours faithfully,

PETER J. DICKERSON.
Berkeley, California. B.SC.(ECON.), A.C.A.

Revaluation for Rates in 1963

SIR, – I was interested to read the article by Mr A. R. Ilersic under the title 'Fixing the rates', which appeared in *The Accountant* dated March 31st, 1962.

I note that in the table on page 379, Mr Ilersic uses the multiplier ×4 to convert current values of dwelling-houses to a 1963 basis and, from this multiplier, he deduces the factors to be applied to the other categories of rateable property.

It appears to me that, whereas the White Paper, rather misleadingly perhaps, adopts the multiplier of 4 for dwelling-houses, it does state that the 1956 and 1963 revaluations will bring the gross values of houses to about four times the *1939 figure*. As the 1956 revaluation resulted in an increase in the assessments of dwelling-houses of approximately 40 per cent the increase over current values in the 1963 revaluation would appear to be of the order of 2·8 per cent. Using this figure as a starting-point, the multipliers for the other categories would be approximately as follows: industrial – 4·1; shops and commercial – 2·4; miscellaneous – 2·2; and Crown – 2·2.

I feel that the comparison with the 1939 values is misleading, particularly as the proposed 1939 revaluation was never implemented, so that the values in force in 1939 were those introduced by the 1934 revaluation. The inclusion in the table on page 4 of the White Paper of rate-deficiency grant can also have a misleading effect since so many local authorities, like Cardiff, do not qualify for this grant.

Yours faithfully,

R. L. DAVIES, F.I.M.T.A.,
City Treasurer and Controller.
Cardiff.

[Mr Ilersic writes: Mr Davies is right. I was misled, as have been others, including one of the leading authorities on local government finance (see *Local Government Chronicle*, March 31st and April 7th), by the curious wording of paragraph 4 of the White Paper. Even when allowance is made for this arithmetical mistake, we are still left with the question how it is that, contrary to expectation and to the surprise of many in local government financial circles, that the 1963 valuation will not offset even in the slightest degree the highly preferential treatment afforded domestic property since 1956. Nevertheless, to the extent that my mistake determined my conclusions I must modify them accordingly.]

Valuation of Work in Progress in a Chartered Accountant's Practice

SIR, – We should be interested to have the views of your readers as to what should be the constituent parts of a work in progress valuation for a firm of chartered accountants having two or more partners.

In particular we wonder which of the following should be included or excluded:

(1) Direct cost (salaries, out of pocket expenses).
(2) Indirect cost (salaries, expenses, etc.).
(3) An allowance for partners' work.
(4) An allowance for accruing profit.

We should be interested to know whether it is considered a distinction should be made as between (*a*) completed jobs, and (*b*) incomplete work.

Yours faithfully,

W. I. P.

THE INSTITUTE OF CHARTERED ACCOUNTANTS IN ENGLAND AND WALES

SPECIAL AND ORDINARY MEETINGS OF THE COUNCIL

At special and ordinary meetings of the Council held on Wednesday, April 4th, 1962, at the Hall of the Institute, Moorgate Place, London EC2, there were present:

Mr P. F. Granger, President, in the Chair; Mr P. F. Carpenter, Vice-President; Messrs J. F. Allan, C. Percy Barrowcliff, W. L. Barrows, T. A. Hamilton Baynes, J. H. Bell, H. A. Benson, C.B.E., Sir William Carrington, Messrs G. T. E. Chamberlain, D. A. Clarke, J. Clayton, C. Croxton-Smith, E. Hay Davison, W. G. Densem, S. Dixon, W. W. Fea, Sir Harold Gillett, Bt, M.C., Messrs J. Godfrey, G. G. G. Goult, L. C. Hawkins, J. S. Heaton, D. V. House, J. A. Jackson, H. O. Johnson, W. H. Lawson, C.B.E., R. B. Leech, M.B.E., E. N. Macdonald, D.F.C., R. McNeil, J. H. Mann, M.B.E., R. P. Matthews, W. Bertram Nelson, C.B.E., W. E. Parker, C.B.E., S. J. Pears, C. U. Peat, M.C., F. E. Price, L. W. Robson, Sir Thomas Robson, M.B.E., Messrs J. D. Russell, R. G. Slack, J. E. Talbot, A. G. Thomas, A. H. Walton, V. Walton, F. J. Weeks, M. Wheatley Jones, E. F. G. Whinney, J. C. Montgomery Williams, E. K. Wright, Sir Richard Yeabsley, C.B.E.

Annual Report and Accounts for 1961

The annual report of the Council and the accounts of the Institute for the year 1961 were approved for issue to members of the Institute.

Committee on Relations with the Universities

The Council has appointed Mr S. Dixon, Mr J. S. Heaton, Mr R. G. Slack and Mr A. H. Walton to be additional members of the Committee on Relations with the Universities.

Report of the Education and Training Committee

The report of the committee has been considered in detail by the Council in the light of the comments made by the committees of the Council and the committees of the district societies. The Council has adopted in principle many of the recommendations made in the report and others are still under consideration. The relevant committees are considering the financial implications and the procedure and time-table for implementation. There will be consequential alterations to the Royal Charter and bye-laws. Meanwhile announcements will be made from time to time by the Council but no member, student or prospective student should take any course of action based on the assumption that a particular recommendation will be implemented.

In view of the increasing part being played by technical and commercial colleges within the educational system, the Council has decided to examine the scope for assistance from such colleges on a wider scale than is envisaged in the report of the Education and Training Committee.

Refusal to allow a Candidate to sit for Examinations

On an appeal made by an examination candidate under the procedure set out in bye-law 73, the Council confirmed a decision of the Examination Committee to refuse to allow him to present himself for examination on any subsequent occasion.

Registration of Articles

The Secretary reported the registration of 202 articles of clerkship during the last month, the total number since January 1st, 1962, being 707.

Admissions to Membership

The following were admitted to membership of the Institute:

Abdulla, Mohamed Hassanali, A.C.A., *a*1962; 40 Bushnell Road, London SW17.

Adams, Derek Stanley, A.C.A., *a*1962; 322 Liverpool Road, Birkdale, Southport.

Aderemi, Bamigbade Sijuwade Adebiyi, A.C.A., *a*1962; 100 Ashmore Road, London W9.

Adeyemo, Michael Adepoju, B.SC.(ECON.), A.C.A., *a*1962; 14 Montpelier Road, London W5.

Aggerwal, Jagdish Chandra, A.C.A., *a*1962; 7 Clanricarde Gardens, London W2.

Agballah, Hyacinth Okoli Petrus, A.C.A., *a*1962; P.O. Box 18, Udi, Nigeria.

Ahmad, Jamal Uddin, A.C.A., *a*1962; Top Floor, 'Kohinoor Manzil', Anderkilla, Chittagong, East Pakistan.

Alexandre, Keith John, A.C.A., *a*1962; 34 Forty Avenue, Wembley Park, Middlesex.

Al-Hafidh, Aziz Husain, B.SC.(ECON.), A.C.A., *a*1962; 41 Arthur Road, Holloway, London N7.

Allatt, John David, A.C.A., *a*1962; 18 St Ives Road, Skircoat Green, Halifax.

Allen, Benjamin James, A.C.A., *a*1962; 30 Holmfield Road, Stoneygate, Leicester.

Alsegaf, Husin, B.SC.(ECON.), A.C.A., *a*1962; 76 Broxash Road, London SW11.

Ambanpola, Ekanayaka Mudiyanselage Karunaratne Banda, B.SC.(ECON.), A.C.A., *a*1962; 1 Clanricarde Gardens, London W2.

Ambler, Keith, A.C.A., *a*1962; 10 Rushton Road, Thornbury, Bradford 3.

Anderson, John Victor Ronald, B.A., A.C.A., *a*1962; 'Tan-Y-Coed', Maenan, near Llanrwst, North Wales.

Winder, John Lindsay, A.C.A., *a*1959; J. L. Winder & Co, 40 Cavendish Street, Barrow-in-Furness.

Wolverson, Maurice Frank, A.C.A., *a*1959; Barnfield & Co, 151 Lichfield Street, Walsall.

Admissions to Membership under the Scheme of Integration

The Council acceded to one application for admission to membership of the Institute under clause 5 of the scheme of integration referred to in clause 34 of the supplemental Royal Charter.

Re-admission to Membership

Subject to payment of the amounts required by the Council, one former member of the Institute was re-admitted to membership under clause 23 of the supplemental Royal Charter, and one former member under bye-law 38. Three applications under clause 23 were refused.

Changes of Name

The Secretary reported that the following changes of name have been made in the Institute's records:

Joannou, Vassilios, to Ioannou, Vassilios.
Mohamed, Sayed Hashim Sayed, to Swage, Sayed Hashim.
Smith, Geoffrey Rae, to Rae Smith, Geoffrey.
Thompson, Griffith Moore, to Moore Thompson, Griffith.
Williams, Thomas Sarl, to Sarl-Williams, Thomas.

Deaths of Members

The Council received with regret the Secretary's report of the deaths of the following members:

Mr Harold Bird, F.C.A., East Grinstead.
„ John Neville Coxon, F.C.A., Birmingham.
„ Hubert William Crutch, F.C.A., Purley.
„ Stanley Neville Davis, F.C.A., Dorking.
„ Percy Robert Fowler, F.C.A., Manchester.
„ David Reginald Grassan, A.C.A., London.
„ William Percy Grimwood, F.C.A., London.
„ Hugh Hart, F.C.A., Pembroke, Ontario.
„ Charles William Jackson, F.C.A., Guiseley.
„ William Joseph Kenny, F.C.A., London.
„ John Walford Lussignea, F.C.A., London.
„ George Henry Middleton, F.C.A., Newcastle upon Tyne.
„ Harold Sirett Mitchell, F.C.A., Halifax.
„ John Henry Priestley, F.C.A., Folkestone.
„ Roger Cecil Procter, M.B.E., F.C.A., Woking.
„ Joseph Sandiford, F.C.A., Bolton.
„ Francis Merchant Warr, F.S.A.A., Bexhill-on-Sea.
„ Peter Lester Baird Charlton Young, F.C.A., London.

PRESENTATION OF PRIZES

Following the meeting of the Council on April 4th, the President formally presented prizes and certificates of merit to the successful candidates in the November examinations who were able to attend. Relatives and friends of prizewinners were invited to the ceremony, which was held in the Oak Hall at Moorgate Place and was followed by tea.

In the course of his address Mr Granger said:

Ladies and gentlemen, On behalf of the Council and indeed of all our members it gives me very great pleasure to welcome the prizewinners, their parents and friends to this the Oak Hall of the Institute. The people on the platform with me are Mr Barrows, a past president of the Institute, the Vice-President Mr Carpenter, Mr Densem, Chairman of the Examination Committee, and Mr Allen an Under-Secretary.

To obtain a prize in the Institute's examinations is something in which the prizewinners themselves and also their families can take great pride and it certainly means that the prizewinners have made a first-class start to their careers. To those who have passed their Final I extend my heartiest congratulations and two words of advice. The first is to remember that you have joined or are joining a professional body which has a very high reputation for skill and integrity. See that you do what you can to advance that reputation. The second is – do not be in too much of a hurry to make up your minds as to whether you are going into industry or whether you will stay on the practising side of the profession. Unless you are quite clear what you want to do and how you want to do it, a further year or two on the practising side can to my idea of things be advantageous. However, all this is up to you.

To the Intermediate prizewinners I have not a lot to say. You have obviously begun well and worked hard and now you have the reward. Keep up the good work and I have no doubt that in due course you will have my successor addressing you at a function like this.

Finally, I think all the prizewinners should have their parents in mind. In this world few succeed entirely on their own so remember and be thankful for the fact that while you were working, your father was probably quite worried about you and your mother was not only seeing that you were properly fed but was possibly even more worried than father.

It gives me much pleasure to present the prizes and I may say that the fact that a Nottingham man has taken first place in the Final has nothing to do with the fact that a Nottingham man happens to be President. He did it on his own.

FINDING AND DECISION OF THE APPEAL COMMITTEE

Finding and Decision of the Appeal Committee of the Council of the Institute appointed pursuant to bye-law 108 of the bye-laws appended to the supplemental Royal Charter of December 21st, 1948, at a hearing held on March 16th, 1962.

The Appeal Committee heard an appeal against the Finding and Decision of the Disciplinary Committee of the Council of the Institute upon a formal complaint preferred by the Investigation Committee of the Council to the Disciplinary Committee that William Henry Blount, F.C.A., was by an Order dated June 23rd, 1961, adjudicated bankrupt, so as to render himself liable to exclusion or suspension from membership of the Institute. The Committee affirmed the Finding of the Disciplinary Committee that the formal complaint against William Henry Blount, F.C.A., had been proved and the Committeee also affirmed the Decision of the Disciplinary Committee that William Henry Blount, F.C.A., of 1 The Towers, Grand Avenue, Worthing, Sussex, be excluded from membership of the Institute.

MEMBERS' LIBRARY

The Librarian reports that among the books and papers acquired by the Institute in recent weeks by purchase and gifts are the following:

Accounting and Business Fluctuations; by D. D. Ray. Gainesville, Florida. 1960. (University of Florida Press, 58*s* 6*d*.)

Taxation in Canada; by J. H. Perry: third edition. Toronto. 1961. (University of Toronto Press, 100*s.*)

*Underhill's law relating to Trusts and Trustees; by Sir A. Underhill: eleventh edition. by C. M. White and M. M. Wells. 1959. Second supplement 1961. (Butterworth, 12*s* 6*d.*)

UK, Commonwealth and Common Market; by J. E. Meade. 1962. (Institute of Economic Affairs, 5*s* 6*d.*)

Use and Abuse of Statistics; by W. J. Reichmann. 1961. (Methuen, 22*s* 6*d.*)

'Who Makes That?': a guide to the makers of about 4,000 branded products and processes; by D. W. A. Gregg. Cheltenham. (1962.) (Gregg, 10*s* 6*d.*)

*This book has been presented to all District Society Libraries under the grant of books scheme.

CHARTERED ACCOUNTANTS' GOLFING SOCIETY

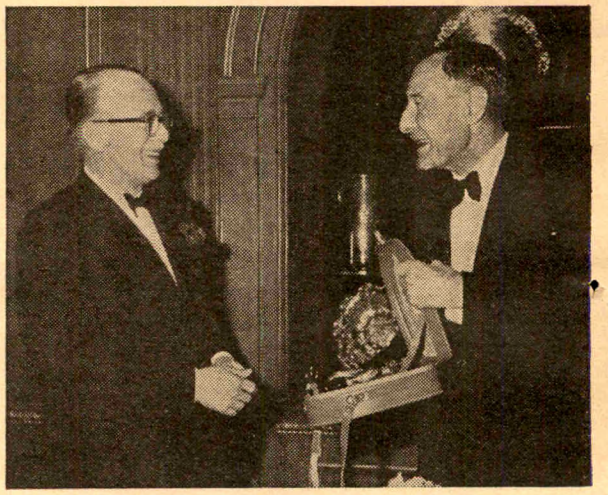
Presentation to Mr D. V. House

Mr Donald V. House, who has resigned from the secretaryship of the Chartered Accountants' Golfing Society after over thirty years in that office, was the guest of honour of the Society at a dinner in the Hall of the Haberdashers' Company, London, on April 6th.

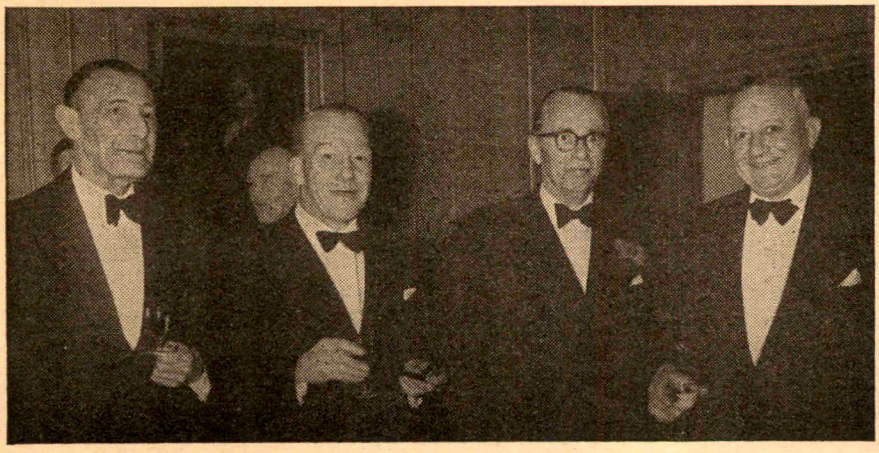
The Society's President, Mr Bernard Pittman, in a tribute to Mr House, said his work for the Society went back even further than thirty years, for he had been assistant secretary for a long time before that. Mr Pittman expressed the Society's appreciation of Mr House's sterling service and on behalf of members presented him with a Paillard Bolex B8L cine-camera and a Eumig P.8 projector. Members gave Mr House a standing ovation and sang 'For he's a jolly good fellow'.

Replying, Mr House expressed thanks to those who had helped him in his job as secretary, mentioning particularly his former private secretary, Mrs Taylor; Mr Charles Emmerson, his first assistant secretary; the President; and Mr L. R. Elcombe and Mr L. E. Parsons, Vice-Presidents. In conclusion, he expressed his good wishes to the secretary-elect, Mr E. H. Head.

Mr House writes: I should be grateful if you would allow me the courtesy of your columns in order to thank all those friends in the Society whose generosity provided the magnificent present which was given to me at the dinner on Friday last. I am most grateful and the cine-camera and projector will always remind me of the happiest job which I have ever undertaken.



Presentation of the cine-camera to Mr House (*left*) by the Society's President, Mr Bernard Pittman.



Mr House with officers of the Golfing Society. *Left to right:* Mr Bernard Pittman, President; Mr A. W. Coleman, Chairman; Mr House; and Mr L. R. Elcombe, a Vice-President.

Notes and Notices

THE INSTITUTE OF CHARTERED ACCOUNTANTS IN ENGLAND AND WALES

Annual Meeting

The annual meeting of The Institute of Chartered Accountants in England and Wales will be held in the Hall of the Chartered Insurance Institute, 20 Aldermanbury, London EC2, on Thursday, May 3rd, at 2 p.m. It will be followed by a special meeting for the purpose of amending one of the bye-laws.

Luncheon Party

The President of the Institute, Mr Paul F. Granger, F.C.A., and the Vice-President, Mr Percy F. Carpenter, F.C.A., gave a luncheon party on April 6th, at the Dorchester Hotel. The guests were:

Mr Edward Heath, M.P., The Earl of Cromer, Sir Edmund Compton, Sir Henry Jones, Sir Milner Holland, Q.C., Mr Gordon Richardson, Sir Thomas Robson, Sir Richard Yeabsley, Mr J. Godfrey and Mr Alan S. MacIver.

THE CHARTERED ACCOUNTANTS' BENEVOLENT ASSOCIATION

The annual general meeting of The Chartered Accountants' Benevolent Association will follow the annual meeting of the Institute referred to above.

PROFESSIONAL NOTICES

MESSRS BLACK, GEOGHEGAN & TILL, Chartered Accountants, of 54 Old Broad Street, London EC2, and 10 Lefebvre Street, Guernsey, announce that they have admitted into partnership Mr H. HALE CROSSE, A.C.A., who has been a member of their London staff for a number of years. They also announce that Mr R. A. DE PUTRON, A.C.A., and Mr C. S. MOLLETT, A.C.A., who have for many years served on the Guernsey staff, have been admitted as partners in their Guernsey practice.

MESSRS CARNABY HARROWER, BARHAM & CO, MESSRS GEORGE PYKETT and MESSRS WILKINSON, CHATER & CO, Chartered Accountants, all of London, announce that they have amalgamated their practices as from April 6th, 1962. The combined practices are being carried on from 28 Queen Street, London EC4, under the firm name of CARNABY HARROWER, BARHAM & PYKETT. Accommodation has been retained for the use of the retiring partners, Mr GEORGE PYKETT, M.C., F.C.A., and Mr H. A. KINNEY, F.C.A., and they will be available through the practice address. The partners of the new firm are Mr A. M. HENDRY, T.D., F.C.A., Mr P. L. NEILD, T.D., F.C.A., Mr J. S. H. VINE, D.S.C., F.C.A., Mr W. E. WEBBER, F.C.A., Mr M. A. P. GAY, F.C.A., Mr M. F. PICKETT, A.C.A., and Mr J. H. PIZZEY, A.C.A., with Mr GEORGE PYKETT as consultant.

MESSRS W. G. HAWSON, WING & CO, Chartered Accountants, of Hartshead Chambers, Sheffield 1, announce that Mr P. D. MILLS, A.C.A., and Mr R. N. FROST, A.C.A., who have been members of their staff for a number of years, have joined the firm as partners.

MESSRS JAMES, EDWARDS & CO, Chartered Accountants, of Salisbury House, London Wall, London EC2, regret to announce the death of their former senior partner Mr HAROLD GARTON ASH, O.B.E., M.C., F.C.A., on April 7th, 1962. [An obituary notice appears on the following page of this issue].

MESSRS MARTIN, FARLOW & CO, Chartered Accountants, of 27 Finsbury Square, London EC2, announce that they have taken into partnership Mr MERVYN H. BRADBURY, F.C.A., and Mr EDGAR A. HASLAM, F.C.A., and that Mr W. G. STRACHAN, F.C.A., who has been a partner with the firm for many years, has retired but will continue to be available in a consultative capacity.

MESSRS MAXTONE GRAHAM & SIME, Chartered Accountants, of 54 Old Broad Street, London EC2, and of Edinburgh, announce that Mr H. HALE CROSSE, A.C.A., has been admitted as a partner in their London practice.

MESSRS HERBERT PEPPER & RUDLAND, Chartered Accountants, of Walsall and Aldridge, announce that they have taken into partnership Mr CLIFFORD EDWARD HUBBOLD, A.C.A., who served his articles with the firm and has since been a senior member of the staff.

MESSRS HARRY L. PRICE & CO, Chartered Accountants, 47 Mosley Street, Manchester 2, announce that Mr ARTHUR TYLDESLEY EAVES, F.C.A., their senior partner, who has been with the firm for fifty years, retired as a partner on March 31st, 1962. He is being retained by the continuing partners as consultant, and will also remain in office in respect of the various trust matters in his name.

MESSRS SHEARS & GILBEY, Chartered Accountants, of 27 Gloucester Place, London W1, announce that as from April 2nd, 1962, Mr ALAN GILBEY, A.C.A., was admitted a partner in the firm. The style of the firm remains unchanged.

MESSRS A. & C. SURREY & CO, Chartered Accountants, of Portland House, 73 Basinghall Street, London EC2, announce that as from April 1st, 1962, they have admitted Mr CEDRIC J. HODGSON, A.C.A., as a partner. The style of the firm remains unchanged.

MESSRS W. T. WALTON & SON, BASIL L. DENTON & CO and W. T. WALTON, SON & ROWLAND, Chartered Accountants, of West Hartlepool, Stockton-on-Tees, London and Liverpool, announce with regret the retirement as at March 31st, 1962, of their senior partner Mr ROBERT HENRY STAFFORD, F.C.A., after fifty-two years' service with them. As from April 1st, 1962, Mr W. I. R. ALDERSON, A.C.A. (West Hartlepool), Mr P. W. BARFOOT, A.C.A. (London), and Mr J. HAY, A.C.A. (Liverpool), who have been members of their staffs for some years, have been admitted into partnership.

Appointments

Mr J. F. Body, F.C.A., has been appointed chairman of De Jong Machinefabriek N.V.

Mr D. A. Day, A.C.A., has been appointed assistant secretary of Rickett, Cockerell & Co Ltd.

Mr S. W. Fewster, F.C.A., has been appointed an additional director of Joseph May & Sons (Leeds) Ltd.

Mr W. R. C. Halpin, B.A., F.C.A., has joined the borad of Executive Appointments Ltd as a consultant.

Mr Charles E. M. Hardie, O.B.E., F.C.A., has been appointed a director of Bowmaker Ltd.

Mr W. G. Howes, F.C.W.A., has been appointed production director of Sexton, Son & Everard Ltd.

Mr J. F. Nash, F.C.A., has been appointed a director of New Finance (Peterborough) Ltd.

Mr T. A. Nicol, F.C.A., has been appointed a director of Swan Hunter & Wigham Richardson Ltd.

Mr L. H. Owen, F.C.A., has been appointed financial consultant to Ernest Scragg & Sons Ltd and subsidiary companies.

Mr D. A. C. W. Parker, O.B.E., T.D., C.A., has been appointed a director of Copthall Holdings (Dalgety) Co Ltd.

OBITUARY

Harold Garton Ash, O.B.E.(Mil.), M.C., F.C.A.

It is with regret that we record the death at the age of 77 at his home in Harpenden, Herts, on April 7th, of Mr Harold Garton Ash, O.B.E.(MIL.), M.C., F.C.A., a Past-President of The Institute of Chartered Accountants in England and Wales.

Senior partner in the firm of James Edwards & Co, Chartered Accountants, of London, until his retirement in June 1959, Mr Garton Ash was articled in 1901 to the late Mr J. H. Duncan, of Duncan & Co, of London, being admitted an Associate of the Institute in 1906. He commenced to practise on his own account in 1912. After service in the First World War in France, Salonika and Palestine, for which he was awarded the O.B.E.(MIL.), and Military Cross and bar, he returned to practice and was elected to fellowship of the Institute in 1919. He amalgamated his own practice with that of James Edwards & Co in 1933.

Elected a member of the Council of the Institute in 1938, he subsequently served on many of its committees: the Applications Committee (1938–46); Investigation Committee (1942–49) and again from 1951–58, serving as Vice-Chairman for nearly six years; Planning Committee on its formation in 1945 until its dissolution in 1951; General Purposes Committee (1946–58), being Vice-Chairman in 1948–49 and Chairman in 1951–54; and the Summer Course Committee (1949–51). Mr Garton Ash was also a member of the Joint Parliamentary Committee of the Accountancy Profession. In 1952, he served as Chairman of the Council of the Sixth International Congress on Accounting in London.

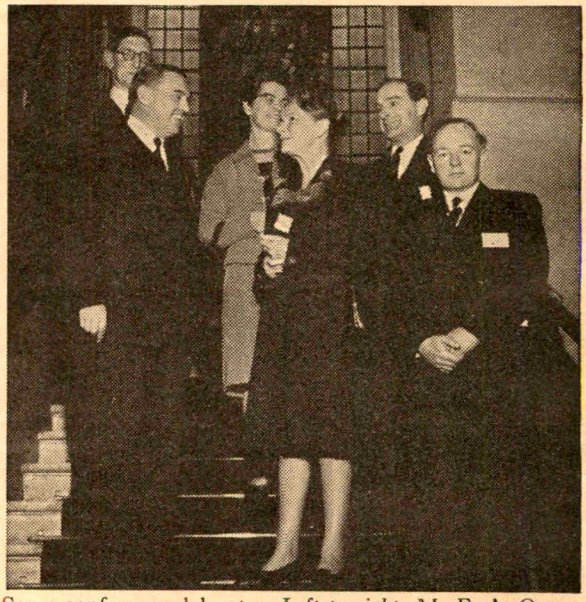
Apart from his active interests in Institute affairs, Mr Garton Ash was a member of the Council of the Lawn Tennis Association, and latterly served as honorary treasurer. He was also a freeman of the City of London and a member of the Worshipful Company of Wheelwrights.

A memorial service will be held in London on April 17th at 11.30 a.m. at St Lawrence Jewry, near Guildhall.

CONFERENCE OF UNIVERSITY APPOINTMENTS OFFICERS

About thirty officers of university appointments boards accepted an invitation of The Institute of Chartered Accountants in England and Wales to a one-day conference at Moorgate Place on March 29th – the second occasion on which a meeting of this kind has been arranged. Morning and afternoon discussions were held at which leading members in practice, commerce and industry emphasized the desire of the Institute to increase its recruitment of graduates.

Careers advisers at the universities are, for the most part, well acquainted with the basic regulations of the Institute and with the scope of the opportunities after qualification. Their main interest was in the arrangements made by individual firms to assist training and in the financial and other conditions of articled service. From their special knowledge they were able to contribute much valuable information and opinion on the academic and social background of those graduates who at present consider entry into articles. They also suggested ways in which the Institute might widen the field of potential recruits.



Some conference delegates. *Left to right:* Mr E. A. Ovens (*Sheffield*), Mr E. H. K. Dibden (*London*), Mrs G. Baker (*Institute Information Officer*), Dr Elsie M. Briggs (*Bristol*), Mr H. B. Putt (*Wales*), and Mr H. D. Thomas (*Wales*).

DOUBLE TAXATION: UNITED KINGDOM AND MALTA

The Double Taxation Agreement between the United Kingdom and Malta was published last week as a Schedule to an Order in Council numbered S.I. 1962, No. 639.

LOCAL LOANS FUND
Reductions in Interest Rates

It has been announced by the Treasury that as from April 7th, 1962, the rates of interest charged on loans advanced by the Public Works Loan Board from the Local Loans Fund to local authorities will be as follows:

	Per Cent	
Loans for not more than five years ..	$6\frac{3}{4}$	$(6\frac{7}{8})$
Loans for more than five years but not more than fifteen years	$6\frac{3}{4}$	$(6\frac{7}{8})$
Loans for more than fifteen years but not more than thirty years	$6\frac{3}{4}$	$(6\frac{3}{4})$
Loans for more than thirty years	$6\frac{3}{4}$	$(6\frac{3}{4})$

The current rates of interest are shown in brackets; these have been in force since November 11th, 1961. The rates of interest on existing loans are unaffected.

ASSISTANT OFFICIAL RECEIVER APPOINTMENT

The Board of Trade announce that Mr Stanley Pollard has been appointed an Assistant Official Receiver for the Bankruptcy Districts of the County Courts of Aylesbury, Banbury, Brentford, Chelmsford, Edmonton, Hertford, Newbury, Oxford, Reading, St Albans and Southend. The appointment took effect on March 19th, 1962.

TAX RELIEFS FOR EXPENSES

The Income Tax Payers' Society, has published for members only a new booklet entitled *Income Tax and Your Expense Account.*

Written by P. J. Naish, it explains the tax position of business expenses incurred by employees taxed under Schedule E. It describes the differences in treatment under present tax law of expenses of employees and those of self-employed taxpayers.

DIRECTORY OF UNIT TRUSTS

The 1962 *Directory of Unit Trusts* issued by the Association of Unit Trust Managers now on sale contains general information about unit trusts, the names and addresses of members of the Association together with details (including a portfolio description) of the trusts which they manage, and a description of the aims of the Association.

In particular, the booklet summarizes what a unit trust is and how it operates; describes the savings schemes run in conjunction with the trusts managed by members; explains how units may be bought and sold and outlines the income tax position of unit holders. There is also a short historical sketch of the growth of unit trusts in the United Kingdom, the sales and repurchases of units in each month of 1960 and 1961 and high and low prices quoted in 1961.

Copies of the Directory are obtainable from the secretary of the Association, 306–308 Salisbury House, Finsbury Circus, London EC2, price 2*s* 6*d* post free.

BELFAST SOCIETY OF CHARTERED ACCOUNTANTS
Annual Meeting

The annual report of the Belfast Society of Chartered Accountants presented at the Society's annual meeting on March 26th records a total membership of 832, being an increase during the year of thirty-three members. Of these, 181 were members in practice, 309 not in practice, and 342 students.

A number of lecture meetings were held and eminent guest speakers included the Rt Hon. J. L. O. Andrews, M.P., Minister of Commerce for Northern Ireland. A successful week-end residential course was held at Portstewart, when some seventy members were present. Social functions included the annual dinner and dance and the annual golf meeting.

The Industrial and Administrative Group passed another successful year and increased its membership by nineteen; membership of the Students' Group also increased and there were improved attendances at the alternating luncheon and tea lecture meetings.

Addressing the annual meeting, Mr D. H. Templeton, F.C.A., Chairman of the Society, referred to the period of change through which the profession is passing. New techniques in auditing, the introduction of management accounting and the development of costing techniques and mechanized accounting had meant increased demands for chartered accountants both in practice and commerce. 'It is becoming increasingly difficult', he said, 'to obtain properly qualified staff in the profession and this shortage was accentuated by newly-qualified chartered accountants rushing into industry immediately.' This in his opinion was quite wrong; young chartered accountants should be encouraged to stay at least two years in a practising accountant's office after qualification. This post-graduate training, he declared, was invaluable to the young men and helped to raise the standard of accountancy work not only in the profession, but also in industry and commerce.

The following were elected to office for the ensuing year:

Chairman: Mr B. A. Courtney, M.COM.SC., F.C.A.
Vice-Chairman: Mr E. W. McDowell, F.C.A.
Hon. Secretary: Mr D. M. Foster, F.C.A., Imperial Buildings, 72 High Street, Belfast 1.
Treasurer: Mr N. G. White, F.C.A.
Committee: Messrs A. N. Lovesy, F.C.A.; K. E. D. Mackerell, F.C.A., T. Donnelly, A.C.A.; J. T. Montgomery, F.C.A.
Hon. Auditor: Mr N. W. Allen, F.C.A.

A vote of thanks to the outgoing chairman was proposed by Mr A. N. Lovesy, F.C.A.

ANNOTATED TAX CASES

Part 9 of Volume XL of the *Annotated Tax Cases*, edited by Mr Peter Rees, of the Inner Temple, Barrister-at-law, is published today and contains reports with notes on the judgments of the following cases: *Rennell v. C.I.R.* (Ch.D.); *Butter v. Bennett* (Ch.D.); *In re Courtauld's Settlement* (C.A.); *Australian Mutual Provident Society Ltd v. New Zealand Inland Revenue Commissioner* (P.C.); *C.I.R. v. Ridge Nominees Ltd* (C.A.); *Hong Kong Commissioner of Inland Revenue v. Four Seas Co Ltd* (P.C.); *C.I.R. v. Henty & Constable (Brewers) Ltd* (C.A.); *In re Roberts' Settlement Trusts* (Ch.D.).

The annual subscription to the *Annotated Tax Cases* is 50*s* post free; the publishers are Gee & Co (Publishers) Limited, 151 Strand, London WC2.

LONDON STUDENTS' COLUMN

News from the London Chartered Accountant Students' Committee

Cambridge Residential Course

This four-day course, designed primarily for members in pre-Intermediate stage, was well over-subscribed. This testifies to its popularity due to its contribution in the wider aspects of professional education. The course started in Cambridge on Thursday of this week. There are seventeen discussion groups in college for the 292 students taking part in the course and the general meetings are being held in the large lecture theatre of the Zoology Department of the University.

Magazine

The magazine of the Society will be called *Contra*. The first issue was published in the first week of this month. Comments and literary contributions will be welcome. Readers should direct their inquiries to the Editor.

London Students' Diary

Arrangements are being made for the issue of diaries for the year 1963. Too optimistic a forecast for the 1962 diaries has left the Society with an unsold surplus. Copies are therefore being issued free to new members.

Union of Chartered Accountant Students' Societies

The detailed record of the conference of students' societies held last December is now available and may be seen at the library.

Society's Year

The practice of preparing the Society's annual report and accounts to December 31st has given rise to many difficulties and it has been suggested that the date should be changed to April 30th. This will enable the committee's report and accounts to cover a full year of the Society's activities instead of the two halves of different years under the present method.

Annual General Meeting

The alteration in the date of accounts will have to be passed at the next annual general meeting, due to be held on Monday, April 30th, at 5.30 p.m., in the Chartered Insurance Hall. Members should not miss this opportunity of expressing their views on the affairs of their Society. Notice of the meeting, together with the annual report and accounts, will be sent to the members in the near future.

1962 Budget

The estimate of income and expenditure for 1962 showed a substantial deficit. In order to reduce the debit balance the committee have decided to increase the charge for the Oxford Week-end Course and to reduce the provision for sports by 36 per cent. This has involved the cancellation of some fixtures with distant student societies. It still leaves a considerable estimated deficit, a large part of which is the cost of the experimental first issue of the magazine.

Mr J. Woolgar

On doctor's orders, Mr J. Woolgar has, unfortunately, had to give up his articles. His active membership of the committee will be missed, though he was only elected at the last annual general meeting. The committee decided not to fill the vacancy in view of the near approach of the next annual general meeting.

Practical Aspect Lectures

The annual series of 'Practical aspect' lectures held by the Society commences next week from April 16th–19th in the Oak Hall of the Institute.

The lectures are designed to give students who have already acquired textbook knowledge an opportunity to hear lectures on practical aspects of the accountant's work. Subjects will include 'The accountant's place in an industrial organization', 'Accounting for management'; 'Economic effects of taxation' and 'Stock exchange practice.'

The Institute's Year

THE income of The Institute of Chartered Accountants in England and Wales in 1961 from all sources amounted to £292,270. Of this impressive sum, no less than £251,451 was derived from members mostly by way of annual subscriptions. The corresponding totals for 1960 were £275,382 and £241,849. Expenditure in 1961 was £280,592 as against £250,653 in the previous year, the largest increase being in administrative salaries which rose from £75,605 to £94,723. The excess of income over expenditure, £11,678 (as compared with £24,729 for 1960), was transferred to the Accumulated Fund which, at December 31st, 1961, stood at £318,389. Although these figures certainly convey a comforting impression of financial stability, the Council in its 1961 report – reproduced elsewhere in this issue – points out that the present resources and income of the Institute will have to be substantially augmented in order to deal with the long-term problem of accommodation and with the continuing expansion of its activities.

In 1961, the membership of the Institute reached the record strength of 35,228, an increase of 1,351 during that year. By a simple and sensible amendment of certain bye-laws, a member practising in Scotland or Northern Ireland is no longer regarded as being in a foreign country and may take articled clerks in the same way as do his colleagues in England and Wales. As a consequence of this process of envelopment, he must now, however, pay the 'town' instead of 'country' subscription rate.

The number of articles of clerkship registered in 1961 was 3,240 which is 248 more than for the previous year. Again the examination results were remarkable for their consistency. During the past six years, the percentage of passes in the Intermediate examination has only varied from 46 to 49 and in 1961 it was 47. In the Final examination, except for 1956 when it was 42, it has remained within the same limits and in 1961 it was also 47. What might be called the final Final examination of The Society of Incorporated Accountants was held in November 1961.

The report of the Parker Committee dealing with the education and training of articled clerks made its appearance in May 1961 and its three score and ten recommendations have since been considered in detail by the Council and by the committees of the district societies. The Council now announces that many of the proposals made by the Parker Committee have been adopted in principle and that announcements regarding their implementation will be made in due course. Fundamental changes in examination syllabuses invariably cause awkward transitional problems and

the time-table and procedural steps will require careful advance planning.

In 1961, the Council made a start with the publication of a series of Statements on Auditing. The first of these dealt with general principles and appeared in August. The second, on the thorny subject of stock-in-trade and work in progress, was issued last month. In welcoming 'General Principles of Auditing', we said that the profession should be grateful to the Council for restating old truths in clear outline and with full regard for the changes which are constantly taking place in an apparently changeless routine. The second statement had the same hall-marks as the first and the others in the series are keenly awaited both by practitioners and by students. Another Council publication which promises to be of outstanding interest are the notes entitled, 'Terms Used in Published Accounts of Limited Companies', which will be distributed next month.

For some time now, the Council has been concerned with the difficulties which the small practitioner, particularly in the provinces, has to contend with against unfair and unqualified competition, and in an attempt first to assess the size of the problem and, secondly, to formulate appropriate remedies, a questionnaire was circulated to all district societies in October of last year. The information obtained from this exercise is now being examined in committees and will thereafter be considered. It is evident from the letters which appear in our correspondence columns at intervals that a genuine grievance exists and effective action by the Council would be a stimulus not only to the Institute members concerned but to the whole profession. Another matter on the boil is the report of the Technical Activities Committee which was appointed in 1959 to review 'the whole question of the Institute's activities in the technical field'. This document is now in the hands of the Council for consideration.

During the year, the Council kept a watchful eye on Government legislation on all developments which are the direct concern of the profession. Although nothing was produced to equal in comprehensiveness the two memoranda prepared in 1960 for the Company Law Committee now deliberating on the possibility of company law-reform (although in point of time the second of these fell into 1961), the Council last year submitted evidence to the Robbins Committee on Higher Education (in August) and to THE CHANCELLOR OF THE EXCHEQUER (in May) on the 1961 Finance Bill. The Council also assisted the Stock Exchange in drafting amendments to its rules relating to the balance sheets of brokers and jobbers; on ex dividend and ex rights procedure, and on the transfer of securities. As all who undertake such work well know, behind a laconic reference of a few lines in the annual report may lie a mass of intricate and responsible work and the services performed by Council and committee members in these directions cannot be too often or too highly commended.

The success of the Institute's summer courses is strikingly demonstrated by the fact that whereas Christ Church, Oxford, comfortably housed the first pioneers of 1947, now four colleges (two each in Oxford and Cambridge) will be required for the 1962 migrations. We look forward to the day when an entire university will be given over each time to accommodate members wishing to participate in these delightful occasions. Another migration of even greater moment is the Eighth International Congress of Accountants at New York in September. Nearly 800 members of the Institute have indicated their interest in attending and three of their number have been invited to give papers while others will be acting in various official capacities.

Although statistics show that the library is being used more each year, the volume of activity still seems small in relation to the total membership and to the admirable facilities which are freely available. It is pleasing to note that the Institute, by acquiring a copy of *Divina Proportione*, has completed its collection of all the known printed works of Luca Pacioli. Another gap was filled by the appearance in 1961 of MR A. A. GARRETT's history of The Society of Incorporated Accountants. This is much more than a work of piety. It records with full knowledge and understanding an important phase in the history of accountancy and indicates what may be accomplished by accepting only absolute standards of professional endeavour. Members of the Institute, in reading their Council's report for 1961 cannot but feel that their interests, and those of the profession at large, are being looked after at the same scrupulous level.

Standard Costs and Stock Valuation

by H. A. V. WILSON, B.Com., F.C.A., A.C.W.A.

EACH year accountants in industry are faced with the problem of stock valuation for the purpose of the annual accounts. On the value placed on stock and work in progress depends the amount of profit for the year; this in turn affects the taxation assessment and may affect the amount of dividends to be paid. More and more businesses are introducing standard costs in place of historical costs as a means of cost control and as a basis for the preparation of management accounts at regular intervals throughout the year. The change from historical costs to standard costs has inevitably affected the work of valuing stock and the object of this article is to discuss the various points involved.

Early Years of Standard Costs

When a system of standard costs is introduced every attempt is made to value the stock for balance sheet purposes on a basis which is consistent with previous years. In the first few years of the system the work of valuation is often difficult; it is usually necessary to apportion the variances arising throughout the year between the standard cost of stock and the standard cost of sales. Variances frequently arise in the early years of a standard cost system because reliable production standards in terms of material usage and operating times are not available from the outset of the system; the cost accountant has, therefore, to calculate the standard costs on inadequate information. In addition, to prepare an accurate production budget and overhead expenses budget requires considerable experience; large variances may arise simply through lack of this experience in budgeting.

In view of these early difficulties, and particularly for the first year-end, it is considered that all production variances should be taken into account when valuing stock. This may be regarded as the 'comprehensive' method of valuing stock, briefly described below.

'Comprehensive' Method of Valuing Stock at 'Actual' Cost

Stock should first be valued at standard works cost (this may be at 'direct' or 'variable' cost when all fixed overheads are excluded; or it may be at 'total' cost which includes both variable and fixed overheads). The valuation should then be analysed over cost elements and main groups within each cost element. The analysis over cost elements should be taken as far as it is practicable. For example, a light engineering company might analyse the cost of stock as follows:

Cost element	*Main group*	*Standard cost*	
		£	£
Materials	Ferrous	1,000	
	Non-ferrous	500	
	Castings	1,500	
	Bought-out components	4,000	
	Engines	800	
	Other materials	1,900	
			9,700
Labour	Machine shop	500	
	Assembly shop	300	
	Other workshops	1,200	
			2,000
Overheads – Variable	Machine shop	600	
	Assembly shop	450	
	Other workshops	4,550	
			5,600
Overheads – Fixed (if included in stock valuation)	Machine shop	300	
	Assembly shop	150	
	Other workshops	2,250	
			2,700
		Grand total	£20,000

The variances which have been experienced during the year are then examined in detail to determine the amount which should be applied to the standard value of stock. The variances would have been analysed throughout the year in order to supply foremen and managers with essential control information. Working back from the end of the year the variance is extracted on

enough of a main group of cost as will cover the amount of that group in stock. This is the application of the 'first in-first out' principle to variances in stock valuation.

The following example, based on the stock valuation as analysed in the previous paragraph, illustrates the adjustment which should be made to the standard cost of machine shop labour of £500. The adjustment arises from the labour variance which has been incurred during the year in the machine shop. This labour variance would have arisen from a number of causes such as increases in pay and loss of efficiency. In the example it is necessary to list figures for four months back from the end of the year before the standard cost of labour in production covered the standard cost of labour in stock:

	Standard cost of machine shop labour in production	*Labour variance*	
	£	£	
Month 12	150	15	unfavourable
,, 11	140	12	,,
,, 10	170	15	,,
,, 9	140	18	,,
	600	60	

Labour variance per cent $= \frac{60}{600} \times 100 = 10\%$ unfavourable.

The analysis of the stock valuation at standard cost shows that the standard cost of machine shop labour in stock is £500. On this basis, the adjustment to be made to the cost of machine shop labour in stock to arrive at 'actual' cost is £500 × 10 per cent = £50. Since the variance was unfavourable the £50 is therefore an addition to the cost of stock.

The degree to which it is necessary to analyse variances and standards costs must depend on the circumstances of each business. An analysis of a purchase price variance might reveal that the bulk of the variance related to one type of material used in one group of products. The variance could then be apportioned by reference to the material cost of that one group of products instead of to all the products which are in stock.

Treatment of Exceptional Variances

So far it has been assumed that in the early years of standard costs, all variances which related to standard cost of production would be apportioned between cost of stocks and cost of sales. But there may be instances even in the first year when a variance, or a distinct part of it, should be charged wholly to cost of sales. For example, an exceptional or non-recurring item of expense such as a major repair job following a breakdown, because it was not budgeted for, would go wholly to an expense variance. Such an item, if it had occurred, would have been ignored in previous years when calculating overheads for product costs; therefore, in the current year a variance on this item would be written off to cost of sales.

Volume variances (under or over recovery of fixed and semi-fixed expenses) may also be wholly or partly ignored for purposes of stock valuation.

For example, in previous years fixed and semi-fixed expenses may have been included in stock valuation on the basis of a normal level of production, and this basis may have been used to determine overhead rates under the standard cost system. In this event the volume variances should be ignored. On the other hand, the fixed and semi-fixed expenses may have been included in the previous years' stock valuations on the basis of the actual levels of production; to be consistent the volume variances should be brought into the calculation of the current year's valuation.

Modifications to 'Comprehensive' Method

Once the system of standard costs is well established, the whole question of the treatment of variances for the purpose of stock valuation should be reviewed. Before making such a review, however, it is useful to consider modifications to the 'comprehensive' method of valuing stock at 'actual' cost.

For some companies the comprehensive method of valuing stock at actual costs would be impracticable. The time or staff required to make the necessary detailed analyses of variances and standard cost of stock may be too much, in view of the time-table for finalizing the accounts and the volume of other work. As a result, short cuts have to be taken and it is advisable for the accountant to discuss these with the company's auditors. He should prepare specimen calculations to satisfy himself, and the auditors, that the accuracy of the end results will not be materially affected.

There are three main short cuts which are used in the early years of a standard cost scheme:

(i) Ignore all variances below a specified amount or which are below a specified percentage to standard costs.

If these variances have been analysed in some detail in the first place, thus restricting each variance to a limited type of cost element,

then the risk in adopting this short cut is minimized.

(ii) Calculate apportionments of variances over the whole or a very broad analysis of each cost element in stock; for example, the labour variances for all departments may be totalled and applied as one percentage to the standard cost of all labour in the stock.

Where production passes through all departments this global approach may be reasonably accurate. There could be a serious inaccuracy if the bulk of the products in stock pass through departments with large favourable variances. If this same approach is applied to price variances, large price variances (both favourable and unfavourable) will have been averaged out over all materials. There may then be considerable inaccuracy in the final figures of 'actual' cost of materials in stock. However, some large companies use this method and disregard the apparent inaccuracy.

(iii) Where there is not time to wait for the preparation of variance figures, use the variances which have been recorded up to the previous month and assume that the ratios of variances to standard costs apply also to the last month.

This method can be justified at the beginning of the standard cost system only when the time factor in completing the accounts is most critical. There is the risk of distorting the profit for the year by a grossly inaccurate stock valuation. In any event, once the last month's variances are available the adjustment to stock valuation should be recalculated to check that there was no substantial inaccuracy in the earlier calculation.

Established System of Standard Costs

As indicated in earlier paragraphs, it takes time for a standard cost system to operate efficiently. Most companies should be able to report a progressive improvement each year, due largely to the fixing of more scientific production standards and more accurate expense budgets. The result is a system of standard costs which is an effective instrument of cost control providing reliable costs of products – the main basis for stock valuation. The variances which are recorded and reported to management resulting from this improved system of standard costs will then have real significance.

Once this position has been reached the approach to valuing stock at 'actual' cost should be reviewed. It should no longer be necessary to adopt the 'comprehensive' method whereby all variances are brought into the calculation of stock valuation. Two methods of valuing stock seem to be in current use; the first is to ignore variances altogether, and the second is to take into account only variances which are non-controllable so far as the company is concerned. These methods are considered below.

Valuation at Standard Cost Only

The first method, whereby stock is valued at standard cost without adjustment for variances, is straightforward. It is not necessary to analyse variances and standard costs and to calculate the apportionments of variances between cost of stock and cost of sales. This method should only be adopted if the variances are negligible as it cannot be used without the risk of inaccuracy. The policy of some companies is to revise standard costs at regular intervals. This can be quarterly, or whenever major price changes take place, such as an increase in the price of an important raw material or the granting of a pay award. The effect of this regular or continual revision of standard costs is to minimize variances so that standard costs always approximate to actual costs. This system does, however, complicate routine accounting procedures and numerous adjustments may be necessary to the costing records. One company, where the cost of materials forms the greater part of product cost, is reported to revise its standard material prices when major changes in prices occur and then to value stock at standard cost only.

Valuation at Standard Cost *plus* Non-controllable Variances

The second method values stock at standard cost with the addition of non-controllable variances but the exclusion of controllable variances. In this context, controllable variances refer to such items as labour efficiency, material usage, consumption of consumable stores and over or under recovery of fixed and semi-fixed expenses. These variances are ignored because standard costs for such items, being based on work study standards and production planning, are considered to be acceptable costs for the purpose of stock valuation.

Non-controllable variances refer to prices paid for materials, labour, indirect expenses and services. Variances arising on these items would be apportioned between stock and cost of sales. Some companies would still wish to use short-cut methods to make the apportionment of the variances. They might use methods described

earlier in this paper and the comments made then would be as valid.

These non-controllable variances need not be taken wholly into account when calculating the value of stock. For example, if an increase in price paid for materials is purely a temporary increase due to special circumstances, then it would be reasonable to exclude this from the calculation of the apportionment. Unfortunately, increases in labour costs and in many indirect expenses are likely to be of a permanent rather than temporary nature.

However, any non-controllable variance arising out of special circumstances, such as a strike or a breakdown of equipment, should be isolated and excluded from the calculation for stock purposes; in most cases it would be excluded on the basis that the value of stock is not really increased by such an event.

Valuation at Following Year's Standard Costs

It is now proposed to consider a method of valuing stock which is not normally used, yet if found suitable, it would save a considerable amount of clerical work. The method is to value stock at the following year's standard costs and to regard this as the actual cost for balance sheet purposes. It is claimed that this method deals automatically with variances arising at the end of the year. The new standard costs take price changes into account, thus the proposed method also obviates the need to make comparisons with replacement price or net realizable value.

In order to assess whether these claims can be substantiated, it is necessary to examine the assumptions on which the following year's standard costs might be based.

A system of standard costs can only be fully effective if budgets and standards are finalized at the commencement of the year to which they refer. To achieve this timing, the work of preparing budgets and standards is begun about three or four months before the beginning of the year to which they relate. The standards for prices of raw materials, wage rates and prices of overhead expenses are generally fixed at the prices ruling at the time of preparation. On that basis the following year's standard costs, so far as prices are concerned, would be as accurate as previous year's standard costs adjusted for price variances. However, if increases in prices are probable the new standard prices would be based on the higher prices. For example, there may be a national increase in wage rates or contracted increases in the prices of materials. Depending upon the extent to which the standard prices anticipated these changes during the year there would be a corresponding overstatement in the valuation of stock at the end of the previous year. With regard to the overhead expenses it is usual to calculate the standard cost rates on the basis of annual budgets of expenditure. These budgets take into account probable changes in the size of departments, the proposed pattern of production and the equipment to be used. Consequently, the standard cost rates may reflect a position which has still to be achieved rather than the position as it was at the end of the previous year. On the other hand, this may not be so and where few changes are expected in the production departments the standard cost rates might accurately reflect the actual costs being incurred at the end of the previous year. The following year's rates could therefore then be used for evaluating the current year's stocks.

Certain conditions should apply if the valuation of stock at the following year's standard costs is to be equivalent to the actual cost. Briefly summarized they are:

(i) Standard prices of raw materials and indirect expenses and standard wage rates for the following year should be approximately the same as those being paid during the build-up period of the stocks.

(ii) Standard overhead rates for the following year should be approximately the same as those which could be computed for the production departments during the build-up period of the stocks.

If these two conditions apply, and there are businesses where they do, then there seems to be every reason why, for balance sheet purposes, the stock should be valued at the following year's standard costs. The number of companies using this method is likely to grow.

Conclusion

This article has dealt with the problems of arriving at the 'actual cost' of stock where a system of standard costs has been installed. Once the stock has been revalued at actual cost then such factors as replacement prices, net realizable value and obsolescence have to be taken into account. Though these factors are of substance they are not related to the problems of standard cost and therefore have not been considered in this article.

Swapped Digits

by FRED T. NEELY, C.P.A.

THE recognition of place value in the use of its magic digits has given the Arabic system of notation a place of greatness among the achievements of the ages. Even when tired or careless workers copy numbers so that two of the digits swap places, the magic persists and provides a clear and simple method of detecting the error that has resulted.

When the letters of a word are transposed by a typist or a printer, the fact that these characters of the alphabet have swapped places is usually apparent to the reader. Letters must form an inflexible pattern in the spelling of a word. In contrast, the arrangements of Arabic digits have no limits to their flexibility. If two digits are transposed when written, the act of swapping has not caused a lapse in style or format which suggests an error has been made. Thus, if 134 is shown as 143, there is no apparent inaccuracy in the printed page. This is usually referred to as a transposition. Some individuals make the error frequently; some do it seldom or never. Everyone encounters such errors from time to time.

When 34 is written as 43, the place value of the Arabic system has been brought into operation. The two numbers use the same digits. But because of the place value of the digits, there is of course an error of 9. There are 99 one- and two-digit combinations, or if a zero or nought is placed before the one-digit numbers, it may be considered that there are 99 two-digit combinations. Nine of these are identical, as 11, 22, 33, etc. This leaves 90 two-digit combinations which can result in transposition errors if these consecutive digits swap places.

The smallest error that results from a transposition of two consecutive digits is 9, 90, 900, etc., depending on the order or place value of the digit that is transposed. This error can result only from the transposition of two consecutive numbers with a difference of 1. They are 10, 21, 32, 43, 54, 65, 76, 87, 98 and the same number written in reverse, 01, etc.

The largest error that results from the transposition of two consecutive digits is 81, 810, 8,100, etc., depending on the position or order of the number transposed. There are only two ways this error can occur. The digits 90 may be written as 09, or 09 as 90. In both errors, the value of the tens column has a value change of 90 with an offsetting error of 9 in the units column, or a net error of 81.

A listing of all the errors resulting from the transposition of consecutive two-digit combinations in the order of the size of the resulting error is shown in the table below. This shows the difference in the digits transposed which produces the error and lists the number of combinations in each error size.

Difference in digits transposed	*Amount of error*	*Number of combinations*
1	9	18
2	18	16
3	27	14
4	36	12
5	45	10
6	54	8
7	63	6
8	72	4
9	81	2
Total number of combinations		90

A glance at this table shows in repetitive detail that the amount of a transposition error is always nine times the difference of the digits transposed. Thus when an error of 63 is looked for, it will only be necessary to look back at numbers having a difference of 7 (63 divided by 9). These numbers are 70, 81, 92, 07, 18 and 29.

There are 45 two-digit combinations that will result in smaller numbers if transposed. The amount of the resultant errors and the combinations that will produce them are as follows:

9	18	27	36	45	54	63	72	81
10	20	30	40	50	60	70	80	90
21	31	41	51	61	71	81	91	
32	42	52	62	72	82	92		
43	53	63	73	83	93			
54	64	74	84	94				
65	75	85	95					
76	86	96						
87	97							
98								

The reader will note the rhythm in the pattern of these numbers. In the vertical column of both the tens and the units, the numbers follow the regular order of the digits. The horizontal pattern of the tens also follows the order of the digits. The units of each horizontal line are identical.

There are an equal number of two-digit combinations, 45, that will result in a larger number if transposed. The resultant errors and

the combinations that will produce them are shown below:

9	18	27	36	45	54	63	72	81
01	02	03	04	05	06	07	08	09
12	13	14	15	16	17	18	19	
23	24	25	26	27	28	29		
34	35	36	37	38	39			
45	46	47	48	49				
56	57	58	59					
67	68	69						
78	79							
89								

The reader will see, too, in this table the rhythmic pattern of the digits. Reading down, the digits follow in their natural order in both the tens and units columns. Horizontally, the number pattern of the units column also follows the sequence of the digits, while all the figures in the tens column of each horizontal line are the same.

In looking for a posting that caused a transposition error of, for instance, 72, 720, 7,200, etc., it would not be necessary to check all four of the number combinations. If a trial balance has a debit column that is too much by that amount, only 80 and 91 debit postings would be traced back from the ledger to the books of original entry. If a debit item of 08 or 19 in journal, sales book or other book of original entry has been transposed by posting as the larger debit number the error is accounted for. On the credit side, the amounts 08 and 19 would be checked back to the source entries. If it is found that 91 has been posted as 19, this locates the error and the ledger can be placed in balance through this correction.

Error in Trial Balance

In looking for an error in a trial balance when a transposition is suspected, the following general procedure should be followed.

If the total of the debits in the trial balance is larger than the credits, and the books of original entries are looked over for source of error: the debit entries should be checked for items which, if transposed, would have produced a larger amount. The credit entries should be checked for items which, if transposed, would have produced a smaller amount.

If the ledger is looked over for the possible cause of error where the total of the debits in the trial balance is larger than the credits: the ledger debit postings should be checked for amounts which, if the result of a transposition, would be larger than amount shown in the book of original entry. The credit items would be checked for a posting which, if the result of a transposition, would be smaller than the amount shown in the book of original entry.

An error resulting from a transposition is always exactly divisible by 9. The difference in the number transposed is found through dividing the amount of the error by 9. If the error is 45, then the difference in the numbers transposed is 5, as for instance, 16 written as 61 or 61 written as 16. If the difference is 450, the same transposition has occurred one column further to the left, as 160 written as 610. The size of error increases tenfold with each movement of one column to the left and the discovery of the error becomes relatively easier as very large numbers are usually less numerous than small ones in a group of accounts or transactions.

The transposition of 16 as 61 may find these digits as part of a larger number, as 4,161 written as 4,611, which in no way changes the nature of the error. It occasionally happens that there is an intervening number between transposed digits. If 142 is written as 241, there is a resulting error of 99. The explanation is very simple. The value of the third column to the left is increased by 100 while the unit column goes down in value by 1, making a net difference of 99. If 623 is written 326, the difference is 297. This is the product of 99 multiplied by 3, the difference in the numbers transposed. An interesting observation was once made to the writer about this by Mr Henry B. Fernald, a distinguished American accountant who lives in New York City. Mr Fernald observed that dividing 297 by 9 gives 33. He said:

> 'The 3 still indicates the difference between the figures transposed, but its being repeated again indicates that there is another column between the two where the transposition occurs. Or if 6,243 is written 3,246, the difference is 2,997 which divided by 9, will give 333. This indicates that the difference between the figures transposed is 3, that there are two columns between those in which the transposition occurs, and that the transposition is, therefore, between the fourth and the first columns from the right.'

On those great days of time when the place value of the Hindu-Arabic digits first found expression, no chroniclers were there to record those high moments of drama and achievement. Though the name of the creative genius is long since lost, his work and ideas that shaped a priceless legacy for the centuries to follow, will live for ever in the annals of great moments. With its blend of simplicity and magic, this legacy from the past offers to everyone who looks, a vital and useful skill that may be acquired through a few quick observations and some easy and pleasant practice.

Thinking in Figures

by H. C. EDEY, B.Com, F.C.A.

Scientists have long been accustomed to describing their ideas by using numbers. This idea is familiar to men and women engaged in industry and trade, though the methods they have used have been of a simpler variety than those employed by many scientists. What was once called mercantile arithmetic – and for many people this included the elements of book-keeping – has for a long time been an everyday tool of their work.

But commercial mathematics are now leaving the elementary stage. Automatic computers have made possible calculations of a size and complexity never before possible. This has opened up the way for the application to business of analytical processes using mathematics as far beyond the old-fashioned mercantile arithmetic as the moon-rocket is beyond the bicycle.

In this Travers Lecture[1], Mr Edey examines some of the implications of this for business and management, and for business education.

SIX thousand years ago, in the valley of the rivers Tigris and Euphrates, in the southern part of the land we now call Iraq or Mesopotamia, temple priests, responsible for the revenues of the gods, wrote down on clay tablets their statements of receipts and disbursements. These ancient pictographic accounts – perhaps the oldest written records in the world – may well have been the source from which arose both writing and arithmetic. The whole of human literature and the whole vast edifice of modern mathematics perhaps originated in the needs of archaic mercantile arithmetic.

Ancient Accounting

Two thousand years later, in the same valley, in the city of Ur – the city from which Abraham began his wandering – and I quote from Sir Leonard Woolley:

> 'there were a host of secretaries and accountants responsible for the revenues and outgoings of the temple . . . countrymen would bring their cattle, sheep and goats, their sacks of barley and rounds of cheese, clay pots of clarified butter and bales of wool; all would be checked and weighed and scribes give for everything a receipt made out on a clay tablet and would file a duplicate in the temple records . . . animals had to be issued for the daily sacrifices, the priests and the temple servants required to be fed, wood or metal might be needed for repairs to the [temple] fabric, even oil for the oiling of the door hinges would be drawn from the stores and for everything issued the storekeeper made out an issue voucher giving the name of the applicant, the nature and amount of goods required, their purpose and the authority on which the order was granted. Within the temple precincts there were regular factories where worked the women attached to the temple . . . the ledgers of the factory give a nominal roll of the women, the weight of wool issued to each at the beginning of the month, the lengths and weights of the specimens of cloth of various qualities which she produced at the month's end (a due allowance is made for unavoidable wastage in the process of manufacture), and then in parallel columns the amounts issued for her maintenance during the period, so much grain and cheese and cooking butter . . .[2].

These ancient accounts were not kept in money values, but in kind and, let me hasten to add, did not follow the rules of double entry, which did not yet exist; but we cannot doubt that the skills involved in keeping them – the inscribing of the cuneiform script in clay, the addition and subtraction of numbers – formed a worthy part of the curriculum of Sumerian education, and higher education at that, and ranked, we may surmise, level, as learned disciplines, with the astronomical studies to which we owe our 60 minute hour and our 360 degree circle – for unlike the

Mr H. C. Edey, B.Com., F.C.A. the author of this Travers Lecture, is Reader in Accounting at the University of London and a Governor of the City of London College where he gave the lecture on April 4th.

[1] John Ingram Travers, who was a partner in a firm of merchants in the City of London from which he retired in 1863, was active in promoting reform of the administration of the customs system. In recognition of his work in this direction the merchants and bankers of the City subscribed to a fund known as 'The Travers Bequest' to be used for providing lectures on commerce or commercial law.

[2] Woolley, *The Sumerians* (Oxford University Press): see also *Excavations at Ur*, by the same author (Benn).

electronic computer the Sumerians used a radix of sixty.

Three thousand years passed. During all this time I do not think that there was much change in the way that merchants or public officers of the civilized cities and states of Europe and the Near East handled their accounting records and mercantile calculations. There must have been indeed change in detail. Papyrus, or parchment, or waxed tablets might be substituted for clay. As time passed money values were more likely to be the units of account. But in the essential details of numbering, listing, adding and subtracting there was little change; and indeed the Greek and Roman number systems were inferior as tools of calculation to that of the Sumerians.

Rise of Double Entry

But around A.D. 1300 new ideas were arising in the Medieval city states of Italy. About that time a new accounting technique appeared that was to spread rapidly and become the standard of good accounting throughout Western Europe. We do not know just where double-entry book-keeping first arose or exactly how it came into being. It is, however, significant that not long before there had been a technical innovation of great importance – the introduction into Western Europe of a cheaper writing material, paper, and an innovation of equal importance in the tools of thought, for the Indian numbers brought to Europe by the Arabs were now coming increasingly into use; though, needless to say, the new-fangled numbers were deplored and successfully resisted for a long while by members of the Establishment of that time. But the simplicity of the new numbers made it possible for the writers of commercial arithmetics in Florence to develop improved rules for calculation[1], and may well have been decisive in suggesting the pattern of double entry[2]. It is characteristic of the period that the first known treatise on double-entry book-keeping – Pacioli's textbook of 1494 – should form part of a compendium on arithmetic, algebra and geometry, and their commercial applications.

The Italian merchant of that time was well trained in the arithmetic necessary for his business, including the use of compound interest and discount. He believed that accuracy and clarity were essential in business. As Sapori says, he was 'accurate in his computations and clear in his book-keeping'.[3] But he was also a man of culture. He took pains in recording matters of interest in the life around him whether relating to his business or personal affairs or otherwise. To quote Sapori again:

> 'The Italian merchant was orderly to the point of meticulousness; he was a shrewd observer and a clear thinker. Being always willing to learn he reached a high level of strictly professional competence. But he also created, by harmoniously combining his various achievements in different spheres of knowledge, a genuine mercantile culture which was broad, solid, and magnificent.'[4]

Medieval Business Education

As for education, a merchant's son would receive his basic training in a public school where he would be taught reading and writing and the use of the abacus. He would then enter commerce to acquire the book-keeping skills, and the knowledge of merchandise and geography and other matters, that would fit him to become a successful merchant. The public school was a matter of concern to the authorities: it was there that a boy received his basic education that fitted him to take his part as a citizen and prepared him for success in a business career.

I do not think that the Florentine boy's education would have seemed to a Victorian merchant inappropriate for a good employee in his own accounting house – one who might expect to rise in the business and perhaps become a partner in due course. I doubt whether the nineteenth century commercial texts differ greatly, except in matters of language and detail, from what would have been appropriate in Renaissance Italy.

Nor, in essentials, has there been a great change since Victorian days. Perhaps of all professions today, that of the chartered accountant is the most obviously appropriate for someone who wishes to acquire a general skill in business. As you know it has not been unusual for a father who wishes his boy to take his place in a family firm to send him first to be articled to a chartered accountant so that he can become skilled in financial matters. I am not sure that in fundamentals the professional education of the present-day chartered accountant covers such a very different field, or is even so very different in kind, from that of the Italian merchant. Let us look at the curriculum.

The basis of the whole curriculum is a sound training in the principles of double-entry book-keeping. This is designed to make the accountant, like the Italian merchant, 'accurate in his computations and clear in his book-keeping'.

He must be trained in the techniques of auditing – in the checking and verification of accounts and accounting reports. Yet auditing, Sapori says, was a task that might well fall to the thirteenth century Italian merchant who would often be required, along with fellow merchants, to examine the accounts of outgoing public officials.

Needless to say the chartered accountant must – like his Italian merchant forerunner – acquire a general knowledge of commercial and financial affairs, and of the law as it affects commercial activities.

Of cost and management accounting the Italian

---

merchant was certainly concerned; though the nature of his business was such that detailed cost analysis beyond what was possible in his ordinary ledger – where, for example, he could separate the financial results of a given venture or activity from those of others, was hardly necessary. I do not think the training of the modern chartered accountant in cost accounting goes far beyond this. Mathematically speaking it requires no more than simple arithmetic.

Only perhaps when we turn to taxation do we find a really significant difference between the modern training of a chartered accountant and that of the Italian merchant. Yet even this is perhaps a question of degree rather than of kind. We may assume that the Italian was not unaware of the problems of tax.

The Italians went as far in their studies of compound interest and discount as is normal in business education today. I do not think it can be assumed that an English chartered accountant, a company secretary, or generally one who has studied business in commercial or technical college or elsewhere (I exclude such specialists as stockbrokers and actuaries) will necessarily have more than the slightest acquaintance with the standard compound interest and annuity formulae, or will be able to give a clear description of, for example, the significance of the gross redemption yields set against the Government securities that are listed daily on the back page of *The Financial Times*.

Generally, a Florentine merchant looking at the training of a modern professional accountant, a company secretary, or of others taking business courses today, would have little difficulty in understanding the nature of the course and the ideas governing its structure; and the techniques would be well within his range of knowledge.

Even the mathematical methods used by actuaries – the one class of people who have for many years consistently applied advanced mathematics to business problems – would not I suspect seem strange to our early Italians, once they understood the ideas lying behind the mathematics.

New Instruments and New Thought

I am not going to pretend that much of, shall we say, the average chartered accountant's work today is not far removed from the everyday detail of commercial life in Medieval and Renaissance Florence. The auditing or investigation of the financial statements of a complex group of companies requires a wide and specific knowledge of company law, revenue law, contract and agency law and their applications, of financial institutions and of their mode of operation, and of modern accounting methods. Nevertheless, in fundamentals, the change is not great. It is in detail rather than in kind.

There is an intimate connection between the growth in human knowledge and understanding and the development of instruments and tools. A new instrument is developed – the telescope, the X-ray tube, the electron microscope. At first it is crude and clumsy, but its potentialities are visible. Practical men – I am using the word not as an adjective of praise, but in the opposite sense to theoretical – develop the new instrument, improving as they go. New uses may be found for it, not at first suspected. The theoretical men are faced with a series of challenges. One is to fit the working of the new instrument into the general body of established theory – to explain why it functions as it does; sometimes this may not be necessary: the new invention may be a child of earlier theory, as the wireless was of Maxwell's theoretical work on electro-magnetic radiation. Another is to fit into the pattern of theory the new discoveries that the instrument makes possible. The theoretician himself may use the new instrument for testing the validity of old and new theories, as the big radio telescopes are now being used. Along with the new development in theory comes the need for new mathematical methods, or the application of methods already developed by the pure mathematicians, hitherto without an obvious use. Thus, new instruments produce new concepts and new concepts lead to new instruments, while both widen and deepen the fund of human knowledge and exend the tools of thought itself.

The Automatic Computer

The field of business is as open to this process as any other branch of human activity. We can see in the use of clay tablets in Sumer, and in the introduction of paper to Europe, examples of improvement in instruments – in the tools of intellectual activity and exploration. The men who first used pictographic inscriptions to express the ideas of numbers and things had made a step forward in the apparatus of thought so important that it is hard to find a suitable adjective to describe it. The introduction of arabic numbers was another such step. We may say that the rise of double-entry book-keeping was in a small way such a development, providing a systematic, logical, formulation for certain economic concepts. Seen in this light its growth in use, as the Italian cities moved towards the Renaissance, is part of the general pattern of growth in human knowledge and culture[1].

The time has come to speak of the electronic computer – or to use a better name, the automatic digital computer. I do not propose to say a great deal about the computer, deeply interesting though it is. Here I am concerned rather with the impact that I think this new instrument, along with modern mathematics, will have – and indeed is having – on business and on teaching for business. It would, in my view, be difficult to underestimate the importance of this new development. Life will never be the same again, any more than it could after the modern astronomical

[1] Cf. Yamey, Introduction to *Studies in the History of Accounting*, (op. cit.) pages 2–4.

telescope, by showing us the almost unimaginable vastness of the Universe, placed human life in a wholly new perspective.

Before I go on, however, I must distinguish between two, quite different, functions of the computer. The distinction is one well known to all who have to do with such matters.

On one hand, the computer provides us with a substitute for the clerical work of adding, subtracting, multiplying, dividing, writing down and transposing words and figures. It can indeed be regarded as a battery of very dull, but very accurate, obedient and fast clerks, each provided with an adding or multiplying machine, each able to read and write numbers, and to detect when one number is greater than or less than another, but little else. True, it is so much faster than any clerk or clerks that it can provide one with more accounting and statistical analyses, statements and summaries than could ever be obtained, or if obtainable, afforded, with older methods. (At this point I am irresistibly reminded of the story of the little girl who was asked to review a book on natural history. She wrote in her review 'This book tells me more about rabbits than I care to know'. If one is not careful a computer is liable to tell one more about one's business than one cares to know.)

Data Processing

This kind of activity is in itself of great importance. But it is not perhaps more than a development of the kind that started with the abacus itself, and had already gone far with the use of simpler mechanical and electrical computing machines. If it were possible, as I believe it soon will be, for a bank general manager to link all his branches by teleprinter to a central computer, so designed that the balance sheet for the whole bank is always on his desk before him, displayed, and continuously changing, on the screen of a cathode ray tube, this is really no more than one more step on a path long trodden, that leads back to Medieval Florence and the other Italian cities. Whether to use a computer for this kind of work is a matter of cost study. The decision is made, or should be made, just as one decides whether punched cards would be more profitable than hand-written ledgers (though it may be worth adding something on the credit side of the calculation for the benefits of research and experimentation). Double-entry principles are not rendered obsolete. They remain built into any accounting system that is put on to a computer. The auditor has to familiarize himself with the new routines. But no one, in these days, need even learn what binary arithmetic means. The modern computer may indeed do its work in binary, but it has been so built, or so taught – programmed is the appropriate word – that the figures and instructions fed into it can be in decimal notation; and what it has to report – its output – can be in the same form. All that one needs in order to use it is a dictionary, so that verbal instructions can be translated into appropriate numbers that the computer can read, and this the manufacturers will provide, under the name of a code manual.

New Mathematics of Business

But there is another side to the computer's work. It has made possible for the first time the solution, within reasonable time limits, of certain types of mathematical problem that earlier it would hardly have been practicable to tackle. At the same time – and here, I think, is the parallel with the way in which new theories and new applications grow up in the natural sciences alongside new instruments – has come a realization that there are problems of business and public administration that will yield to the use of mathematical methods of a relatively advanced kind. When a computer is available, problems can be formulated and equations solved to provide answers as good as and sometimes better than will normally be reached on a rule of thumb basis or by the intuition of those with long practical experience – and this as part of a standard routine that, once established, can be operated with accuracy and speed by men untrained in the field of knowledge to which the problem belongs.

This is a revolution: the invasion of the field of business decisions by the powerful methods of modern mathematics aided, where necessary, by the new instrument. The applications of these techniques are, I suppose, relatively few as yet, though they are by no means of negligible importance. But they will grow in number. I will try to list some of these, though I must emphasize my relative mathematical ignorance and acknowledge the help of my mathematical colleagues.

There is the use of probability theory and calculus, associated, as in all the applications, with simple economic concepts, in optimizing the amount of stock that a business holds, balancing the costs of holding stock – money and space tied up, and risks of damage, deterioration, and so on – against the damage to goodwill that would be caused by running out of stock and the lower costs of an even production flow during the year as compared with an uneven one.

There is the use of probability theory and calculus in queueing theory – an application relevant where there are bottlenecks, for example, in transport, or in production, or in communication networks, where it is necessary to balance the cost of waiting time against the cost of the additional equipment that would reduce the wait.

There are programming methods, based on matrix algebra, for determining the best mix of materials in a given product as the prices of materials vary; or the best blend in the refining of oil products as the selling prices vary; or for minimizing transport costs, for example, from variously dispersed collieries to different coke ovens or power stations; or for determining the optimum mix of outputs of a textile mill, as prices vary; or for so cutting paper rolls as to minimize the waste at the end of a given roll.

The Computer and Mathematics

What is the characteristic of these methods is that a solution had somehow to be reached before a mathematical method was available; now the optimization can be turned into a routine. The operational researcher, as it is convenient to call him, having established the theoretical model which suits the problem, can turn the solution over to less highly paid staff, who can keep it running until a new theoretical model is required in the light of changed conditions; and within the limits which the problem allows it will be known that as good a solution as is available has been obtained.

I do not want to mislead you. The computer is not always necessary for the solution of problems of operational research, even when they are posed in a mathematically sophisticated form. Actuaries have long managed without digital computers, though they are now taking to them as ducks take to water. Relatively simple actuarial calculations that can be solved without computers are increasingly being applied to capital budgeting problems. There is a class of problems in which statistical sampling methods, based on probability theory, are used. These have been applied successfully in business without computer facilities. They are such problems as the quality control of manufactured products, market research, certain aspects of auditing, the determining of maintenance costs of fleets of lorries, and so on. But there are many formulations for the solution of which a computer is essential; and the rapidity of advance in these methods has been, and will continue to be in some degree, dependent upon the growth of computer technique – a growth to which, at present, it is impossible to foresee any limit. In what direction these techniques will lead, and how fast, I cannot predict. But it seems to me that the signs of rapid development are present. The Americans with their usual vigour and interest in new ideas are driving ahead fast, and there is no lack of financial support in the United States for the work of colleges and research institutes in this field. The Russians are on the same track and will follow the trail with equal vigour and determination. The period when a business man could afford to be completely ignorant, not only of the manipulation but of the meaning and significance of such matters as calculus, probability, vectors, and the like, is almost here.

Future of Operational Research

Do not mistake me, I do not suggest that every decision, every problem in business, can today, or will, even within the next ten years, be solved by the application of higher mathematics. The range of application, as I have already indicated, is still small, though it is growing. Many of the problems of business are far too complex, there are far too many variables and far too complicated a network of relationships, to yield to existing mathematical procedures (though even in such cases a problem may yield to the use of simulation methods on a computer). But the appetite of the mathematicians and the operational research men will not easily be satisfied, and I am convinced that there will be a rapid expansion in the fields of useful application.

I do not want to pretend that there are no difficulties and that everything in this particular garden is as it should be. There have been and will be failures. In the early stages these could be expected to exceed in number the successes. This has always been so. It would have been unwise to condemn the idea of air travel on the basis of the quality and capacity of the aeroplane of 1910 – though I am sure that many did so. Or again it would be foolish to discount the future of the rocket as a result of the failures in Florida. It is the successes that count. By the same token there will be – there are – charlatans about who will and do make claims that they cannot justify. O.R. is O.K., if I may coin a phrase. The hangers-on will rush in. As usual, their failures will be wrongly taken by some as a sign that the whole subject is a sham.

Logic of Decisions

We must, however, not only think of techniques that are advanced in the mathematical sense. When all is said and done, to use mathematical methods is simply to apply logical methods of thought to certain types of problem. Mathematics is no more than a branch of logic that takes over where the symbols that we call words become too clumsy for the occasion. If some business problems are susceptible of solution by the application of certain advanced logical methods, may not others be better handled than at present by the use of simpler logical tools?

But, you will say, this is exactly what happens already. The business man applies logic to his problems. I am afraid that this is only a half-truth. I have no doubt at all that, given the way in which a business problem is formulated, and given the facts and relationships that are known and the assumptions about the facts and relationships that are less clearly known, most people in business are likely to reach a conclusion and make their decision by a logical chain of reasoning, for man is undoubtedly a logical animal. But the rub lies in the words 'given the way in which a problem is formulated'. The marshalling of knowledge before a decision is made can be done in many ways.

Anyone who has worked on operational research problems will, if he is competent and honest, confirm that in a certain sense the mathematics is the least part of the job. The really difficult problem is to set down clearly the circumstances, the aim in view, and the constraints or limitations within which the solution must be sought. These must be chosen so that they are relevant to the problem. This process is common to the solution of all business problems. But when the process that is to follow is a formal mathematical one, in which each piece of information must be fitted into some kind of standard pattern, there is little room for vagueness or sloppiness in the setting

of the problem. The rigorous nature of the process that is to follow imposes its own discipline of thought.

I do not wish to suggest that the use of mathematical methods ensures the good sense and relevance of the selection of facts, the assumptions made, and the formulae used. Nothing could be further from the truth. There is no substitute for a basic understanding of the nature of business enterprise, its environment and its major aims. Some study of the economics of business enterprise is, I think, an essential concomitant of such work. The merit of the techniques of operational research is, I think, that the need for such a study becomes rapidly apparent when they are used, at any rate to a sensible man, as it does not always when a more haphazard, traditional, hit and miss method of decision making is employed.

Need for Systematic Decision Making

We must all know of the business committee in which some decision on the purchase of this or that piece of equipment is debated. How many of these discussions are preceded by the preparation of a systematic study showing the results expected to follow from alternative courses of action? How many really large decisions are made on little more than hunch? How many boards of directors even trouble to have calculated, however roughly, the rate of return that their business is earning on the current value of the resources they control? How many even realize that such a calculation is relevant? – more perhaps now than before Mr Chambers and his board made their recent bid, so fortunate for the shareholders of Courtaulds; but still very far from all – perhaps not even most. How many boards even realize that the very concept of profit as it is measured by accounts is – and must be in the last analysis – vague and ambiguous; clear enough in terms of accounting procedures, but clothed in uncertainty in its economic and financial implications? Do not misunderstand me here. I am well aware that few business problems have a unique solution. The future is uncertain and hazy. Errors are inevitable. It will often be seen, *ex post facto*, even when the most brilliant men are concerned, that a different course of action would have produced better results. But there is no need, for this reason, deliberately to cultivate ignorance. Carefully chosen hypothetical examples based on likely assumptions and worked out, before the event, to show the results in terms of cash flows over time, can throw light on almost any business problem – and sometimes expose an unsuspected major pitfall in a proposed course of action.

It is indeed, as I have already said, true that a critical, careful and systematic approach towards decisions, attempting to put numerical values upon the results of these, need not only arise as a by-product of advanced mathematical work. It is, however, a reproach, both to men in business, and I think also to many university economists in this country who have held themselves aloof from business, that there is far too much woolliness in business decision making and far too little thinking in figures, or at any rate using figures as an aid to thought in a way that can at least avoid the silliest of mistakes.

You may reply that my criticisms do not apply to some businesses. This is true. I am not here concerned with such businesses. High quality men will produce high quality work, wherever they are. Such men will find, like *le bourgeois gentilhomme* who found he had been talking prose for forty years, that they have been doing operational research since they went into business. But I am concerned with the others who need guidance. This, after all, is what education is for.

Mathematical Training for Business

It will now I think be apparent in what direction my mind is turning. You will not be surprised when I say that in my view the time has come for young men and women who wish to prepare themselves for more senior posts in the management stream of business – and of public bodies – to think seriously whether they should not provide themselves with a better mathematical education than has hitherto been considered necessary for such posts; and for schools and colleges to consider what preparations they should now be making to meet this need.

It may seem that the need is not yet pressing; and it is true that there is as yet no apparent abnormal demand for the delivered product. There is all the more reason to be prepared, for education of this kind cannot be produced at a snap of the fingers. It is the job of educationalists to be thinking ahead. The higher education of a young person of 18 today is not designed – or should not be designed – for the business needs of today. It is to the needs of 1975 that we should be looking.

I am not thinking of specialists in mathematical and statistical work – though we shall need plenty of these – but of those who in their early days in business will specialize in such activities as marketing, purchasing, advertising, secretarial work, accounting, and so on. To some extent work in these fields already has an obvious mathematical or statistical basis as in marketing, in which sampling techniques are relevant, or in secretarial work where the application of quality control methods to such activities as invoicing is growing. I have already given my view that many more such applications of mathematics will be found in the years to come. But it is not merely in order to appreciate the significance of certain sections of their work that these young people will need a sounder basis in mathematics, desirable though that is. I have already implied that the use of operational research methods, even when applied to simple problems (and a business problem may be quite difficult to handle, even though no more than simple arithmetic is involved in the numerical work) can be of value in inculcating a systematic, careful and critical approach to business problems. Such an approach is desirable at all levels of business. It is most desirable in those

who have reached the levels of middle and higher management. To understand these methods, some basis in mathematics is necessary.

The Accountant and Mathematics

My own subject, accounting, is in a special position in this respect. Accountants are already recognized as working in the field of numbers, and it is characteristic of the layman's attitude that he regards the accountant as a mathematician. Most of you will know that this is far from being the truth. It is a well-known saying in the profession that for success no more than an elementary knowledge of mathematics is needed – certainly no more is necessary than can be obtained in a course leading to mathematics at the ordinary level in the General Certificate of Education. I can assure you that this certificate can be obtained in the subject of mathematics by those whose range of knowledge and competence in the field is extremely limited.

Yet I believe that today the accountant, of all people, has most to gain by adding to his repertoire a reasonable competence in certain branches of higher mathematics – and by this I mean mathematics not necessarily much higher than would be relevant at the advanced level of the General Certificate of Education, though perhaps differently biased. Indeed, unless he does so soon, and moreover learns something of the way the mathematics can be applied to business problems, it is I think very likely that a substantial part of what is at present regarded as a legitimate activity for professional accountants – that broadly summed up by the words management consultancy – will pass to others. The statisticians and operational researchers tend at present to be limited in their approach. Their expertise tends to be mathematical rather than economic and financial, and to do their job they often have to work with those, such as economists and accountants, who understand these matters. But this may not last. These people will I think rapidly acquire an appetite for all aspects of management advisory work, and are unlikely in the longer run to limit themselves to the more technical side of their study. The less ready are accountants to make themselves competent in the new field, or at least to fit themselves to formulate problems in such a way that they can be handed over to the technical mathematicians and mathematical statisticians, the more likely is it that the work will pass to the latter. All the applications that I have given above – sampling, mathematical programming, queueing theory, stock control – are relevant to accountants' work.

Unless the accountants in industry are prepared to give themselves an understanding – though I emphasize not necessarily full professional expertise – of this subject, they may, I fear, find themselves in the longer run restricted to what is essentially high level book-keeping – provided the computer operators allow them to keep that side of the business – and to a *quasi* legal role, advising on such matters as income tax and, except where a company may choose to employ specialist economist staff for the purpose, financing methods.

But to return to the educational side, whether one is thinking of accounting or of other business specialisms, there is no doubt that the study of business subjects too often tends to be approached in a rigid, uncritical and very often, I am afraid, sloppy and logically woolly way. No more proof of this is necessary than a perusal of some of the textbooks in use. Intellectually speaking many of these have no merits. There are, of course, honourable exceptions. But the study of our group of subjects has, intellectually speaking, and in general, sunk far below that of the equivalent on the science side, such as the various branches of engineering. It is true that a great deal of the work in the field of economics – which let me remind you should play a similar part in relation to business and Government to that of physics in relation to engineering, providing fundamental theoretical concepts – is of an intellectually satisfactory kind; unfortunately too many academic economists have fallen into the opposite sin, that of scholasticism – failure to keep their subject alive and to make relevant its theorems by close contact with the world of business (though I am happy to say that there are now some signs of change in this respect). The relevance of industrial sociology – a most interesting and important subject – to the side of business problems concerned with human relations has hardly been appreciated yet in this country. In general, business as an intellectual activity is a Cinderella and a pretty dull Cinderella at that. The situation is strikingly different from that which reigned in Renaissance Italy, and I have no doubt in Babylon and the other cities of Akkad and Sumer.

Role of Mathematics

It is my belief that the growth and importance of mathematics and mathematical statistical work in business will provide one of the stimuli that will put business studies once more on an intellectual par with their fellow sciences, and that this stimulus will extend from the mathematical work itself to the work in those parts of business studies that are not in themselves directly concerned with mathematics. To continue my metaphor, I see mathematics in the role of a fairy godmother for Cinderella.

Perhaps I may say in parentheses, since we are concerned with commercial education, that if this is to happen, a considerable number of promising young people of high intellectual calibre will have to be attracted to the teaching and academic study of these subjects, not only mathematics and statistics, but industrial and commercial economics, accounting and industrial sociology. It will not be enough to rely on the very small number of high-grade men and women who happen to like such work, and will for this reason accept monetary disadvantages in order to do it. Unless this is recognized we cannot expect

much improvement. If the country wants high-grade business men it must pay for high-grade business teachers.

New Development in Accounting Education

Perhaps I may be permitted to refer finally to a development at my own college in the University of London, The London School of Economics and Political Science. Some of us who are concerned particularly with the teaching of accounting are so convinced of the need to raise the mathematical skills of our own graduates that we have, with the collaboration of our mathematical friends, introduced into the first year of the university course in economics which is followed by those who wish to specialize on the accounting side, a compulsory mathematics course. This is designed to allow our students, including those who have only reached ordinary level in mathematics in the General Certificate of Education, to bring themselves up to a standard which will permit them later, if they so wish, to study at least the principles of some of the new management mathematics. Those who wish to can pursue these studies further in their second and third years. Those who do not will at least have a basis upon which they can build later should they experience the need to do so, after they have left the University. In some degree we regard ourselves as pioneers in this work.

I do not pretend that there have been no difficulties. That even the most elementary mathematical teaching in some of our schools leaves much to be desired is becoming very apparent to us – the raw material we get from the schools varies a great deal in the degree to which it has been processed; and I am afraid some of it has been spoilt. And, of course, we make mistakes ourselves. We shall, however, persevere and adapt our courses, so far as we are able, to meet these problems.

It is my own firm conviction that a vastly greater number of our young people would, if only they were properly taught, find little difficulty, and indeed substantial pleasure, in the acquisition of appropriate mathematical skills and that the time will come when it will be an exceptional business man who has no facility in thinking in figures.

Profit and Loss

by a member of The Accountants' Christian Fellowship

EASTERTIDE must have a somewhat startling significance for a profession as closely bound with commerce and finance as that of the accountant. One of the first acts of Easter week was the clearing by Christ of the cashiers and traders from the Temple precincts: the incident which inspired a writer in *The Accountant* to dub one of the late Archbishop Temple's outspoken criticisms of the City as 'the Temple casting out the money-changers'.

That the practice of commerce and the sincere practice of the Christian faith are impossible at one and the same time, is a favourite theory and a plausible one. That such a theory should be shown to be untrue, must be the heartfelt object of every accountant whose faith is more than nominal. In a world where white is rarely pure, and black is rarely unrelieved, how is this object to be achieved? Not by a self-conscious concern for the opinions others may hold of us: for that is merely to destroy one's personal standards. Not by a censorious regard of the shortcomings of others: for that is merely to reflect one's own failings.

The money-changers of the Temple had become so absorbed with profit that it eclipsed, both for themselves and others, regard for God Himself. The full blasphemy of their fault, the events of Easter were to show. Those world shattering events transformed once and for all the true values of mankind: so transformed them indeed, that the apostle Paul could go so far as to say: 'What things were gain to me, these I counted loss for Christ.'

Profit – and loss. As the Christian accountant weighs them, in every context, so Easter draws his attention to other entries in the ledgers of life: and their symbols are a cross and an empty tomb.

Weekly Notes

THE ASSOCIATION'S NEW PRESIDENT

MR EDGAR SPENCER, F.A.C.C.A., a partner in the firm of Rogers, Son & Spencer, of Nottingham, was elected President of The Association of Certified and Corporate Accountants at a meeting of the Council held last Tuesday.

Mr Spencer, who is aged 64, was born in Belper, Derbyshire, and after being educated locally, served from 1915–18 in the 9th Battalion of the Sherwood Foresters. He qualified as a member of the London Association of Accountants in 1925, after carrying out his training with the firm of Rogers, Son & Co, of Nottingham, one of the oldest practices in the Midlands, having been established in 1847. He was admitted a partner in the firm in 1936 and is also a director of a number of companies.

Elected to the Council of the Association in 1952, Mr Spencer has served on all the standing committees of the Council. He was chairman of the District Societies Committee in 1958 and chairman of the Parliamentary and Law Committee in 1960. He has also been actively connected with the work of the Nottingham, Derby and Lincoln District Society of the Association since 1926, serving as honorary secretary from 1936 to 1950, and as President of the Society in 1951–52. He was also a member of the Birmingham Area group of the London Association of Accountants from 1926 to 1939.

Mr Spencer has played a prominent part in voluntary service organizations in Nottinghamshire for many years and has been closely connected with the work of the Boys' Brigade and the County Cadet Force. He is also a member of the East Midlands Regional Advisory Council for Further Education and a member of the Accountants' Advisory Panel of the University of Nottingham.

Mr Vivian Ralph Chennell, F.A.C.C.A., senior partner in the firm of Chennell & Co, Certified Accountants, of Brighton, has been elected Vice-President of the Association for the coming year.

IRISH BUDGET

IRELAND'S long struggle for independence has now been succeeded by a striving for integration with Europe, in the economic sphere. The Minister for Finance, introducing his Budget on April 10th, told the Dail that the Government was considering seriously the economic problems which might arise from her entry into the Common Market. He said he had accepted the recommendations of the Committee on Industrial Organization, which had suggested that the initial allowance on industrial plant and equipment should be raised from 20 per cent to 40 per cent, and that on industrial buildings from 10 per cent to 20 per cent. The implementation of this proposal is estimated to cost £100,000 in the current year. In order to ensure that the change shall have its desired effect quickly, the new rates are confined to expenditure prior to March 31st, 1965. Farmers' rates are to be reduced, as well as the road tax on their tractors.

Social welfare benefits also go up; *2s 6d* a week on old age and blind pensions, and increased children's allowances. Entertainment tax at cinemas and dance halls is to be abolished.

On the other side of the medal there is an appreciable increase in the taxes on tobacco and drink; a penny a pint on beer, twopence a glass on spirits, and twopence on a packet of twenty cigarettes. It seems that the Republic is also considering a general turnover tax on the Common Market model.

SITTING ON INFLATION

ONE of the criticisms of this year's Budget has been its authors' preoccupation with inflation and the failure of the Government to tackle the problem of unused capacity or preparation for entry into the European Common Market.

Sitting on inflation, however, is not the exclusive preoccupation of the British Government. In the last week Professor Erhard (whose economic miracle in Western Germany seems about to be succeeded by a more humdrum bout of wage inflation) has castigated the German car manufacturers for raising their prices. In France, old-age pensions have had to be raised whatever miracles in other quarters the French manners may be able to achieve. Most dramatic of all, President Kennedy in the United States has played Canute with the upward surge of steel prices – and has won.

Quite clearly the Chancellor of the Exchequer has plenty of current examples to choose from in implying that this country's danger is still inflation rather than deflation. He returned to the need for an incomes policy in the debate on the Budget and the need for maintaining the substance (if not quite the appearance) of wages and salaries restraint is still uppermost in the Government's mind. The Budget debate has done nothing to change it.

PUBLICIZING TECHNICAL CO-OPERATION

THE phrase 'technical co-operation' has a forbidding sound about it when it comes to stirring the public imagination. This is so both in the country offering technical help and in the country receiving it. Political parties in this country and nationalist leaders in under-developed areas do not raise their appeal for survival to their kind of standard.

Nevertheless, the latest Government White Paper with that title has much to say of interest and value on the subject. The White Paper explains that the Department for Technical Co-operation is to give special attention to twelve main heads of activity in which this country is particularly well placed to help. These include training of public servants, the supply and training of teachers, assistance with surveys and economic planning and the training of management.

It has often been said that the basis of improvement in under-developed countries rests on three things – clean water, good communications and cheap power. All these catch the imagination because they are translated into public works and public utilities. There is something to see for one's money – or other people's money obtained on favourable terms. But they are little more than twentieth-century pyramids without good service industries, good technicians and professional advice. Hence the importance of technical co-operation.

NEW BASE FOR PRODUCTION INDEX

IT has been decided to change the base year of the Index of Industrial Production from 1954 to 1958. An article by the Central Statistics Office in the March issue of *Economic Trends*[1] explains the details of the new calculation.

It points out that it is desirable to change the base and the weights in the index from time to time to take account of the changes which occur in the emphasis of different industries in the economy. The weight given to each industry in the new index is proportional to the value of its estimated net output in 1958. Apart from the change of base only minor changes have been made in the text since the publication in 1959 of the booklet, *The Index of Industrial Production: Studies in Official Statistics No. 7*, put out by H.M.S.O. A comparison between the old and the new indices shows that out of seventeen industries used, small increases in emphasis have been given to mining, the food industries, metal manufacture, other metal goods, building materials, timber and the construction industries. Modest downward adjustments have been made mainly in chemicals, engineering, shipbuilding, vehicles, textiles, leather and clothing and paper. None of the changes in either direction are very significant but it is of interest that some of the industries which have been slightly reduced in weight in the index are those which are still considered the major growth industries – chemicals, engineering and vehicles. Among the industries worth slightly greater emphasis it is noted that food and construction are prominent. What was true in 1958 may, of course, be out of date in early 1962 especially when only small changes in weighting are being made.

[1] H.M.S.O. Price 5s.

HIGHER MACHINE TOOL EXPORTS

NEW export orders for machine tools increased by 16 per cent in January compared with January 1961. These results have helped to keep the industry's order-book over the £100 million level and to offset the disappointing position in the home market. Both on price and delivery date the British industry has been enjoying superiority over its competitors, including Western Germany. An economic pause in Germany (and such is possible) might improve the delivery dates offered by German machine tool manufacturers. On the other hand, costs in Western Germany are rising so this country is likely to keep its advantage on price.

Particular attention always attaches to the performance of the machine tool industry at a time when trends in capital investment are wider considerations. As might be expected the machine tool industry in some ways typifies the problem for all capital goods industries at present. Export prospects are good: the home market is depressed. Furthermore, here is an industry facing the Common Market with mixed feelings. There are good prospects in continental Europe, but there is a home market to be defended. This year, more than ever, the machine tool industry will be a microcosm of the capital goods industries as a whole.

'DYNAMIC PENSIONS'

THIS title is given to a pension scheme which has been evolved by Hobbs Savill & Bradford (Pensions) Ltd, in collaboration with the Provident Mutual Life Assurance Association, to deal with the problem of defending pensioners from inflation and even to give them some access to the benefits of a rising standard of living in the community as a whole. Hobbs Savill & Bradford have strong connections in the United States and a sister company in Canada. The Provident Mutual has been associated with enlightened employee pension schemes since it was founded in the 1840s. The new arrangement has received the approval of the Inland Revenue Commissioners.

The new pension scheme follows the practice of certain self-employed annuity schemes being run on a 'with profits' basis although it is not itself an annuity arrangement. The 'with profits' elements in

the policy are dealt with as bonuses added in compound form to the basic annual value of the initial pension. In this way the compound bonus element added to the basic pension would offset something like a 20 per cent drop in the purchasing power of the £ over a nine-year period.

There is a modest increase in the cost of such a policy. For example, a non-contributory scheme to provide a fixed pension costs 5 per cent of the annual salary bill of a company. The same scheme with profits continuing after retirement would cost about 5½ per cent. In other words, for every 20*s* spent on a scheme offering fixed pensions the new scheme costs about 22*s* while the benefits are expected to be about 24*s* compared with each 20*s* on the value of a fixed pension. The scheme is being offered by the Provident Mutual to employers as a whole and not only to clients of Hobbs Savill & Bradford.

This is My Life . . .

by An Industrious Accountant

CHAPTER 120

ALL this topical talk about stock-in-trade valuation takes me back some years. One day I went in to see our auditors hard at work on our own stock books. There they were, four keen and able juniors, solemnly and laboriously checking tots and extensions in the heavy tomes that held our records for years back, a soul-killing task that reduced their status to that of robots. They had never looked at the articles represented by these columns of code numbers . . . 27$\frac{5}{12}$ doz. crossbred Bdfd. No. 81 Blk. Sect. 9/34 at 23/4$\frac{7}{8}$ . . . they had never queried the mechanics of our stocktaking procedure. It wasn't their fault; that was the contemporary technique.

In the men's outfitting department two floors lower down, old Michael was being rather apologetic. His stocktaking wasn't finished yet. Our figures were held up. He was *so* sorry.

He didn't look a bit sorry. He was a powerful, deep-chested Irishman whose quick eye for a bargain in purchasing, allied to an instinct for pricing to the psychological penny when selling, had made a fortune for us over the years in his section. His genial good fellowship made him deservedly well-liked; his disregard of accounting principles and preaching had nearly broken our hearts.

He took stock when he could get round to it, not when he should. 'Arrah, my bhoy, amn't I here to sell?' he protested cheerfully. 'Sure, I'll get on with me job and you can put down any figure you like for the stock; sure it'll be gone next month.'

The ready-made suits had been checked on March 26th, five days before the date; group by group they were listed in detail. An ancient volume entitled 'Stock-outs' listed day by day the subsequent sales from each of these groups; on the due date their five totals were deducted from each group to arrive at the net final figure. The use of coded symbols ensured that only someone from the 'ready-made' staff knew what to subtract from what. Sports coats, flannel trousers and knitwear had been counted on various dates from April 1st to April 6th. A further volume of 'Stock-adds' listed items sold during those six days, which, as was clear to the meanest intelligence, must be added back in order to arrive at accuracy. Depending, of course, on the exact hour each group was checked.

'Sure, the job almost went back on me when I found we'd included in our totals some stuff we'd unpacked on the 2nd', explained Michael helpfully. 'The invoices not being passed in March, we had to subtract something, you follow me? Not the totals, of course, but what was left unsold . . . we had to estimate here and there . . . it's all set out in these schedules.'

A little dazed by now, I scrutinized a further set of tabulations. Obviously actual stocks could never be counter-checked physically; the pricing per unit held untold possibilities for error. 'Michael, listen to me,' I said sternly. 'With up-to-date organization, you can count all stock in your department in four hours flat; the comptometers will stand by; we'll pre-price and pre-list the schedules. What about trying it my way for once?' He wasn't listening; he was remembering his talk with our chairman. 'I told the big fella to expect turnover to be up 11 per cent this half-year,' he mused. 'I'm aiming for a record profit at 26 per cent gross; sure his eyes were smiling when he heard it.'

I thought of the four juniors totting up their uncomprehended pages; I remembered our senior auditor when I hinted at my scruples. He had quoted the *Kingston Cotton* verdict, that millstone round the neck of our progressive thinking for decades past. He wasn't worried about stock figures; the signed certificate from the managing director was good enough in those days. But last week our junior auditor asked if he could watch our actual stocktaking to gain experience; there's a new generation growing up.

Finance and Commerce

More Intense

THIS week's reprint of the accounts of Associated Motor Cycles Ltd continues the story of the decline in the motor cycle industry that has been followed in this column. The depression has become more intense. There is a consolidated loss of £106,294 as compared with the previous profit of £427,525 and the outlook is so obscure as to leave those engaged in the industry, in production and in distribution, with only the vaguest idea when the turn will come and how far the lost past will be regained.

A.M.C. covers such famous names in motor cycling as Norton, Matchless, A.J.S., James and Francis-Barnett. It also owns The Indian Company of America, Clarendon Pressing and Welding Co of Coventry, which specializes in factory storage and transporter equipment, and R. T. Shelley of Birmingham, which produces jacks for the motor industry and tools. But the engineering and toolmaking side is a minor interest; 90 per cent of A.M.C. is motor cycles.

The accounts this time incorporate the results of the Indian Company for its first full year of trading. Last year the Indian figures were given separately, a form of accounting that some shareholders criticized as an attempt to minimize the serious position of the American company.

Turnover Down

In his statement with the accounts, Mr T. P. Cowell, the chairman, gives a broad view of the make-up of the group trading loss of £106,294. Francis & Barnett and James, which represent the two-stroke side of the business, suffered a reduction in turnover of 40 per cent and a resulting trading loss of £44,000. Norton turnover dropped 20 per cent and, although its accounts are merged with those of Shelley, it is clear, says Mr Cowell, that the motor cycle interest was not profitable. Shelley, producing largely for the vehicle industry, made a trading profit of £78,000 – and was the only sector of the group's business to do so, 'being unaffected by the vicissitudes of the motor cycle industry'.

Matchless and A.J.S. at the original manufacturing unit at Woolwich had a turnover reduction of 20 per cent, partly due to reduced demand for motor cycles of those 'marks' but primarily because Francis & Barnett and James were not taking its two-stroke engines. Looking back, it is now seen that one of the unfortunate moves of the past was the setting up of an engine factory to enable A.M.C. to become independent of the Villiers engine. But the industry then had not been forced to realize the changing fashion in transport. A.M.C. has now gone back to Villiers for its two-stroke engines.

American Loss

The American venture through the Indian Company has been a heavy burden on the group's resources. The main purpose of the American subsidiary is to provide the largest possible outlet for the company's products in the U.S.A. That means, very particularly, the high-powered Norton motor cycles, styled to give the Americans what they want – except that they, too, have not been wanting them as they did. The American company had 'a very poor year' and 'such recovery as did occur in the American economy did not significantly reduce the level of unemployment'. In addition to its £113,000 loss, the Indian Company has been left with 'considerable stocks of motor cycles'.

There is an element of write-down of stock values in the light of the current season's trading prospects in each section of the trading loss given by the chairman. In the aggregate, this write-down comes to rather more than £80,000. 'If we face the facts squarely', said Mr Cowell at the meeting, 'there is no escaping the conclusion that trading this summer is going to be difficult.'

Retail sales, broadly speaking, are running 25 per cent down on the same period last year. Comparison of one season with another in recent years, however, has been upset by the stop-go-stop hire-purchase and credit policy which has distorted normal buying trends.

Realization

If there can really be a gleam of light in this dark situation, it is in the changed attitude of a section of the shareholders who, having enjoyed high prosperity not many years ago, are now facing what these accounts have to show. Mr Cowell said at the meeting: 'I think shareholders have come to realize what a serious collapse there has been in the motor cycle market on which we are so dependent.'

Annual meetings of the last two years with most stringent criticism of the board have made headline news. This year, however, the retailers, those in the industry who actually meet the public, turned up in force and supported the chairman's description of the motor cycle depression. A leading speaker was Mr S. Hailwood, joint managing director of the motor cycle agents and distributors, King's Motors (Oxford) – and father of the racing motor cyclist. Mr Hailwood confirmed that the blight was on the whole industry, not merely in A.M.C.

It might, in parentheses, also be noted that manufacturers of the simple cycle have also had to face a similar situation in the last few years.

Meantime, the A.M.C. executive is trying to develop a balanced trade of general and specialized engineering to go with its traditional motor cycle trade. And Mr Cowell gives the assurance that 'where activities which do not produce a profit cannot be concentrated into profitable units, they will be curtailed or stopped altogether'.

CITY NOTES

HAVING indulged in its familiar post-Budget jump for joy, the stock-market has settled down to a reduced volume of business and a rather lower level of equity prices. On the basis that the Budget provided little incentive for industry, there seems little incentive to buy shares.

It can be argued that, by the autumn, the standstill Budget may have been overtaken by some Treasury re-thinking and that later in the year the equity market may begin to look more promising. But that kind of argument rarely brings immediate market support.

Noticeably, the institutions have come back to the gilt-edged section as buyers and have been supporters of industrial loan and convertible loan stocks. The convertible loan stock seems the ideal investment article under conditions in which fixed interest stocks seem likely to offer short-term appreciation against the rather longer term equity growth prospect.

In its present state of indecision, the market seems open to the adverse effect of any discouraging industrial company news at a time when taxed capital gains may considerably reduce the amount of ultra short-term market activity which could formerly be relied upon to provide a commercial dealing basis.

Under such conditions it would not be surprising to see the reverse yield gap narrowing gradually over the next few months.

The Training of Accountants

SIR, – When I read Mr Carter's article 'Training for the profession – fact and fantasy', in *The Accountant* of April 7th, I was surprised to note how far removed from the facts of the case are his remarks concerning technical schools and colleges.

No one, I believe, will seriously challenge the view that the basis of training for the accountant should be practical experience, but in regard to the manner in which educational instruction (which is equally important) should be given, opinion is divided.

Mr Carter states that 'the colleges and schools of technology seem to have only a minor place in the training for the practice of accountancy'.

The facts are that these colleges are already playing an important part in providing accountancy education. Although the number of students for the Institute examinations attending technical colleges may not, as yet, be large, the number attending who are studying for the examinations of The Association of Certified and Corporate Accountants, and The Institute of Cost and Works Accountants, is far greater, and is rapidly increasing.

Mr Carter appears to be convinced that even if a technical college could provide the necessary instruction, the time required for this purpose would be excessive. The facts are that full courses for the Intermediate and Final accountancy examinations can and *are* being provided on the day release principle, supplemented, when practicable, by a short full-time revision course of four to six weeks' duration immediately prior to the examination. There is, of course, an appropriate work assignment in conjunction with these courses which the student is able to

perform at home. An increasing number of students prepare satisfactorily for accountancy examinations in this way every year.

It is amusing to read that 'the most the technical schools can do is to provide tuition in the technique of book-keeping'. This statement may have been true of pre-war technical colleges. Today the facts are that the full-time staffs of the larger technical colleges contain many qualified accountants (representative of all recognized bodies), and at Swansea, for example, good facilities are available for tuition in every subject specified in the syllabus for the Intermediate and Final examination of the Institute.

In the face of the indisputable advance which has taken place in professional education in technical colleges in recent years, Mr Carter is being quite unrealistic in making the remarks he does in his article, some of which I have quoted above. Yet his views are not dissimilar from many other members of the Institute, who, like the ostrich, bury their heads in the sand and are thus unable to see benefits that will accrue to the entire accountancy profession by taking advantage of the educational facilities available at technical colleges. Let us hope that there are also many enlightened members of the Institute who can help to remove the dislike for change which appears to inhibit their more conservative fellows.

Yours faithfully,
H. LIVESEY,
B.A.(ADMIN.), B.COM.(LONDON),
Head of Department of Commerce,
COLLEGE OF TECHNOLOGY, SWANSEA.

SIR, – I should like to comment on Mr R. J. Carter's article in your issue dated April 7th. I was shocked to have such opinions emanate from a responsible source and especially from someone who is closely connected with the training of future accountants. I feel that the attitude is a purely negative one and can be paraphrased by saying something like this:

> 'Accountancy is a very unimportant job and really nothing much more is involved than book-keeping and advising small traders on their income tax problems. It would therefore be a waste of time to give a decent education to prospective accountants.'

It is this attitude which will deprive accountants of their rightful professional standing as advisers to commerce and industry.

Industry is becoming more and more complex yet the techniques of the profession are not keeping pace.

No one would deny the need for detailed practical experience but this surely does not mean that a sound academic foundation is to be decried. If the present Universities Scheme is considered inadequate or inappropriate it should be the task of the accountancy profession to create a better scheme. The sooner this need is realized by the leaders of our profession, the better it will be for both present and future accountants.

Yours faithfully,
London W1. E. M. KEVEHAZI, F.C.A.

Football Club Transfers

SIR, – The ways of football club finance may seem a trifle 'confusing' to Mr J. T. H. Williamson (March 31st issue), but I can assure him that professional football players are treated as current items of expense in the accounts of football clubs. There is certainly no capitalization of any player, since who could really define his value when this is liable to disappear in a matter of minutes following an accident?

The cost of acquisition of players is charged as an expense after crediting to the account income received for any players disposed of. The accounts of many professional clubs would be interesting if studied to see how profits or losses on the year's trading arise, very often as the result of debits or credits in the transfer fee account; in fact, some clubs only survive by such credits.

I cannot let the comments of the Secretary of the West Ham United Football Club go unchallenged when he says (in the footnote to Mr Williamson's letter) that 'the transfer money may be included in accounts for different years'. Transfers are the subject of formal contracts between clubs which give rise to debtors and creditors. These contracts are registered both with the Football League and the Football Association which gives them an enforceability. The mere arrangement for the satisfaction of liabilities by instalment payments does not change the fundamental accounting for debtors and creditors. Debt or credit is taken for the full amount of transfer fees in the year of the contract, whether payable or receivable by instalment payments. This follows correct accounting practice and whatever the procedure in relation to the club mentioned above may be, I feel sure that it is not the general practice to do other than follow correct accounting procedure.

Yours faithfully,
Norwich. H. ROBINSON, F.C.A.
Director,
NORWICH CITY FOOTBALL CLUB LTD.

How to Decimalize the Currency

SIR, – Further to Mr William Phillip's article in *The Accountant* of April 14th, may I remind you that many years ago H. G. Wells wrote a short story entitled *The Country of the Blind*, in disproof of the proverbial saying that in the country of the blind the one-eyed man is king. What happened in that story was that the inhabitants insisted that a stranger, blessed with sight, who had come amongst them must be blinded. I have yet to come across a reasoned statement from any competent inhabitant of a country using such a one-eyed currency as the decimal, which convincingly argued that we ought to be similarly afflicted by compulsion. This will indeed be the country of the blind if the British people permit the politicians to deprive them of the convenience of twelve pence in the shilling.

Yours faithfully,
London EC4. P. D. CONSTABLE.

THE INSTITUTE OF CHARTERED ACCOUNTANTS IN ENGLAND AND WALES

REPORT OF THE COUNCIL FOR 1961

We reproduce below the annual report[1] of the Council for the year 1961 to be presented to the eighty-first annual meeting of The Institute of Chartered Accountants in England and Wales to be held on Thursday, May 3rd, 1962, at 2 p.m. in the Hall of the Chartered Insurance Institute, 20 Aldermanbury, London EC2.

Royal Charters and Bye-laws

1. The amendments to clauses 18 and 31 of the supplemental Royal Charter of 1948, as approved by the members in general meeting on May 3rd, 1961, and at the subsequent confirmatory meeting on June 7th, 1961, were allowed by Her Majesty in Council on October 24th, 1961. The amendments to bye-laws 2, 42, 54, 58, 61, 62, 63, 79 and 85 as approved by members on May 3rd, 1961, were allowed by the Lords of Her Majesty's Most Honourable Privy Council on October 24th, 1961.

2. The general effect of those amendments (except bye-law 63 referred to in paragraph 73) is as follows:

(*a*) most of the references to 'England and Wales' and 'England or Wales' in the Royal Charters and bye-laws have been replaced as from October 24th, 1961, by references to 'the United Kingdom'; the purpose is to enable an associate or a fellow in practice as a public accountant in Scotland or Northern Ireland to take articled clerks under precisely the same conditions as an associate or fellow in practice in England or Wales;

(*b*) as a consequence of (*a*), the annual subscriptions of members resident in Scotland or Northern Ireland (whether or not in practice) have, as from January 1st, 1962, been at the same rates as those of members resident in England or Wales instead of, as hitherto, the rates applicable to overseas members;

(*c*) 'Practice' now means practice as a public accountant in any part of the world (instead of in England or Wales only) except where otherwise provided.

President and Vice-President

3. At a meeting of the Council held on Wednesday, June 7th, 1961, Mr Paul Francis Granger, F.C.A., Nottingham, was elected President for the ensuing year in succession to Mr Sidney John Pears, F.C.A., London. Mr Percy Frederick Carpenter, F.C.A., London, was elected Vice-President.

Resignations from the Council

4. The Council has to report with regret the resignations of the following from membership of the Council:

Mr Charles Maxwell Strachan, O.B.E., F.C.A., Hull, a member of the Council since 1949. He was a past chairman of the District Societies Committee and had been vice-chairman of the Parliamentary and Law Committee since 1959.

Mr Kenneth George Shuttleworth, F.C.A., Sheffield, a member of the Council since 1948.

New Members of the Council

5. The vacancies on the Council caused by the resignations reported above have been filled as follows and in accordance with bye-law 13 a resolution confirming the appointments will be submitted to the annual meeting:

Mr Ralph Gordon Slack, M.A., F.C.A., Hull.

Mr Alfred Gordon Thomas, F.C.A., Sheffield.

[1] The Appendices and some references to them in the report are not reproduced.

Retirement and Election of Members of the Council

6. For the 11 vacancies in the membership of the Council which required to be filled at the annual meeting on May 3rd, 1961, there were 12 nominations including the 11 members retiring by rotation. A ballot was taken at the meeting and as a result the 11 retiring members were re-elected.

7. The following eleven members of the Council retire under bye-law 5 and are eligible for re-election. The names of these members (other than the 'Society's appointed members' whose position is governed by clause 18 of the Scheme of Integration) have been referred to the district societies concerned and the Council recommends their re-election:

Mr Henry Alexander Benson, C.B.E., F.C.A., London.
Mr Percy Frederick Carpenter, F.C.A., London.
Mr Donald Victor House, F.C.A., London
Mr Eric Norman Macdonald, D.F.C., F.C.A., Liverpool.
Mr James Henderson Mann, M.B.E., M.A., F.C.A., London.
[2]Mr Frank Edward Price, F.C.A., Newport, Mon.
Mr Lawrence William Robson, F.C.A., London.
Mr John Dennis Russell, M.A., F.C.A., London.
Mr John Colin Montgomery Williams, F.C.A., Swansea.
Mr Robert Pearson Winter, C.B.E., M.C., T.D., D.L., F.C.A., Newcastle upon Tyne.
[2]Sir Richard Ernest Yeabsley, C.B.E., F.C.A., London.

Council and Committee Meetings

8. During the year 1961 the Council met on 11 occasions, on each of which both special and ordinary meetings were held. The following committees held meetings totalling 220 as follows:

Applications	11	General Purposes	11
Articled Clerks	11	Investigation	12
Consultative Committee of Members in Commerce and Industry	4	Library	4
		Overseas Relations	3
		Parliamentary and Law	11
Disciplinary	15	P. D. Leake	4
District Societies	4	Public Relations	10
Examination	5	Summer Course	3
Finance	11	Technical Activities	5
Special committees and subcommittees of standing committees	96		

The foregoing table does not include meetings with representatives of other bodies on matters requiring joint consideration; nor does it include Taxation and Research Committee meetings which are recorded separately in paragraph 119.

Committee on Relations with the Universities

9. At its meeting on October 4th, 1961, the Council appointed a Committee on Relations with the Universities with the following terms of reference:

'To consider methods by which closer collaboration with the universities might be achieved.'

[2] Denotes 'Society's appointed member'.

Annual Church Service

10. The annual church service was held at 1 p.m. on Wednesday, July 5th, 1961, at St Margaret's Church, Lothbury, EC2, and was attended by the President and members of the Council as well as by a number of other members of the Institute. The service was conducted by the Rector, the Rev. A. John Drewett, M.A., B.SC., and the Lesson was read by the President. The collection for the benefit of The Chartered Accountants' Benevolent Association amounted to £47.

11. The service in 1962 will be held at 12.45 p.m. on Wednesday, July 4th, at St Margaret's Church, Lothbury. The Council hopes that as many as possible of the members of the Institute will attend.

Hospitality

12. The President's Dinner was held on the evening of May 2nd, 1961, the day preceding the annual meeting of the Institute. The dinner was held at the Drapers' Hall by kind permission of the Worshipful Company of Drapers. The names of those present were reported in *Accountancy* for May 1961, and *The Accountant* of May 6th, 1961.

13. The President and members of the Council entertained The Lord Mayor of London, Sir Bernard Waley-Cohen, at a luncheon in the Oak Hall on October 3rd, 1961. Other guests were Mr Sheriff C. S. P. Rawson; Mr Deputy H. W. Keith Calder, C.B.E. (Chief Commoner); Mr Deputy O. G. Sunderland, F.C.A. (Chairman of Bridge House Estates Committee); Mr Rodway Stephens, F.C.A. (Chairman of Coal and Corn and Finance Committee); Mr Leslie B. Prince, M.A., F.C.A. (Chairman of Rates Finance Committee); Mr W. B. Holden, F.C.A. (Chairman of Central Markets Committee); Mr K. R. Cork, F.C.A. (Chairman of Music Committee); Mr R. J. Hayward, C.B.E., R.D., F.C.A. (Chairman of Officers and Clerks Committee); Mr Deputy E. F. Wilkins, F.C.A. (Chairman of Barbican Committee); Sir Irving Gane, K.C.V.O. (City Chamberlain); Mr E. H. Nichols, T.D., B.A., LL.B. (Town Clerk); Mr Desmond Heap, LL.M. (Comptroller and City Solicitor); Mr Paul C. Davie, B.A. (Remembrancer); Brigadier R. F. S. Gooch, D.S.O., M.C., M.A. (Secretary to the Lord Mayor); Mr R. S. Walker, F.R.I.C.S. (City Surveyor); Mr E. G. Chandler, F.R.I.B.A. (City Architect); Brigadier P. Clapham, O.B.E. (Common Cryer and Serjeant-at-Arms); and Colonel G. E. P. Hutchins, D.S.O. (City Marshall).

14. The President, Vice-President and chairmen of committees of the Council entertained The Viscount De L'Isle, V.C., P.C., G.C.M.G., K.ST.J., D.L., M.A., F.C.A., at a luncheon in his honour in the Oak Hall on June 27th, 1961, prior to his departure for Australia to take up his appointment as Governor-General.

15. The President, with some members of the Council and the Secretary, has entertained guests at luncheon at the Dorchester Hotel as follows:

April 14th, 1961. The Viscount Chandos, P.C., D.S.O., M.C. (Chairman, Associated Electrical Industries Ltd); The Lord Heyworth (Chairman, Unilever Ltd, 1942–60); The Viscount Kilmuir, P.C., G.C.V.O. (Lord Chancellor); The Rt Hon. Ernest Marples, M.P., F.C.A. (Minister of Transport); Sir Cyril Musgrave, K.C.B. (Chairman, Iron and Steel Board); Sir Richard Powell, K.B.E., C.B., C.M.G. (Permanent Secretary, Board of Trade); and The Rt Hon. Alfred Robens (Chairman, National Coal Board).

July 27th, 1961. Dr A. R. Beeching (Chairman, British Transport Commission); The Rt Hon. Sir Norman Brook, G.C.B. (Joint Permanent Secretary, The Treasury); The Lord Milne, C.A. (Master, The Grocers Company); The Lord Radcliffe, P.C., G.B.E. (Lord of Appeal); and Sir Ivan A. R. Stedeford, G.B.E. (Chairman, Tube Investments Ltd).

December 1st, 1961. Mr Anthony Barber, T.D., M.P. (Economic Secretary to the Treasury); The Lord Bishop of London, C.B.E., D.D., D.C.L.; Sir William Haley, K.C.M.G. (Editor, *The Times*); Sir Alexander Johnston, K.B.E., C.B. (Chairman, Board of Inland Revenue); Mr Geoffrey Lawrence, Q.C. (Chairman, General Council of the Bar); and Sir Basil Smallpeice, K.C.V.O., F.C.A. (Managing Director, British Overseas Airways Corporation).

February 15th, 1962. Mr Arthur J. Driver (President of the Law Society); Mr Victor C. Ellison, M.C., T.D. (Chairman, The Cement Marketing Co Ltd); The Rt Hon. F. J. Erroll, T.D., M.P. (President of the Board of Trade); Dr Peter S. Noble (Vice-Chancellor, The University of London); Sir Thomas Padmore, K.C.B. (Second Secretary, The Treasury); and Mr C. R. Sopwith, F.C.A. (The Public Trustee).

Visitor to Meeting of the Council

16. At its meeting held on May 3rd, 1961, the Council was pleased to welcome Mr John A. Wilson, the President of The Canadian Institute of Chartered Accountants.

Banquet in Guildhall

17. A notice was issued to members on January 19th, 1962, inviting, them to apply for tickets for an Institute banquet in Guildhall on Thursday, May 3rd, 1962. Among the guests will be The Lord Mayor of London, Sir Frederick Hoare, and The Lord Chancellor, The Viscount Kilmuir, P.C., G.C.V.O., who will propose the toast of the Institute. Other members of Her Majesty's Government and representatives of overseas accountancy bodies have been invited.

18. The President, in his address at the annual meeting on May 3rd, 1961, announced that by way of an experiment the Council had decided to arrange an entirely new form of annual meeting in 1962. Accordingly a draft plan was agreed which, in addition to the annual meeting, envisaged the holding of a number of group discussions concluding the day with a banquet in Guildhall. Unfortunately, it was not possible to obtain suitable accommodation on a date when Guildhall would also be available and when the Lord Mayor would be able to be present. Members were therefore notified on November 14th, 1961, that it had been decided to defer the experiment of group discussions for a further year but that, as now indicated in the preceding paragraph, a banquet will be held in Guildhall on the evening of May 3rd, 1962, the day of the annual meeting.

Membership Changes

19. The number of new members admitted during the year 1961 was 1,692 including 562 admitted under the Scheme of Integration (3 members of The Society of Incorporated Accountants, 2 former members of the Society and 557 students of the Society). Eight former members of the Institute resumed membership through revocation of exclusion, 4 through readmission after resignation and one after a period of suspension from membership. Under clause 22 of the supplemental Royal Charter 33 members were excluded (24 of them for non-payment of subscription). The resignations of 32 members and the deaths of 279 members were reported.

20. During the year 1961 three applications for revocation of exclusion from membership were refused and one application for admission to membership was refused. Three notices of resignation from membership were not accepted.

21. The admission of 2 members became void under bye-law 41 through non-payment of the admission fee. One of them was later admitted and is included in the total of 1,692 in paragraph 19 above. The other did not make a further application in 1961.

22. The number of members of the Institute on January 1st, 1962, was 35,228 compared with 33,867 on January 1st, 1961, an increase of 1,361. A summary of the changes is

given in the table in the Appendix, page 71. As a consequence of the substitution of 'the United Kingdom' for most of the references to 'England or Wales' in the Royal Charters and bye-laws (see paragraph 2) the table has been adjusted to reflect the reclassification of 180 members in Scotland or Northern Ireland who were previously classified 'not in England or Wales' and are now classified as 'in practice' or 'not in practice' in the United Kingdom.

Fellowship

23. During the year 1961 the number of associates who became fellows on the basis of five years' practice was 126 (compared with 165 in 1960). 1,148 associates automatically became fellows on January 1st, 1962 (compared with 896 on January 1st, 1961).

Use of the letters F.S.A.A.

24. During the year 1961 the Council approved applications under clause 4 (*b*) of the Scheme of Integration from 3 incorporated accountant members A.S.A.A. to use the letters F.S.A.A. (compared with none in 1960). 66 incorporated accountant members A.S.A.A. automatically became incorporated accountant members F.S.A.A. on January 1st, 1962 (compared with 63 on January 1st, 1961).

Incorporated Accountant Members becoming Associates

25. During the year 1961 the Council approved applications from 6 incorporated accountant members eligible to become associates in accordance with clause 6 of the Scheme of Integration (compared with 5 in 1960).

Notices to Members Overseas

26. At its meeting on November 1st, 1961, the Council decided that for overseas members the annual report, notices convening meetings and notices which invite members to reply as a matter of urgency, should in future be sent by air mail.

List of Members

27. The 1962 *List of Members* was published on February 16th, 1962. Distribution to those members who completed the reply-card stating that they wished to have a copy was completed on March 30th, 1962. A member who wishes to receive a copy of the 1963 *List of Members* is asked to complete the reply-card which accompanies this report and to return it forthwith.

Members' Handbook

28. Since the last report the following supplements to the *Members' Handbook* have been issued:

Supplement No. 9, issued on August 16th, 1961, containing the first of a series of Statements on Auditing, *General Principles of Auditing* (section U1)

Supplement No. 10, issued on March 15th, 1962, containing Statement on Auditing No. 2, *Stock-in-trade and Work in Progress* (section U2).

Disciplinary Action

29. Details are given in the Appendix, page 72,[1] of the findings and decisions of the Disciplinary Committee, and where applicable of the Appeal Committee, since the last report, on formal complaints preferred by the Investigation Committee in accordance with its duty under bye-law 105. The findings and decisions have been or will be published in *Accountancy* and *The Accountant*.

30. *Lloyd v. The Institute of Chartered Accountants in England and Wales.* On October 11th, 1961, Mr Justice Wilberforce sitting in the Chancery Division dismissed with costs an application by a member for an injunction restraining the Institute by its Council or Disciplinary Committee or otherwise from determining the question whether he had acted discreditably under the provisions of clause 21 (3) of the supplemental Royal Charter of 1948.

[1] Not reproduced.

Professional Conduct

31. The following statement was authorized by the Council at its meeting on June 7th, 1961, and published in *Accountancy* for June 1961 [and *The Accountant* of June 17th, 1961]:

Ethical Aspects of the Use of Companies by Members in Practice

'The Council has been asked from time to time whether there is any ethical reason which precludes a member of the Institute from carrying on one or more of the functions of a public accountant through the medium of a company. The Council now makes the following statement on this matter:

'(i) The Council emphasizes the personal responsibility of every member of the Institute for his professional conduct; this applies regardless of the way in which the work of the member is organized and of the medium through which it is performed.

'(ii) A member is not permitted to do under the guise or through the medium of a company or firm anything which he is not allowed to do as an individual.

'(iii) There is no ethical reason which would preclude a member's performance through the medium of an *unlimited* company of which is he a member of any of his functions as a public accountant which a company is permitted by law to perform. (Members are reminded that some functions may not lawfully be so performed, for example acting as auditor, receiver or liquidator of a company.) There is also no ethical reason which would preclude a member from using a *limited* or *unlimited* company of which he is a member to provide him with assistance (such as the provision of staff, accommodation and equipment) which he may require in the performance of any of his functions as a public accountant. In all cases the following provisos apply:

(*a*) the company shall at all times observe all the rules, and conform to all the standards of conduct, which apply to a member in practice;

(*b*) while it shall be permissible for the name of the company to be similar to that of a member or firm, it shall not be indicative of the activities of the company;

(*c*) from the standpoint of ethics the member shall be responsible for the conduct of the company and its directors and officers as if the company were a firm in which he is a partner;

(*d*) nothing in this statement shall be taken to authorize the use of the designation 'chartered accountants' by any company;

(*e*) the company shall not be used directly or indirectly as a means of sharing profits or remuneration of a member or firm in a manner contrary to clause 20 (2) of the Royal Charter.

'(iv) This statement is limited to matters of ethics and does not imply any view on the desirability or otherwise of the use of companies for the purposes indicated. It is of general application subject only to any special conditions which may exist anywhere outside the United Kingdom. The conditions on which companies were permitted to be formed under the Council's 1945 statement "Executorship and Trustee Companies" (*Members' Handbook*, section E8), which has now been withdrawn, will, however, continue to be applied to companies which are now operating under the authority of that statement. The Council hopes, however, that such companies will be brought into line with the present statement as soon as possible or convenient.'

Honours and Decorations

32. The Council congratulates the following members who have received honours and decorations since the last report:

G.C.M.G.

Viscount H. E. De L'Isle, V.C., P.C., K.ST.J., D.L., M.A., F.C.A.

K.C.V.O.

B. Smallpeice, B.COM., F.C.A.

Knight Bachelor

C. H. Pollard, C.B.E., F.S.A.A.

C.B.E.

R. M. Chapman, T.D., D.L., M.A., F.C.A., H. H. Goodwin, M.B.E., F.C.A., L. C. Hawkins, F.C.A., A. F. Lampitt, F.C.A., J. Matson, F.C.A., R. D. Sherbrooke-Walker, T.D., D.L., F.C.A.

O.B.E.

H. W. Archer, F.C.A., C. W. Baxter, M.B.E., F.S.A.A., L. F. Cheyney, F.S.A.A., K. R. Cook, M.B.E., F.C.A., J. C. Dickinson, F.C.A., H. Kennewell, F.C.A., A. W. Lowe, F.C.A.

M.B.E.

W. D. Austin, F.C.A., T. Bourne, F.C.A., G. D. Hayden, F.C.A., P. R. Johns, F.C.A., A. L. Leggett, F.C.A., G. S. Smith, M.C., T.D., F.C.A.

T.D.

E. P. Andrews, F.C.A., J. Calver-Jones, A.C.A., C. T. Digby-Jones, B.A., F.C.A., J. A. Murray, B.COM., F.C.A., R. I. Slater, F.C.A., P. Taylor, F.C.A

V.R.D.

B. Smith, F.C.A., B. J. West, M.A., A.C.A.

Lord Mayor of Cardiff

33. The President sent a letter of congratulations to Alderman Edward Ewart Pearce, M.B.E., F.C.A., on his election as Lord Mayor of Cardiff in May 1961.

National Public Service

34. Since the last report the following members have accepted appointments of national importance. The list does not include numerous appointments of importance in local or regional spheres of public service:

Member	*Appointment*
Mr R. D. R. Bateman, M.B.E., F.C.A. Mr L. W. Robson, F.C.A.	By the President of the Board of Trade, to membership of an advisory committee to advise on the preparation of forms and instructions, and the making of any orders, for the census of production to be taken in 1963 in respect of the year 1962, and for the two subsequent annual censuses.
Mr H. A. Benson, C.B.E., F.C.A.	By the Minister of Commerce, Northern Ireland, to investigate the position of the railways, to make recommendations about their future, and to report on the effect which the recommendations will have on the transport system of the Ulster Transport Authority.
Sir William Carrington, F.C.A.	By the Minister of Health, as chairman of the Dental Rates Study Group.
Mr J. Cockram, F.C.A.	By the Minister of Housing and Local Government, to membershipof the Central Advisory Water Committee for a further period.
Mr R. W. Foad, F.C.A.	By the Minister of Power, to executive membership of the Iron and Steel Board.
Mr J. W. Hough, O.B.E., F.S.A.A.	By the Minister of Health, to membership of the Board of Governors of the National Hospitals for Nervous Diseases.
Mr D. V. House, F.C.A.	By the Minister of Transport, as chairman of the committee of inquiry into shipping services between Great Britain and Northern Ireland.
Mr W. H. Lawson, C.B.E., B.A., F.C.A.	By the Chancellor of the Exchequer, as chairman of the Iron and Steel Holding and Realisation Agency for the period from January 1st, 1962, to June 9th, 1963.
Mr M. S. Rigden, F.C.A. Mr E. D. B. Todd, F.S.A.A.	By the Minister of Health, to membership of the Lycett Green Committee on administration and clerical staffing arrangements in the hospital service.
Sir Graham Rowlandson, M.B.E., F.C.A.	By the Minister of Health, to membership of the Council for Professions Supplementary to Medicine.
Mr J. D. Russell, M.A., F.C.A. Mr J. M. A. Smith, F.C.A.	By the Minister of Housing and Local Government to membership of the Commission for New Towns.
Mr J. M. A. Smith, F.C.A.	By the Chancellor of the Exchequer, to membership of the committee of inquiry into decimal currency.
Mr C. R. Sopwith, F.C.A.	By the Lord Chancellor, as Public Trustee.

Council Nominations to Other Bodies

35. *National Productivity Year.* The President has accepted an invitation from the British Productivity Council to be one of the Vice-Patrons of the British Productivity Year which is to be held from November 1962 to November 1963, and of which H.R.H. The Duke of Edinburgh has consented to be the Patron.

36. *Festival of the City of London – July 1962.* At the invitation of the Lord Mayor of London, the Council has appointed the President of the year to serve on the Council of the Festival of the City of London, sponsored by the City Arts Trusts in association with the Arts Council and to be held between July 9th and 21st, 1962.

37. *National Council for Quality and Reliability.* On August 2nd, 1961, the Council decided that the Institute should become a constituent member of the newly-formed National Council for Quality and Reliability and appointed Mr J. Clayton, F.C.A., as the Institute's representative on that Council.

38. *Trustee Savings Banks Inspection Committee.* The Council has reappointed Mr W. G. Densem, F.C.A., to be a member of the Trustee Savings Banks Inspection Committee for a period of four years from November 21st, 1961.

39. *London Chamber of Commerce.* On April 5th, 1961, the Council nominated Mr J. D. Russell, M.A., F.C.A., as one of the two honorary auditors of The London Chamber of Commerce for a period of three years.

40. *City of London College.* The Council has reappointed Mr P. F. Carpenter, F.C.A., to represent the Institute on the governing body of the City of London College for a further term of three years from March 1961.

41. *Joint Committee for the Award of Diplomas in Management Studies.* Mr A. W. Howitt, M.A., F.C.A., has been appointed as the Institute's representative on the Joint Committee set up by the Minister of Education for the Award of Diplomas in Management Studies.

42. *Professional Classes Aid Council.* On June 7th, 1961, the Council reappointed Mr J. A. Allen, F.C.A., as the Institute's representative on the Professional Classes Aid Council for a further term of three years.

Library

43. *Activity.* The following figures show the extent to which the library has been used in recent years:

Year	*Attendances*	*Books lent*
1957	9,375	4,459
1958	11,295	6,783
1959	12,332	6,710
1960	12,143	6,922
1961	14,037	7,270

44. *Collection of early books.* The following important additions have been made to the Institute's collection of early books:

Pacioli (Luca): *Divina Proportione: opera a tutti glingegni perspicaci e curiosi necessaria ove ciascun studioso di Philosophia, Prospectiva, Pictura, Sculptura, Architectura* . . . Luca Pacioli 1509. (This completes the Institute's collection of all the known printed works of Luca Pacioli.)

Josephus Unicornus: *De l'arithmetica Universale* . . . Venice. 1598.

45. *Short list.* A new edition dated August 1961 of the *Short List* of books in the Library is available to members, without charge, from the Librarian on receipt of an addressed label. (This supersedes the August 1959 edition and the third cumulative supplement issued in June 1961.) The *Short List* is sent to each new member on admission.

Appointments Register

46. The number of members who were enrolled on the appointments register in 1961 was slightly less than in the previous year. The decrease was, however, mainly confined to the younger members, there being a significant increase in the number of those over 45 years of age making use of the register. Assistance in finding employment for these members is therefore especially welcome. The number of vacancies notified by employers during 1961 showed a considerable fall as compared with the previous year although there continued to be a very wide demand for young members. The number of members placed through the register was slightly higher than in 1960. Members are particularly requested to bring the facilities provided through the register to the notice of prospective employers.

Deaths of Members

47. The names of members whose deaths have been reported up to the date of preparing this report are given in the Appendix[1]. These include:

Mr Geoffrey Bostock, F.C.A., one of the Institute's auditors from 1934 to 1958. The President sent a message of sympathy to the family and partners.

Mr George Oliver May, F.C.A., who had been a member since 1897. He played an outstanding part in the development of the profession both in the U.S.A. and in the wider international field. He had for many years been a leading member of The American Institute of Certified Public Accountants. A message of sympathy was sent to the family and the American Institute.

Institute Examinations in 1961

48. Examinations were held in May and November 1961, the Preliminary examination in London and Manchester and the Intermediate and Final examinations in London, Birmingham, Cardiff, Leeds, Liverpool, Manchester and Newcastle upon Tyne; in addition the Intermediate examination was held in Bristol and Nottingham. The following were the results:

	Passed	Failed	Total Candidates	*Comparative totals 1960*
Preliminary ..	128	305	433	*478*
Intermediate	1,883	2,164	4,047	*4,184*
Final ..	1,506	1,688	3,194	*2,992*
Totals ..	3,517	4,157	7,674	*7,654*

The Council wishes to place on record its appreciation of the administrative work undertaken by district societies in connection with the holding of examinations.

49. *Disqualification of examination candidates.* The following statement was published in *Accountancy* for October 1961 and *The Accountant* of October 14th, 1961:

"The Chairman of the Examination Committee reported that a candidate in the May 1961 Final examination and a candidate in the May 1961 Intermediate examination were discovered attempting to cheat, one of the candidates being found to be in possession of notes in the examination room during one of the papers. The committee had, after inquiry, disqualified both candidates and informed them that they would not be allowed to present themselves for examination on any subsequent occasion.

50. *Notification of results.* At its meeting on May 3rd, 1961, the council authorized the issue of a statement [*The Accountant*, May 13th, 1961] setting out a new procedure for notifying results to candidates, the object being to reduce the candidates' waiting period. The new procedure was followed for the May and November 1961 Intermediate and Final examinations.

Final Examination Syllabus

51. In the syllabus for the paper on English Law (Part II) in the Final examination the item referring to 'Trusts, as contained in the Trustee Act, 1925' has been altered to refer to 'Trusts, as contained in the Trustee Act, 1925, and the Trustee Investments Act, 1961'. An announcement to that effect was made by the Council on February 7th, 1962, and published in *Accountancy* for February 1962 [and *The Accountant* of February 17th, 1961].

Final Examination of the Society

52. Examinations were held in May and November 1961 in London, Belfast, Birmingham, Cardiff, Dublin, Glasgow, Leeds, Liverpool, Manchester and Newcastle upon Tyne. The following were the results obtained by candidates for membership of the Institute:

	Passed	Failed	Total
Final			
Parts I and II together	3	3	6*
Part I only	9†	7	16
Part II only	112†	58	170

† In addition to the 112 who have completed the Final examination by passing Part II, 2 of the 9 successful candidates in Part I had already passed Part II and have therefore now completed the Final examination.

* In addition, 1 candidate who sat for both parts passed in Part I only.

The Final examination of The Society of Incorporated Accountants, was held for the last time in November 1961. Former students of the Society who registered as a result of the Scheme of Integration and who are eligible to present themselves for a Final examination must now apply to sit for the Final examination of the Institute. At its meeting on February 7th, 1962, the Council placed on record its appreciation of the services rendered by the Society's Board of Examiners.

South African Special Final Examination

53. The South African Special Final examination was held in South Africa and Southern Rhodesia in May and November 1961. The examination was passed by 17 candidates and failed by 2 candidates.

54. At its meeting on March 7th, 1962, the Council authorized the following statement which was published in *Accountancy* for March 1962 [and *The Accountant* of March 17th, 1962:]

"The Scheme of Integration between The Institute of Chartered Accountants in England and Wales and The Society of Incorporated Accountants provided that the Special Final examination of the Society held in South Africa and in Southern Rhodesia should be held until December 1967 "if and so long as the Council of the Institute considers it necessary and practicable to do so". The examination, which was conducted by the Society for many years in May and November annually, may be taken only by those former students of the Society who registered with the Institute as a result of the Scheme of Integration; no other person is eligible.

'The Council of the Institute has decided that from May 1962 the examination will be held in May only of each year, subject to its right under the Scheme to discontinue the examination before 1967.

'Any former student of the Society who registered with the Institute under the Scheme of Integration and who

[1] Not reproduced.

has not received a communication incorporating the foregoing information is invited to write to the Secretary of the Institute, Moorgate Place, London EC2.'

Examination Prizes and Certificates of Merit

55. The names of the candidates awarded prizes and certificates of merit in the Institute's examinations held in 1961 are given in the Appendix, page 78[1]. The President presented prizes and certificates of merit in the Oak Hall. Candidates accompanied by their relatives and friends were entertained to tea and given the opportunity of seeing the Council Chamber, the Committee Room and the Library.

The C. W. Boyce Prize

56. Chartered Accountants Charities Ltd, as trustee of the Institute Prize Trust Fund, has accepted a special donation of £250 contributed by many friends in Bradford of the late Charles William Boyce, C.B.E., F.C.A., on the understanding that not less than seven guineas will be made available half-yearly for C. W. Boyce Prizes. Mr Boyce was a member of the Council from 1935 to 1957 and was President for the year 1951–52. The C. W. Boyce Prize will be awarded in the Final examination to the student of the Bradford and District Chartered Accountant Students' Society who obtains the best results in the examination as a whole; an announcement to that effect appeared in *Accountancy* for October 1961 [and *The Accountant* of October 14th, 1961]. The first award was made in respect of the November 1961 Final examination.

The Charles M. Strachan Prize

57. Chartered Accountants Charities Ltd, as trustee of the Institute Prize Trust Fund, has accepted a gift of £900 Hull Corporation 3½ per cent Irredeemable stock First Issue from Mr Charles Maxwell Strachan, O.B.E., F.C.A., on the understanding that not less than fifteen guineas will be made available half-yearly for Charles M. Strachan Prizes. The Council has acknowledged with gratitude this gift by Mr Strachan who was a member of the Council from 1949 to 1961. At its meeting on February 7th, 1962, the Council decided that the Charles M. Strachan Prize shall be awarded in the Final examination to the Candidate (other than the candidate taking any other prize) who obtains the highest number of marks in the examination; an announcement to that effect appeared in *Accountancy* for February 1962 [and *The Accountant* of February 17th, 1962]. The first award was made in respect of the November 1961 Final examination.

Exemption from the Preliminary Examination

58. *Bye-law 78.* Certificates of exemption from the Preliminary examination were issued during the year 1961 to 3,336 persons who had passed exempting examinations compared with 3,067 in the previous year.

59. *Executive Class Written Open Competition Examination.* At its meeting on June 7th, 1961, the Council decided that the Executive Class Written Open Competition Examination of the Civil Service Commission should be added to the list of examinations recognized under bye-law 78 (*b*) for the purpose of exemption from the Preliminary examination and that a candidate relying upon that examination should be required to have obtained a pass in one of the optional mathematical subjects available on the syllabus. An announcement to that effect was published in *Accountancy* for June 1961 [and *The Accountant* of June 17th, 1961].

60. *Bye-law 79.* Exemption from the Preliminary examination was granted during the year 1961 to 21 applicants under bye-law 79. One application was refused. (The number of applications granted in 1960 was 37.) This bye-law relates to persons, not being under the age of 30 years, who at the date of application had been for ten years continuously in employment as clerk to a member or members in practice.

[1] Not reproduced.

61. *Bye-law 81.* During the year 1961 permission was granted to 3 applicants to sit the Intermediate examination earlier than normally eligible; and 6 applications were refused. (The numbers in 1960 were 8 granted and 3 refused.)

62. *Bye-law 86 (a).* During the year 1961 permission was granted to 10 applicants to sit the Final examination earlier than normally eligible; and 8 applications were refused. (The numbers in 1960 were 19 granted and 3 refused.)

Education and Training Committee

63. At its meeting on April 5th, 1961, the Council authorized the issue of the following statement which was published in *Accountancy* for April 1961 [and *The Accountant* of April 15th, 1961]:

'The Council received the report of the Education and Training Committee.

'The Council expressed its warm thanks to the chairman, Mr W. E. Parker, C.B.E., F.C.A., and to the members of the committee, especially those who are not themselves members of the Council. It also expressed its gratitude to the many persons inside and outside the membership of the Institute who have assisted the committee with evidence and advice, and the Secretariat which has served the committee so well.

'It was decided that the report should be referred to the appropriate committees of the Council and to the committees of the district societies. Until these committees have given the report the close study which it requires the Council will not be in a position to indicate its own attitude to the various recommendations. In the meantime, therefore, although the Council has agreed to publication the report should not be looked upon as giving any indication of the views of the Council.

'Copies of the report may be obtained free of charge on application to the Secretary, Moorgate Place, London EC2, on and after Friday, May 5th, 1962.'

The report of the committee has been considered in detail by the Council in the light of the comments made by the committees of the Council and the committees of the district societies. The Council has adopted in principle many of the recommendations made in the report and others are still under consideration. The relevant committees are considering the financial implications and, where applicable, the procedure and time-table for implementation. There will be consequential alterations to the Royal Charters and bye-laws. Meanwhile announcements will be made from time to time by the Council but no member, student or prospective student should take any course of action based on the assumption that a particular recommendation will be implemented.

64. In view of the increasing part being played by technical and commercial colleges within the educational system, the Council has decided to examine the scope for assistance from such colleges on a wider scale than is envisaged in the report of the Education and Training Committee.

Articles of Clerkship

65. *Registrations.* During the year 1961 the number of articles of clerkship registered was 3,240 compared with 2,992 in 1960.

66. *Service under articles in Scotland and Northern Ireland.* As stated in paragraph 2 the Royal Charters and bye-laws have been amended so that associates and fellows in practice in Scotland or Northern Ireland may take articled clerks under precisely the same conditions as associates and fellows in practice in England or Wales.

67. *Permitted number of articled clerks.* At December 31st, 1961, permission under bye-law 56A to take additional articled clerks was in operation for the partners in 55 firms, who had been allowed 787 additional clerks.

68. *Refusal to register articles of clerkship.* An applicant for exemption from the Preliminary examination who admitted forging a letter submitted in support of the application was informed that the Council will refuse to accept for registration articles of clerkship to which he is a party. An articled clerk whose articles had been cancelled because of theft by him was informed that further articles to which he is a party will not be registered.

69. *Disciplinary Committee.* Since the last report the Disciplinary Committee has considered formal complaints

preferred by the Investigation Committeee against three articled clerks. The findings and decisions of the Disciplinary Committee in respect of two of these clerks are recorded in the Appendix[1], and have been reported in *Accountancy* and *The Accountant*. In respect of the third clerk the Disciplinary Committee decided to take no action.

70. *Prescribed clauses.* Two applications were received and one was granted during the year 1961 for permission to waive the inclusion of certain provisions prescribed under bye-law 51 for inclusion in all articles. (In 1960 one application was made and was granted.)

71. *Bye-law 57* During the year 1961 permission was granted to 22 articled clerks to follow, while under articles, another business or occupation to the limited extent specified in their applications; and 2 applications were refused. (The numbers in 1960 were 18 granted and none refused.)

72. *Bye-law 58 (c).* During the year 1961 permission was granted to 38 articled clerks wishing to spend periods not exceeding six months in an industrial, commercial or other suitable organization; and 2 applications were refused. (The numbers in 1960 were 31 granted and one refused.)

Concessions to Former Regular Officers

73. In the last report (paragraphs 62 and 63) the Council recorded its decision to use its powers under bye-law 63 in favour of former regular officers of H.M. Forces who satisfy certain conditions; and in accordance with the resolution passed at the annual meeting on May 3rd, 1961, the bye-law, has been amended by removing the requirement that the national service shall have been during war or any other period of national emergency. To the end of the year 1961 the Council granted 5 applications under bye-law 63 (*c*) for a reduction of one year in the period of articled service. One application was refused. No applications were received under bye-law 63 (*a*) for exemption from the Preliminary examination.

Recruitment of Articled Clerks

74. The Council has continued its efforts to make students, parents and careers advisers more aware of the many aspects and advantages of a career as a chartered accountant. It has relied greatly on the work of district societies, branches, groups and individual members in fostering contacts with schools and youth employment officers and in arranging for representation at careers conventions and exhibitions.

75. More than one hundred members of the Institute in most parts of England and Wales have been nominated by district societies to give advice concerning entry into articles and, where required, to give introductions to members with vacancies for articled clerks. The names and addresses of the members so nominated have been sent to all schools in England and Wales at which pupils remain to the age of 16 and beyond, to university appointments officers and to the youth employment service.

76. For Greater London, the individual advisory and introductory service is undertaken by the staff of the Institute. Over 700 interviews took place in 1961 and more than 400 students entered articles with members to whom they had been introduced by the Institute.

77. Members who are prepared to accept students from overseas are strongly recommended to make use of the introductory service provided by the Institute. It is in the best interests of members and students that this service should be regarded as the normal method of introduction for overseas students. Attention is therefore drawn to the statement issued by the Council in June 1961 [*The Accountant*, June 17th, 1961].

78. New editions of the booklets *Why Not Become a Chartered Accountant?* and *The Chartered Accountant: A Career for Graduates* have been widely circulated and the Central Youth Employment Executive has repeated the half-yearly comprehensive distribution to schools of the booklet *General Information and Syllabus of Examinations.*

79. Advertisements and contributed articles have appeared in the principal careers guides for university students and on March 29th, 1962, a conference was held at Moorgate Place with university appointments officers. The appointment of the Committee on Relations with the Universities (paragraph 9) is a further indication of the great importance which the Council attaches to the need for a substantial increase in the number of graduates who enter into articles.

80. During Commonwealth Technical Training Week (May 29th to June 4th, 1961), district societies and individual members throughout the country co-operated in many local exhibitions and conventions and organized special meetings for teachers and students. The Council wishes to thank members for participating and for the work which they are still doing to maintain and extend the goodwill created by their efforts.

Bye-laws 61 and 85 (*b*)

81. Bye-laws 61 and 85 (*b*) relate to those persons who have for not less than ten years been continuously in employment as clerks to members in practice or who have had experience which in the opinion of the Council is equivalent to such employment. Such persons may apply for a reduction in the period of service under articles (bye-law 61) and exemption from the Intermediate examination (bye-law 85 (*b*)). Applications determined in 1961 were as follows:

Bye-law 61: 34 applications, of which 27 were granted. (In 1960 the numbers were 46 and 42 respectively.)
Bye-law 85 (b): 29 applications, of which 17 were granted. (In 1960 the numbers were 27 and 13 respectively.)

All these applicants were interviewed in London or in the provinces unless they had already been interviewed in connection with an application under bye-law 79 (see paragraph 60).

The Robbins Committee on Higher Education

82. At its meeting on August 2nd, 1961, the Council approved a memorandum for submission to the Committee on Higher Education (the Robbins Committee). Oral evidence was later given by Mr W. G. Densem, F.C.A., and Mr W. E. Parker, C.B.E., F.C.A.

The Universities and the Accountancy Profession

83. *Bye-law 85 (a).* During the year 1961 exemption from the Intermediate examination was granted to 101 articled clerks who had graduated after taking one of the degree courses approved for the purposes of bye-law 62; and 3 applications were refused. (The numbers in 1960 were 132 granted and none refused.)

84. *Approved university degree courses.* At its meeting on November 1st, 1961, the Council approved the following university degree courses for the purpose of bye-law 62 provided that in each case the subjects taken are in accordance with the course approved by the Joint Standing Committee of the Universities and the Accountancy Profession:

University of Leeds. Bachelor of Commerce (in place of the previously approved Bachelor of Commerce) for students commencing their degree ccurse from October 1961.
University of London. Bachelor of Science in Economics (in place of the previously approved Bachelor of Science in Economics) for students commencing their degree course from October 1961.
University of Manchester. Bachelor of Arts in Economic and Social Studies (in place of the previously approved Bachelor of Arts in Commerce) for students commencing their degree course from October 1961.
University of Southampton. Bachelor of Science in the Social Sciences (in place of the previously approved Bachelor of Science in Economics) for students commencing their degree course from October 1962.

There is no change in the position of students who commenced a degree course previously approved under bye-law 62. A statement to the above effect appeared in

[1] Not reproduced.

Accountancy for November 1961 [and *The Accountant* of November 11th, 1961].

85. *Joint Standing committee's booklet.* Details of the degree courses approved by the Council under bye-law 62 are given in the booklet *The Universities and the Accountancy Profession* issued by the Joint Standing Committee of the Universities and the Accountancy Profession. The April 1960 edition of this booklet was published to cover the two university sessions from October 1961 to July 1963. In view, however, of the revision of the degree courses at the universities of Leeds, London and Manchester from October 1961 the booklet was revised and reprinted in September 1961.

86. *Institute booklet.* The Institute's booklet *Approved Universities Degree Courses: Explanatory Notes* was revised and reprinted in November 1961. This booklet explains the Institute's regulations regarding articles and examinations as they affect the joint standing committee's scheme.

87. *Conference.* A conference attended by members of the Joint Standing Committee of the Universities and the Accountancy Profession and representatives of the local joint committees of accountants and university representatives was held at Burwalls, University of Bristol, from September 22nd, to 24th, 1961. This was the sixth conference to be held.

Students' Societies

88. On March 6th, 1962, a liaison committee of the Union of Chartered Accountant Students' Societies had its annual discussion with the President and certain members of the Council.

Grants to Students

89. In order to compile a more comprehensive record for the benefit of members and articled clerks an inquiry is to be undertaken, with the co-operation of students' societies, to establish which local education authorities have made grants towards the tuition expenses of articled clerks.

Summer Courses

90. *1961.* Two summer courses were held in 1961 as follows:

(*a*) *Oxford.* A summer course held at Christ Church, from July 13th to 18th, 1961, was attended by 185 members of whom 84 were in practice, 48 were engaged in industrial, commercial and other occupations and 53 were engaged with public accountants. The addresses presented were as follows: 'Services to the private company and its members', by Mr A. B. Snow, F.C.A.; 'Surtax and companies', by Mr J. S. Heaton, F.C.A.; and 'Some problems of a group upon the acquisition of companies', by Mr R. O. A. Keel, F.C.A. In addition an informal talk was given by Sir Theobald Mathew, K.B.E., M.C., the Director of Public Prosecutions. Mr John L. Carey, Executive Director of The American Institute of Certified Public Accountants, took part in a general discussion on topics of interest to the profession with the Secretary and Deputy Secretary of the Institute. Mr H. C. Treffers, President of the Nederlands Instituut van Accountants, attended the course.

(*b*) *Cambridge.* A summer course held at Gonville and Caius College from September 13th to 17th, 1961, was attended by 161 members of whom 52 were in practice, 75 were engaged in industrial, commercial and other occupations and 34 were engaged with public accountants. The addresses presented were as follows: 'The employment of capital', by Mr J. C. Walker, F.C.A.; 'Some considerations in relation to the accounting treatment of stock-in-trade and work in progress', by Mr H. W. Sydenham, F.C.A.; and 'What the business man expects of the practising professional accountant', by Sir Donald Perrott, K.B.E.

The full text of the six formal addresses, together with the programme for both courses, was subsequently reprinted in the form of a booklet for each course for which an order form was sent to all members of the Institute on November 14th, 1961. The price of the booklets is 5*s* each post free. (Remittances must accompany orders.)

91. *1962.* Summer courses are to be held in 1962 as follows:

(*a*) *Cambridge,* at Emmanuel and Sidney Sussex Colleges from Wednesday, 18th to Sunday, July 22nd, 1962. The subjects and speakers will be: 'Taxation aspects of amalgamations and reconstructions', by Mr D. O. Bailey, F.C.A.; 'Service to management', by Mr R. D. S. Shrimpton, F.C.A.; and 'Insurance and the accountant', by Mr David Williamson, F.C.A.

(*b*) *Oxford,* at Christ Church and Pembroke College from Thursday, 13th to Tuesday, September 18th, 1962. The subjects and speakers will be: 'The training of accountants for industrial responsibilities', by Mr G. W. Searle, D.S.C., F.C.A.; 'The problems of the smaller practice', by Mr R. W. Smith, O.B.E., T.D., F.C.A.; and 'Investment in stocks and shares', by Mr Mr A. G. Touche, F.C.A. Informal talks will be given by Sir Edmund Compton, K.B.E., C.B., the Comptroller and Auditor-General, and by Mr Howard Ross, a Vice-President of The Canadian Institute of Chartered Accountants.

An application form was sent to all members of the Institute on February 16th, 1962.

92. *1963.* Provisional dates for summer courses in 1963 are:

Oxford	..	July 11th to 16th, 1963.
Cambridge	..	September 11th to 15th, 1963.

District Societies of Chartered Accountants

93. *President's visits.* The President, with the Secretary or an Under-Secretary, has attended annual dinners or other annual functions of the district societies and has met students at informal meetings during his visits. Members of the Council have represented the Institute at dinners and other functions held by branches and students' societies.

94. *Annual conference.* The annual meeting of Presidents and Secretaries of district societies with representatives of the Council took place on November 9th, 1961.

95. *Areas.* Following agreement between the two societies concerned, the Council has agreed to an alteration in the boundaries of the Sheffield and District Society and the Leeds, Bradford and District Society. The re-definition of the areas is set out in the Appendix.[1]

96. *London and District Society of Chartered Accountants.* The Council appointed Mr D. V. House, F.C.A., Mr J. H. Mann, M.B.E., M.A., F.C.A., and Mr J. D. Russell, M.A., F.C.A., to serve on the Committee of the London and District Society of Chartered Accountants for the year 1961–62.

97. *Women Chartered Accountants' Dining Society.* The President and the Secretary, accompanied by Mrs Granger and Mrs MacIver, attended the annual dinner of the society on December 1st, 1961.

The Small Practitioner

98. The President has asked all district societies to undertake an inquiry into the problems and difficulties of the small practitioner. The President's letter to presidents of district societies was accompanied by a standard form of questionnaire; and the letter was reproduced in *Accountancy* for October 1961 [and *The Accountant* of October 21st, 1961]. District societies, branches and groups have held meetings and the views which have been expressed are being examined in committee and will in due course be considered by the Council. The Council appreciates the contribution which has been made by presidents and by other officers of district

[1] Not reproduced.

societies in undertaking the considerable amount of work which the inquiry has involved.

Technical Activities Committee

99. The Technical Activities Committee was appointed by the Council at its meeting on June 3rd, 1959, to review the whole question of the Institute's activities in the technical field and to report with recommendations on (*a*) objectives, (*b*) how those objectives can be achieved, and (*c*) the associated problems of staff and office accommodation. The committee's report was received by the Council at its meeting on March 7th, 1962, and is now under consideration.

Statements on Auditing

100. Four years ago the then President in his address to the annual meeting mentioned that the Council had decided to see whether a series of Statements on Auditing could be prepared by way of parallel to the Recommendations on Accounting Principles. He said that this possibility would need to be examined very carefully and that the preparation of such documents must inevitably take a considerable time but he expressed the hope that it would prove possible to render assistance to members in that way. At the annual meeting on May 3rd, 1961, the President referred to this matter and said:

> 'We have made a good deal of progress since then and it is my hope and belief that before long the Council will be able to begin to issue a series of Statements on Auditing. I am confident that the issue of such a series could result in progress in auditing standards no less spectacular than the progress in standards of company accounting which were brought about by the Council's decision nearly twenty years ago to issue the Recommendations on Accounting Principles.'

101. The Council has now begun the issue of such a series of Statements on Auditing as follows:

(1) *General Principles of Auditing*, distributed on August 16th, 1961, as Supplement No. 9 to the *Members' Handbook*.

(2) *Stock-in-trade and Work in Progress*, distributed on March 15th, 1962, as Supplement No. 10, to the *Members' Handbook*.

Each statement is also available in booklet form price 1*s* per copy including postage. (*Remittances must accompany orders.*) In this form the statements have been issued to the students' societies for distribution to all their student members.

Terminology in Published Accounts

102. At its meeting on January 3rd, 1962, the Council approved notes entitled *Terms used in Published Accounts of Limited Companies* for issue to members for insertion in the *Members' Handbook*. An announcement to that effect appeared in *Accountancy* for January 1962 [and *The Accountant* of January 13th, 1962]. These notes are to be issued on May 4th, 1962, as part of Supplement No. 11 to the *Members' Handbook*. The notes are also available in booklet form, price 5*s* including postage. (*Remittances must accompany orders.*)

Taxation

103. *Finance Act, 1961.* A memorandum on the Finance Bill was submitted to the Chancellor of the Exchequer on May 12th, 1961, and was discussed with members of the Board of Inland Revenue on May 24th, 1961, when the Institute was represented by Mr H. A. Benson, C.B.E., F.C.A., Mr N. B. Hart, O.B.E., T.D., M.A., LL.B., F.C.A., and Mr J. E. Talbot, F.C.A.

104. *Stock-in-trade and Work in Progress.* As a result of discussions which Mr S. John Pears, F.C.A. (as President), and Sir William Carrington, F.C.A., had had with the Chairman and other representatives of the Board of Inland Revenue the following letters were received:

(*a*) letter dated May 1st, 1961, from the Chairman of the Board setting out the Revenue's attitude to the Council's Recommendation 22 on *The Treatment of Stock-in-trade and Work in Progress in Financial Accounts.*

(*b*) letter dated May 25th, 1961, from Mr H. G. Thomas, Senior Principal Inspector of Taxes, regarding the 'adjusted selling price' method of computation of cost of stock-in-trade.

These letters were reproduced in *Accountancy* for May 1961 and June 1961 respectively [and *The Accountant* of May 13th and June 17th, 1961].

105. *Discussions with the Board of Inland Revenue.* In addition to stock-in-trade, referred to in the preceding paragraph, other matters have been the subject of discussion with representatives of the Board of Inland Revenue. The Council greatly values these opportunities for discussion which it hopes and believes are of mutual benefit. Statements arising therefrom will be issued as and when this is considered to be appropriate.

106. *Apportionment of expenditure on repairs and improvements of fixed assets.* At its meeting on October 4th, 1961, the Council approved the publication of a statement[1] recording the view of the Board of Inland Revenue that where it is established that actual repairs have been carried out at the same time as improvements the law permits the expenditure to be apportioned between the two elements.

107. *Schedule E: members' subscriptions to district societies.* The Council is pleased to report that all 13 provincial district societies have now been approved by the Commissioners of Inland Revenue for the purposes of section 16 of the Finance Act, 1958. Accordingly the whole of the annual subscription paid to a district society by a member who qualifies for relief under that section is allowable as a deduction from his emoluments assessable to income tax under Schedule E.

108. *Interest on Government stocks on the Post Office Register.* The Council has made representations to the Treasury (by way of renewal of representations made in 1948 and 1956) regarding the absence of vouchers for interest paid on issues of Government stocks on the Post Office register. No change is likely to be made while the existing equipment for making payments is in use.

109. *Overseas trade corporations.* At its meeting on March 7th, 1962, the Council authorized the sending of a letter to the Chancellor of the Exchequer enclosing a memorandum on practical difficulties encountered in the operation of the overseas trade corporations legislation and also requesting the Chancellor to consider again the proposal made by the Council in its memorandum of December 2nd, 1959, that the legislation should be extended to embrace income from non-resident subsidiaries.

Building Societies

110. The following statement was authorized by the Council at its meeting on June 7th, 1961, and published in *Accountancy* for June 1961 [and *The Accountant* of June 17th, 1962].

> 'The Council in its booklet *Audits of Building Societies* (which was published in December 1960 and reproduced in the December issue of *Accountancy*) has drawn the attention of members to section 48 of the Building Societies Act, 1960, and its possible effect on the holding of a building society agency by the auditor of that society.
>
> 'The Council has now given further consideration to the ethical aspects of this matter. The Council is of the opinion that, from the standpoint of professional independence, it is undesirable that an auditor of a building society (or his partner, or firm, or employee or employer) should also act as agent for the same society.'

The Charities Act, 1960

111. *The Charities (Statements of Account) Regulations, 1960.* The Council is still in correspondence with the Home Office with a view to the withdrawal and replacement of the Charities (Statements of Account) Regulations, 1960 (paragraph 110 of the last report), on the ground that the regulations place upon charity trustees the unreasonable burden and expense of preparing accounts in the form prescribed by the regulations in addition to the different accounts

[1] See *The Accountant* of October 14th, 1961.

already required under section 32 (1) of the Charities Act, 1960.

Local Government Act, 1933 Section 76: Disclosure of pecuniary interest

112. The Council has obtained the opinion of counsel (Appendix, page 93)[1] on the position of practising members of the Institute who are members of local authorities and therefore subject to the provisions of section 76 of the Local Government Act, 1933.

The Stock Exchange

113. *Rule 79A of the Rules of The Stock Exchange.* At the request of The Stock Exchange, London, the Council has assisted with the drafting of important amendments to Rule 79A of the Rules of The Stock Exchange which relates to the balance sheets of brokers and jobbers.

114. *Ex-dividend and ex rights procedure.* The Institute was consulted prior to the issue by the Secretary of the Share and Loan Department of the Stock Exchange, London, of a letter dated November 24th, 1961, requesting companies to have regard to the Stock Exchange calendar in fixing dates of board meetings and dates for closing share registers in order to reduce the number of dividend claims which arise where a purchaser cum-dividend is not registered in time to receive the dividend direct from the company.

115. *Transfer of securities.* The Council submitted comments on the first report dated December 1960 of the Committee on Transfer of Securities set up by the Stock Exchange, London, and on the report of its Advisory Committee. These reports were concerned with the simplification of transfer procedure.

Documents Issued by Companies

116. The Council attaches importance to the matter dealt with in its statement of December 1960 (paragraph 103 of the last report) that is to say the inclusion of a reference to professional accountants, along with stockbrokers, bankers and solicitors, as being persons to be consulted by shareholders who do not fully understand documents received by them. In the hope of improving company practice in this matter letters have been sent (Appendix, page 95)[1] to the issuing houses which are members of the Issuing Houses Association and to a considerable number of firms of solicitors who are believed to deal with company matters to a material extent.

Dividend Warrants

117. Comments have been submitted on behalf of the Council on a draft British Standard Specification for dividend warrants and relative tax vouchers drawn up by a sub-committee of the technical committee on commercial forms and stationery of the British Standards Institution. Mr R. P. Brown, F.C.A., is the Institute's representative on the commercial forms and stationery committee and Mr D. W. Robertson, F.C.A. (alternate Mr L. H. Clark, F.C.A.) is the Institute's representative on the dividend warrants sub-committee.

Unlawful Acts or Defaults by Clients of Members

118. Amendments to certain paragraphs of the Council statement on *Unlawful Acts or Defaults by Clients of Members* (*Members' Handbook*, section S5) have been approved by the Council and will be issued on May 4th, 1962, as part of Supplement No. 11 to the *Members' Handbook*. These amendments arise from the provisions of section 47 of the Finance Act, 1960, relating to the making of incorrect returns and from the decision of the House of Lords in the case of *Sykes v. Director of Public Prosecutions* with regard to the offence of misprision of felony.

[1] Not reproduced

Taxation and Research Committee

119. *Meetings.* During the year 1961 the Taxation and Research Committee held six meetings and its sub-committees held seventy-five meetings, making a total of eighty-one meetings for the committee and nineteen sub-committees. (The total for 1960 was eighty-seven meetings.)

120. *Activities.* The Taxation and Research Committee played an important part in the drafting of the first two *Statements on Auditing – No. 1, General Principles of Auditing* and *No. 2 Stock-in-trade and Work in Progress* (paragraph 101), the preparation of *Terms used in Published Accounts of Limited Companies* (paragraph 102), the drafting of the memorandum on the Finance Bill (paragraph 103) and the drafting of the memorandum on Overseas Trade Corporations (paragraph 109). A number of other matters were the subjects of special reports by the Taxation and Research Committee, which throughout the year continued to receive valuable assistance from the regional taxation and research committees of the district societies.

121. *Chairman and Vice-Chairman.* At its meeting in September 1961 the Taxation and Research Committee appointed Mr J. Cartner, F.C.A., as Chairman for the year commencing October 1st, 1961, in succession to Mr G. N. Hunter, F.C.A. Mr S. M. Duncan, F.C.A., was appointed Vice-Chairman.

122. *Council appointments.* The following twelve members were appointed by the Council to serve on the Taxation and Research Committee for the year commencing October 1st, 1961: Messrs G. R. Appleyard, F.C.A., L. H. Clark, F.C.A., S. M. Duncan, F.C.A., W. F. Edwards, F.C.A., R. O. A. Keel, F.C.A., J. W. Margetts, F.C.A., G. P. Morgan-Jones, M.A., F.C.A., L. Pells, M.A., F.C.A., J. Perfect, F.C.A., D. W. Robertson, F.C.A., C. Romer-Lee, M.A., F.C.A., and J. G. Vaughan, F.C.A. In December 1961 Mr Keel resigned and the Council has appointed Mr R. W. Foad, F.C.A., to fill the vacancy.

123. *Death of Mr L. J. H. Noyes.* Reference is made in paragraph 167 to the death of Mr L. J. H. Noyes, B.SC.(ECON.), F.C.A., the Secretary to the Taxation and Research Committee since 1954.

Advertising of Accountancy Services by Members of Other Professions

124. It is the practice of the Council to take up with other professional bodies instances where their members have referred in advertisements to the provision of accountancy services. As a result of such an approach a firm of auctioneers and estate agents has agreed to discontinue an advertisement stating that it undertakes accountancy work.

Misuse of Designations

125. The Council has taken appropriate action in any case reported to it of a person misdescribing himself as a chartered accountant or as an incorporated accountant.

Accountants Joint Parliamentary Committee

126. The Accountants Joint Parliamentary Committee has continued its work of watching all parliamentary matters relating to the qualification and status of auditors and has taken action on a number of Bills and Departmental Orders.

Chartered Accountants Joint Standing Committee

127. The Chartered Accountants Joint Standing Committee consisting of representatives of the Institute, The Institute of Chartered Accountants of Scotland and The Institute of Chartered Accountants in Ireland has considered matters of common interest to the three institutes.

128. The Overseas Accountancy Examinations Advisory Board established by the Chartered Accountants Joint Standing Committee has continued its work of advising

and assisting overseas bodies in establishing and conducting their own accountancy examinations.

Writ against the Institute

129. As stated in the last report (paragraph 128) the George S. May International Company (G.B.) has issued a writ against the Institute claiming damages for libel and an injunction.

Eighth International Congress of Accountants New York, September 1962

130. On June 29th, 1961, a notice was sent to all members giving preliminary details of the Eighth International Congress of Accountants to be held in New York from September 23rd to 27th, 1962. Nearly 800 members indicated their interest in attending and their names were notified to the Congress Secretary in New York.

131. The theme of the congress will be 'Auditing and financial reporting in the world economy'. Each subject is to be dealt with from the standpoint of communicating financial information to investors, banks, Government agencies and others and also from that of internal control and information for management purposes. Three members of the Institute accepted invitations to prepare papers: Mr H. A. Benson, C.B.E., F.C.A., on *Auditing and the world economy*; Mr R. O. A. Keel, F.C.A., on *Financial reporting and the world economy*; Mr W. E. Parker, C.B.E., F.C.A., on *Accounting and the world economy*. Mr G. P. Morgan-Jones, M.A., F.C.A., has been appointed to act as a Vice-Chairman of a technical session.

132. The Institute's thirty official delegates will have the President and Sir Thomas Robson, M.B.E., M.A., F.C.A., as their chairman and vice-chairman respectively.

133. Sir Harold Howitt, G.B.E., D.S.O., M.C., D.C.L., LL.D., D.L., F.C.A., who was President of the Sixth International Congress on Accounting held in London in 1952, has accepted an invitation from the President of the Eighth International Congress to reply to the opening address of welcome.

134. The Council hopes that as many members of the Institute as possible will make arrangements to attend the congress so that the Institute representation will be worthy of the major part which members have taken over the years in the international development of the profession. Any member who wishes to attend the congress and has not yet notified the Secretary should do so as soon as possible.

European Congress of Accountants, 1963

135. Representatives of European accountancy bodies agreed at a meeting held in Glasgow on November 28th, 1961, that arrangements should proceed for the holding of a European Congress of Accountants in Edinburgh in September 1963, with The Institute of Chartered Accountants of Scotland acting as the host organization. His Royal Highness The Duke of Edinburgh has been pleased to give his Patronage to the congress. It will take place from September 10th to 13th, 1963, and the subjects of the papers will be *Auditing; Accounting principles; The impact of electronics on the accountant of the future;* and *The accountant's contribution to small businesses, particularly in connection with specialized services.* Mr A. McKellar, Past President of The Institute of Chartered Accountants of Scotland, has been appointed President of the Congress and Chairman of the Policy Committee. Sir Thomas Robson, M.B.E., M.A., F.C.A., has been appointed to represent the Institute on the Policy Committee with Mr S. John Pears, F.C.A., as alternate. Mr S. M. Duncan, F.C.A., has accepted an invitation to prepare a paper on *Auditing*. Miss D. M. Vaughan, B.A., F.C.A., and Mr M. G. Wittet, F.C.A., have been nominated as Joint Honorary Auditors of the congress. The Council hopes that the congress will be well supported by members.

World Bank

136. The President, Mr P. F. Granger, F.C.A., accompanied by Mrs Granger, represented the Institute at the annual meetings of the World Bank, the International Finance Corporation, the International Development Association and the International Monetary Fund held in Vienna from September 18th to 22nd, 1961.

Practice Rights Overseas

137. Legislation and other developments affecting the practice of accountancy and auditing in many countries overseas have been watched closely and continuously throughout the year. Representations have been made where these appeared to be desirable, including representations with a view to safeguarding the practice rights of members in the Common Market countries of Europe. Information and advice have readily been given in response to requests from overseas countries.

138. The Council cannot emphasize too often its belief that the ideal arrangement is reciprocity in all parts of the world of the right to practise under the professional designation which the individual accountant has obtained by suitable training, experience and examination, without restrictions on the right to enter into partnership or agency arrangements with properly qualified accountants whatever may be their country of residence. The international nature of the profession is such as to require a liberal attitude towards world freedom of practice rights, if the profession is to be able to continue to serve adequately the business interests which depend upon it.

139. The Council believes that all forms of artificial barriers (by reference to nationality, residence, partnership association, firm names, or otherwise) are detrimental to the future development of the profession and to the interests of the countries imposing such barriers. In the past, over a long period of years, United Kingdom chartered accountants have taken a major part in the creation and development of an organized profession in many overseas countries; it is the Council's earnest hope that they will be enabled to continue to make a material contribution in this way.

Other Overseas Matters

140. *Canada.* Mr W. H. Lawson, C.B.E., B.A., F.C.A., represented the Institute at the fifty-ninth annual conference of The Canadian Institute of Chartered Accountants held in Toronto from September 24th to 27th, 1961. Mr Lawson read a paper on *Practical steps to improve financial statements.* In May 1961 the President sent the following message under the Common Seal of the Institute to the President of The Institute of Chartered Accountants in Manitoba:

> 'At a meeting held on May 3rd, 1961, in the Council Chamber at Moorgate Place, London, the Council of The Institute of Chartered Accountants in England and Wales resolved to convey to The Institute of Chartered Accountants of Manitoba on the occasion of the seventy-fifth anniversary of its incorporation on May 28th, 1886, the congratulations of the Council and best wishes for the future progress and prosperity of The Institute of Chartered Accountants of Manitoba.'

141. *Denmark.* The President, Mr P. F. Granger, F.C.A., and Mr C. A. Evan-Jones, M.B.E., an Under-Secretary, accompanied by Mrs Granger and Mrs Evan-Jones, represented the Institute at the Fiftieth Anniversary celebrations of the Föreningen af Statsautoriserede Revisorer held in Copenhagen on January 12th, 1962. The President conveyed the following message under the Common Seal of the Institute:

> 'At a meeting held on December 6th, 1961, in the Council Chamber at Moorgate Place, London, the Council of The Institute of Chartered Accountants in England and Wales resolved to convey to the Föreningen af Statsautoriserede Revisorer in Denmark, on the occasion of the Golden Jubilee of its formation on January 12th, 1912, the congratulations of the Council and best wishes for the future progress and prosperity of the Föreningen af Statsautoriserede Revisorer.'

142. *France.* Sir Thomas Robson, M.B.E., M.A., F.C.A., gave evidence on behalf of the Institute on June 22nd, 1961, in Paris before the Pleven Commission on company law in France.

143. *Netherlands.* The President, Mr P. F. Granger, F.C.A., and the Secretary, accompanied by Mrs Granger and Mrs MacIver, represented the Institute at the Accountants' Yearday of the Nederlands Instituut van Accountants at Scheveningen on September 29th and 30th, 1961.

144. *South Africa.* The following statement was authorized by the Council at its meeting on October 4th, 1961, and published in *Accountancy* for October 1961 [and *The Accountant* of October 14th, 1961]:

South Africa: Bye-law 47

'The four societies of chartered accountants in South Africa have for many years been approved by the Council under bye-law 47 to enable the description "chartered accountants" to be used by a firm with partners consisting of members of the Institute together with a person having the qualification of a South African chartered accountant but not membership of the Institute. Bye-law 47 requires not only that the overseas body of chartered accountants should be approved by the Council but also that the body should be in the British Commonwealth of Nations and accordingly the approval of the four South African societies of chartered accountants has lapsed following the withdrawal of South Africa from the British Commonwealth. The Council considers that this result would be unfair to the firms which are or may be affected and accordingly proposes to place before the members of the Institute in due course a resolution for the amendment of bye-law 47 to the effect that where an overseas body has been approved under bye-law 47 the approval shall not cease to be effective by reason only of the country concerned ceasing or having ceased to be within the British Commonwealth of Nations.

'In the meantime in accordance with the spirit of the Republic of South Africa (Temporary Provisions) Act, 1961, the Council will not object to the use of the description "chartered accountants" by any firm which would have been entitled to that description but for the withdrawal of South Africa from the British Commonwealth.'

The necessary resolution will be proposed at a special meeting of members to be held on May 3rd, 1962, at the conclusion of the annual meeting.

145. *United States of America.* Mr S. John Pears, F.C.A., accompanied by Mrs Pears, represented the Institute at the seventy-fourth annual meeting of The American Institute of Certified Public Accountants held in Chicago from October 29th to November 1st, 1961.

146. *Union Européenne des Experts Comptables, Économiques et Financiers.* Mr S. John Pears, F.C.A., and the Secretary, accompanied by Mrs MacIver, attended as observers on behalf of the Institute at the Fourth Congress of the Union Européenne des Experts Comptables Économiques et Financiers (U.E.C.) held in Zürich from September 18th to 21st, 1961.

The P. D. Leake Trust

147. At its meeting on February 7th, 1962, the Council approved for publication a booklet containing the accounts of the P. D. Leake Trust for the year ended October 31st, 1961, with the ninth report by the Council on the administration of the trust and the ninth report by the P. D. Leake Committee on the application of the income. Any interested person may obtain a copy, without charge, on application to the offices of the Institute. A statement to that effect was published in *Accountancy* for February 1962 [and *The Accountant* of February 17th, 1962].

Chartered Accountants Trustees Limited

148. Chartered Accountants Trustees Limited has continued to act as trustee of CARBS, CAESS and the Staff Pensions Fund and to administer the Merrett estate. The report of the directors and the accounts of the company to May 31st, 1961, appear in the Appendix, pages 96 and 97.[1]

Chartered Accountants Retirement Benefits Scheme (known as CARBS)

149. The Chartered Accountants Retirement Benefits Scheme provides retirement benefits for members who are self-employed or otherwise within the ambit of section 22 of the Finance Act, 1956. The accounts for the year ended May 31st, 1961, are reproduced in the Appendix, page 98,[1] and they show members' contributions of £139,681 compared with £146,751 in the previous year. The charge for Institute staff time devoted to administration was £750 as in the previous year. The outstanding balance due to the Institute on loan account remains at £4,750 and neither the trustees nor the Council will agree to the repayment of any part thereof unless satisfied that the solvency of the scheme will not be affected.

150. On November 14th, 1961, a notice was sent to all members resident in the United Kingdom in the following terms:

'The Trustees of CARBS have informed the Council of the Institute that, as a result of changed conditions, members contemplating a contribution to section A of CARBS may for the time being be able to secure better terms outside the scheme. The Council understands that the difference is not large but it appears at present that those members who are so inclined should explore the market before contributing to section A. (Members who have not yet contributed at least £50 in any one year may wish to consider the desirability of such a contribution to section A before June 30th, 1963, in order to secure the benefits of guaranteed contribution rates for the future.)

'Members who wish to make provision for a widow's pension on their death are still likely to find that section B is at least as attractive as any comparable contract and those already engaged on a series of contributions to section B or to section C (which is now closed to new entrants) should in their own interests complete the series.

'The change in surtax will for many members have removed the particular attraction of self-employed retirement annuities under the Finance Act, 1956, as endowment assurance with an annuity option may well be more satisfactory. The Institute is not in a position to advise members on the relative merits of the wide variety of insurances available and those seeking information will no doubt consult insurance brokers or make a direct approach to insurance companies.'

Chartered Accountants Employeees Superannuation Scheme (known as CAESS)

151. The accounts of CAESS for the year ended May 31st, 1961, are reproduced in the Appendix, page 99,[1] and show net contributions of £68,324 compared with £56,119 in the previous year. The charge for Institute staff time devoted to administration was £250 as in the previous year. The outstanding balance due to the Institute on loan account remains at £4,750 and neither the trustees nor the Council will agree to the repayment of any part thereof unless satisfied that the solvency of the scheme will not be affected.

152. CAESS provides a framework within which practising members may set up contributory retirement benefit schemes for their staffs. In their report (Appendix, page 101[1]) dated October 26th, 1961, to the Council the trustees said they were in no doubt that CAESS offers important advantages to most practising members, whether their firms be large or small, and expressed the hope that those who had not yet seriously considered the matter would consult the scheme secretaries. The report was issued to members generally on November 14th, 1961, and reproduced in *Accountancy* for November 1961 [and *The Accountant* of November 11th, 1961] together with the text of the third edition (October 1961) of the CAESS explanatory booklet.

153. At its meeting on July 5th, 1961, the Council appointed Mr G. P. Townend, M.B.E., M.A., F.C.A., to the Committee of CAESS as an 'employers' committeeman' to fill a vacancy caused through the retirement of Mr E. W. P. Broad, T.D., D.L., F.C.A., and resolved that the thanks of the Council be conveyed to Mr Broad for his services on the committee since its formation in 1957.

154. The fourth report of the committee of CAESS is reproduced in the Appendix, page 102.[1] The number of participating firms continues to increase. On March 31st, 1962, there were 1,050 individual members of the scheme from 227 participating firms, as against 973 members from 204 firms a year earlier.

Chartered Accountants Charities Limited

155. The funds of The Institute Prize Trust and The Chartered Accountants General Charitable Trust are administered by Chartered Accountants Charities Limited. The accounts appear at pages 66 to 68[2] During 1961 the

[1] Not reproduced.

[2] Reproduced in this issue.

Institute made the final payment of £450 less tax under a deed of covenant in favour of The Institute Prize Trust and no further deed of covenant is at present contemplated. Payments totalling £4,900 per annum less tax are at present being made by the Institute in favour of The Chartered Accountants General Charitable Trust under deeds of covenant entered into in 1956, 1957, 1960 and 1962. Grants from this trust are made to chartered accountant students' societies and joint tuition committees and to other charitable causes with which the Council may from time to time wish to associate the Institute.

F.C.A. Limited and A.C.A. Limited

156. Two wholly owned private companies, F.C.A. Limited and A.C.A. Limited, were formed during 1961, each with a share capital of £100, as a precaution against the registration of companies with those names by other persons.

Liquidation of The Society of Incorporated Accountants

157. Reference was made in the last report (paragraph 149) to the fact that the final winding up of The Society of Incorporated Accountants was being delayed pending the formal transfer to the Institute of certain legal proceedings against a body in India which were commenced before the Scheme of Integration. It is hoped that the remaining formalities in connection with this transfer will shortly be completed, thereby enabling the Society to be wound up.

History of The Society of Incorporated Accountants

158. *The History of The Society of Incorporated Accountants*, written by Mr A. A. Garrett, M.B.E., M.A., a former Secretary of the Society, was published in July 1961 by the Oxford University Press. Copies have been dispatched in fulfilment of all orders received. Further copies are still available and may be ordered from Mr C. A. Evan-Jones, c/o Lloyds Bank Limited, 55 Moorgate, London EC2. The price is £1 4*s* including postage and packing. The special attention of former members of the Society is drawn to this publication.

Capel House (Medcalf) Trust

159. Reference was made in the last report (paragraph 141) to the Capel House (Medcalf) Trust which was created in 1953 by the late Colonel S. A. Medcalf, O.B.E., T.D., D.L., who settled Capel House, Enfield, with certain investments, on trust for the education of students and members of The Society of Incorporated Accountants. On the application of the trustees the High Court has declared the trusts to be valid charitable trusts and has ordered a *cy près* scheme. The trustees have now completed a draft scheme for submission to the High Court.

Financial Position

160. The audited accounts for 1961 accompany this report, commencing at page 46[1].

161. Although income for 1961 has exceeded expenditure by £11,678 and there has been a further substantial appreciation in the value of investments, which at December 31st, 1961, stood £189,344 above cost (£105,627 in 1960), the present resources and income will require substantial augmentation to meet expenditure on accommodation (see paragraph 169) and expansion in the scope and extent of the Institute's activities. The recommendations of the Council will be placed before members in due course.

Reduced Subscriptions under Bye-law 43

162. *Retired members.* The subscriptions of 1,336 members were reduced to one guinea for the year 1961 under bye-law 43. (The number of subscriptions so reduced in 1960 was 1,227.) The great majority of these members satisfy all the conditions of the bye-law. A small number of the reductions was allowed under the special discretionary power given by the bye-law.

163. *National service.* The subscriptions for 1961 of 645 members engaged on compulsory full-time national service on January 1st, 1961, were reduced to one guinea under bye-law 43 in accordance with the concession introduced in 1956.

Staff

164. Mr Maurice Comber Ashill, F.C.A., has been appointed an Under-Secretary and commenced his duties on August 1st, 1961.

165. Mr George Albert Slator, F.C.A., has been appointed an Assistant Secretary to the Taxation and Research Committee and commenced his duties on September 11th, 1961.

166. Mr Walter Taplin, M.A., B.COM., has been appointed Editor of *Accountancy* with effect from November 1st, 1961.

167. The Council records with regret the death on July 29th, 1961, of Mr Leslie John Henry Noyes, B.SC.(ECON.), F.C.A., who had been Secretary to the Taxation and Research Committee of the Institute since 1954. In addition to his duties as Secretary to the Taxation and Research Committee, Mr Noyes acted as Editor of *Accountancy* until January 1961 as an emergency measure following the death of Mr Little in August 1960.

Institute Staff Pensions Fund

168. Certain changes have been made in the rules of the Staff Pensions Fund, including the reorganization of the classes of membership in order to discontinue a class of membership for which the benefits had proved to be inadequate. All benefits are now related to salary in the closing years of service. The Institute's annual contribution continues unchanged at a rate of 14 per cent of salaries of all staff who are members of the fund. The accounts of the fund appear on pages 58 to 61[1].

Institute Building

169. The Council regrets that it is not yet able to announce its development plans to deal with the long-term problem of accommodation. Certain negotiations have proved more protracted than had been expected. The matter is receiving constant attention and a statement will be made as soon as possible.

Appreciation

170. The Council records its appreciation of the invaluable work done by members of the Institute who have given so much time to the work of the Taxation and Research Committee, the committees of the district societies, the summer courses, examinations and other activities on behalf of the Institute. The Council also records its appreciation of the work of the Secretary and staff.

Auditors

171. The auditors, Mr L. W. Bingham, F.C.A., and Mr Leonard Pells, M.A., F.C.A., retire under bye-law 115 and are eligible for reappointment. The auditors' fees fixed at the annual meeting on May 3rd, 1961, were 1,000 guineas, an amount which has remained unchanged since 1958. The Council considers that this amount is inadequate and recommends that members approve an increase to 1,250 guineas for 1961; accordingly that amount has been shown as a charge in the income and expenditure account for 1961. The Council also recommends that the resolution appointing auditors at the annual meeting on May 3rd, 1962, should specify 1,250 guineas as their audit fee.

PAUL F. GRANGER,

April 4th, 1962. *President.*

REPORT OF THE AUDITORS TO THE MEMBERS OF THE INSTITUTE OF CHARTERED ACCOUNTANTS IN ENGLAND AND WALES

We have examined the above balance sheet and annexed income and expenditure account which in our opinion respectively give a true and fair view of the state of the Institute's affairs as at 31st December 1961 and of its income and expenditure for the year ended on that date.

L. W. BINGHAM
LEONARD PELLS
Chartered Accountants

4th April 1962

BALANCE SHEET NOTES

These notes form an integral part of the balance sheet on [opposite] page.

(1) A total of £30,000 is being provided against the cost of the remaining sections of the Members' Handbook. £20,000 has so far been set aside and a further £10,000 will be set aside in 1962.

(2) The accounts of the Staff Pensions Fund, the benefits of which are based on salaries in the closing years of service, appear at pages 58 to 61. The Institute is under obligation to make annual contributions by way of percentage of salaries calculated from time to time by the actuary (at present 14 per cent) but subject to a maximum of 20 per cent and to the right of the Institute to close the fund and cease to contribute. Under rules previously in operation and now superseded the Institute was under obligation to maintain the solvency of the fund: 6 pensioners and 11 employees who were in the service of the Institute prior to 1947 and who were entitled, without reservation, to the benefits provided under those rules are therefore the subject of guarantees by the Institute to ensure that they will not be prejudiced by the new rules.

(3) A writ is outstanding against the Institute claiming damages for libel.

(4) The liquidation of The Society of Incorporated Accountants is not yet complete and the liquidators have retained a small balance against the remaining liabilities of the Society. If the balance retained by the liquidators proves inadequate, the Institute will make a refund out of the amounts already received from the liquidators.

3,227		—	**7,070**				
151,162			**191,275**				

NOTE.—The annual contribution made by the Institute for 1961 was at the rate of 14 per cent of salaries. The benefits are based on salaries in the closing years of service and the Institute has the right to close the fund. An actuarial valuation as on 31st December 1959, made on the basis that the annual contributions would continue at 14 per cent, showed a surplus of £32,012, after including £5,854 due from the Institute in respect of a special contribution. On the recommendation of the actuary the surplus was then reduced to £26,158 by treating £5,854 as a payment in satisfaction of the above mentioned special contribution. In view of this surplus the actuary agreed that no payment by the Institute was necessary in respect of special contributions of £10,410 which became due from the Institute in 1961. The next normal valuation date is 31st December 1964.

London Chartered Accountants' 'Big Game'

Over 140 chartered accountants – of whom some two-thirds came from industry and commerce – assembled at New College, Oxford, on Thursday of last week for the London and District Society's conference on 'Information for Management'. The conference was notable for two innovations – the biggest and most advanced management decisions game yet to be played in Britain; and a paper by a Dutch accountant of international repute.

The conference opened on Thursday afternoon with introductory speeches by Mr P. F. Carpenter, F.C.A., Vice-President of the Institute, and Mr B. A. Maynard, M.A., F.C.A., the conference chairman, after which a paper on 'Improving management accounting in the small business' was given by Mr N. R. Bellwood, F.C.A., director of funds and general division, British Transport Commission.

Then, at 8.45 p.m., members were introduced to the rules of the management game and the fourteen discussion group leaders found themselves transformed into company chairmen with the task of welding eight other accountants into an effective management team within a few hours. The challenge was accepted with enthusiasm. The decisions for the first quarter were made between 10 p.m. and 11.30 p.m., the results being telephoned to the computer centre in London by midnight so that the accounts and statistics for the quarter were available in Oxford for the second round, played at midday on Friday. But few of the 'boards of directors' closed their meetings at 11.30 p.m. and it seemed at that stage that one and a half hours was an impossibly short time in which to deal with a quarter's business.

Although the programme provided for only four hours to be spent on the decisions of the three quarters which were made at Oxford, it is unlikely that any of the fourteen 'companies' spent less than seven hours on the game during this period; at least half of the 'boardrooms' were in use throughout Friday afternoon during what was intended to be the only free time of the conference. Certainly, there is no doubt that the game gripped members from the beginning, as the Vice-President must have realized when he found on Thursday evening that no 'company' was ready to be visited until after 11.30 p.m. when the first decisions were handed in.

On Friday morning the conference had listened to a paper on 'Long-term planning' by Professor A. Goudeket, chief internal auditor of the Philips Group in Holland. This was not only a stimulating lecture in itself, but one which was of immediate interest to the boards of the companies which were even then struggling to develop longer term policies for the game.

On Saturday, breakfast was taken early in order to establish the companies in their mobile boardrooms in private carriages on the 8.52 train to London. Here they received the accounts based on the decisions handed in at 10.30 p.m. the previous evening and they occupied the journey deliberating on their decisions for the fourth quarter.

The conference duly arrived at the computer centre in Newman Street and the boards were in action again

REPORT OF THE HONORARY AUDITORS TO THE TRUSTEE

We have examined the above balance sheet and annexed statements of income and expenditure which in our opinion give a true and fair view of the state of affairs as at 31st December 1961 and of the income and expenditure for the year ended on that date of the trusts administered by Chartered Accountants Charities Limited.

Chartered Accountants

4th April 1962

by 10.45 a.m. Between then and 5 p.m., with no breaks of any kind, the companies dealt with a further nine quarters, in addition to sending representatives to sales and production conferences. This was only possible because the companies had now become highly efficient decision-making machines, producing accurate forecasts which often required only slight modification when the results of the previous quarter became available, and experimenting widely in methods of delegation, charting, statistics and alternative policies.

At the concluding review sessions it was apparent that, in addition to having enjoyed the exercise, members felt that the game had been a valuable experience. Mr Maynard may, however, have been attributing rather too much to the realism of the game when he suggested that members looked exactly three and a quarter years older than when it started.

Notes and Notices

PROFESSIONAL NOTICES

MESSRS NEVILL, HOVEY, GARDNER & CO, Chartered Accountants, of 94 Old Broad Street, London EC2, announce that Mr G. W. GUMBRELL, A.C.A., was admitted into partnership on April 6th, 1962.

MESSRS MORRIS, GREGORY & CO, Chartered Accountants, of 3 York Street, Manchester 2, announce that Mr A. D. COTTON, B.A., A.C.A., and Mr G. W. MILLS, A.C.A., have been taken into partnership. The name of the firm will remain unchanged.

MESSRS J. A. KINNEAR & CO, of 1/2 Leinster Street South, Dublin 1, announce that Mr RONALD GORHAM WALSH, A.C.A., and Mr PAUL JOHN MCCLEARY, A.C.A., have been admitted to the partnership, with effect from April 2nd, 1962. They further announce that Mr ROBERT T. POOLE, F.C.A., has retired from the partnership as from March 31st, 1962.

MESSRS WHITAKER, REDFEARN, PAPPIN & CO, Newquay, announce that Mr H. T. DARLINGTON, A.C.A., who has been with the firm for some time, has been admitted to partnership.

MESSRS CRAIG, GARDNER, & CO, Chartered Accountants, of Dublin and Belfast, announce that as from April 6th, they have admitted to partnership Mr NOEL MACMAHON, B.COM., A.C.A., who has been a member of their staff for some years.

MESSRS LUCRAFT, HODGSON & CO (G. R. LUCRAFT, T.D., F.C.A., and T. T. HODGSON, F.C.A.), of 131 Preston Road, Brighton 6, Sussex, announce that they have acquired as from April 1st, 1962, the practice of L. GORDON GEE, F.C.A., F.A.C.C.A., and D. SOUTHGATE, A.A.C.C.A., practising as W. H. ROBERTS GEE & CO (incorporating SAY & WILLIAMS) of 19 Gildredge Road, Eastbourne, Sussex, and will practise at that address under the style of LUCRAFT, HODGSON & CO (incorporating SAY & WILLIAMS). The practice of W. H. ROBERTS GEE & CO, at 1 Broad Street Place, London EC2, continues to be carried on as hitherto.

MESSRS G. E. HOLT & SON, Chartered Accountants, of 10 Dale Street, Liverpool 2, and Victoria House, Southampton Row, London WC1, announce that on April 1st, 1962, Mr I. R. HENDERSON, B.SC.(ECON.), A.C.A., who served his articles with the firm, was admitted to partnership. The name of the firm remains unchanged.

MESSRS H. H. SHERWOOD & CO, Chartered Accountants, of Birmingham, announce that they have taken into partnership Mr RICHARD ANTHONY SQUIRES, A.C.A., who has been a member of the staff for the last twelve years. The style of the firm will remain unchanged.

Appointments

Mr Robert G. Beldam, M.A., F.C.A., M.I.MAR.E., has been appointed chairman of the London and South Eastern Regional Council of the Federation of British Industries.

Mr A. V. Endsor, M.A., A.C.A., secretary and accountant of Ready Mixed Concrete Ltd, has been appointed to the board.

Mr Brian John Gillespie, B.A., A.C.A., has become a partner of Sherlock and Edmenson, stock and share brokers, Newcastle.

Mr R. Grimshaw, F.C.A., has been appointed vice-chairman and a joint managing director of Spirella Company of Great Britain Ltd.

Mr John Edgar Grove, F.C.A., has been appointed a director of William Iszard Ltd.

Mr W. A. Hildreth, F.C.A., secretary of Associated Motor Cycles Ltd, has been elected a director of the company.

Mr W. Lambert, A.C.A., has been appointed chief accountant of A. V. Roe & Co Ltd.

INSTITUTE'S 'SMALL PRACTITIONER' INQUIRY

The 'Small Practitioner' inquiry inaugurated by the President of The Institute of Chartered Accountants in England and Wales last October has attracted interest throughout the profession. Meetings have been held under the auspices of the district societies, memoranda have been submitted to the Institute, and we have it on the authority of the President that considerable progress has been made. While the inquiry is proceeding the President has asked us to publish the following letter which he has sent to the presidents of the district societies together with the accompanying 'progress report':

To Presidents,

THE SMALL PRACTITIONER

I enclose a note on the present position of the small practitioner inquiry which you are at liberty to distribute if you wish.

I have forwarded a copy of this letter and of the note to *Accountancy* and *The Accountant*.

Yours sincerely,
P. F. GRANGER.
President.

On October 10th, 1961, the President of the Institute wrote to the presidents of district societies asking for their assistance in an inquiry into the problems and difficulties of

the small practitioner. The President's letter was reproduced in *Accountancy* of October 1961 and in *The Accountant* of October 21st, 1961.

With his letter was enclosed a form of questionnaire which, it was thought, covered most of the problems which the small practitioner might wish the Council to examine and on which he might wish to propose remedies. District societies were invited, with the assistance of their branches and groups, to give members the fullest opportunities to express their views, both by the distribution of the questionnaire and by arranging to call meetings at suitable centres.

Presidents of district societies were asked to complete their inquiries by the end of February 1962, and their replies have now been received and are under consideration. More than seventy meetings have been held with a total attendance of some 2,000 members and the returned questionnaires represent the views of about 2,000 practitioners. The number and nature of the submissions made have shown clearly the great interest which the inquiry has aroused among members. The Council is recording in its annual report for 1961 [reproduced in this issue] the contribution which has been made by presidents and other officers of district societies in undertaking the considerable amount of work which the inquiry has involved. No less appreciation is due to members for the care taken in submitting their representations.

Amongst many problems raised were those of fees, competition, registration, publicity, staffing, recruitment of articled clerks, and relations with the Inland Revenue and with members of other professions. Of particular significance perhaps is the willingness shown by members in answer to question 1 to give information on fees, remuneration, salaries and costs. There is a strong feeling that detailed particulars of these matters should be obtained at an early date through a survey to be undertaken by the Institute on an anonymous basis and that the information should then be summarized under various heads and circulated to practising members. Not only would the information be valuable in itself but it would contribute towards a better appreciation of many of the other problems raised in the inquiry. The President has already been in communication with the presidents of district societies on the further steps which might be taken.

The inquiry which has already been undertaken was not designed to be in a form to permit statistical analysis but to obtain information about those matters on which small practitioners felt most strongly. There is no doubt that this preliminary purpose has been achieved. The District Societies Committee is now undertaking a detailed examination of the problems raised.

TAXATION AND RESEARCH COMMITTEE

The one hundred and twentieth meeting of the Taxation and Research Committee of the Institute was held on Thursday, April 12th, 1962, at 2 p.m.

Present: Mr J. Cartner (in the chair); Messrs F. W. Allaway, G. L. Aspell, R. D. R. Bateman, M.B.E., C. J. M. Bennett, R. P. Brown, K. A. Buxton, W. R. Carter, R. A. Chermside, L. H. Clark, S. M. Duncan, E. S. Foden, R. W. Foad, C. R. P. Goodwin, J. S. F. Hill, G. N. Hunter, H. Kirton, T.D., S. Kitchen, J. W. Margetts, A. G. Martin, S. A. Middleton, G. P. Morgan-Jones, E. J. Newman, R. D. Pearce, L. Pells, T. B. Pritchard, J. D. Reekie, D. W. Robertson, H. Robinson, C. Romer-Lee, E. C. Sayers, H. G. Sergeant, H. C. Shaw, W. Shuttleworth, H. Eden Smith, D. E. T. Tanfield, C. C. Taylor (37 members) with Messrs H. G. Powys Greenwood and G. H. Vieler with the Assistant Secretaries to the Committee.

Mr A. G. Thomas, F.C.A.

The congratulations of the Committee were offered to Mr A. G. Thomas on his election to the Council of the Institute.

Membership

The Chairman extended a warm welcome to Mr R. W. Foad who was attending a meeting of the Committee for the first time.

It was reported that Mr A. G. Thomas had, on his election to the Council of the Institute, tendered his resignation from the Committee. It was agreed that a letter should be sent to Mr Thomas expressing the Committee's appreciation for his services in the past.

Sub-Committees

Reports of progress were received from seventeen sub-committees and two new sub-committees were appointed.

Future Meetings

The one hundred and twenty-first meeting of the Committee will be held on Thursday, June 14th, 1962, and the following dates have been provisionally fixed for further meetings in 1962:

Thursday, September 13th, 1962.
" October 11th, 1962.
" December 13th, 1962.

THE INSTITUTE OF COST AND WORKS ACCOUNTANTS

Midland Regional Cost Conference

Nearly two hundred delegates attended the Midland Regional Cost Conference held last Saturday by The Institute of Cost and Works Accountants at Birmingham University. The conference was opened by Mr F. M. W. Hird, F.C.A., F.C.W.A., President of the Institute. Papers were presented on: 'The management accountant and capital expenditure', by Mr A. Kenyon, B.COM., F.C.W.A., F.A.C.C.A., A.C.I.S., and 'Keys to cost reduction', by Dr J. M. S. Risk, B.COM., PH.D., C.A., F.C.W.A., F.C.I.S.

Major capital expenditure proposals must be subjected to very careful investigation before the expenditure was sanctioned, said Mr Kenyon. Once one had become committed to a sizeable portion of the expenditure, control was very largely an illusion.

Dr Risk, in his paper, stated that continuous effort was necessary to reduce costs and thereby to improve the return on investment. There were certain basic cost reduction techniques which were of so fundamental a nature that they were applicable in practically all organizations but too often only some of these techniques were applied.

PERSONNEL SELECTION

At a recent meeting of The Dublin Society of Chartered Accountants two papers were presented on the selection of personnel by Dr J. R. M. Nolan, M.A., of the Department of Psychology, University College, Dublin, and Mr Colm Barnes, President of the Federation of Irish Industries.

Both Dr Nolan and Mr Barnes made the fundamental point that the selection of good personnel was of extreme importance to any organization. They maintained that here was the greatest scope for the development of an organization and any methods that would contribute towards the placing of the right man in the right job, such as psychological tests, were worth while. Tests were not infallible, however, they only indicated probability. It was much easier to specify existing requirements for jobs at lower grades than for senior and executive posts; the usefulness of tests was highest at the lowest level. It was agreed that their usage could create difficulties of morale in an organization, and while they might legitimately be used to measure ability, it should be remembered that tests were no substitute for personal judgment.

LIVERPOOL CHARTERED ACCOUNTANT STUDENTS' ASSOCIATION

At the seventy-ninth annual general meeting of the Liverpool Chartered Accountant Students' Association, held on March 28th, the following officers were elected for the year 1962–63:

President: Mr G. English, F.C.A.
Vice-Presidents: Messrs F. D. M. Lowry, A.C.A., M. S. Moon, A.C.A., K. R. Mackenzie, F.C.A.
Hon. Treasurer: Mr E. Bradshaw.
Hon. Secretary: Mr P. R. Deyes, B.COM., The Library, 5 Fenwick Street, Liverpool 2.
Hon. Auditors: Messrs W. A. Bates, A.C.A., D. K. Adams, B.COM., A.C.A.

OXFORD CHARTERED ACCOUNTANTS' STUDENTS' SOCIETY

The annual report of the Oxford Chartered Accountants' Students' Society presented at the Society's thirteenth annual meeting on March 22nd records a total membership of 113 – a decrease over the year of five members. Seven lecture meetings were held during 1961, the attendances ranging between fifty-four at the first meeting of the year and only nineteen members at one of the later meetings. In addition, pre-examination courses were held before each of the Institute's examinations for both Intermediate and Final examination candidates.

Members were again invited to attend the London Chartered Accountants' Students' Society's autumn residential course at Balliol and Trinity Colleges but there was a disappointing response, few members availing themselves of the offer. Two afternoon tea meetings were held for newly-articled clerks, one in March and one in November, when the President and other officers spoke on the work and objects of the Society.

The following officers were elected to serve for the ensuing year.

President: Mr S. E. Clark, M.A., F.C.A.
Vice-President: Mr R. H. Langdon-Davies, D.F.C., F.C.A.
Hon. Secretary: Mr C. P. Burton, c/o Thornton Baker & Co, 8 King Edward Street, Oxford.
Hon. Assistant Secretary: Mr J. R. H. Starmer-Smith.
Hon. Treasurer: Mr C. M. Alexander.
Hon. Librarian: Mr P. T. Venables.
Committee: Messrs O. B. T. Bennett, F.C.A.; J. Thornton, F.C.A.; J. A. C. Offer; J. D. Andrewes; A. E. Woodward; J. Temple.
Hon. Auditors: Mr G. B. Watson, F.C.A.; and Mr I. R. Peedell.

THE WEST WALES CHARTERED ACCOUNTANT STUDENTS' SOCIETY

The annual report for 1961 of The West Wales Chartered Accountant Students' Society, presented at the Society's twenty-second annual meeting held on March 14th, records that membership at the year end totalled 180 (comprising fifty-six honorary members and 124 ordinary members).

Average attendances at lectures increased for the second consecutive year to over forty students per lecture. A comprehensive series of lectures relating to the examination syllabus was held as well as two pre-examination courses. At sport, association football, rugby, cricket, golf and table tennis matches were played in which forty-three members represented the Society. The report adds, however, that response by members to take part could have been higher. Disappointment is expressed at the lack of support given to two dances held in May and December.

The following officers and committee have been appointed for the ensuing year:

President: Mr George E. Gibbs, J.P., F.C.A.
Vice-President: Mr J. G. Powell, F.C.A.
Hon. General Secretary: Mr P. M. Vaughan, c/o Francis, Williams & Vaughan, 12 Christina Street, Swansea.
Hon. Treasurer: Mr P. Sykes.
Hon. Lecture Secretary: Mr J. G. Martin Davies.
Hon. Sports Secretary: Mr J. Howard Thomas, B.SC.
Hon. Auditor: Mr F. C. Rudd, A.C.A.
Committee: Messrs Gwyn Bowen, A.C.A.; R. Gibb, F.C.A.; R. S. C. Solomon, A.C.A.; V. A. Davies (Miss), D. A. R. Day; N. D. Grieve; Gerald Rees; R. A. Smart; K. D. Vincent, and J. G. R. Williams.

MANAGEMENT COURSES

Two two-day courses on 'Company control' and 'Marginal costing' will be held in London from May 8th–9th and May 17th–18th respectively. They are to

MOTOR — FIRE — CONSEQUENTIAL LOSS
CAR & GENERAL INSURANCE CORPORATION LTD
83 PALL MALL, LONDON, SW1

be repeated in Manchester from June 5th–6th and June 19th–20th. The former aims to provide a comprehensive and co-ordinated scheme for the control of a company's affairs whilst the second will take the form of a critical examination of marginal costing.

'Cost reduction' and 'Stock control and reduction' are the titles of two one-day courses which will take place in London on May 15th and 16th respectively. They are also to be held in Manchester on June 27th and 28th. The first course is designed to provide a procedure for examining any business to show where cost reduction is needed, and the tools available for management for use in reducing costs. The second sets out to analyse the problem and to show methods of reducing stocks and controlling future holdings.

Further details regarding the courses are obtainable from Management Courses Ltd, 8 St George's Terrace, London NW1.

O.E.C.D. ECONOMIC SURVEY

A further booklet in the 1962 series containing an economic survey of the Republic of Ireland has recently been published by the Organization for Economic Co-operation and Development. Copies of the booklet are obtainable from H.M. Stationery Office, price 3s.

Tax on Short-term Gains

THE central feature of the Finance Bill published just before Easter, is Chapter II of Part II, headed 'Charge on gains from acquisition and disposal of assets'. Comprising clauses 9–15 and covering thirteen pages, Chapter II is supplemented by the Ninth and Tenth Schedules, which together cover another seventeen pages. At long last the Inland Revenue have adopted the often-repeated suggestion that explanatory memoranda should accompany Finance Bills. A White Paper costing 1*s* 3*d* and entitled 'Taxation of short-term gains' (Cmnd. 1710) appeared on the same day as the Finance Bill and describes the proposals in Chapter II in outline.

Having read Chapter II, one realizes why the drafting has taken so many months. It is evident that all kinds of devices, well known and not so well known, have been reviewed and subjected to anti-avoidance provisions. Although, as we have said, the new tax is largely a voluntary one, since one has only to wait the statutory three years for land (six months for other assets) in order to avoid it, the very introduction of such a tax, hedged about with such safeguards, is the thin end of a very big wedge. As might be expected, the Inland Revenue have had second thoughts about the drafting of sections 21–23 and 28 of the Finance Act, 1960, and the result of their cogitations appears in clauses 19–21, which clauses are going to be a great headache to property speculators, apart altogether from Chapter II.

Clause 9 (1) imposes Schedule D tax for 1962–63 and subsequent years in respect of 'gains' accruing to any person who is both resident and ordinarily resident in the United Kingdom, from the acquisition and disposal of 'chargeable assets', if the gains do not accrue as profits of a trade, profession, vocation, office or employment. Where either acquisition or disposal occurred before April 10th, 1962, the tax does not apply. The three years (or six months) rule is imposed by providing that where the appropriate time limit is exceeded, 'there shall be no acquisition and disposal within the meaning of this chapter'. A new Case VII of Schedule D is created. It charges the gains accruing in the year of assessment (no complicated basis periods) after deducting the Case VII losses of the same or a previous year (not earlier than 1962–63). Profit is deemed to accrue at the date of disposal (or the date of acquisition in the case of a 'bear' transaction). Losses in the ordinary sense can also be set off against Case VII income under section 341 of the Income Tax Act, 1952. Taxpayers not domiciled here will enjoy the remittance basis in respect of gains arising outside the United Kingdom.

Chargeable assets are defined in clause 10; they include all forms of property (including options), with the exception of 'tangible movable property'. Even tangible movable property can be chargeable assets in three cases: commodities dealt with in a futures market; currency; and any property acquired with a view to its employment in a trade or business, but disposed of without being so employed. There are exemptions. Currency for an individual's personal expenditure or maintenance is not taxed; a main residence goes free, together with the garden etc. up to one acre, or more if the Appeal Commissioners allow it. Some speculators have bought large houses with large gardens and paddocks and have gone through the motions of living in the house, with a view to developing the grounds tax-free. Buildings and structures, with the ancillary land, used solely for a trade will be exempt. So will patent rights, for there are already provisions for taxing these. The exemptions for a residence or trade building will not apply if the acquisition was partly for the purpose of resale at a profit.

Clause 11 contains some complicated provisions as to the acquisition and disposal of rights in assets, contracts to acquire or dispose, transactions not at 'arm's length' (a phrase which is not defined), nominee holdings, settled property, property passing on death, transfers by way of mortgage, and the disposal of interests in land. In particular, a letting for a term of less than twenty-one years will normally not be treated as a disposal of land. Clause 12 deals with the computation of profit and applies Case I rules as they apply to an adventure in the nature of trade.

Clause 13 deals with the device of selling the shares in a company owning land, as a means of disposing of the land, where the owning company has not held the land for the statutory three years. Given that if the company sold the land it would be chargeable under Case VII, then a charge is laid on the proceeds of sale of the shares. For this purpose the period during which the shares have been held is really irrelevant and therefore neither the six months' nor the three years' time limit applies. The resemblance of clause 13 to sections 21 and 22 of the Finance Act, 1960, will be apparent. Clause 13 goes further than these two sections in their original form. 'Share' is defined as including the interest of a member in a company not limited by shares. The disposal of rights attached to or forming part of a share will be dealt with as though those rights were a separate share. Clearly, this is a lesson learned since 1960. Another lesson is that persons 'connected with' each other (to use the Bill's own expression) could dispose of shares without being caught by sections 21 or 22. A person's disposal of shares in a company will be caught if either:

(*a*) the company is (or controls) a 'land-owning company', is itself controlled by not more than five persons, and is a company in which the person has a 'substantial interest'; or

(*b*) the company (or its subsidiary) has a substantial interest in a land-owning company under the control of not more than five persons, and is a company of which the person (or he and persons connected with him) have control.

A land-owning company is one not trading as a dealer in land but nevertheless owning land to a value of one-fifth or more of the value of its net assets. A substantial interest is one-twentieth or more of the market value of the share capital, whether held by the person alone or by himself and persons 'connected with' him.

Clause 14 confers exemptions on charities. Clause 15 (5) gives to the Inland Revenue powers to require *any* person (under penalty) to say whether he has acted on behalf of a person 'in connection with any acquisition or disposal of assets' by that person and to furnish information as to relevant matters. The words 'in connection with' are so wide that it would seem that no professional person would be immune. Clause 9 (7) imposes profits tax in appropriate circumstances on Case VII profits.

One obvious criticism of the new tax is that although it is ostensibly directed at 'short-term gains', which in the words of THE CHANCELLOR are used as income, in fact it is applied to gains by trustees of settlements, and mutual insurance companies, which, generally speaking, are not spent.

Chapter I of Part II deals with the charge to income tax and the increased relief for small incomes. Chapter III contains miscellaneous amendments. Part I is devoted to customs, excise and purchase tax; Part III to estate duty; Part IV to stamp duty, and Part V to the compulsory redemption of tithes and the short title, construction, extent and repeals.

Revenue Back Duty Reverse

THE new back duty code contained in Part III of the Finance Act, 1960, was put forward as removing the anomalies of the former law. At the committee stage THE ATTORNEY-GENERAL said:

> 'we have thought it right to make a provision for the payment of interest by the taxpayer on the money of which he has had the use during the period since his default, simple interest at 3 per cent. In that part of the machinery contained in this Part, we believe we have devised a way by which all back duty and interest on it can be recovered'.

Others were not quite so enthusiastic about the drafting of the Act as the ATTORNEY-GENERAL. And now a blunder in it has been revealed.

MR CHARLES WILLIAM MARTIN of Albert Road, London SE25, like the celebrated MR HINCHY[1], was the subject of a back duty investigation as a result of which a number of assessments for past years were raised on him. The General Commissioners for the Wallington Division in Surrey dismissed his appeals against them as long ago as January 1958. In January of this year the Tax Inspector applied to these Commissioners for a certificate under section 58 (5) (6) of the Finance Act, 1960, of interest at 3 per cent on the tax charged.

Although the taxpayer himself did not take the point, the Clerk to the Commissioners advised them that they had no power to grant such a certificate. The Inspector then applied to the Divisional Court for leave to apply for an order of *certiorari* to quash the Commissioners' determination. This application (*Fysh v. Martin*) was granted on April 10th and the case came on for hearing on April 18th. The Divisional Court unanimously dismissed the Inspector's application.

Section 58 (1) imposes a charge for interest where 'an assessment *is* made for the purpose of making good to the Crown a loss of tax wholly or partly attributable to the fraud, wilful default or neglect of any person'. Read by itself, the subsection clearly applies only to assessments made after the Act became law on July 29th, 1960. The ATTORNEY-GENERAL relied on section 44 (1) which provides that, subject to section 44 (2), the provisions of Part III (including, of course, section 58) 'shall have effect in relation to any year of assessment . . . whether ending before or after the commencement of this Act'. Section 44 (1) also provides that the old penalty provisions shall cease to have effect, to the extent specified in Part II of the Eighth Schedule. The ATTORNEY-GENERAL said the obvious intention was that the new provisions should apply to assessments made before 1960.

The Court pointed out, however, that assessments for tax years prior to 1960–61 could well be made after July 29th, 1960, so that it was not necessary to infer that Part III was retrospective to such an extent as to hit assessments already made. The Court also pointed out that section 51 (1) uses the expression 'has been made', not 'is made'. The ATTORNEY-GENERAL was obliged to admit that, on the construction contended for by the Crown, it would be open to the Crown to levy interest in respect of tax which had been paid many years before 1960.

The Court declined to decide another point on the section, on the ground that the Inspector's application failed in any case on the plain wording of section 58. The other point arose out of section 44 (2) and constituted one of the grounds of the General Commissioners' decision – section 44 (2) provides, inter alia, that nothing in Part III

> '(*a*) shall affect any proceedings commenced before the commencement of this Act or the recovery of any penalty imposed in such proceedings;
>
> '(*b*) shall apply in relation to anything done or omitted which is the subject of such proceedings or in respect of which any proceedings were compounded before the commencement of this Act.'

The Commissioners took the view that the defaults of MR MARTIN were the subject of proceedings (i.e. the additional assessments) before the commencement of the Act.

It seems to follow from the Court's decision that the new penalty provisions in sections 46 and 47 are confined to acts or omissions occurring after July 28th, 1960. As the Legislature rather rashly repealed the old penalty provisions, a yawning chasm is now revealed, which calls for a hasty addition to the Finance Bill.

[1] *C.I.R. v Hinchy* (39 A.T.C. 13).

The Association's Affairs

ON the evidence of the extracts from the Council's 1961 report which we published in these pages three weeks ago, the affairs of The Association of Certified and Corporate Accountants continue to prosper although three problems, carried forward from previous years, remain unresolved.

The most urgent of these is the poor quality of the examination results. In the Final examinations in 1961, only 28 per cent of the candidates passed as compared with 44 per cent in 1960 and 49 per cent in 1959. The Intermediate examination results were more satisfactory although exact comparisons with the immediate past cannot be made as this examination has now been divided into two sections. Forty-three per cent passed Section I and 38 per cent Section II in December 1961, whereas in June 1961, under the old syllabus, 26 per cent passed the complete examination. In his presidential address given at the fifty-seventh annual general meeting of the Association on April 17th – a report of which appears in this issue – MR G. L. BARKER, F.A.C.C.A., considers that the difficulty may be that once the demands of office employment are honoured not enough time is available for examination study. Accordingly, the Association's bye-laws have been altered to permit students to take whole-time study courses for the two years preceding the Intermediate examination. MR BARKER appreciates that this innovation is a departure from traditional training methods but thinks that it is in keeping with modern developments in business education.

The second question still confronting the Council is the lack of support given to the district societies. Here again, the office octopus may be the cause but the efforts of those who look after the corporate and cultural sides of the Association certainly deserve more encouragement than they appear to get from the membership rank and file.

The third matter is that of headquarters accommodation. A further short lease of 22 Bedford Square has been taken but new and more commodious premises will have to be obtained to allow the activities of the Association adequately to expand. Bound up with this is the question of finances. Each year the Council contrives most commendably to spend less than it receives and in 1961 the excess of income over expenditure, before making certain transfers for future commitments, was £8,179. The aggregate funds of the Association at December 31st, 1961, were £85,854 and, by present-day money levels, that is clearly not sufficient backing. Accordingly, higher rates of annual subscriptions have been approved and will become operative from January 1st, 1963. It is noteworthy that this is the first increase since 1956 and that the new levels are only slightly more than twice those of 1939.

The Technical Research Committee and its satellite bodies, to whom THE PRESIDENT pays just and due tribute, quietly pursued their valuable inquiries during the year. The electronic data processing subcommittee produced the third of its current series on that subject, entitled *The Planning and Installation of a Computer* and the fourth – *Management Control and Auditing* – is promised for this summer. Behind the scenes, the taxation subcommittee made progress with two future publications – on back duty and double taxation relief – and began work on a new study on estate duty. A regular feature of the Committee's labours is the submission of memoranda to various Government departments including the usual pre-Budget advice to THE CHANCELLOR OF THE EXCHEQUER. Another notable event in the Association's calendar was the week-end school at St John's College, Cambridge, at the end of last month when nearly one hundred members attended.

It is becoming a tradition that the PRESIDENT makes some reference in his address to the Budget and this year, in the course of his remarks, MR BARKER describes the capital gains levy as a political expedient and dismisses it as a costly and complicated tax from which only accountants will derive benefit. This is a solemn thought because the present fortunes of the accountancy profession are substantially based on the ability to see that the law is correctly interpreted, observed and administered. Perhaps if, for a start, taxation laws were simplified – and the Association recently has made some excellent recommendations in this direction – accountants might find more constructive outlets for their specialized skills.

THE ACCOUNTING WORLD

Company Law Reform in Germany

by R. J. NIEHUS
Wirtschaftsprüfer, Düsseldorf

THE German Companies Act dates back to 1937, and almost from the start has been subject to heavy criticism. Its structure generally is considered undemocratic because nearly all power rests with the board of managers (*Vorstand*) and too little with the shareholders, or even with the board of directors (*Aufsicht*) for that matter[1]. The uniform profit and loss statement as prescribed by the Act is considered to fall far short of a proper statement of income. It permitted the offsetting of net sales not only against cost of sales but also against a host of other expenditures so as to arrive at an absolutely meaningless balance as the first item on the profit and loss statement.

After almost twenty years of debate the Federal Ministry of Justice published a Bill in 1958 and invited comments from experts. Naturally the Bill faced strong opposition – mostly from those who would have to relinquish some of their power under the new Act.

New Model Uniform Profit and Loss Statement

Since it has been the established aim of the German Government to revitalize the German stock-market in order to bring in new classes of the population who may buy and sell shares on the stock exchange, it was deemed necessary to eliminate as soon as possible the opportunity afforded by the 1937 Act, as mentioned above, to conceal the sales figure. Over stiff opposition from many in industry who feared that disclosure of net sales would afford their competitors too deep an insight into their operational set-up, and only after a link up with another Bill that permitted stock companies to issue 'stock' dividends without creating an income tax liability on the part of the recipient shareholders (until then a stock dividend like a cash dividend meant taxable income to the recipient), the so-called 'Little Company Reform Bill' became law on January 1st, 1960. As from that date, all companies operating in the form of an *Aktiengesellschaft* are required to disclose their net sales as the first item on the profit and loss statement which they have to publish annually together with their balance sheet. Only family companies below a certain size are excepted from this disclosure requirement.

[1] In the German company hierarchy the directors are elected by the shareholders. They are their representatives entrusted with the supervision of the management. The managers (*Vorstand*) manage the day-to-day business of the company. On principle, a member of the board of managers may not at same time be a director of the company, or vice versa.

Certain other but relatively minor changes were made to the income statement at the same time. For instance, amounts taken into income from a reserve account have to be disclosed separately; the same applies to provisions for general reserves which the management may have made before presenting the annual accounts to the stockholders.

These, however, were only piece-meal amendments. The sweeping changes are still to come. The Government presented a completely new Bill to the last *Bundestag*, but it was not considered before the *Bundestag* was dissolved for last year's general election. It is understood that the Bill, which must be tabled again before the new Parliament, will get its first reading some time in April or May of this year.

It is, of course, impossible to discuss here in detail the new Bill with its 350 articles and its implications for shareholders, board members, advisors, auditors, and the business community in general. Therefore it is proposed briefly to describe the most significant of the new features as far as they would seem to be of interest to public accountants in other countries.

New Model Uniform Balance Sheet

The balance sheet, which in Germany conventionally starts on the left side with fixed assets and with the other assets following in the order of their liquidity, now will have a separate section between fixed and current assets called 'investments'. The sub-headings will be: (*a*) Investments; (*b*) Long-term securities; (*c*) Long-term loans not maturing within the next three years. It is felt that such a subdivision (which has its counterpart on the liabilities side (see below) will give a deeper view into the company's liquidity position.

It has always been obligatory for public companies to show inter-company accounts as a separate item. In future, according to the new Bill, management will have to disclose the amount of shares the company holds in a controlling or a subsidiary company. At the same time the nominal amount of such stocks has to be mentioned. In this connection it should be noted that no change is envisaged regarding the provision that a company generally may not repurchase more than 10 per cent of its own stock.

On the liabilities side, it is perhaps of interest to note that in future only the reserves for depreciation of fixed assets may be shown here (it is customary in Germany, generally speaking, to deduct the annual depreciation from the book values of fixed assets), whereas, for instance, amortization reserves, reserves for doubtful accounts, reserves for inventory devalua-

tion are not to be shown here, but must be deducted from the assets concerned. This provision also operates in the interests of a clearer balance sheet.

Public companies in Germany usually show on the liabilities side of their balance sheets, between the profits retained and the accounts payable sections, an item called 'Reserve for contingent liabilities'. The new Bill contains a provision requiring the amount of contingent liabilities not maturing within the next three years to be shown in parentheses.

The interests of more adequate disclosure are also to be served by the introduction, on the liabilities side of the balance sheet, of a separate section for loans not maturing within three years. It will be subdivided as follows:

(*a*) Bonds (DM . . . secured by mortgages);

(*b*) Bank loans (DM . . . secured by mortgages);

(*c*) Other loans (DM . . . secured by mortgages).

As regards deferred accounts, it has been the practice of some companies to inflate deferred or prepaid charges or credits. In future, however, only truly deferred items may be shown here, whereas prepayments of any form have to be shown on separate accounts.

Secret Reserves

German commercial law which underlies the Companies Act is based on the principle of protection of creditors of an enterprise. In theory, this can mean that the interests of the creditors are best protected if assets are stated as low as possible and liabilities are overstated as high as possible, so that management may not distribute too much profit. It is, of course, often difficult to determine exactly where conservative valuation stops and wilful understatement begins. This has been realized by the authorities, who have not given in to demands from certain circles, mainly academic, to outlaw 'secret reserves' altogether, but have merely tried to restrict them. In future, secret reserves may be created in the balance sheet only within the following limitations:

(*a*) Fixed assets – only if this is deemed necessary from the viewpoint of a prudent and conservative business man in order to strengthen the position of the company.

(*b*) Inventories – only where considered necessary by a prudent and conservative management.

The new Bill explicitly states than no wilful overvaluation may be contained in the 'reserve for contingencies'. Management would violate the law if it should decide to transfer part of the annual profit to the reserve for contingencies account under whatever pretext – and in such a case the public accountant would have to withhold his certificate.

Annual Report to Stockholders

In addition to the information which has to be presented in the annual report under present law (liens, total emoluments paid to members of the board of managers and supervisors, assignment by bill of sale as security – to name only the more important items), the new Bill requires that, for instance, management has to inform stockholders when a right of the directors or managers to share in the profits of the companies has been commuted into any other form of compensation, for example, additional superannuation payment.

Under present law, management may curtail the information ordinarily required to be presented in the annual report, if this is deemed to be in the interests of the company. It appears that this protective clause has not infrequently been invoked, although there is no exact information on this point as management is not compelled to divulge at the annual stockholders' meeting that it had, in fact, withheld information for any reason. In future, there will be no such 'protective clause' and all the information stipulated by law must be disclosed.

A provision of existing law requires management to report to stockholders if the valuation – although still within the boundaries of the law – has not been observed consistently. There is no doubt, however, that this statutory requirement has been interpreted very liberally and practically no reports have contained any comments worth mentioning of changes in accounting principles. In the legislation now proposed this matter is tightened up and any changes regardless as to whether they are considered material or not would in future have to be reported.

Right to Fix Dividends

As in the past, the new Bill requires the company managers, acting with the board of directors, to prepare the financial statements and to determine the amount of the profit which in their opinion may be distributed as a dividend. At the same time they are required to disclose in the profit and loss statement the amounts set aside as reserves.

The shareholders' meeting, however, has the right to reject the balance sheet and profit and loss statement in the form presented, and may either restore to income part of the amounts set aside, or conversely, increase the provision for reserves. This exclusive right of the stockholders to dispose of the profit including open reserves is generally considered to be a prominent democratic feature of the new Bill.

Right of Minority Shareholders

Under present law the majority of shareholders could vote to liquidate the company or to change it into a *G.m.b.H.* which is the other form of incorporation in Germany (but which does not have to publish its financial statements, and the shares of which cannot be traded on a stock exchange). In future this will only be permitted if at least 95 per cent of the shareholders present at the shareholders' meeting agree to such a change-over.

Group Companies

Described above are some of the amendments which are proposed, which are designed to modernize – or as some critics say, to 'democratize' – the present company legislation. However, the most significant features of the new Bill are the provisions which deal with 'group companies' and, in this connection, especially with 'interlocking investments'. Not only does the Bill for the first time require the audit and subsequent publication of consolidated accounts, but it also requires management to prepare an annual report to stockholders on the consolidated accounts. Nor is the method of consolidation left entirely to the discretion of the companies and their accountants, but is to some extent prescribed in the Bill. A consolidation has to be made if a company owns more than 75 per cent (in certain instances more than 50 per cent) of the shares of another company.

Points on Take-over Procedure

CONTRIBUTED

The recent I.C.I.–Courtaulds battle has once again focused attention on take-overs and has given rise to some discussion of procedural points. In this article our contributor discusses current procedures in the light of the Prevention of Fraud (Investments) Act, 1958, the Licensed Dealers (Conduct of Business) Rules, 1960, the 'Notes on Amalgamations of British Businesses' published by the Issuing Houses Association in October 1959, recommendations made by various bodies and persons to the Jenkins Committee on Company Law Reform, and some case law on the subject.

Who can make Offers?

AT the present time a take-over offer, whether for cash or by shares exchange, can be made, *inter alia*,

(i) by an exempt person under the Act of 1958 on behalf of a principal. Exempt persons include issuing houses and merchant banks and all stock exchange firms which, as the result of a change in stock exchange regulations, can now make take-overs provided they have the consent of their council. Lists of exempted dealers are published annually by the Board of Trade and are obtainable from the Stationery Office;

(ii) by a licensed dealer under the Act of 1958 who has been granted either a principal's licence or a representative's licence by the Board of Trade. The Board has power to regulate the conduct of business by holders of licences and has done so in the Licensed Dealers (Conduct of Business) Rules, 1960 (S.I. 1960, 1216). These rules are not made applicable by statute to exempt persons;

(iii) by any company or firm provided it submits the document containing the offer to the Board of Trade for approval, or without such approval when making an offer for shares of any of its own subsidiaries;

(iv) through the sitting board of the offeree company. In this last case the question arises whether the document must be vetted by the Board of Trade before it is sent out to shareholders. Section 14 (3) (*a*) (iii) of the 1958 Act provides that a circular issued by a company and addressed exclusively to holders of securities in, or to persons employed by, or to creditors of the company or any subsidiary thereof, is exempt from the provisions of subsection (1) which places restrictions on the distribution of circulars relating to investments.

In a case which came before the stipendiary magistrate at Marlborough Street Court, London, in 1959, the chairman of a company of wholesale chemists was also chairman of a company of financial consultants who were financial advisers to the first company. At a meeting of the first company the chairman reported that he had received a firm offer for the company's shares and a resolution was carried unanimously that the board recommend shareholders to accept the offer. A circular was sent out to shareholders from the company's offices advising acceptance of the offer, but acceptances were to be sent to the offices of the financial consultants who had undertaken to deal with the transfer of the shares for a special fee. The financial consultants, who were not licensed dealers, were charged by the Board of Trade with having caused the wholesale chemists to distribute documents which were circulars containing an invitation to persons to offer to enter into an agreement for disposing of securities. The magistrate said he could not accept the claim that the act of the wholesale chemists was the act of the financial consultants

and he dismissed the summons. Nevertheless, there seems to be a feeling that the position generally in this respect is in need of clarification.

Controls

In the case of licensed dealers (but not exempt persons) the document containing the offer must contain the information and advice set out in article 1 (*a*) and (*b*) of the 1960 Rules, and the terms of the offer and the document containing the offer must also comply with the numerous requirements specified in Parts I and II of the First Schedule to the Rules. It is understood that where the offer is made by a member of the London Stock Exchange, the Council of that body is likely to insist that the offer contains the information laid down in the 1960 Rules, and a company or person (other than an exempt person or licensed dealer) submitting the document containing the offer for the approval of the Board of Trade will presumably also have to conform to the same rules as a condition of obtaining approval. Merchant banks, issuing houses and other exempt persons, on the other hand, are largely guided by 'City practice' as set out in the *Notes on Amalgamations of British Businesses.*

The control exercised by the stock exchange over information disclosed to offerees in a bid has been confined to cases of quoted companies issuing a circular of offer to its shareholders or intimating to its shareholders the existence of an offer. In such circumstances four copies of the proofs of circulars to shareholders and notices of any meetings are required to be submitted to the Share and Loan Department.

There is no stock exchange control over offers made by issuing houses, bankers, solicitors, accountants or other persons directly to holders of securities, but most issuing houses and merchant banks and several holders of principals' licences have, as a matter of courtesy, submitted proof documents of offer for comment by the Share and Loan Department. The *Notes on Amalgamations of British Businesses* in fact recommend that documents containing offers for securities which are quoted on the stock exchange should be cleared with the stock exchange authorities before their issue.

Contents of Documents

Among the financial institutions, professional bodies and others who have submitted memoranda to the Jenkins Committee, there is a large measure of agreement as to what the document should basically contain, but there are one or two striking instances of disagreement. It is generally accepted that the bidder should disclose his identity at the date of the offer, together with the number of shares he has already acquired, if only for the reason that a shareholder should know who will be in control if he is left in a minority.

On the other hand, the Law Society has stated that any person interested in acquiring any sort of property was at present free to conceal his identity if he wished, and the Council of the Society could not see any reason why a person wishing to acquire control of a company should be placed in a position of peculiar disadvantage. Several recommendations have been made to the effect that the latest date when an offer could be declared unconditional should be stated; and that when the offer was declared unconditional the bidder should reveal the number of shares which he then held or for which acceptances had been received and should allow a further period of seven days for acceptance. Three weeks is the most popular minimum period for which an offer should be kept open, with five weeks as the maximum period. The Accepting Houses Committee and Issuing Houses Association, in a joint memorandum, suggested that licensed and exempted dealers, when making an offer on behalf of a principal, should accept statutory responsibility (on the lines of the responsibility of an issuing house for the accuracy of an offer of sale) for seeing that the offer contains accurate and sufficient information about the offeror company to enable the recipient to make up his mind.

Other suggestions would require the bidder to state his intentions regarding the continuation or otherwise of the business and his proposed treatment of redundant personnel, if any. There are no dissentients from the view that in the event of a partial offer, acceptances should be on a *pro rata* basis in the event of acceptances exceeding the amount required. Indeed, the Council of the London Stock Exchange stated that it had as a 'subject for inquiry' the possibility of requiring an explanation of the reasons for the unwillingness or inability of the bidder to make an offer for the whole of the securities of a particular class.

By section 193 (1) of the Companies Act, 1948, particulars of any payment to a director for loss of office in connection with the transfer of all or any of the company's shares must be included in or sent with any notice of the offer for their shares which is sent to shareholders. Details of

such payments have often been included as part of the terms of the offer. However, where the Licensed Dealers Rules apply, article 1 (3) of Part II of the First Schedule to the Rules provides that the acquisition of the securities to which the offer relates shall not be conditional upon the offerees approving or consenting to any payment or other benefit being made or given to any director of the offeree company as compensation for loss of office or as consideration for or in connection with his retirement from office.

Duty of Offeree Company's Board

The Third Schedule to the 1960 Rules contains a list of requirements to be satisfied by the board of directors of an offeree company recommending acceptance (but not refusal) of an offer. Perhaps the most important requirement from the point of view of shareholders is number (8), namely, whether or not there has been any material change in the financial position or prospects of the offeree company since the date of the last balance sheet, with particulars. The Law Society of Scotland suggests that in addition the directors of the offeree company should inform the shareholders as to (*a*) the prospects of the industry in general and the company in particular; (*b*) whether in their opinion the present value of the assets of the company differs substantially from the balance sheet figures; (*c*) what they know of the financial standing of the offeror, and (*d*) whether the offeror's method of settlement appears satisfactory.

Section 54

Section 54 of the Companies Act, 1948, prohibits a company, saving exceptions, from providing financial assistance towards the purchase of its own shares or those of its holding company. It is not clearly worded and its main provisions have given rise to different interpretations. The fine for a breach of its provisions is relatively small and it is considered by some that there have been wholesale breaches of the section in connection with take-over bids, particularly where, for example, the bidder borrows the whole or part of the cash consideration for the purchase of shares and later repays the loan from the offeree company's resources. Some recommendations to the Jenkins Committee would deal severely with alleged breaches of this kind, but the question arises whether some of the practices condemned are really detrimental.

The Law Society (of England) points out that in many groups of companies finance is quite properly centralized in the parent company which acts as a banker to the group. When a company with liquid resources is acquired, those resources are taken over by the parent company which, it could be argued, had thereby recouped part of the purchase price of the shares and thus received financial assistance in connection with the purchase. The Council of the Society therefore recommends that section 54 should be reviewed so as to make it clear that this kind of transaction is permitted.

Similar observations came from the Council of The Institute of Chartered Accountants in England and Wales who stated that the section was apparently being interpreted to mean that if company A. (using its own resources or a bank overdraft or money borrowed from a third party) purchases the shares of company B., it is therefore unlawful for B. to transfer to A. either by way of loan or dividend any part of the cash or other assets held by B. at the time when the shares were acquired by A. In a memorandum from Guest, Keen & Nettlefolds Ltd, it was recommended that the extent to which a company's resources can be used, after the event, to finance the purchase of its own shares should be specified by statute.

Conclusion

It will be apparent from what has been said that the only direct statutory control, in the case of take-overs, is exerted where the offer is made by a licensed dealer, but that the Licensed Dealers Rules may be made applicable, under pressure or by persuasion, to other offerors or agents. Since, however, the majority of the more important bids appear to be made by merchant banks and issuing houses on behalf of principals, the governing factor is usually 'City practice' as outlined in the *Notes on Amalgamations of British Businesses*, and the requirements of the stock exchange so far as relevant.

Needless to say, circumstances alter cases, and the larger the company to be taken over and the more problematical the merits of the bid, the fuller should be the information required from both sides to enable shareholders to arrive at a decision. Indeed, latitude and flexibility are emphasized as desirable in connection with take-over bids by many of the recommendations to the Jenkins Committee, their sponsors being opposed to statutory intervention except to cure real or imaginary abuses or to clarify matters of law which are now in doubt.

Management Decisions Games

by BRIAN A. MAYNARD, M.A., F.C.A., F.C.W.A.

In this paper, the chairman of the recent 'Information for Management' conference of the London and District Society of Chartered Accountants, describes the aims and operation of the business game he organized for the conference.

THE idea of using games to teach principles for the conduct of operations is an old one. In the armed forces, where it can be unnecessarily disastrous to learn lessons the hard way, games have long been used for training purposes. Thus, it is known that Kriegspiel was in use in the Prussian army as early as 1798 and military games, which were introduced into the British army in 1872, later spread to many other countries. During the first half of this century Germany and Japan made extensive use of war games, particularly in their preparation for the Second World War.

Over the last five years, management or business games involving the use of an electronic computer have been used increasingly in industry and commerce and in business schools in the U.S.A.

In Britain, games which do not involve the use of a computer, often derived from the Andlinger (*Harvard Business Review*) game, have been in use for some time. But games which exploit the possibilities of computers have only recently become available in the United Kingdom. It is safe to prophesy that we shall be hearing a lot more of them as the many computers now being installed in this country become established, and their possessors find themselves in a position to benefit from recent American research and experience.

It was appropriate that the first conference in Britain at which such a management game was played should be organized for members of The Institute of Chartered Accountants in England and Wales. For accountants will inevitably have a large part to play in this development, either as external advisers or as members of the management team. Their enthusiasm was shown by the fact that the members of this conference were prepared to play the game on Thursday and Friday evenings until midnight and to follow this by an all-day session on Saturday in London near the computer.

Game not a Gimmick

I would like to stress the fact that this game constituted an integral part of our conference and was not an extraneous gimmick. Our theme was 'Information for management' – a much broader concept than the somewhat limited and dated one of management accounting. We were therefore concerned with our role as information men responsible for providing an all-round information service to all levels of management to assist them in planning and control and generally to make better decisions.

The selection of a computer game as a means of learning more about management decision-making processes does not imply any excessive enthusiasm for this new technique, which must be considered in perspective as only one of a whole range of management training methods. A computer game, however, offered two valuable advantages for our purpose. First, its speed enabled us to telescope some four years of vicarious experience into twelve hours of real time – no small consideration at a brief conference on a large subject. Secondly, it provided a rapid feedback of the results of their decisions to the players, thus allowing them to modify their policies in the light of the lessons learned while the game was in progress. This dynamic quality in the game can lead to a remarkable degree of personal involvement and absorption and increases the impact of its lessons.

Computers have the advantage of being able to use models incorporating far more numerous and complex factors than it would be practicable to include in a manual game. This makes it possible to illustrate a broader range of principles and to illustrate more complex procedures or techniques. Their other virtues include accuracy – though this is not infallible – and complete impartiality in establishing the results of competitive decisions. This obviates the personal resentments that are so easily engendered in games which involve qualitative decisions by a human referee.

Nature of the Game

A high degree of realism is vital in functional games used to provide training in specific areas like marketing, production control or stock control, or games designed for a particular industry, and, more

Mr Brian A. Maynard, M.A., F.C.A., F.C.W.A., is a partner in Cooper Brothers & Co. In 1960 he led a mission of European computer specialists to study integrated data processing and computer developments in the United States.

generally, wherever simulations are used for research or problem-solving. But in general management games, whose object is to illustrate and teach general principles, verisimilitude or an impression of reality is what is required. Here it is more convincing and effective to simulate only those factors which are necessary for these purposes than to allow the main issues to be obscured by too many unimportant, though realistic, factors. At the other extreme, over-simplification to a point where verisimilitude was lost would interfere with players' concentration and acceptance of a game.

Ours was one of many variations of a well-known game produced by the American Management Association, which has done much to encourage the development of games for training purposes. Our version was adapted from the basic A.M.A. model by The Pillsbury Company in 1958 and has since been further modified by C.E.I.R. on whose resources and administration we relied.

Our game was of the 'interactive' variety, so described because the actions of each company were affected by those of each of the others. For example, a company's sales were affected if a competitor lowered its unit price, or improved the quality of its product and indulged in heavy marketing expenditure without changing the price. Being interactive, the game was competitive.

Non-interactive games are used for such purposes as training in the operation of internal procedures such as new inventory or production control systems. They can also be played competitively by, as it were, playing against par and comparing results.

The element of competition between the policies of the leading companies, which formed a most enlightening feature of our game, could easily be lost if there were too many competitors. We therefore restricted the number of companies to seven a game and organized the conference into fourteen groups so that two games could be played simultaneously.

Organization of 'Companies'

Each group comprised ten members – a chairman, his eight executives and a tenth, non-playing member who acted as observer. It was left to the chairman to decide how best to organize his team. As sound decision-making at high speeds is not possible without efficient internal organization, chairmen delegated responsibility for the more important functions and various clerical tasks. Some 'companies' found it practicable to rotate some of the jobs to broaden members' experience.

Concentration on the most relevant information for each decision is essential to success. It was left to each company to decide the extent and form of the records it required, but an *aide-mémoire* was prepared for any chairmen who were interested. Similarly, details of a number of possible forms of organization were also provided for the consideration of chairmen.

To facilitate the clerical work involved, stationery, including specially ruled graph paper and schedules for tabulations, coloured pencils and calculating machines were provided in the boardrooms.

Role of Observers

The observer attached to each company had previously attended a special half-day session on the game. His concern was that the company should learn from the game and not that it should win it – there was in any case no fixed criterion of success. His primary function was therefore to ensure that his company did not neglect any facts that might increase the benefits it obtained from playing the game. In doing this, he had to be careful to remain an observer and not to use his privileged inside knowledge about competitors' activities and the progress of the game to influence the policies or decisions of the company. An additional function was to assist generally in the maintenance of the time-table and answer questions of a routine nature about the game, passing others to the referee.

Observers were supplied with working schedules on which they recorded their observations under such headings as:

I – General objectives of the board;
II – Policies adopted to achieve goals;
III – Main interests of board members;
IV – Records maintained;
V – Organization of the board;
VI – General comments on benefits obtained.

They were particularly requested to agree with the chairman of their company a statement of its initial objectives and policies by the end of the first year, and, of course, to record changes made subsequently as a result of experience of competitors' activities.

At the general review session at the end of the proceedings, the observer was required to give his comments immediately after his chairman had reported.

At various stages in the game, conferences were held for the executives responsible for a particular function, such as sales, production or finance. These lasted for one quarter, during which the chairmen had to re-allocate the duties of those concerned. The agenda for each conference, which specified who was to open the discussion on each point, was circulated two quarters before the meeting.

Starting Position

Each group took over a company as a going concern from the previous management, competing in a relatively new market for a single type of product which they manufactured. In some games each group starts off with the same cash reserves and the individual companies, which are all in different positions, are auctioned to them. In our game, all companies started in identical positions in terms of cash and credit resources, plant, profit and share of the market and sales potential. These initial details were set out in the last reports of the previous management (Figures 1 and 2) and some explanatory notes are

provided in Appendix A. I should have liked to extend the technical information back over, say, the four previous quarters but this was not practicable. It was, however, apparent from the previous quarter's report that things were far from well and that every company had to improve its performance.

Decision Reports

At quarterly intervals, each company was required to make a series of decisions covering:

Level of output;
Level of expenditure on research and development;
Level of expenditure on marketing;
Unit price to be charged for its product;
Dividend to be paid, if any;
Expenditure on purchasing plant;
Expenditure on market research information;
Increase or decrease in bank loan.

These were recorded on the decision report (Figure 4) after their cash implications had been reviewed on the cash budget form (Figure 3). Notes on how these forms were to be completed are provided as Appendix B.

The ranges from which decisions had to be selected were realistically limited to prevent a company from extricating itself from difficulties by adopting extreme policies with a suddenness which would not normally be practicable in real life. This was appropriate for our purposes, though it can be objected that such restrictions prevent just those breakthroughs from which, in practice, success often stems. Less realistic was the precise implementation of all the decisions on expenditure, so that expenditure was always exactly in accordance with the budget.

The time allowed for a round of decisions varies greatly from game to game. In some of the more complex games which are now incorporated in the curricula of some of the leading American business administration schools, there is an interval of a week between each round of decisions. In other games, decisions are made every quarter of an hour.

We aimed to get the best of both worlds. During the initial two days, while we were at Oxford, the programme allowed an hour and a half to complete each of two rounds of decisions and three-quarters of an hour for the third. By the time we left for London, we should therefore have spent about four hours over the three quarters' decisions. In the event, as indicated in *The Accountant* last week, most companies worked at least four hours' overtime between these early rounds.

When we arrived at the computer centre on Saturday morning, having made a further round of decisions in our private carriages on the train, companies had got the feel of the game and established longer-term policies. We then went over to continuous working at high pressure, making quarterly decisions at intervals of about half an hour and starting work on the following quarter as soon as the decisions for its predecessor had been handed in. We worked right through lunch, which was consumed on the job.

There is no one best way of playing a management game and several combinations of policy can prove successful. Good management principles tend to pay off and, while it is important to explore the game's economy and regulate decisions accordingly, attempts to beat the game instead of playing it properly are a waste of time and defeat its objects.

As I have already stressed, the object of playing the game is to learn as much as possible from it and from one another in the process. If we must have criteria of success, I suggest those by which we would judge a company soon to issue a prospectus. 'Window-dressing' towards the end of a game (for example, by reducing stocks or expenditure on research and development to a dangerous level) in order to increase the value of one's company's shares in the final quarter at the expense of its future prospects therefore carry no weight and only invite criticism either from members of other companies, or from the observer, at the concluding review sessions.

Stock Exchange quotations, as in real life, do not always provide much of a yardstick of success. In our game they took account of earnings, dividends, production capacity, marketing expenditure, net assets and excessive stocks.

Returns

At the beginning of each quarter, each of our companies was given its report for the previous quarter in the standard form (Figure 1), together with any additional market research information it might have purchased. While it was important to watch competitors' activities, it had to be remembered that, as in real life, they could well be making mistakes. An enterprising management did not, therefore, let any undue tendency to conform deter it from thinking ahead and following positive policies.

(As a token of sympathy for those who might be running their businesses blind and to bring home the disadvantages of operating on this basis, we asked for the decisions for one of the quarters to be handed in before the results of the previous quarter were issued.)

At the end of each year, each company received an annual statement (Figure 4), which set out the net assets and annual profit of all the companies.

Economic Background

There is inevitably artificiality about an environment in which human factors outside the boardroom, such as labour relations, are completely ignored and decisions are made solely on the basis of reported information without first-hand knowledge of external events. Valuable deductions about what is going on in the economy generally can, however, be made from the quarterly reports. Thus it would be significant if the limit on the company's line of credit fell suddenly at a time when its credit-worthiness appeared to be increasing, or if there were a general fall or rise in the level of the share prices of all the companies

without any corresponding movements in profits to justify this.

A ten-minute talk on the general economic background of our game was therefore given before the third quarter. In the general review session at the end there was a further short review of the actual working of the economy during the particular game.

The only hint that was given in advance was that the market might tend to expand over the long term. Expansion would, however, be subject to planned checks representing such unforeseeable hazards as strikes, credit squeezes and import restrictions in the export markets and to the policies of the companies in such matters as selling prices and marketing expenditure.

Learning about the Economy

Each company was keen to find out quickly as much as possible about the industry simulated by the game. For example, how soon did expenditure on research and development affect the quality of the product? In games where research expenditure is considered to be incurred primarily on the search for new products, it may well prove unsuccessful and an appropriate element of chance is therefore built into the model. In our game, all expenditure was to some extent fruitful and resulted in some improvement in the quality of the existing product and some reduction in the production costs. No new products could be developed.

The appropriate level of expenditure, of course, depended both on the policy of the company and on the expenditure incurred by competitors. It was found to be worth spending £10,000 from time to time to find out how the quality of one's product compared with the target and with that of competitors as a check on the effectiveness of the company's research and development expenditure (Decision VIII).

It is tidy, but unrealistic, to think of each company's research work being carried out in a watertight compartment. But in practice they would be watching each other's progress by buying competitors' products and analysing them or by occasionally hiring members of a rival's research staff. We introduced a touch of realism here by exchanging one member of each company in the middle of the game. As the moves were between companies in different games, they brought no direct knowledge of a competitor's activities. They did, however, bring a breath of fresh air to each boardroom in terms of ideas about how the board should operate and what information was most useful for planning and controlling its business and alternative policies in different areas.

Marketing expenditure was another item which had to be carefully watched. In some games it pays off immediately; in others, intended to illustrate different circumstances, its effect is delayed. It is important to discover from experience both how quickly it begins to pay off and over how long a period its effects can be expected to last. This expenditure provides a good illustration of one of the limitations of these games, namely, the exclusion of the qualitative element. Thus each pound spent on marketing is equally effective regardless of who spends it and the circumstances in which it is spent. Selection of an appropriate level of expenditure must depend to some extent on the actions of one's competitors; for example, a level of expenditure which has previously been adequate may cease to be so if one's competitors step up their campaigns.

It was also desirable to discover as much as possible about the elasticity of the demand for one's own product and whether demand was to any significant extent seasonal. Other things being equal, overall demand would be increased if a number of companies incurred exceptionally heavy expenditure on marketing and research and development at the same time as pursuing a modest pricing policy, but this effect was not always very apparent.

Operation of Computer

The mechanics of our game were relatively simple; the programme for the game and the position of each team at the end of the preceding period, both previously recorded on magnetic tape, was fed into the store of the computer; an operation which was completed in only five seconds.

Each team's decisions were punched from its decision report into an eighty-column card. The seven cards, one for each team in the game, together with a card containing any special seasonal, cyclical and other factors affecting the level of demand, were then fed into the IBM 7090 computer. The machine took about three seconds to read the punched cards, allocate sales between the companies on the basis of the decisions that they made, compute the position at the end of the current quarter and record it on magnetic tape. This tape was then transferred to a smaller computer with a printing speed of 600 lines per minute, and the companies' quarterly reports were printed at a rate of about one report every fifteen seconds. For the rounds played at Oxford, the decisions were telephoned to London and the resulting reports sent to Oxford by car.

General Review Session

During the game, charts showing the progress of the teams, including their net assets, sales, net income and their decisions on such matters as unit costs and prices, were kept in an operations room. These were discussed at the general review session with which the game concluded.

The main part of these sessions were devoted to a consideration of each company's experience. Each chairman, in addition to outlining his company's goals and policies and commenting on its achievements, was asked to say something of the lessons learned in the process, the main mistakes made and how his company would behave differently if given another chance.

The observer then gave his comments, covering such matters as the efficiency of the company's internal organization and of its use of time, the clarity of its goals and policies and its sensitiveness to changes in the economy and to the policies of its competitors.

Benefits Obtained

There is no doubt that all participants enjoyed playing the game. What practical benefits were obtained, depended, of course, on the individual. On the whole, the experience strengthened the conviction that a positive approach, supplemented by good internal organization, and the intelligent selection and analysis of such information as may be available, enormously improves the quality of decision-making.

More specifically, it should have sharpened players' awareness of:

(*a*) the importance of keeping a proper balance between short- and longer-term objectives and the folly of maximizing short-term profits at the expense of future growth;

(*b*) the differences between the viewpoints of the various interests represented on the board and the need for intelligent compromise to reconcile their conflicting demands;

(*c*) the importance of constantly reviewing policy in the light of external factors, including the activities of competitors;

(*d*) the importance of calculating risks and of adopting policies which are flexible enough to enable a company to minimize the effects of unfortunate experiences and recover quickly from them.

While, for most organizations, the expense of preparing a tailor-made computer game would be prohibitive, the possibilities of adapting an existing game may well be attractive. The computer programme for a game incorporates a number of parameters – quantities which represent environmental features that remain constant – and, provided that the programme has been appropriately written, these parameters can easily be changed. In our game, some parameters could readily be recognized – for example, the rates of depreciation and interest and charges connected with stockholding. Those which were less apparent included the demand curve, and the effectiveness of expenditure on research and development and marketing and the period over which effects occurred. It will be clear that by altering such constants a game can be materially changed to meet varying requirements. Participants must, however, beware of assuming that policies which were successful in the particular simulated environment can be applied blindly in real life.

Notes on Quarterly Reports

I – STATEMENT OF NET ASSETS

This shows the figures at the end of the quarter together with the changes during the quarter. Changes are increases unless preceded by a minus sign.

1. *Cash.* – This includes the proceeds of sales during the quarter which, for simplicity, are assumed to be received on the last day of the quarter.

2. *Stocks.* – The number of units of the finished product in stock at the end of the quarter, at its unit production cost (F.I.F.O.).

3. *Depreciation.* – Depreciation is provided at the rate of 2 per cent per quarter on the net book value of plant at the end of the previous quarter.

4. *Net plant.* – It is assumed that each £5 net book value

Figure 4

4 10	Q	Relative quality of product.
5 15	SM	
6 15	SQ	
7 20	MQ	
8 25	SMQ	

IX *Increase loan*, £(000) =

X *Decrease loan*, £(000) =

of plant held at the end of the previous quarter is capable of providing one unit of output during the quarter. The productive capacity of the plant is therefore calculated by dividing its net book value by five.

5. *Bank loans.* – Loans outstanding at the end of the quarter.

II – Income Statement

1. *Sales.* – Number of units sold during the quarter, at the price decided at the beginning of the quarter.

2. *Cost of units sold.* – Cost of production during the quarter (including wages, materials, depreciation, administrative salaries, maintenance, etc.), less any increases in stocks (credited at the unit cost of production during the quarter), plus any decreases in stocks during the quarter (at the unit cost at the beginning of the quarter).

3. *Research and development.*
4. *Marketing.*
5. *Market research.*

} Expenditure during the quarter as decided at the beginning of the quarter.

6. *Stock carrying costs.* – Cost of holding stocks, calculated at the rate of 4*s* per unit held at the beginning of the quarter.

7. *Bank interest.* – Interest payments of 2 per cent per quarter on the loans outstanding at the end of the quarter.

8. *Taxes.* – Taxes are computed at the rate of 50 per cent of profits. Taxes are repaid at the same rate on any loss in the period in which it is incurred.

III – Market Information

Each company will be provided with the following information about all companies at the end of each quarter.

1. *Unit price of product.* – Selling price during the quarter.

2. *Share price.* – The Stock Exchange quotation at the end of the quarter.

3. *Dividends.* – Dividend paid during the quarter, together with:

4. *Total industry market.* – Total units sold by all companies during the quarter.

Each company will also be given the following information about itself:

5. *Percentage share of market.*

6. *Potential sales.* – The number of units it has sold during the quarter, or, where appropriate, the total number that it could have sold if it had not been out of stock. If sales are lost for this reason, there will be a loss of goodwill for a number of subsequent periods.

In addition, the following information will be provided if it was purchased on the decision form at the beginning of the quarter.

7. *Quality of all companies' Products.* – Graded 'excellent', 'good' or 'fair' as an indication of the relative effectiveness of each company's research and development programme. This information costs £10,000.

8. *Total industry marketing expenditure.* – Aggregate amount spent on marketing by all companies during the quarter. This information costs £10,000.

9. *Percentage share of market.* – Similar information about all other companies to that provided free about itself (III – 5). This information costs £5,000.

Appendix B

Notes on Completing Decisions Report and Cash Budget

1. Decisions on the following points must be made from the range provided on the decisions report for the quarter. They should be recorded on the report at the beginning of the quarter by ringing the appropriate serial number.

I – Cost of Production

2. The report shows the unit costs of the plant held at the beginning of the quarter at different levels of output. From this a production level for the quarter must be selected.

II – Research and Development

3. The range of thirteen alternatives is centred on the company's decision for the previous quarter – which thus appears against No. 7. An increase or decrease from the previous quarter's level of expenditure of up to £30,000 in £5,000 steps, is therefore possible.

III – Marketing

4. The range is centred on the previous quarter's decision (No. 7) and permits an increase or decrease from the previous quarter's level of expenditure of up to £60,000 in £10,000 steps.

IV – Unit Price

5. The range is centred on the previous quarter's item (No. 7) and permits an increase or decrease from the previous quarter's unit price of up to 6*s* in 1*s* steps.

V – Dividends

6. Enter zero if no dividend is to be paid. The dividend payment shown on the starting report is a quarterly one.

VI – Additional Plant Investment

7. The range of alternatives for the purchase of plant remains the same in each quarter. As the capacity of the plant and equipment is assumed to fall at a rate corresponding to the depreciation provision (2 per cent per quarter on the net book value) a quarterly expenditure of about £100,000 is required to avoid a reduction in capacity. Expenditure on plant becomes productive in the quarter after that in which it is incurred.

VII – Scrapping of Plant

8. This facility will not be available.

VIII – Market Research Information

9. Three types of market research information may be purchased – competitors' share of market, total industry marketing expenditures and relative quality of all companies' products – see Appendix A, III: 7, 8 and 9.

IX–X – Increase or Decrease in Loans

10. The expenditure resulting from the above decision should be entered on the cash budget. The total expenditure proposed should then be calculated by calculating and entering the figures for 'Stock carrying costs' and 'Interest' (Appendix A – II: 6 and 7).

11. The cash position should then be reviewed in the light of the total funds available (the proceeds of the quarter's sales are excluded as they are assumed to be received at midnight on the last day of the quarter). The line of credit available is affected by profits, the Stock Exchange quotation, marketing expenditure, the level of stocks and the current economic climate. As the depreciation provision for the quarter is included in its production costs, it is automatically added to the figure of funds available to simplify calculations.

12. It is essential to prepare a provisional cash budget as early as possible so that the implications of the proposed decisions can be reviewed in good time. For it will often be found that the expenditure initially proposed would exceed the total funds available with the result that the decisions will have to be modified.

13. Decisions on whether to increase or decrease bank loans can then be reached and entered on the report. The arithmetic should always be checked to ensure that the loan increase is adequate to meet requirements. Enter zero where there is no change.

14. If at the end of any quarter the company's credit limit is reduced below the outstanding loans, the position must be rectified in the following quarter.

Weekly Notes

NEW SCHEDULE A ASSESSMENT UPHELD

A DEVICE to avoid Schedule A tax by letting a gravel-pit at an ordinary agricultural rent and granting a simultaneous licence to extract gravel in consideration of royalties was successful before the General Commissioners and in the High Court (*De Voil v. Welford Gravels Ltd* (40 A.T.C. 287) but foundered in the Court of Appeal (*The Financial Times*, April 18th).

The land in question consisted of 23½ acres on the 115-acre Stows Farm. It contained a gravel-pit which had been worked to a limited extent for years. Then the owners of the farm having obtained development permission sold the 23½ acres to Besbuilt Ltd in February 1957. The latter allowed Welford Gravels Ltd to erect some expensive plant and small buildings for the purpose of intensive exploitation. In December 1957 Besbuilt Ltd granted to Welford Gravels Ltd a twenty-one-year lease of the 23½ acres at £60 a year, with a prohibition against extracting sand or gravel. However, on the same day Besbuilt also granted to its tenant a licence to extract, for the same term, at a royalty. Very large sums were paid in royalties.

The Inland Revenue made an additional Schedule A assessment on the 23½ acres for 1957–58 on the ground that, although 1957–58 was not a year of general revaluation, the 23½ acres constituted a new property. This argument prevailed in the Court of Appeal; Upjohn, L.J., dissenting. The taxpayer obtained leave to appeal to the House of Lords.

PRUDENTIAL POLICY?

THE head man from the Prudential, Sir Frank Morgan, M.C., in his chairman's statement with the accounts for the year ended December 31st, 1961, strongly advocates the retention of the penny at its present value in any system of decimal coinage which the United Kingdom may introduce. He argues that the essential transactions of life involving the purchase of goods and services – bread, milk, bus fares, newspapers, postage stamps, and industrial assurance policy premiums among them – are based on the spending power of a penny or multiples of it and that to alter this standard – as would have to be done if the £ or 10*s* were adopted as the main unit – would seriously disrupt our everyday economy. He therefore supports building the new currency system upwards from the penny thus creating a new standard coin worth 100 pence or 8*s* 4*d*.

Sir Frank's particular case for industrial life assurance is that policies are long-term contracts and that

> '. . . the compulsory alteration of the premium during the existence of the contract produces a major administrative problem not only in accounting changes but in the adjustment of benefits to accord with the change in premium'.

It is difficult for the layman to appreciate this argument. There should be no alteration in the real value of the premiums of any existing policy nor in the corresponding value in the benefits accruing therefrom. All that would be affected over a short term is the incidence of collection of premiums and surely it is not beyond the wit of the agent to arrange his affairs so that, instead of collecting, say, fourpence every four weeks over a period of twelve weeks from a client, he calls twice in the same period and collects the equivalent of sixpence (5×1·2*d* if the principal unit in the new currency was 10*s*) each time. This would actually save him a call. Perhaps there is much more to it than that, but on the surface it looks as if the Prudential chairman's concern for the possible passing of the penny, as we know it, is scarcely justified.

ACTION AGAINST ACCOUNTANTS FAILS

IN the High Court on April 18th Mr Justice Megaw dismissed with costs an action in which a former Plymouth solicitor, Mr Ralph Damerell Luscombe, alleged that professional negligence by his accountants had led to his being struck off the Solicitors' Roll.

Mr Luscombe, 56, now of Mill End House, Bickington, South Devon, claimed damages from Messrs Roberts & Pascho, Chartered Accountants, of Ermington Terrace, Plymouth, alleging that from 1953 to 1957, inclusive, they overstated his profits, causing his liability to his own clients to be camouflaged. By the time the true position was ascertained in 1958 his liability to clients was £10,369. The defendants denied negligence and claimed that Mr Luscombe was to blame for his present position because, they alleged, he used clients' money for his own purposes.

Giving a reserved judgment, his lordship said, 'I have, not lightly nor without anxious consideration, decided that Mr Luscombe, a man in an honourable profession with an otherwise unblemished record, a man who was clearly liked and respected by his fellow solicitors and others in the place where he lived and worked, has been guilty over a period of years of dishonest conduct.'

None of the plaintiff's clients had suffered any loss as a result of the deficiency because a large number of Plymouth solicitors, moved to a large extent by affection for Mr Luscombe, had subscribed over £7,000 towards the deficiency.

'I have come to the conclusion that Mr Luscombe's claim fails and there is no liability on the defendants,' said the judge. 'It is true that the accountants were in breach of their duties in various respects, for which in different circumstances they would have been liable. I have, however, been driven reluctantly and inexorably to the conclusion that throughout the

relevant period Mr Luscombe's conduct was dishonest and he is, therefore, to blame.'

From 1952 Mr Luscombe had transferred from his client account money he held on behalf of clients to his office or private account. From the office account he was paying disbursements on behalf of clients, office expenses and his own personal and private expenses.

It had not been disputed that Mr Luscombe had acted in breach of the Solicitors' Accounts Rules, and that the defendants had failed in their duty as accountants in certain respects. It was highly probable that if the accountants had exercised the necessary standard of care, the plaintiff's irregularities would have come to light much earlier and would have been prevented for the future. If Mr Luscombe had been completely free from blame he would have been entitled to recover some damages against the defendants.

The judge rejected the contention that Mr Luscombe had never made incorrect entries in his books. 'I am satisfied that certain deliberately wrong entries were made with the intention of deceiving the accountants. In fact it was an investigation of wrong entries which brought the whole deficiency to light,' he said. The fact that Mr Luscombe made these false entries showed beyond doubt that he knew what he was doing and that in making these transfers he was being dishonest.

The judge referred to the further transfers made by Mr Luscombe after July 25th, 1958, when Mr Pascho told him that the transfers had to cease. Plaintiff had alleged that these transfers, made in the agony of the moment, were done with the knowledge and approval of Mr Pascho. If it were true that Mr Pascho had approved the later transfers, he would have been guilty of a criminal offence of abetting and encouraging fraudulent conversion by Mr Luscombe. But Mr Luscombe's story was not true and the fact that he had told this story was of itself indicative of a dishonest mind. That the plaintiff was prepared so to lie about this and other matters provided confirmation that his state of mind throughout 'this whole lamentable history was not that of a man of incredible stupidity but that of a man with a dishonest mind'.

His lordship, having considered all that had been said on behalf of Mr Luscombe, was driven irresistibly to the conclusion that his conduct was dishonest. Mr Luscombe knew that what he was doing was wrong – wrong not merely in the sense of a technical breach of professional rules but wrong in misusing clients' money, constituting a breach of the trust imposed in him as a solicitor and also of the law of the land. It followed that Mr Luscombe's claim failed and judgment was given for the defendants.

Mr John Willmers, for defendants, applying for an order for costs, said Mr Luscombe was legally aided with a nil contribution. The judge granted the defendants the costs of the action but said the order should not be enforced without the leave of the Court.

ESTATE DUTY AND THE 'SURVIVING SPOUSE' EXEMPTION

THE Court of Appeal, by a majority, has dismissed the Inland Revenue appeal against the judgment last June of Mr Justice Buckley in the case of *Coutts & Co (Stanhope's Trustees) v. C.I.R.* (40 A.T.C. 161). The claim arose out of the death of Lady Beryl Groves. A settlement had been made on her first marriage (to Captain Stanhope) in 1914. Captain Stanhope was the life-tenant subject to 'pin money' annuity of £200 to Lady Beryl. He was killed in 1916 and duty was paid on the whole settled fund, less the 'slice' producing the pin money. Lady Beryl being the then life-tenant made a settlement in 1923 of equitable interests of hers in the settlement – she died in 1957.

The Revenue claimed estate duty on the whole settled fund. The trustees resisted this on the ground that the exemption conferred by section 5 (2) of the Finance Act, 1894 (as amended) applied. This exemption is known as the 'surviving spouse' exemption. Where estate duty is paid on settled property on the death of one spouse, the settlement continues, and the other spouse dies without being competent to dispose of the settled fund, the exemption applies. The Revenue argued that they were claiming duty on the fund settled by Lady Beryl in 1923, which *ex hypothesi* she had been competent to dispose of. Buckley, J., held that the exemption applied to all the fund except the slice necessary to produce the pin money. The Court of Appeal have affirmed his decision but have given the Revenue leave to appeal to the House of Lords. (*The Financial Times*, April 18th.)

LITTLEWOODS' STORES STAMP DUTY APPEALS

THE appeal and cross-appeal in the case of *Littlewoods Mail Order Stores Ltd v. C.I.R.* (40 A.T.C. 171) were dismissed by the House of Lords on April 17th. The Court of Appeal had held (affirming Danckwerts, J.) that the assignment of a lease in exchange for the conveyance of a freehold was not a 'conveyance on sale' so as to attract *ad valorem* stamp duty under the Stamp Act, 1891. The Crown appealed in vain against this decision (*The Financial Times*, April 18th).

The second point, on which the taxpayer appealed, was rather more complicated. The taxpayer took a lease, from the Independent Order of Odd Fellows, of certain property. It then made a voluntary assignment of that lease to its wholly-owned subsidiary. It claimed exemption from *ad valorem* voluntary disposition duty on such assignment, on the ground that the exemption conferred by section 42 of the Finance Act, 1930, applied. However, this exemption is withdrawn by section 50 of the Finance Act, 1938, where the assignment is executed in connection with an arrangement where under, *inter alia*, the beneficial interest in the property was previously conveyed or transferred directly or indirectly by a person who

was not an associated company. The question was whether in granting the lease, the Odd Fellows 'conveyed or transferred' the property. The company argued that these words imported the idea of a conveyance or transfer in the ordinary sense, which a lease was not. However, the argument has been rejected.

RATE OF STOCKBUILDING

THE April issue of the *Treasury Bulletin for Industry* shows that over the past ten years the level of stocks has tended to increase at an average annual rate of £200 million, at 1958 prices. There have, however, been very wide variations in the stock changes in individual years.

Apart from 1951 when stockpiling due to the Korean War added a record figure of £870 million to home demand, the biggest addition to stocks occurred in 1960, when the increase in home demand of £408 million was one of the major factors tending to inflate imports. The statistics show that at the end of 1961 the ratio of stocks to industrial output was exceptionally high. This may mean not only that the balance of trade will continue to improve but also that a considerable expansion in demand may occur before there is any marked rise in industrial output.

At the end of 1960 total stocks were valued at about £10,000 million, equivalent to 45 per cent of the gross domestic product in that year.

This is My Life . . .

by An Industrious Accountant

CHAPTER 121

I WENT to hear a lecture on Common Market problems recently; primarily because it was given by an old colleague from the firm of auditors whence I graduated. He's gone far since those early days, far up the ladder to success and prosperity – director, member of two Government commissions – and his talk was really good. I sat at the back of the hall and listened.

He hadn't changed much. His tall figure was still fit and athletic-looking; his raven hair, though thinning and frosted, looked distinguished; his bearing was impressive. I thought of the handsome young man who had worked across the aisle from me at the paper-laden desk, without background or qualifications but with the urgent, insatiable ambition, years ago. He wasn't 'chartered' like the rest of us. He had left school earlier owing to his father's business collapsing suddenly; he had leeway to make up.

If we were more carefree, he helped to adjust the balance. He worked at night classes for a degree and read the financial papers avidly. *We* talked test matches and went to Wimbledon; *he* read the speeches given at annual general meetings and visited libraries during the winter week-ends. Not that he was a backroom-boy type or a swot; rather the reverse. He was the best of company when he relaxed; a good raconteur, an interested listener; he added to the gaiety. Even now he was telling a story in dialect that had the audience in stitches ('Oh la, la, monsieur, eet ees different in zis countree').

He had an attractive personality in any party. It was more that he matured early; where we used to be easily tolerant of people's blunders or weaknesses – more inclined to forgive or help, he had a realistic approach. Listening now to his speech, while he urged the audience to cut out the deadwood ruthlessly, to achieve efficiency to survive, I remembered his coldly logical precision in the past. Our senior partner had asked him to carry old William in his section for some months, William being nearly due to retire and becoming feeble; but our colleague had refused firmly. The rest of us would have agreed, or demurred politely. He was adamant and by sheer personality induced the partner to transfer William elsewhere.

Now he was smiling gaily round and the audience was with him to a man. He was telling an audacious anecdote of his early days, about his holiday spare-time work behind a shop counter 'to gain experience of human relationships, gentlemen, and also . . . because I dam' well needed the cash!' I remember that holiday. I went to the Isle of Man and he chaffed me cheerfully about my wealth when I came back. We were good friends and he was often a guest in my house.

He was doing better by then; his salary was probably being stepped up; his prestige was growing. He was being selected for good-level audits where the clients needed polished handling. His charm and diplomacy was well appreciated in our office. He was largely responsible for avoiding a nasty scene one winter when an ugly situation developed. Petty pilfering had been rife for months. A watch, some valuable books, money left in overcoats in the cloakroom . . . we all became suspicious and edgy. We were pretty sure, on circumstantial evidence, that it was old William. We very nearly denounced him, but our colleague made us keep it quiet. He talked to the senior partner and William got a month's notice without fuss or scandal.

He had reached the climax of his speech now; a stirring appeal to patriotism; the audience was cheering and clapping. He bowed with friendly dignity. He's certainly gone far since that unforgettable day in our old office – just before he landed a good job with our most influential client – when I entered unawares . . . and caught him red-handed in his thieving.

Finance and Commerce

Honours

THE accounts of Grampian Holdings Ltd, an industrial holding company with a decidedly Scottish background, are the subject of this week's reprint. The company's head office is in Glasgow; its interests are mainly in Scottish industries and its organization includes 'a Scottish finance company to provide facilities which have hitherto only been available in England'. Chairman is Sir James R. H. Hutchison and the deputy chairman, Mr Andrew Rintoul. And where the accountancy profession is represented among its chief officials, their designation is 'C.A.'.

Industrial holding companies, a growth of the post-war years, have sometimes been criticized for their lack of information on the companies and businesses which constitute them. Expansion as individual holding units has obscured revenue comparison as fresh sources of income have been acquired. Instances have been noted in this column where comparison has been invalidated by the inclusion of profits from a source that, so far as the holding company was concerned, did not exist in the previous year.

Grampian Holdings, however, is free from such criticism. Indeed, Press comment on its accounts has been highly commendatory. 'As usual, a very model of their kind', said one. And another writer felt that the board should be 'congratulated on the exemplary manner in which the accounts have been presented once again'. There may have been more in this vein, but no effort has been made to collect up the honours.

Behind the Scenes

The outstanding point about this report and accounts is that they do take the shareholder, and others whom it may concern, behind the scenes. Interests are diverse. There is Lanarkshire Bolt (Holdings) making nuts and bolts; Fleming Brothers (Structural Engineers) which last year completed the reactor at the Windscale Atomic Energy Station; Revel Industrial Products in furniture and musical instruments; Grampian Textiles making Harris tweeds, etc.; Grampian Lighting making electric light fittings; Hall Electric producing for the radio and electrical trades; W. H. Malcolm, road transport and haulage contractors; Millard Brothers making fishing tackle, guns and other sporting equipment; and Leonard Hill, publishing technical and trade journals and books, to mention only some of the interests.

Consolidated Profit and Loss Account

		£7,623,454		£5,012,098

The notes on pages [542] form part of these accounts

But the essential fact is that each has its own place in the report, most of them two pages. The composition of the separate boards of directors is given, the address of the registered office, auditors, solicitors, bankers, and the identity of further subsidiaries.

Capital employed in each is shown: fixed assets, current assets less current liabilities, the percentage which net assets bear to the total of Grampian assets, and the percentage of profits subject to tax to the total of Grampian profits. And each chairman reports on the business which, within the holding company, is his responsibility.

Group Earnings

Equally important, if not more so, is the statement of group earnings by companies (net before tax). This, it will be seen, identifies the separate sources of income and the income they produced. It provides a level comparison by drawing the line below those companies owned by Grampian Holdings for a full year and continues in the 1961 column the same information in respect of acquisitions during the year. And the totals, allowing for the fact that the statement is approximated to thousands, can be followed through to the group's consolidated profit and loss account.

Grampian now has seventeen direct subsidiaries, says Sir James Hutchison, and to meet the administration of the growing group, related companies are being brought together under sub-holding companies. Grampian Textiles, for instance, itself has five subsidiaries covering weaving from the factory to the Scottish croft looms.

Group policy in future will give preference to acquiring companies related to existing holdings but 'where the opportunity appears to be attractive', policy will be adaptable. Common Market prospects are being followed up. 'A limited extension of our activities in Europe has been arranged by an investment in two publishing companies located in France and Germany'.

The Purpose

Referring to the purpose behind the formation of the holding company, Sir James says that Grampian furnishes a method of meeting death duty and surtax requirements which otherwise could have a very serious effect on a company's future. It also helps to solve succession problems.

So far as is prudent, management of concerns acquired is left undisturbed. Sellers frequently take some part of the purchase price in shares and management can thus preserve that feeling of vital interest in enterprises in which, in many cases, they have spent their lives.

There is one further aspect of this holding company unity. A group can maintain a body of professional specialists that might well be beyond the capacity of the individual interests within it.

Notes on the Accounts *31st December 1961*

These notes form part of the Company's Accounts and are given to comply with the requirements of the Companies Act 1948

1 Issued Capital—Parent Company and Group

The Capital of Grampian Holdings Limited has been increased during the year to 31st December 1961 as follows

7 per cent Cumulative Preference Shares of £1 each fully paid

145,000 Shares at par as part consideration for the acquisition of shares in Subsidiary Companies	£145,000

Ordinary Shares of 5s. each fully paid

303,420 Shares at varying premiums as part consideration for the acquisition of shares in Subsidiary Companies	£75,855

2 Share Premium Account—Parent Company and Group

The increase of £277,832 represents The premiums on the 303,420 Ordinary Shares referred to above	£277,832

3 Capital Reserves—Subsidiary Companies—Group

The increase arises from the appropriation of £5,500 shown in the Profit and Loss Account and a surplus of £2,750 on the realisation of certain investments.

4 Future Income Tax—Group

The amount set aside for future Income Tax represents the estimated 1962-63 Schedule D Assessments with the exception of 3 companies liable under the new business provisions of the Income Tax Acts where approximately two-thirds of the 1962-63 estimated liability has been appropriated as shown in the Profit and Loss Appropriation Account. The amounts charged in the Profit and Loss Account are based on the profits of the year.

5 Loans—Group

The Loan of £30,000 is secured over Buildings and Life Policies on Directors' lives of one of the Subsidiary Companies. Premiums paid to date on the life policies aggregate £23,521 and are included in Sundry Debtors.

6 Fixed Assets—Group

These are arrived at as follows:	*Cost or Valuation*	*Depreciation*	*Book Value*
Land and Buildings	£	£	£
Freehold and on Feued Land			
at cost	399,720	49,592	350,128
at valuation in 1959 plus additions at cost	98,577	6,158	92,419
at valuation in 1960 plus additions at cost	115,000	—	115,000
	£613,297	£55,750	£557,547
Leasehold			
at cost	41,187	23,279	17,908
at valuation in 1959 plus additions at cost	104,192	8,803	95,389
	145,379	32,082	113,297
	£758,676	£87,832	£670,844
Plant and Machinery and Motor Vehicles			
at cost	1,218,613	472,050	746,563
at valuation in 1959 plus additions at cost	126,801	27,040	99,761
	£1,345,414	£499,090	£846,324
Fixtures, Fittings and Equipment			
at cost	172,715	70,684	102,031
at valuation at 31st December, 1961	10,447	—	10,447
	£183,162	£70,684	£112,478

7 Subsidiary Company Balances—Parent Company

The balances due to or by Subsidiary Companies at 31st December, 1961 have been adjusted for Dividends since declared.

8 Profit and Loss Account—Group

The Group Trading Profit, Income from Investments (gross), Depreciation on Fixed Assets, and Bank Overdraft Interest for the year have been arrived at, where necessary, by apportioning on a time basis accounts of Subsidiary Companies for periods other than the 12 months to 31st December, 1961. Accounts for all Companies in the Group have been prepared at 31st December 1961.

In the case of A. B. Hornall Ltd., the Trading Profits and Depreciation for the year 1961 have been arrived at by including the profits of the predecessor firm from 1st January, 1961 to the date of incorporation of the Company (on a time basis) adjusted for Directors' Remuneration and certain other charges on the basis of the arrangements now in force.

The amount applicable to periods prior to acquisition by the Parent Company of £49,286 includes the sum of £1,506 which has been retained by the Vendors and is therefore not available to the Group.

9 Directors' Remuneration—Parent Company

The emoluments of the Directors of Grampian Holdings Limited are as follows

1960		1961
£5,482	As Directors	£6,333
£3,570	As Executives	£6,035
£9,052		£12,368

10 Audit Fee—Parent Company

The amount charged in the Accounts is £325.

11 Commitments for Capital Expenditure—Group

The Group Commitment is estimated at £43,000.

12 Share Options—Parent Company

27,650 Ordinary Shares of 5s. each in the capital of the Company are under option in terms of the Option Scheme approved by the Members in Annual General Meeting on 1st May, 1961 at the middle market quotation on the dates of grant of the options.

Summary of Results

Number of Preference Shareholders	530

CITY NOTES

SENSE and sentiment, instinct and intuition are part and parcel of the City's stock-in-trade. There is currently being displayed in the stock-markets the City's instinct for sensing brighter economic conditions despite, rather than because of, Government policy.

Mr W. Lionel Fraser, in his capacity as chairman of the Thomas Tilling industrial group, but calling on his knowledge as a leading merchant banker, is on record this week as saying that 'the growth in the country's economy has hitherto disappointed me, but I feel that it is now improving, and beyond this lies the prospect of the stimulus which we anticipate if Britain joins the European Common Market'.

This feeling that conditions are improving is behind the post-Budget buoyancy of the industrial equity market – or at least the greater part of the market.

Where the danger lies, as the City sees it, is in Government policy too closely wedded to the Treasury statistical line and too dependent upon the National Economic Development Council to come up with some economic formula for growth.

Traditionally the stock-market begins to discount events six months ahead and is therefore already tending to discount economic improvement expected to show signs of settling in in the autumn. Whether it sets in or not depends on the timing of more positive Government economic policy.

The Training of Accountants

SIR, – In his concluding remarks on 'Training for the profession – fact and fantasy' (April 7th issue), Mr R. J. Carter warns of the danger that the profession may die with its head in the clouds. If the arguments he uses are representative of the thinking of those responsible for the future development of the profession (and I cannot believe that they are), it is more likely to die with its head buried in the sand.

Mr Carter is misinformed when he states that professional qualifications in the U.S.A. are obtained by degree courses at a university with no practical experience. The C.P.A. designation does not require university attendance, but it does require passing an examination, and a period of practical experience in public accounting, the length of which varies with individual States. Many students take university degrees with an accounting major, which earns them credits towards their C.P.A. examinations. When these students join public accounting firms, the larger ones put them through a practical training course to acquaint them with the practices and procedures of the firm. After a suitable period of practical experience, they take the C.P.A. examination. Thus while his American colleague is taking a university course, the average articled clerk in Britain is busy adding columns of figures, checking postings, preparing bank reconciliations, and vouching. Why the defenders of the present system cling to the belief that this type of drudgery fits the student better for his career, whether it be in the profession or in industry, than does a university degree, has always been to me one of life's great mysteries.

Mr Carter implies that success at university is more

dependent on the 'goading of personal tutors' than on personal self-discipline and initiative. This argument is plainly absurd, because the whole emphasis in university training is on self-organization and self-reliance, and many students benefit from university training without taking a degree. By contrast, the *sole* object of correspondence tuition is to cram the student through the examinations, which Mr Carter rightly condemns as a degrading influence. Even more degrading is the semi-annual spectacle of the conflicting and overlapping advertising claims of the leading tutors, regarding the proportion of successful examinees coached by them, and the activities of one correspondence college which blatantly solicits business on the basis of 'No pass – No fee'.

Mr Carter's case would be more convincing if he had presented it objectively, rather than attempting to defend established positions at all costs. He might then have avoided the disdainful reference to a 'theoretical industrial accountant', whatever that may be. If there is one field of endeavour where the practical approach is essential, it is in the area of industrial accounting, as those who leave the cloistered seclusion of the profession for the hurly-burly of industry soon find out. At the present time, the articled clerk's training makes no provision for this, despite the fact that the majority of today's articled clerks go into industry after qualifying.

Those who want to change the system of articles have not suggested the abolition of practical experience as a prerequisite to professional qualification. What they have suggested is a higher standard of education for entry to the profession. The present system places too much emphasis on the narrow vocational aspect, and not enough on the broader aspects of business education, and the development of creative thinking. It is no longer adequate to take grammar school boys, to teach them book-keeping, auditing and company law, and expect them to face the business world of the future. The business man will expect much more of his accountants. If he cannot get what he wants from his accountant, he will turn to someone else. Unless we realize this now, we may one day find ourselves supplanted by non-accountants with a more liberal business training.

Yours faithfully,

Montreal, Canada. J. A. REDMAN, A.C.A.

SIR, – I have been fascinated and at times horrified by the correspondence and articles which have appeared on the subject of professional education in the last few months. I have now worked for two large industrial concerns, in both of which the same general situation exists:

(*a*) A considerable number of important 'accounting' jobs are being done by graduates with no professional training.

(*b*) Those responsible for recruitment of 'qualified' accountants complain of a shortage of suitable candidates.

This situation indicates something that the profession seems to be slow to accept, i.e. that the requirement for a responsible job in a complex situation is for a person with intelligence, whose mind has been trained to think rather than one who has a modicum of technical competence in the use of the Companies Act.

This requirement is, of course, just as important for professional partners as it is for captains of industry.

It is not suggested that experience in a professional firm as a forerunner to employment in industry should be omitted. However, I see no particular virtue in spending that period with one firm or in the necessity for a contract in the form of articles.

If articles were swept away there would be no change in the situation, i.e.:

(1) Demand for future partners and managers in the profession would see to it that those firms that needed them most would get the best people, probably graduates.

(2) The demands of industry on these men after a few years with one or more firms would ensure that the profession rewarded adequately those it wished to keep.

Those who sought a qualification other than their degree, because they wanted to practice, for example, could take the professional examinations.

This examination, as in the case of the first degree for doctors or solicitors, simply helps to ensure that the practitioner will be able to offer the public a certain minimum technical competence – and no more. It is of no particular significance to the industrialist looking for talent. As an examination it is not designed to give as useful an indication of intellectual ability as the result of an honours examination at a university.

The industrialist looking for an accountant will normally want:

(i) a suitable academic standard – probably with economics and accountancy having formed some part of the studies,

(ii) practical experience of accountancy of as varied and senior nature as can be obtained.

Such experience will readily be given by the profession to an able man if he is free to leave at any time. This means that at the present time many men are not given this kind of experience until after their articles have expired. It is easy to spot men who have been treated in this way – when they now frame advertisements for accountants they invariably ask for at least three years' post qualification experience.

I was personally very lucky in my articles – I had only one wasted year out of three. I had two years of invaluable experience. But this arose not as a result of that peculiar relationship which is said to exist between articled clerk and principal, but because my principal was a busy man who was prepared to delegate to anyone willing and able to accept delegation.

My conclusions are these:

(1) The Universities Scheme has performed an

invaluable function by getting accountancy introduced as a university subject in many cases at honours level. Having done this it serves no further useful purpose.

(2) Articles for graduates should be abolished.

(3) Qualification as a chartered accountant should be modified to include, say, three years' experience with a firm or firms approved by the Institute (not necessarily all firms of chartered accountants).

(4) Industrialists should cease worrying about whether a man is a chartered accountant or not but should recruit graduates and arrange for them to spend, say, two years with suitable firms of accountants until the profession takes over this function for them.

It is vital for the profession that it gets its share of the best brains in the country – it must go to the universities for the majority of these people. Unless it is careful, industry will syphon off these people first.

Yours faithfully,

Grays, Essex. J. D. CORMIE, M.A., A.C.A.

Deposit Account Interest

SIR, – We are writing to ask if any of your readers have experienced a similar difficulty to our own.

A client of ours has a deposit account at Lloyds Bank Ltd, and she did not ask for interest to be credited to the account when she called at the bank, although in fact her pass-book was presented each month for specific entries to be inserted which were paid direct to the bank.

After some four years we asked if she could obtain the exact amount of interest credited to her account in order that income tax affairs could be correctly dealt with, and the four years' interest was credited in a lump sum.

The Revenue now seek to tax our client on the lump sum received in one income tax year. Their argument is that Lloyds Bank differs from the other 'Big Five' in that it does not credit interest until it is asked for by a customer, and neither does the customer receive interest on the interest for the years in which it was not credited.

It seems to us to be completely inequitable that one large bank should be out of line with the other 'Big Five', and also the Post Office and Trustee Savings Banks.

Have your readers any observations?

Yours faithfully,

SANDERS, MILLICHAMP & CO.

Wolverhampton.

Commencement and Cessation

SIR, – I act for a milk roundsman who has carried on business in a very small way for a number of years. Recently my client extended his business by purchasing a half of the goodwill of a neighbouring round, the other half of the round was purchased by a large multiple concern.

I prepared accounts for my client without separating the newly-acquired 'business' and with tongue in cheek submitted to H.M. Inspector of Taxes the accounts and computation prepared on preceding year basis. As was expected, H.M. Inspector stated that there had been a succession and that the commencement provisions should apply. I had reason to believe, however, that the multiple concern who had purchased the other half of the connection would not apply the commencing provisions when submitting their accounts to H.M. Inspector of Taxes; I therefore asked the Inspector for an explanation and received, *inter alia*, the following reply:

> 'In the case of some multiple concerns, there may be an informal arrangement not to apply the commencing and cessation provisions, this is purely for convenience and does not establish a precedent'.

Can it really be true that the law which can be applied to the small trader need not necessarily be applied to the large concern?

Yours faithfully,

Doncaster. D. W. SAUNDERS.

Assessment Query

SIR, – Will any of your readers please be kind enough to solve the following query?

A company's trade ceased in 1960–61 but a notice of assessment for 1961–62 on an estimated sum was issued against which the company did not appeal. Does, in such circumstances, the 1961–62 assessment become final, conclusive and binding on the company? Or is the assessment considered invalid?

Yours faithfully,

London W8. R. V. MANIAR.

How to Decimalize the Currency

SIR, – The point made by Mr William Phillips in his article in *The Accountant* of April 14th that, owing to the natural tendency of human beings to think in halves and quarters is so irresistible that every country which has a so-called decimalized currency also has coins or notes for two units, and sometimes four, and for half a unit and a quarter, is one which seems to be almost universally overlooked by the ardent decimalizers in this country, and I feel the author is to be congratulated on having brought it to our attention.

Another common misapprehension suffered by the multitude of people who rush into print on the subject of decimalizing the currency is their failure to have realized that there is an important distinction between decimalized divisions by groups and subgroups such as 10 cents to the dime and 10 dimes to the dollar, which, of course, we have not got with our 12 pence in the shilling and 20 shillings in the pound, and the decimal scale of notation, which, in common with the decimalized countries, we use when we write £67 18*s* 11*d*, since we have no single symbol to express 10*d* or 11*d*, or any quantity of shillings from 10*s* to 19*s*. The Americans have both decimalized divisions and the decimal scale of notation, as in $67·75, as have the countries of Europe, and it is the

combination of the two that is now proposed for us.

What A. C. Aitken, Professor of Mathematics at Edinburgh University, is arguing for is a duodecimal scale of notation, and over the years he has shown again and again how much faster mental arithmetic would be in this scale. What Mr William Phillips has been arguing for since 1936 is the octonary scale of notation for scientific and technical purposes, already seen in a crude form when the mechanic and the carpenter insist on using halves, quarters, eighths and sixteenths of an inch, and so on, and the housewife is accustomed to have four gills to the pint, two pints to the quart and four quarts to the gallon. We shall look rather silly if we decimalize our currency at the very time when, as the experts believe, we are on the threshold of abandoning the decimal scale of notation in two important respects.

Yours faithfully,

London WC2. W. H. CUTTRISS.

SIR, – In his lively contribution to your issue of April 14th, Mr Phillips reminds us that decimalization of the currency has hitherto seemed to present us with the alternatives of retaining the £ and abandoning the penny or of retaining the penny and abandoning the £.

There are powerful objections to both these alternatives but Mr Phillips has made an ingenious and valuable suggestion whereby we could retain the penny and also retain the £ in decimalized form. When we think of currency we tend to think only of its use in day-by-day transactions in the market place. In this way it is often overlooked that in such matters as industrial assurance and national insurance the currency units have been employed in the expression of millions of long-term contracts and obligations. National insurance and friendly society contributions are expressed in the small units of currency (shillings and pence) while the benefits are expressed in the larger units (pounds and shillings). If some of the payments under a long-term contract have been made in a currency unit which is not available for the remaining payments an adjustment of the contracts is necessary and this adjustment is complicated by the fact that the relation between the number of past payments and the number of future payments will vary according to the length of time the contracts have been in force.

Provision for the adjustment of millions of industrial assurance contracts, friendly society obligations, etc., is a very considerable difficulty in the way of the decimalization of our coinage. Mr Phillips's suggestion to retain the penny with a duodecimal relationship with the half-florin overcomes the difficulty of adjusting millions of long-term contracts and goes far to give us the best of both worlds with twelve pennies to the shilling (or 'half') and the £ retained in decimal form: 10 'halves' = £1.

Yours faithfully,

H. HOSKING TAYLER.

Fawkham Green, Kent.

SIR, – I have read numerous accounts on methods which might be used to decimalize our currency, not the least of which was the joint report of committees appointed by the British Association and the Association of British Chambers of Commerce. I have heard and read suggestions that the existing pound should be the new basic unit or £5 or 10*s* or 8*s* 4*d* or even a florin, but I am at a loss to understand why no one has suggested a new 5*s* unit.

A new unit which I suggest should be called a 'Royal' of value 5*s*, subdivided into 100 cents would produce a cent valued at ·6*d*. In my view this is near enough to our present halfpenny to meet fully the requirements of those of us, particularly in the retail trade, who favour the retention of a coin of this value.

Conversion to this form of pure decimal currency, involving only one decimal point and eliminating all fractions, would be eminently simple as the following table shows:

1 cent	= ·6*d* (say, ½*d*)	20 cents	= 1*s*
2 cents	= 1·2*d* (say, 1*d*)	40 cents	= 2*s*
5 cents	= 3*d*	50 cents	= 2*s* 6*d*
10 cents	= 6*d*	100 cents or 1 Royal	= 5*s*

The differences in values between the one and two cent pieces and our present halfpenny and penny respectively are so small that in my view they can be disregarded. After all it has just been decided to abolish as worthless the farthing, or ·25*d*.

It will be seen that all our existing coinage can be used in exactly its present form thus eliminating enormous expense in the conversion of slot machines. During the conversion period new issues of these coins could be stamped with the old and the new values until such time as new values became familiar to everyone.

The new basic unit, the Royal, is of a value which has been well tried and found not to be wanting. It is, after all, not very different from the United States dollar.

Conversion of accounting machinery to a system involving only one decimal point, with never more than two digits after the point and eliminating fractions, would be relatively cheap, though I admit that the present capacity of all such machines based on the pound would be quartered. The sufferers from this disadvantage would, in the main, be big companies who are in a much better position to meet the cost and the inconvenience than are small users.

Our postage stamps would require to be altered and we should have only five stamps from one cent to five cents inclusive instead of the present six from a halfpenny to threepence.

Finally, as a retailer, I would stress the importance of maintaining a unit of currency similar to the halfpenny. The impact on the cost of living, particularly in the field of foodstuffs, will be tremendous if such a unit were to be abolished at the present time.

Yours faithfully,

J. R. SPEED,
Managing Director,
JOHN SPEED & CO LTD.

Rotherham.

Taxation Cases

Full reports of the cases summarized in this column will be published, with Notes on the Judgments, in the 'Annotated Tax Cases'.

Monthly Salaries Loan Co Ltd *v.* Furlong

In the High Court of Justice (Chancery Division)
March 14th, 1962
(Before Mr Justice WILBERFORCE)

Income tax – Moneylender – Reserve for future expenses of collection – Whether sum reserved deductible – Income Tax Act, 1952, section 137 (i).

The appellant company carried on business as a moneylender, and its loans were generally for one year though they could be for a shorter period or as long as eighteen months. The capital consisted of the money it lent and it was for most of the time out at risk. The company maintained a collecting and legal staff. The profit consisted of interest received on the loans less the expenses of obtaining the interest. When a loan was made, the full amount payable in respect thereof (both principal and interest) was debited, but interest not then due was not credited to the profit and loss account, but only interest actually then payable. The debits to profit and loss account were primarily the expenses of collection incurred in the accounting period in question and an amount for bad debts.

The appellant claimed to be entitled also to deduct an amount as a reserve for expenses to be incurred in future years in the collection of outstanding loans. The amount was calculated by a formula, the object of which was to ascertain the portion of the collecting expenses which would be incurred in the future, and which related to the capital element in the loans. No portion of the collecting expenses in respect of the interest element in the loans was included in the formula, as the interest was not brought into the profit and loss account until it was actually received.

The Special Commissioners decided that the sum claimed was not deductible for tax purposes.

Held: the Special Commissioners' decision was correct.

Wellington *v.* Reynolds

In the High Court of Justice (Chancery Division)
March 15th, 1962
(Before Mr Justice WILBERFORCE)

Income tax – Back duty – Wife's business – Assessments on husband – Whether fraud or wilful default by husband – Income Tax Act, 1952, sections 47 (1), 504 (2).

The appellant was assessed for 1936–37 to 1948–49 under Case I of Schedule D in respect of the business of an innkeeper carried on by his wife. The appellant had his own businesses, and also some income in the form of rents from houses.

The appellant made returns in respect of his own income and also of the profits of his wife's business, from 1930 to 1947. In 1957, the Inland Revenue ascertained that the appellant's wife had maintained a deposit account from 1921 onwards in her maiden name, that a deposit of £6,000 had been made in 1947, and that other sums had been deposited in amounts of about £100 over the years. A back duty inquiry was then begun and the appellant's wife stated that the money deposited in the account represented accumulated cash, which she had kept in a tin box in the house, and also represented a bet which had been placed by her mother on a Derby winner. The assessments were made on the footing that fraud or wilful default had been committed by or on behalf of the appellant's wife, and that therefore the proviso to section 47 (1) of the Income Tax Act, 1952, was applicable.

The appellant appealed against the assessments, and gave evidence before the General Commissioners, but his wife did not attend the hearing, and a medical certificate was produced showing that she was unwell. The General Commissioners did not accept the explanation given by the appellant's wife during the course of the investigation as to the origin of the sums in the deposit account, and they confirmed the assessments on the appellant.

Held: there was no evidence pointing to the conclusion that the appellant had had guilty knowledge of the acts of his wife in relation to the subject-matter of the appeal, such as to entitle the General Commissioners to conclude that there had been wilful default on his part; and that the assessments should be discharged.

Jamieson *v.* C.I.R.
Wills *v.* C.I.R.

In the Court of Appeal – March 27th, 1962
(Before Lord Justice SELLERS, Lord Justice DONOVAN and Lord Justice PEARSON)

Surtax – Settlement on children – And on their wives, husbands, widows or widowers – Whether settlement terminable – Whether settlement irrevocable – Finance Act, 1958, section 404 (2) – Income Tax Act, 1952, sections 397, 398, 399.

In 1950 the respondent made a settlement in favour of his one child then living and of future born children 'and otherwise as hereinafter mentioned'. The settlement was to continue till the end of twenty-one years from the death of the survivor of the child and the settlor's wife. The trust fund was settled on issue (including children thereafter to be born) of the settlor, and the wives, husbands, widows or widowers of such issue. The beneficiaries took such shares as the trustees at their discretion should from time to time appoint. The trustees also had power to release or restrict their power of appointment. The trustees had not exercised their power to release or restrict

their power of appointment. The trustees had not exercised their power of appointment, nor their power to release or restrict it, and they had accumulated the trust income during the relevant years. At the time of the appeal the settlor had three children, all of whom were infants. Surtax assessments were made on the appellant for 1955–56, 1956–57 and 1957–58 on the footing that the settlement income fell to be treated as his income.

It was contended on behalf of the appellant that the settlement was irrevocable within the meaning of section 399 of the Income Tax Act, 1952. It was contended on behalf of the respondents that the settlement could be determined because the trustees could appoint the whole of the trust fund absolutely in favour of a particular beneficiary; and that the settlement was revocable for the purposes of section 399 because it was thus determinable. The Special Commissioners decided in favour of the respondents.

Held (Lord Justice Sellers dissenting): the special power of appointment was not a provision for the determination of the settlement, and that the settlement was irrevocable within the meaning of that word in section 399.

Walter W. Saunders Ltd *v.* Dixon

In the High Court of Justice (Chancery Division)
March 30th, 1962
(Before Mr Justice WILBERFORCE)

Income tax – Petrol station – Tie agreement with oil company – Reimbursement of sums expended on sales promotion, co-operative advertising and dealer display – Payment for constructional work – Payment for tie – Whether these payments capital or revenue payments.

The appellant had previously carried on business as a garage owner, but the premises were compulsorily acquired, and the company had to find new premises. It contracted to buy a petrol station, and thus became liable for expenditure greatly in excess of the compensation money it received for its previous premises. In order to obtain financial assistance, the appellant made an agreement on October 5th, 1954, with the Regent Oil Co Ltd (ROC), and there was evidence that it was known to ROC that the money payable by that company was needed for that purpose.

The agreement provided for a maximum sum to be paid over a period of years by way of reimbursement of money spent on sales promotion, co-operative advertising and dealer display, and in connection with the sale of ROC's products. The agreement provided for the tie, but there was no provision relating the sums payable by ROC to gallonage. On the same day a letter was written by ROC suggesting that the proposed work at the garage 'for the purpose of sales promotion, co-operative advertising and dealer display in connection with the sale by you of our products' should be effected. The letter also stated that the oil company appreciated that an advance of money would be needed and that it agreed to advance a sum not exceeding £10,000 conditionally upon reasonable evidence in respect of the work being produced. Two months later ROC, by direction of the appellant, paid £5,000 to the contractors engaged by him to carry out the alterations to the new premises, and on March 4th, 1955, ROC, again by the direction of the appellant, paid £2,000 to the contractors. It was agreed that those sums were spent on structural alterations. On the same day, by another letter, ROC increased the £10,000 to £15,000, and, again on the same day, ROC paid, by direction of the appellant, £6,505 6*s* 11*d* to the appellant's solicitor as the balance of the price of the new premises. On February 15th, 1956, a third letter passed between the parties, in which it was agreed that a further sum up to £5,000 should be paid, and this letter was in the same terms as the previous ones. On February 9th, 1956, ROC paid £6,494 13*s* 1*d* to the appellant, and this sum made up the total of £20,000 provided for in the original agreement.

It was contended by the respondent that having regard to the references to sales promotion, co-operative advertising and dealer display expenses, and to the making of the tie, the sums received by the appellant were received on revenue account. It was contended by the appellant that these sums were capital receipts. The Special Commissioners decided in favour of the respondent.

Held: the sums in question were capital receipts of the appellant except that part thereof relating to advertising. It was agreed, however, on behalf of the respondent, that the whole of the sums in question should be treated as of the same character, namely, capital expenditure.

Bispham *v.* Eardiston Farming Co (1919) Ltd

In the High Court of Justice (Chancery Division)
March 29th, 1962
(Before Mr Justice WILBERFORCE)

Income tax – Farming – Two farms up to a certain date – One farm then disposed of – Unexhausted losses of latter farm – Unexhausted capital allowances – Whether one trade or two trades carried on – Finance Act, 1941, sections 10, 11 – Income Tax Act, 1952, sections 124, 152, 342.

The respondent company carried on a farming business at Eardiston and on January 31st, 1956, it acquired another similar farm in Scotland. On May 3rd, 1956, it disposed of the Eardiston farm. At January 31st, 1955, the losses on that farm amounted to £16,645; and the unexhausted capital allowances in respect of that farm up to 1954–55 amounted to £4,942. The company claimed that it had carried on only one trade all along; and that it was entitled to set the total loss and the total unexhausted capital allowances against its profits from the farm in Scotland.

Held: the company had carried on only one business all through; and that its claim in respect of the losses and the capital allowances was valid.

Electronics in the Office

Vickers Order Two Computers

ORDERS worth more than half a million pounds have just been placed for a Ferranti Orion computer and an I.C.T. 1301 data processing system computer to be installed at the northern works of Vickers-Armstrongs (Engineers) Ltd. The Ferranti computer, whilst dealing with routine commercial requirements, will be used progressively for technical data processing and scientific calculations and investigation. The I.C.T. system will also handle some technical work but will be mainly devoted to commercial and administrative data processing applications. Both computers will be used to serve the group's other companies.

The decision to install systems of different manufacture enables computing to be undertaken simultaneously in different departments of the company and gives opportunity for computer operators to gain a wide experience of advanced systems.

E.D.P. in Local Government

AS a further stage in the mechanization of their records, Hampshire County Council is to install in the County Treasurer's Department, Winchester, an N.C.R. 315 electronic data processing system at a cost of approximately £128,000.

Work which has not yet been mechanized and which is now done separately by different departments will be merged into one electronic system. During the processing of day-to-day transactions involving payments to nearly 9,000 regular creditors, the computer will automatically compile information for the monthly analysis and control of expenditure. The payroll and salary accounting will cover over 17,000 weekly- and monthly-paid staff employed on the many services provided by the County Council and will produce not only pay documents, but all related reports, analyses and statistics. As an automatic by-product of this work, labour charges will be extracted, analysed and fed into the costing system.

Other proposed applications include the analysis of income; highways costing; bank reconciliation; mortgagees' records; the production of statistics for all departments of the County Council; and other administrative procedures such as the maintenance of school medical records and the analysis of school examination results.

In all these applications, full use will be made of CRAM, the random-access memory with which the 315 system is equipped. Information will be stored on special magnetic cards housed in interchangeable cartridges, each giving split-second access to over 5½ million alpha-numeric characters. Because cartridges can be changed in a matter of seconds, the use of CRAM will reduce the cost of the installation and save office space.

Working documents and reports will be produced at speeds of up to 900 lines per minute by a printer directly controlled by the 315 central processor.

Northamptonshire County Council is also to use an electronic computer to reduce its clerical and administrative costs. The computer, a National-Elliott 803, will be installed in the Treasurer's Department at County Hall, Northampton, this summer.

Initially the computer will deal with the payment of accounts and the analysis of expenditure over about 6,000 budget heads. As soon as this is running, the machine will start to produce pay documents and records for the council's 8,000 employees.

Other work now being planned includes a comprehensive system of cost analysis and control, and the production of statistics for the education and medical departments. In all cases up-to-date records will be stored on reels of magnetic film which make up the 803's electronic memory.

It is expected that there will still be spare machine capacity, and it may ultimately be possible to undertake work for other local authorities in the county.

The Lancashire County Council have decided to replace their I.C.T. 555 punched-card computers by two I.C.T. 1301 computers. The larger scale machines are required in order to process the increasing accounting, costing, statistical and payroll work necessitated by the Council's budget of some £81 million and a payroll of some 55,000 personnel, of whom approximately 50 per cent are weekly wage earners.

The decision to acquire the new machines was made after a thorough study of work requirements and a survey of computers available carried out by the County Treasurer, Mr Norman Doodson, F.I.M.T.A., F.S.A.A.

New O.E.C.D. Computer Study

THE English version has now been published of a new O.E.C.D. study *Seasonal adjustment on electronic computers*[1] comprising papers given at an international conference sponsored jointly by O.E.E.C. and E.C.E., and held in Paris in 1960.

The last six years have seen a break through in the use of electronic computers for processing economic time series on a mass production basis. The development in the theory and practice of seasonal adjustment has been correspondingly rapid, and the new study provides for the first time a comprehensive description of modern practice in this field, with references to material published elsewhere.

One group of the papers included describes the methods of seasonal adjustment in current use. Other papers deal with related theoretical problems, including the separation of trend, seasonal and irregular components, time- and trend-conditioned moving seasonality, and the properties of moving averages.

Designed for the use of economists and official analysts, with a knowledge of new techniques, the volume can be considered as a useful new budgetary and forecasting tool.

THE ASSOCIATION OF CERTIFIED AND CORPORATE ACCOUNTANTS

FIFTY-SEVENTH ANNUAL GENERAL MEETING

The fifty-seventh annual general meeting of The Association of Certified and Corporate Accountants was held in London on April 17th with the President, Mr G. L. Barker, F.A.C.C.A., in the chair.

Extracts from the report of the Council for 1961, presented for adoption, appeared in *The Accountant* of April 7th.

PRESIDENT'S ADDRESS

In the course of his address the President said:

It is customary to refer first on these occasions to changes in the constitution of the Council during the year and in this connection I have to mention the resignation of Provost Macfarlane Gray and to express our appreciation of his services to the Association for so many years. I know that Provost Macfarlane Gray regrets this as much as we do, but you will recall that shortly after his term of office as President of the Association came to an end, he was elected Provost of the Royal Borough of Stirling. The office of Provost in Scotland is for a period of three years and his tenure of it accordingly ceased last year. He was, however, unanimously re-elected for a further term and the duties of the office are naturally such as to make it virtually impossible for him to attend meetings of the Council with any regularity. During his first term as Provost the position was met by a grant of special leave of absence, but Provost Macfarlane Gray feels that it would be unfair to the Association and to the Council for that position to continue and in these circumstances he asked us with regret to accept his resignation. This the Council has done with equal regret and I am sure that I am speaking for all my colleagues, as well as for all my fellow-members, when I say that we should like to place on record at this annual general meeting our sincere appreciation of his outstanding services to the Association, both as a member of Council and as President, particularly in the Association's jubilee year over which he presided with such distinction. His public services were recognized by the award of the O.B.E. last year and I am certain that you will all wish to join with me in expressing to him and to Mrs Macfarlane Gray our most cordial good wishes for their future health and happiness. (*Hear, hear.*)

Annual Report

The annual report of the Council and the accounts of the Association for 1961 have been circulated and you will no doubt be prepared to take them as read. Is that agreed? (*Assent signified.*) My next formal duty is to move the adoption of the report and accounts but before I do that there are several matters of importance to which I wish to draw your special attention.

Membership

The membership of the Association continues to progress satisfactorily. It is true that the number of new members is rather lower than last year, but the Council is satisfied that this is a perfectly normal fluctuation and reflects no adverse trend. This view is, I think, amply confirmed by the increase in the number of our registered students, which is now the highest in the history of the Association. It is, indeed, the case that such an increase is necessary, because the wastage among registered students is appallingly high. A glance at the percentage of failures at our examinations will indicate just how high and it is a matter about which the Council is seriously worried. There has been a further fall in the pass percentage during 1961 and this has served to revive an old bogy of which several of my predecessors have attempted to dispose – apparently in vain. This is the suggestion that the Council artificially restricts the number of passes. The answer to this has frequently been given in the past and the answer is still the same, namely, that we do not and I have said this on many occasions. In any event we should regard such a practice as wholly immoral and grossly unfair to our students. The object of the Association is to gain members, not to turn them away, but we require as members only those who can conform to certain standards of achievement, which – I may say – we have no intention of reducing.

I indicated that we were seriously worried about this matter and I want to assure you that this is no mere perfunctory expression of concern. We are most seriously perturbed and, in particular, by the results shown at the Intermediate examination. We have accordingly appointed an *ad hoc* committee whose duty it will be to investigate the reasons for this state of affairs and to make suggestions for remedying it.

There are those who assert that the reason for these failures is perfectly obvious, namely, that students do not work hard enough. This is, no doubt, true of some of them, but I find it very difficult to accept that a young man or young woman who has sufficient foresight and ambition to seek a professional qualification and who to that end has spent good money on registration and examination dues, subscriptions and tutorial fees is going to fritter that away by voluntarily spending more time on amusement and pleasure than they can afford.

What is the alternative to this view? It is possible that with the best will in the world some of them do not have sufficient time to spend on their studies because of the demands of their employment and it was with this possibility in mind that we decided during the past year to introduce a new bye-law whereby students

for the Intermediate examination can prepare by means of a two-year full-time course of study at an approved establishment of further education. We believe that if the necessary foundation of principles can be laid in this way – as we hope it would – then the student will have something enduring and solid upon which to build. At present this mode of preparation is entirely at the option of the student but there are not a few of us who believe that a course of about this duration should be made compulsory, not necessarily in one unbroken period but in such a way as to amount in the aggregate to about that period during the course of the studentship.

This is, of course, in sharp contrast to traditional methods of training for the profession, but we can contemplate that without excessive alarm and, indeed, we must be ready to take advantage of the tremendous developments in business education which will undoubtedly take place within the next few years.

New Teaching Techniques

For a country whose attainments in the past have been so largely based on a certain aptitude for commerce and finance, it is a sobering thing to be told – as we have been told by the McMeeking Report – that we are at least a decade behind the rest of Europe in training in this field. My own contacts with our professional colleagues on the Continent leave me in very little doubt as to the truth of this assertion and you will all know that the Minister of Education is taking the most resolute steps to remedy the position. In this he has our most earnest support and co-operation.

New facilities are going to be provided and we should be failing if we did not take all steps to ensure that we enjoy our fair share of them. It is true that development may be hampered by some shortage of teachers of the requisite quality. On the other hand I am bound to admit that teaching which must of necessity be very largely repetitive is not perhaps likely to attract the best of them. This in turn may mean that new techniques of teaching will have to be more generally adopted. I am certainly not one of those who decry everything British, but I do believe that we have a good deal to learn from some other countries in this particular connection and I believe further that opportunities for our teachers to spend time at American and European schools of business should be considerably increased and that this should be looked upon as a matter of priority.

If I may venture to repeat something which my predecessor said in his address last year, it is that we on the Council are trying to keep our minds as open as possible towards all these new developments and towards training for the profession as a whole. We are trying to rid ourselves of the belief that methods of training which have been quite adequate and successful in the past are on that account incapable of improvement. We have given, we hope, some practical evidence of our readiness to think along new lines by permitting full exemption from the Intermediate examination to graduates in certain faculties and by the introduction of the Diploma in Management Accounting. We are also considering the possibility of introducing a new examination for graduates in other faculties.

surplus at about the same figure as for 1960. The accounts, as such, give little indication of the extent of this achievement, which has been possible only by the most vigorous economies. We intend to maintain that vigilance and to ensure that no part of the Association's income is spent without some reasonable prospect of advantage. Nevertheless it is important to note that although the surplus was maintained the actual sum expended was greater than in 1960, as, indeed, it has been in every single year since the war. During this past year the Association's activities cost well over twice what they did in 1950. I am not suggesting for a moment that we are alone in this, but it would be foolish in the extreme to suppose that our expenditure is likely to fall or even to remain static. There is no waste at headquarters, but as an integral part of the profession the Association has a duty to its members to maintain activities on a proper scale. An encouraging aspect of professional activities which is now assuming growing importance is the development and maintenance of contacts with our professional colleagues abroad. The strengthening of these ties will be of the utmost practical importance if Britain enters the Common Market and a more complete understanding of how the profession is practised in other countries is greatly to the advantage of the profession in its widest sense. But to put it quite bluntly, these things cost money. There is, in addition, a constant demand on the profession from various official and other sources for advice or evidence on matters which fall within our field and it is part of our public duty to ensure that those demands are reasonably met.

We must, therefore, take the view that for one reason or another we are committed to a rising tide of expenditure, despite all reasonable economies, and as though that were not of itself enough, the position is worsened by the fact that as the Association becomes larger and more active, it requires more space and more staff. These are both relatively costly items but they have to be faced and it is the Council's considered view that having regard to the facilities which we ought to be able to place at the disposal of our members and students, to our position as the second largest body of accountants in this country [illegible] the responsibilities which that entails, it is [illegible] should move to premises where the [illegible] more conveniently attained. [illegible] additional assistant[illegible] will be concer[illegible] Association [illegible] tance, an[illegible] prem[illegible] in[illegible]

The taxation subcommittee has continued work on two studies dealing with back duty and double taxation relief and has also started a new one on estate duty. These are all medium-term projects, but at the same time the subcommittee has been responsible for assisting the Council on two matters of extremely topical application. One was the preparation of a memorandum on Revenue procedure at the invitation of the Select Committee on Estimates of the House of Commons – before which our representatives subsequently gave oral evidence; and the other was our annual memorandum to the Chancellor in anticipation of the Budget. The memorandum to the Chancellor this year was of particular interest because it contained some rather novel proposals for the basic simplification of the tax system. This was, in fact, nothing less than self-assessment by the taxpayer – a proposal which would very substantially reduce the work of the Revenue and at the same time bring to the taxpayer a measure of certainty about his liability which at present is all too often absent. As might have been expected, proposals so fundamental as these attracted a good deal of Press comment, almost without exception favourable, and so long as our technical work can attract notice of this kind, I think that we are bound to feel well satisfied with the efforts of those who assist us.

There is perhaps less public appeal in the work of the other technical subcommittees, but to the profession itself they are no less important. One subcommittee is still engaged on a study dealing with management accounting for the small business and another is at work on the fourth of our brochures dealing with electronic data processing. This one will deal with management control and auditing.

This technical work occupies many hours of discussion, painstaking research and drafting. The material rewards for those who do it are small indeed, but its benefit to the Association is beyond measure. I refer to it not because you are unaware of it but because I desire to provide myself with an opportunity of expressing to those members who assist us so readily and so much in this direction our very sincere appreciation and thanks [illegible] assistance is invaluable.

[illegible]dget

[illegible]mment on Budget
[illegible]as, as factual
[illegible]re of infor-

[illegible]is

long overdue, will not result in the administrative saving one might have hoped for, and Government spending still remains the main source of inflation. Indeed, the introduction of the levy on short-term capital gains will only add to the administrative burden and the only satisfaction is acknowledgement of the political expedient, because one cannot see any commensurate return to the Treasury. In point of fact, the only people to benefit may be accountants and that does not make the tax a good one.

The design of the Budget seems to include an attempt to improve the climate of relationship between capital and labour, and if the deliberations of the National Economic Development Council are made easier in consequence, and goodwill in negotiation and discussion ensues, the Budget proposals will have been worthwhile.

Acknowledgements

My term of office as President is now drawing to its close and I should like at this time to express my deep sense of pride and pleasure at the honour which my colleagues on the Council did me last April in appointing me to the principal office in the Association. I hope sincerely that I have not been found too seriously wanting in my discharge of the duties of that office and in that connection I should like to express my grateful thanks both to the Vice-President and to my other colleagues on the Council for their support and encouragement at all times.

I can say without reservation of any kind that it has been to me a year full of enjoyment. It is a stimulating experience, but one which inevitably makes heavy demands on those who accept office. Looking back over the past decade it seems quite certain that the duties of the President increase year by year. I take this to be an excellent sign of progress and, indeed, evidence of a growing urgency in the direction of the Association's affairs and it is an honour and a privilege to have been allowed to take the lead in this work even for a year. My wife and I have greatly enjoyed our visits to the district societies and the pleasure of meeting so many fellow members and their ladies. I am a great believer in the value of personal contacts and I can think of a dozen cases within the last year where such contact has almost immediately resolved a difficulty which had hitherto seemed insoluble; and yet others where as a result of an hour's discussion with some other member of the profession, perhaps at the other end of England, the germ of an idea has formed which later has developed into a change of policy.

Like all my predecessors in office, I should indeed have found it impossible to discharge my many duties [illegible]ithout the assistance of our permanent officers at [illegible]quarters. I should, therefore, like our Secretary [illegible]tant Secretaries to know how much I have [illegible]dvice, assistance and support during the [illegible]e is likewise due [illegible]ers whose

LONDON AND DISTRICT SOCIETY OF CHARTERED ACCOUNTANTS

The twentieth annual general meeting of the London and District Society of Chartered Accountants will be held on Tuesday, May 15th, 1962, in the Oak Hall of the Institute, Moorgate Place, London EC2, at 6 p.m. The report of the Committee for the year ended March 31st, 1962, and details of some of the activities of the Society, are given below.

Committee

Mr G. F. Ansell, Chairman, Mr C. V. Best, Vice-Chairman, Messrs J. A. Allen, G. R. Appleyard, C. W. Aston, C. J. M. Bennett, B.A., P. R. Bradshaw, N. Cassleton Elliott, M.A., L. J. Ezra, Miss Margaret Fox, Messrs E. J. Frary, D. Garrett, J. S. Harrower, W. S. Hayes, D. V. House, A. P. Hughes, R. O. A. Keel, R. H. Langdon-Davies, D.F.C., D. I. Main, J. H. Mann, M.B.E., M.A., B. A. Maynard, M.A., D. S. Morpeth, B.COM., D. Napper, G. C. Peat, C. Romer-Lee, M.A., L. J. Rowley, J. D. Russell, M.A., H. Gordon Smith, D. C. Urry, W. K. Wells, B.A., F. J. G. Whinney, J. K. White, C. J. F. Wilkinson, J. V. Wilson, J. W. G. Cocke, T.D., M.A., Secretary.

Membership

The membership of the Society on March 31st, 1962, was 6,614 against 6,574 last year, being a net increase of forty.

Meetings for those newly-qualified are held to encourage them to join the district society and a number of extra members have been obtained as a result of the Small Practitioner Inquiry.

Future Events

A residential conference with a Management theme will have been held on April 12th–14th, 1962, at which, besides the usual papers and discussions, a Business Decisions 'Game' will have been played with the aid of the largest computer in London today.

On November 22nd to 24th, there will be a conference on Taxation at the Hotel Metropole, Brighton.

Relations with Schools will be strengthened by following up last year's Commonwealth Technical Training Week by inviting headmasters and headmistresses, their careers officers and youth employment officers to meetings and by providing opportunities for school-leavers to obtain information about our profession.

A National Productivity Year is being planned on a national basis from November 1962 to November 1963, and this Society will take part in and organize such activities as may be appropriate.

Programme

Details of the activities of the Society are given at the end of this report.

The committee desires to express its appreciation and thanks to all those who have addressed meetings of the Society.

The committee would welcome suggestions for next season.

Activities of Subcommittees

(a) Regional Taxation and Research

The Regional Taxation and Research Committee, under the chairmanship of Mr C. V. Best, has given consideration during the year to current legislation and auditing, taxation and accountancy problems. These matters were either referred by the main Taxation and Research Committee or raised by members.

(b) Students' Societies

Liaison has been maintained with the Chartered Accountant Students' Societies of London and Oxford through representatives of the respective committees, by the attendance of officers of the District Society at Students' Societies' social functions, and by arranging meetings in London for those successful in the May and November final examinations.

(c) Recruitment

Besides the usual visits to schools, the Society participated in Commonwealth Technical Training Week, May 29th to June 3rd, 1961. A dinner was held for headmasters and headmistresses of the leading schools who were afterwards addressed by Mr W. E. Parker. A cocktail party was arranged for careers officers and youth employment officers. Parties for school-leavers and their parents were held at the Institute on six consecutive afternoons. Over refreshments those attending were able to question members and officials of the Institute. After tea, talks were given about the profession as a career, followed by further discussion. These efforts were considered so successful that the committee has been asked to repeat them this year.

Members of the committee and other members of the Society have attended various other careers conventions and exhibitions arranged by youth employment officers and schools and have advised school-leavers and their parents on careers in accountancy. The committee is grateful to those who have given up time to visit schools etc. and would welcome assistance from more members who are interested in recruitment.

(d) Advice to Members and Articled Clerks

A number of applications for advice were dealt with during the year by consultation with members of the committee.

A sole practitioner having to go into hospital was put in touch with a firm who would look after his practice during the time that he was away. Members in difficulty through having too much work in hand or otherwise unable to attend to their clients' affairs, perhaps through illness, should not hesitate to contact the Secretary to obtain his assistance in finding temporary help from other practising members.

Following the Institute Annual General Meeting in 1961, when questions were raised about assistance for the smaller practitioner, a member in the area covered by this society met the Vice-Chairman and a past Chairman. A useful discussion took place which the member has told us he found most helpful in relation to his particular problems. It is hoped that others who have problems will not hesitate to get into touch with the Secretary.

(e) Small Practitioner

At the request of the President, members were invited to take part in the Small Practitioner Inquiry. Questionnaires were distributed and those completed and returned were analysed. Meetings were held in London, Luton, Oxford, Reading and Southend to enable members to raise and discuss matters of moment, after which a report in detail was submitted to the Institute.

(f) Groups

A meeting of representatives of the branch and groups with members of the District Society's committee was held during the year at which matters of mutual interest were discussed.

Council Membership

The Committee considered the names of the London members retiring by rotation from the Council at the 1962

NEW SUBSCRIPTION RATES

An ordinary resolution to increase the annual subscriptions payable by members was passed, and the new rates will come into effect from January 1st, 1963. Details of the new subscriptions (present rates in parentheses) are set out below:

			£ s d
Members in practice			
Fellows	11	guineas	(8 18 6)
Associates	8½	,,	(6 16 6)
Members not in practice			
Fellows	8½	,,	(6 16 6)
Associates	6	,,	(4 14 6)

Associates	4	,,	(2 2 0)
Members Overseas not in practice			
Fellows	4	,,	(3 3 0)
Associates	3	,,	(3 3 0)

NEW COUNCIL MEMBERS

Four new members of the Council were elected as follows: Mr W. G. H. Clark, M.P., F.A.C.C.A., principal in the firm of W. G. Clark & Co, of London, and Member of Parliament for Nottingham South; Mr J. P. Landau, F.A.C.C.A., senior partner in the firm of Landau, Morley & Scott, of London; Mr E. A. L. Smith, F.A.C.C.A., senior partner in the firm of Goodwin & Lediard Smith, of Bournemouth; and Mr R. P. Crout, A.A.C.C.A., secretary of Schweppes Ltd.

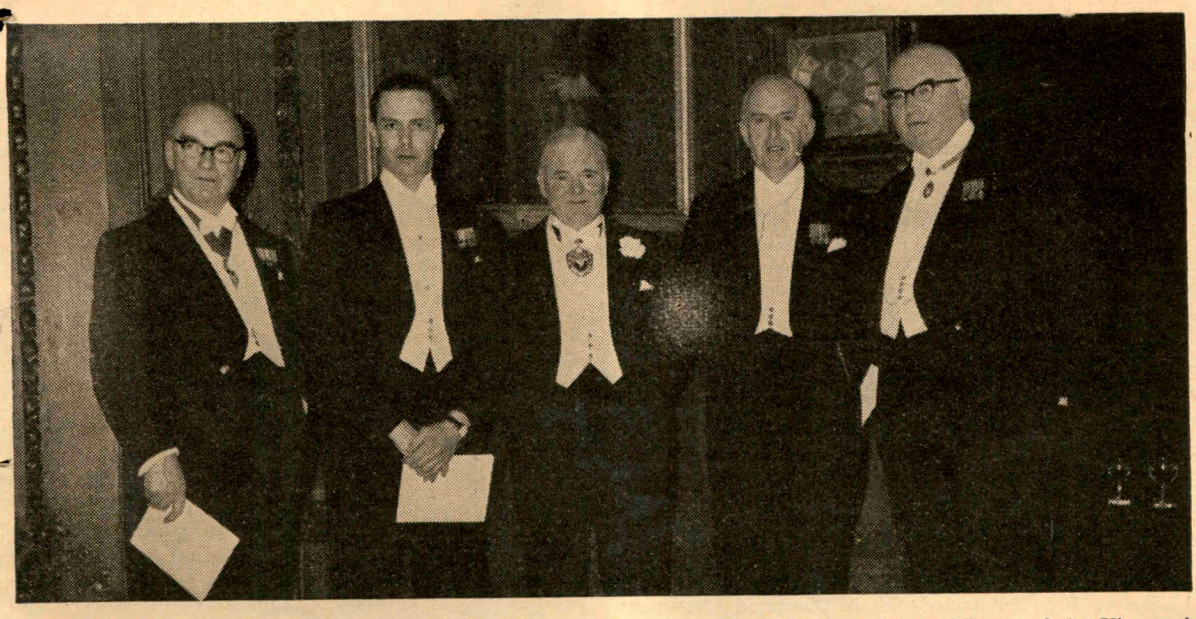
At a meeting of the Council of the Association which followed the annual general meeting, Mr Edgar Spencer, F.A.C.C.A., was elected President and Mr Vivian Ralph Chennell, F.A.C.C.A., was elected Vice-President (as announced in 'Weekly Notes' in our last issue).

PRESIDENT'S DINNER

The President, Mr G. L. Barker, F.A.C.C.A., gave a dinner on April 16th, at the Vintners' Hall, London. The principal guests were the Right Hon. Sir Reginald Manningham-Buller, Bt, Q.C., M.P., Attorney-General, Sir Keith Joseph, Bt, M.P., Minister of State, Board of Trade, Lord Ritchie of Dundee, Chairman of the Stock Exchange, London, and:

Messrs F. St K. Anderson (*Master of the Vintners' Company*); H. P. Barker (*Chairman, British Institute of Management*); Sir Edmund Compton, K.B.E., C.B. (*Comptroller and Auditor-General*); Sir Cecil Crabbe (*Chief Registrar of Friendly Societies*); Messrs A. E. Dawson (*President, The Institute of Chartered Accountants in Ireland*); A. J. Driver (*President, The Law Society*); P. F. Granger (*President, The Institute of Chartered Accountants in England and Wales*); J. H. Gunlake, C.B.E. (*President, Institute of Actuaries*); Denis Healey, M.P.; F. M. W. Hird (*President, The Institute of Cost and Works Accountants*); Sir Frederic Hooper (*Managing Director, Schweppes Ltd*); Mr A. Imrie, C.B.E. (*President, The Institute of Municipal Treasurers and Accountants*).

The Rt Hon. Lord Jenkins (*A Lord Justice of Appeal; Chairman, Company Law Amendment Committee*); Sir Donald Kaberry, Bt, T.D., M.P.; Sir Norman Kipping, K.B.E. (*Director-General, Federation of British Industries*); Sir Denys Lowson, Bt (*President, Chartered Institute of Secretaries*); Mr Maurice Macmillan, M.P.; Sir Edward Norman (*Chief Inspector of Taxes*); Sir Richard Powell, K.B.E., C.B., C.M.G. (*Permanent Secretary to the Board of Trade*); Mr Michael Shaw, M.P., J.P.; Major-General Sir Edward Spears, Bt, K.B.E., C.B., M.C. (*Chairman, Institute of Directors*); Mr J. C. Stewart (*President, The Institute of Chartered Accountants of Scotland*); Mr J. R. McK. Willis, C.B., C.M.G. (*Deputy Chairman, Board of Inland Revenue*).



At the President's dinner at the Vintners' Hall, London. *Left to right:* Mr F. St K. Anderson, Master of the Vintners' Company; Sir Keith Joseph; Mr G. L. Barker; Lord Ritchie of Dundee; and Sir Reginald Manningham-Buller.

Annual General Meeting and decided not to submit any other nominations.

Committee Membership
Nominated Members

The representatives of the Council of the Institute are Messrs D. V. House, J. H. Mann and J. D. Russell. The Chartered Accountant Students' Society of London has been represented by Mr W. K. Wells, and the Beds, Bucks and Herts Branch by Mr E. J. Frary.

Vacancies on the Committee

In Practice – Four vacancies

Mr D. I. Main was co-opted during the year to fill the casual vacancy caused by the death at an early age of Mr A. C. Simmonds, who had served on the Committee for three years.

Mr D. I. Main retires in accordance with Rule 18, and, being eligible and willing to serve, is deemed to be nominated for re-election.

Mr J. A. Allen, Mr B. A. Maynard and Mr H. Gordon Smith retire in accordance with Rule 7 and, being eligible and willing to serve, they are deemed to be nominated for re-election.

Employed in the service of a practising accountant – One vacancy

Mr J. K. White was co-opted during the year to fill the casual vacancy in this category which arose when Mr D. I. Main commenced to practise.

Mr J. K. White retires in accordance with Rule 18, and, being eligible and willing to serve, is deemed to be nominated for re-election.

Not in either of the foregoing categories – Two vacancies

Mr W. S. Hayes was co-opted during the year to fill the casual vacancy which arose when Mr G. A. Slator resigned on his appointment as an Assistant Secretary of the Taxation and Research Committee.

Mr Hayes retires in accordance with Rule 18, and, being eligible and willing to serve, is deemed to be nominated for re-election.

Mr C. W. Aston retires in accordance with Rule 7 and, being eligible and willing to serve, is deemed to be nominated for re-election.

Finance

The audited accounts for the year ended December 31st, 1961, are attached hereto. [Not reproduced.]

The increased grant from the Institute included £309 to meet the special expenditure incurred for Commonwealth Technical Training Week. The increase of £202 in Entertaining and Travelling results from the holding of two meetings to welcome newly-qualified members, now held by this Society instead of the Students' Society, and an additional dinner to the President, due to an alteration in the timing of this event. Also this year, conferences and social events have shown a deficit of £163, against a surplus in 1960 of £125. The net result is a surplus for the year of £12, bringing the accumulated fund to £726.

Messrs Sydenham, Snowden, Nicholson & Co, have kindly agreed to continue to act as honorary auditors.

For and on behalf of the Committee,

G. F. ANSELL,
Chairman.

April 12th, 1962.

SOME OF THE YEAR'S ACTIVITIES

Evening Meetings

The following addresses were given in the Oak Hall of the Institute:

October 24th, 1961. 'The relationship between the Inland Revenue and the Accountant as regards Stock Valuation', by Mr H. G. Thomas, Senior Principal Inspector of Taxes concerned with Stock Valuation.

December 12th, 1961. 'Valuation for estate duty purposes of shares in controlled companies', by Mr P. Vernon, a Chief Examiner of the Estate Duty Office.

February 13th, 1962. 'Insurance – some topical problems', by Mr J. A. Buckley, a director of A. W. Bain & Sons Ltd, Insurance Brokers.

Luncheons

Three luncheons were held at the Connaught Rooms, Great Queen Street, London WC2, and short addresses were given by the following speakers:

November 20th, 1961. Mr G. Ewart Thomson, Chairman of Lloyds.

January 8th, 1962. Mr H. C. Drayton, Chairman of British Electric Traction Co Ltd.

February 26th, 1962. Professor W. J. Fairbairn, C.A. (S.A.), F.S.A.A., Professor of Accounting and Auditing at the University of Natal.

An invitation to the above meetings was extended to Scottish and Irish Chartered Accountants in London.

Dinner to the President

Mr S. J. Pears as President of the Institute, together with the Vice-President and senior members of the Institute staff and the Presidents of the other District Societies, were entertained to dinner at Tallow Chandlers Hall on May 3rd, 1961. His successor, Mr P. F. Granger, was similarly entertained at the City of London Club on November 8th, 1961.

Dinner for Members

A dinner for members was held in the Hall of the Carpenters' Company on October 26th, 1961, by kind permission of the Master and Wardens. The President replied to the toast of the Institute and Mr A. S. MacIver to that of the Guests.

Discussion Groups in London

New members are always welcome and those interested in joining any of the groups mentioned below should write to the honorary secretary of that group.

City Discussion Group

Meets at The Tiger Tavern, 1 Tower Hill, London EC3, at 6 for 6.30 p.m. on the second Wednesday of each month, October to May. The subscription is 10*s* per annum.

Hon. Secretary: D. S. Lewis, 3 Copthall Buildings, Copthall Avenue, London EC2.

North London Discussion Group

Meets at the Russell Hotel, Russell Square, London WC1, at 6.30 p.m. on the third Wednesday of each month, October to May. The subscription is 10*s* 6*d* per annum.

Hon. Secretary: P. D. Knox, The White Cottage, Nutley Lane, Reigate, Surrey.

South West London Discussion Group

Meets at The Kingston Hotel, Wood Street, Kingston upon Thames, Surrey, at 6.45 p.m. on the first Monday of each month, October to May. The subscription is 10*s* 6*d* per annum.

Hon. Secretary: T. C. Backshell, Charter House, Claremont Road, Surbiton, Surrey.

Taxation Discussion Group

Meets at The Cheshire Cheese, 10 Surrey Street, London WC2 (entrance in Howard Street), at 6 for 6.15 p.m. on the first Wednesday of each month, October to June. The subscription is 7*s* 6*d* per annum.

Hon. Secretary: W. J. Bailey, 54 Old Broad Street, London EC2.

Management Discussion Group

Meets at King's Arms (upstairs), Buckingham Palace Road, London SW1 (though this may be changed), at 6 p.m. on the last Wednesday of each month, October to April (except December). The subscription is 5*s* per annum.

Hon. Secretary: K. Hoare, 5 London Wall Buildings, London EC2.

THE CHARTERED ACCOUNTANTS' BENEVOLENT ASSOCIATION

SEVENTY-SIXTH ANNUAL REPORT

Reproduced below is the report of the Board of Governors of The Chartered Accountants' Benevolent Association for the year ended February 28th, 1962, to be presented at the seventy-sixth annual general meeting of the Association in the Hall of the Chartered Insurance Institute, 20 Aldermanbury, London EC2, on Thursday, May 3rd, 1962, at the conclusion of the annual meeting of The Institute of Chartered Accountants in England and Wales.

1. The Association on February 28th, 1962, consisted of 3,702 members, viz.:

The President	835 Annual Governors
117 Vice-Presidents	132 Life Members
20 Life Governors	2,597 Annual Members

being an increase of 119 during the year.

2. A list of the 119 (1961 – 109) cases in which assistance has been given during the year from the General Fund appears on pages 27 to 35.[1] During the year there were nineteen (nineteen) new cases and in three (five) cases former beneficiaries were assisted again. At February 28th, 1962, there were 102 (ninety-eight) current cases. **Additionally, twenty-three cases have been taken over from The Incorporated Accountants' Benevolent Fund with effect from March 1st, 1962.** Three cases are being assisted from the Special Fund.

3. The accounts for the year ended February 28th, 1962, duly audited, are annexed to this report.

4. The total expended by the Association in relief since its formation in 1886 amounts to £325,336. The scale of relief granted by the Association is materially higher than that given by most charitable organizations but in the opinion of the Board is no more than is appropriate to the profession and to the needs of the beneficiaries.

5. The principal figures from the accounts for the last five years are:

Year	*Relief*	*Subscriptions*	*Investment Income*
	£	£	£
1957–1958 ..	13,069	7,018	7,313
1958–1959 ..	14,191	7,476	7,755
1959–1960 ..	18,093	7,813	8,026
1960–1961 ..	19,103	8,444	9,943
1961–1962 ..	21,030	8,798	10,491

6. The deficit for the year is £3,330 (1961 – £1,080). This is after charging the sum of £1,305 for the cost of the special appeal for new subscribers which was made on February 28th, 1962. The amount spent on relief was £21,030 (£19,103) a figure which will be considerably greater in 1962–63 when the Association will be assisting the twenty-three beneficiaries who were cared for by the Society's Fund.

7. On February 28th, 1962, the President sent out a personal letter of appeal to all members of the Institute for greater support of the Association. With this letter was sent a list of subscribers to the Association at January 31st, 1962. It is too early to know what the result of the appeal will be but the Board hopes that it will result in a very much greater percentage of members of the Institute becoming subscribers to the Association. In the past there has been the very unsatisfactory position of only 10 per cent of the members of the Institute supporting the Association. The Board is most grateful to the committees of the district societies and of their branches for the efforts they are making in following up the appeal. **Those who have not yet responded to the appeal are asked to do so now; a form of covenant and a form of banker's order[1] are provided on later pages of this report.**

8. Christmas food hampers have, as usual, been sent to the majority of our beneficiaries. Gifts of clothing and special donations have been made in appropriate cases. The cost to the Association of this expenditure has been reduced by the income from the H. F. Holloway Memorial.

9. During the year the Association has received the following legacies and donations:

Legacies:	£
Administrators of the late H. C. Merrett, F.C.A.	16,116
Executors of the late R. Simpson, A.C.A. ..	3,772
,, ,, A. W. Death, A.C.A. ..	215
,, ,, G. Bostock, F.C.A. ..	100
	£20,203

Donations:	£
J. Donaldson, F.C.A.	250
H. G. Payton	250
J. Clayton, F.C.A.	125
K. J. Dean, T.D., F.C.A.	100
Bekonscot Model Railway and General Charitable Association	100
T. C. Fitton Will Trust	100
W. H. Wright, F.C.A.	94
R. L. Waller, F.C.A.	52
Anonymous	50
Delmar Charitable Trust	20
Donations made at summer and other courses	32
Others	306
	£1,479

10. Upon the completion during the year of the administration of the estate of the late Mr H. C.

[1] Not reproduced.

Merrett, F.C.A., the administrators transferred to the Association investments to the value of £15,116. They have also paid over £1,000 on account of income and an amount of £16,116 is included in the list of legacies in paragraph 9 of this report. A total of £26,046 has so far been received from the Merrett estate. Chartered Accountants' Trustees Limited has appointed Mr M. G. J. Harvey an additional trustee of the estate.

11. The Association is a joint residuary legatee of the late Robert Simpson, A.C.A., who died on August 14th, 1950. Following the death of the surviving life-tenant, the Association has received investments and money to a total of £3,772 on account of its share of the residue and this sum is included in the list of legacies in paragraph 9 of this report.

12. The Board has gratefully accepted from Mr Jack Clayton, F.C.A., a gift of shares in a private company, Skirden Products Ltd. The shares are partly paid and Mr Clayton has undertaken to indemnify the Association in the event of any call on the unpaid capital within three years of the gift.

13. The sum of £47 was received from the collection at the annual Church Service.

14. Grants from the W. B. Peat Memorial Scholarship Fund amounted to £220. The number of cases assisted on February 28th, 1962, was seven (1961 – five).

15. The Board has accepted with much regret the resignation by Mr Donald V. House, F.C.A., of his membership of the Executive Committee of which he has been a member since 1945.

16. Mr J. F. Aitchison, B.A., F.C.A., has been elected to fill the vacancy on the Executive Committee.

17. The Board reports with great regret the death last year of Geoffrey Bostock, F.C.A., who had been a joint honorary auditor of the Association since 1934, and desires to record its great appreciation of his services over the last twenty-seven years. The Board has appointed Mr Leonard Pells, M.A., F.C.A., to fill the vacancy.

18. The Board reports that on February 28th, eight of the Association's ten places in the homes of Crossways Trust were filled by nominees of the Association. The homes of Crossways Trust provide accommodation for old people whether they be able-bodied or infirm. There are present vacancies in homes for the able-bodied and the Honorary Secretary would be glad if members would let him know of any retired member (married or single) or of any widow of a member who might wish to be considered for a place in one of these homes. To be eligible, a person must be in need of care and attention and have insufficient means to pay for board and lodging and care and attention at normal rates.

19. The Board has continued to take steps to ensure that in appropriate cases the maximum grant available from the National Assistance Board is obtained provided that there is no loss of income to a beneficiary. Grants have also been obtained from County Councils to assist in the maintenance of those who are in homes for old people.

20. It is the policy of the Board to ensure that as far as possible a member of the Institute living near a beneficiary or applicant for relief, acts as a referee and is available to give advice when required. Such assistance from members is of the greatest value to the Executive Committee in considering applications. The Board wishes to thank district societies, branches and groups, for their help in appointing members for this purpose and also to thank those appointed for the considerable time and trouble they have taken in helping beneficiaries.

21. The Board is pleased to report that the Court gave its approval on January 22nd, 1962, to the merger of The Incorporated Accountants' Benevolent Fund with the Association. The assets of the Society's fund, which are likely to be of the order of £20,000, are in course of being transferred to this Association which has accepted the responsibility of looking after the beneficiaries of the Society's fund. This has added a further twenty-three beneficiaries to the number previously assisted by the Association and will of course add to the future expenditure on relief. When the formal order of the Court is received it will bring into force the alterations in the rules of the Association, subject to such amendments as the Court may see fit to make, which were approved by the members of the Association at the special general meeting which was held on May 4th, 1960. The main purpose of these alterations is to enable the Association to give relief to necessitous persons who have been members of The Society of Incorporated Accountants and to their necessitous wives, widows, children or dependants.

22. The Board wishes to record its warm appreciation to Mr R. W. L. Eke, Mr G. L. C. Touche and Mr D. A. Clarke as members of the Investment Sub-committee of the Executive Committee of the Association.

23. The Board is grateful to Messrs Markby, Stewart & Wadesons, the honorary solicitors, for their advice and help particularly in connection with the merger of The Incorporated Accountants' Benevolent Fund with the Association.

24. The Board thanks the editors of *Accountancy* and *The Accountant* for the publicity they have given to the affairs of the Association during the year. Brief reports of the quarterly meetings of the Executive Committee are published in these journals.

25. The Board wishes to place on record its high appreciation of the work of the officers and staff of the Institute.

26. The honorary auditors, Mr Leonard Walter Bingham, F.C.A., and Mr Leonard Pells, M.A., F.C.A., retire and kindly offer themselves for reappointment.

W. S. CARRINGTON,
March 28th, 1962. *President.*

Notes and Notices

THE INSTITUTE OF CHARTERED ACCOUNTANTS IN ENGLAND AND WALES

Members' Addresses Wanted

The Secretary of the Institute would be glad to know the present address of the following members of the Institute. The town at which the member was last known is shown after each name.

Alfred Charles Axon, F.C.A.	Brighton
William Glyndwr Bowen, B.SC.(ECON.), A.C.A.	Penygraig, Rhondda
Brian Morris Davies, F.C.A.	London
Walter Driver, F.C.A.	Keighley
Michael David Gerrard, A.C.A.	London
Bernard Richard Green, A.C.A.	Dorchester
William Edward Guest, F.C.A.	Barnsley
Peter Hallmey, F.C.A.	London
Edmund Adrian Hurley, A.C.A.	Thame
Frank Denis Leech, A.C.A.	London
Wilfred Norman Marlow, F.C.A.	Leicester
Harold Mayers, F.C.A.	Liverpool
Thomas Proudlove, O.B.E., F.S.A.A.	Sanderstead
Reginald James Roff, F.C.A.	Cheltenham
Cyril Ward, F.C.A.	Agincourt, Ontario

PROFESSIONAL NOTICES

MESSRS BARTON, MAYHEW & Co, announce with regret the retirement on March 31st, 1962, of Mr E. R. C. ROSS, F.C.A., their senior partner in Portugal. Mr Ross has been a partner in the firm's practice in Portugal for the past thirty years. Mr ANTHONY J. BIRD, C.A., who has been a member of the staff in Lisbon for several years has been admitted to partnership in Portugal.

MR F. W. BERRINGER, F.C.A., practising as F. W. BERRINGER & Co, Chartered Accountants, at 8 Widmore Road, Bromley, Kent, announces that as from April 6th his son, Mr JOHN FRANCIS BERRINGER, A.C.A., became a partner in the practice.

MESSRS CLARE CATLEY & Co, Chartered Accountants, of 6 Westborough, Scarborough, announce that Mr C. L. CATLEY, F.C.A., will retire from the firm on April 30th, 1962. The practice will continue to be carried on under the same name by Mr JOHN A. BRYDEN, F.C.A.

MESSRS HENDERSON, GRIFFITHS & Co, Chartered Accountants, of 53 Cathedral Road, Cardiff, announce that Mr WILLIAM RHIDIAN JENKINS, A.C.A., has been admitted into partnership.

MESSRS MANN JUDD & Co, Chartered Accountants, of 8 Frederick's Place, Old Jewry, London EC2, announce that Mr FRANK LEONARD MOORE, M.C., F.C.A., a senior partner, retired on April 10th, 1962, after forty-one years' service. He will continue to be available in a consultative capacity.

MESSRS WALTER MEACOCK & Co, Chartered Accountants, of 21 Gold Tops, Newport, Mon., announce with regret the death of their senior partner, Mr ROBERT W. MEACOCK, F.C.A., on April 10th.

MESSRS SOOLE & Co, Chartered Accountants, of 22 Southampton Place, London WC1, announce that as from April 6th, 1962, Mr A. B. WAGSTAFF, A.C.A., and Mr P. G. HINE, A.C.A., have been admitted as partners. The style of the firm remains unchanged.

Appointments

Mr Ivor L. Lloyd, F.C.A., company secretary and comptroller, has been appointed to the board of directors of United Merchants & Manufacturers (U.K.) Ltd.

Mr P. R. Parry, A.C.A., has been appointed accountant to the Hong Kong Housing Authority.

Mr C. R. Plummer, C.A., has been appointed a director of City & Commercial Investment Trust Ltd, Second City & Commercial Investment Trust Ltd, Third City & Commercial Investment Trust Ltd, Redeemable Securities & General Investment Trust Ltd and Forsecs Investments Trust Ltd.

Mr R. G. Sutton, F.C.A., has been appointed a director of Simms Motor & Electronics Corporation Ltd.

Mr F. G. Taylor, F.C.A., secretary of Carpet Trades Ltd, has been appointed a director of the company.

RESTRICTIVE PRACTICES COURT

The Queen has signified her intention of appointing Mr Donald V. House, F.C.A., who was President of The Institute of Chartered Accountants in England and Wales in 1954–55, to be a member of the Restrictive Practices Court. Mr W. G. Campbell, B.A., F.C.A., a member of the Court whose appointment expired earlier this month had indicated that he did not wish to be considered for further appointment.

COMPANY INQUIRY

Mr J. R. Muirie, B.A., C.A., a partner in the firm of Peat, Marwick, Mitchell & Co, of London, has been appointed by the Secretary of State for the Colonies, Mr Reginald Maudling, to inquire into the affairs of Bailey (Malta) Ltd. Mr Maudling has also appointed Mr William Rendell, M.A., F.C.A., who is general manager of the Colonial Development Corporation, to be a Government director of the company under the

MOTOR — FIRE — CONSEQUENTIAL LOSS
MOTOR UNION INSURANCE COMPANY LTD
10 ST JAMES'S STREET, LONDON, SW1

Loans Agreement between the Government and the company.

The decision to order the inquiry and to appoint a Government director has been taken as a result of the recent resignation of three directors from the board. They were Sir Richard Yeabsley, C.B.E., F.C.A., and Mr R. Hanning Philipps, who were appointed to the board by the company at the Government's request in December 1960, and Mr Lawrence W. Robson, F.C.A., who joined the board at the same time.

NEW RAIL CONTROL COMMITTEE

Three members of the profession have been appointed to the British Railways Committee which was announced last week by the British Transport Commission. They are Colonel D. H. Cameron of Lochiel, T.D., B.A., F.C.A., chairman, Scottish Area Board, Mr P. H. Shirley, F.C.A.(AUST.), Finance Director, and Sir Reginald H. Wilson, B.COM., M.INST.T., C.A., chairman, London Midland Area Board.

The purpose of the Committee, which is under the chairmanship of Dr Richard Beeching, is to prepare the way for the proposed British Railways Board which is to be established in due course, when the Commission will cease to exist in its present form.

INSTITUTE OF OFFICE MANAGEMENT

Glasgow and West of Scotland Branch

The ninth annual spring conference of the Glasgow and West of Scotland Branch of the Institute of Office Management will be held at the Peebles Hotel Hydro on May 4th, 5th and 6th.

The subject of this year's conference is 'What has the office to offer?' and the conference speaker will be Mr D. S. Greensmith, M.B.E., A.C.I.S., F.I.O.M., Chairman of the Council of the Institute, director of Boots Cash Chemists Ltd, and controller of administration of Boots Pure Drug Co Ltd. He will speak on the changing role of the office, the need therein for an efficient management control system, the important implications that the development of the modern office has for the staff, and the adjustments to the recruitment and training that are needed to meet the new situation. Mr T. R. Craig, O.B.E., T.D., managing director (sales), Colvilles Ltd, will be guest speaker at the conference dinner.

Further information may be obtained from the conference secretary: Mr C. R. MacHaffie, Philips Hamilton Works Ltd, Wellhall Road, Hamilton.

THE INSTITUTE OF COST AND WORKS ACCOUNTANTS

Oxford Week-end Course

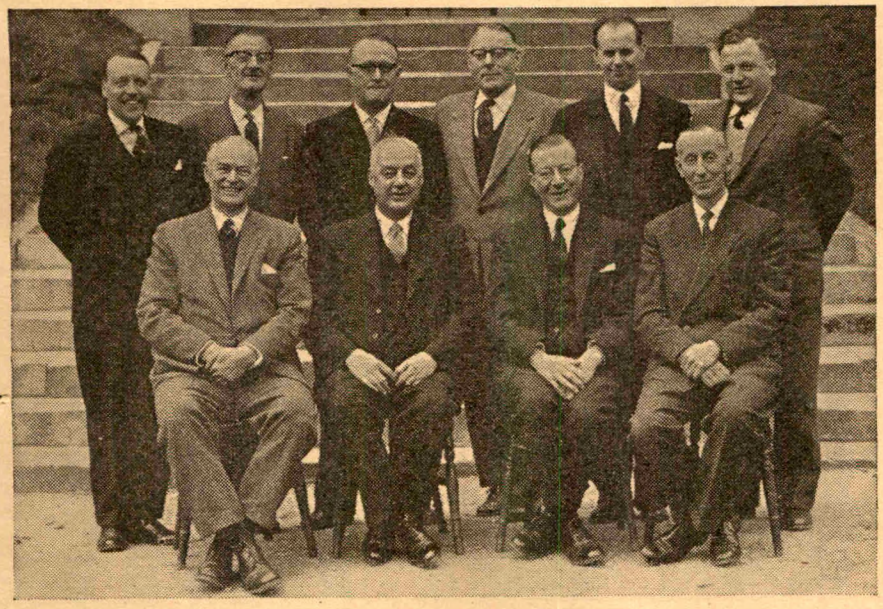
During the week-end April 13th–15th, some forty members of The Institute of Cost and Works Accountants took part in the first residential course for qualified members held at Worcester College, Oxford.

On Friday evening, Mr Ian T. Morrow, C.A., F.C.W.A., a past President of the Institute, spoke on the expanding field for the management accountant.

Papers were presented on sources of finance, the assessment and control of capital expenditure, the measurement of return on investment and the utilization of capital, both in relation to fixed assets and current assets.

After dinner on Saturday evening, the President of the Institute, Mr F. M. W. Hird, F.C.A., F.C.W.A., who had that day also been present at the Regional Conference in Birmingham (referred to in our last issue) addressed members in Hall. Mr Hird emphasized the importance which he and his colleagues on the Council attached to courses such as the present one.

Also present were two past Presidents of the Institute, Mr J. Borsay, F.C.W.A., and Mr G. C. Stone, F.C.W.A., who presented papers, the Chairman of the No. 1 Area Co-ordinating Committee, Mr A. W. Field, F.C.W.A., A.C.I.S., and Mr W. L. Spalding, B.SC.(ECON.), C.A., F.C.W.A., F.C.I.S., Chairman of the Institute's Education Committee.



Some personalities at the Oxford Course. **Seated, left to right:** Messrs Derek du Pré, *Secretary of the Institute*; G. C. Stone, F.C.W.A., *a Past President* (*Speaker*); F. M. W. Hird, F.C.A., F.C.W.A., *President of the Institute*; J. Borsay, F.C.W.A., *a Past President* (*Speaker*). **Standing, left to right:** Dr J. M. S. Risk, B.COM., PH.D., C.A., F.C.W.A., F.C.I.S., *Convenor*; Messrs G. R. Coe, F.C.W.A., *Member of Course Committee*; S. J. Careless, F.C.A., F.C.W.A., *Speaker*; A. D. Coventry, F.C.A., F.C.W.A., A.C.I.S., *Speaker*; W. L. Spalding, B.SC.(ECON.), C.A., F.C.W.A., F.C.I.S., *Member of Course Committee*; S. G. H. Freeman, A.C.W.A., *Secretary of the Course.*

HOLIDAY CROSSWORD: SOLUTION

The solution to the Holiday Crossword compiled by Mr Kenneth Trickett, F.C.A., which appeared in last week's issue, is as follows:

LONDON STUDENTS' CAMBRIDGE COURSE

A total of 287 students from the Chartered Accountant Students' Society of London and seven from Cambridge joined in a four-day course of lectures and discussions from April 12th–15th at Cambridge, under the chairmanship of Mr G. B. C. Hughes, M.A., A.C.A. The subjects of the lectures were appropriate to students in the early years of their articles.

After a most informative and stimulating talk, full of anecdotes, on 'Everyday justice' by Mr Harold F. Sturge, Metropolitan Magistrate, the course got down to a more domestic lecture by Mr S. J. D. Corsan, F.C.A., on 'What it is like to be a principal'. On this subject the provocation to argue seemed to be less than on the following talk by Mr Donald V. House, F.C.A., on 'Professional ethics and all that'. 'All that' included many warning and guiding suggestions on examinations, some of which were accepted gratefully and others with rather less wholehearted agreement.

On the Saturday morning, under the title, 'Shapes . . . and sizes', Mr Peter Darvall, B.A., A.R.I.B.A., gave the course the architect's view of 'true and fair' with a strong accent on the 'fair'. The impact of intended use and of future developments, so often overlooked in setting out statements of accounting information was brought vividly into focus in a language quite unfamiliar to accountants and therefore all the more striking. The course ended with a lecture by Mr A. R. Ilersic, M.SC.(ECON.), B.COM. on 'Britain and European trade' which gave a most salutary and corrective view of the basic economic factors in a problem usually violently distorted by political and pressure-group partisans.

All the lectures were followed by discussions, and the seventeen groups formed for discussion in Corpus Christi and Pembroke Colleges where the students had rooms, covered not only questions arising out of the lectures but also many other subjects of professional and general interest.

The President of the Students' Society, Mr W. E. Parker, C.B.E., F.C.A., presided at high table at dinner in Corpus Christi College on the Thursday and in Pembroke College on the Friday when guests from the colleges were present. On the Saturday afternoon a substantial proportion of eight crews who took part in an 'informal' punting race found themselves in and out of the River Granta for the amusement of themselves and others, and in the evening a dance for the course was organized by two students. On the Sunday morning a Course Service was held in the Chapel of Corpus Christi College and about eighty students took part.

For nearly three hundred articled clerks the course provided not only information on subjects of wide and practical importance to future chartered accountants, but also much stimulating discussion and an unique opportunity to get to know personally those who will share with them the responsibility of maintaining the future status of the Institute.

NEW STUDENTS' MAGAZINES

The appearance of two further students' magazines following the publication last November of The Bradford and District Chartered Accountant Students' Society's half-yearly *Newsletter*, is a welcome sign of student enterprise.

Contra, the new magazine of the Chartered Accountant Students' Society of London, extends to twenty-six pages, and combines humorous items with articles on such subjects as 'Know your Common Marketeers', 'Alhambra and Generiffe today' and 'The Parker Report'. Other matters include notes of forthcoming events and information about the Students' Club.

The Chartered Accountant Students' Society of Leeds have based their new magazine *Equilibrium* on the annual report of the Society and have admirably interwoven details of the year's activities with comment, a quiz on 'How do you rate as a student?', and a controversial piece on the Parker Report. A page and a half of verse and a page 'For those with money to spare' – listing union colours, publications, and part-time lecture courses, make up the remainder of the magazine's thirty-one pages.

Bradford's second issue of its *Newsletter*, also now published, covers a variety of subjects from beagling, to Portugal under Dr Salazar, and the Bradford Town Hall clock; there is also a letter from Lord Russell on nuclear disarmament. Reports from branches, details of study courses, and a sports report all help to give varied and interesting reading. Congratulations to the officers of all three societies on their initiative in producing these periodicals for members.

Terminology in Accounts

IN modern accountancy, words and figures are rightly regarded as complementary and both must be used with subtlety and reasonable economy if concise and accurate financial statements are the objective. The importance of this interdependent relationship has not always been properly appreciated by accountants, many of whom even now think that figures are all that matter. This view is being modified gradually, however, partly by the enlightening influence of the 1948 Companies Act and partly by the fruits of accounting research.

The most ambitious example of the latter is *Accounting Trends and Techniques*, a comprehensive analysis, prepared annually, by The American Institute of Certified Public Accountants of the accounts of 600 leading United States companies. A smaller but equally able guide is the summary made by The Canadian Institute of Chartered Accountants of the financial reports of 300 prominent commercial and industrial companies in that country, the fourth edition of which appeared earlier this year. In both these publications, form as well as terminology is studied and tables are given of the ways, words and phrases most popularly favoured.

To these valuable transatlantic digests may now be added a new publication, issued as a supplement to the *Members' Handbook*, by the Council of The Institute of Chartered Accountants in England and Wales entitled *Terms Used in Published Accounts of Limited Companies*. It differs from the others in three respects. Firstly, it deals only with terminology. Secondly, it does not disclose the names of the companies examined although these are said to form a representative cross-section of the *Stock Exchange Daily List*. Thirdly, and most important, the Council makes positive suggestions as to the words and phrases it prefers. The American and Canadian Institutes are content to indicate without comment what are the most commonly accepted methods of presentations and the vocabularies employed.

We are reproducing the Council's notes in three parts, the first of which appears in this issue. This instalment is sufficient to indicate the general pattern. After share capital and reserves, the various assets and liabilities are considered, then the profit and loss account and, finally, the constituents of the consolidated balance sheet and consolidated profit and loss account. A short review of the practices adopted for describing each item is followed by the Council's suggestions with, where appropriate, the reasons for making them.

It must always be remembered when drafting accounts for

general publication that they will be read mostly by shareholders and others who have no specialized financial knowledge.

With this in mind, the Council stresses in its introduction that clarity of expression is essential and that accounts should be so laid out as to enable significant descriptions to be applied to figures and totals where thought desirable. Certainly the words and phrases it suggests are simple and concise and resort is made to legal and other specialized terms and references only where no alternative would be adequate. Emphasis is also placed on the importance of grouping only similar components and of giving descriptions to all significant sub-totals. The latter are often omitted and an air of anti-climax is sometimes thereby created when a figure, so carefully contrived with the aid of insets, boxes, lines and dots is left without a label.

An example of this is found on occasion in the top left-hand corner of the 'two-sided' balance sheet where popularly dwells the lordly group of balances known as share capital and reserves. These may or may not have a common heading (the section of the Council's notes on these leaves the point open) but if they have not then any total shown should be appropriately described.

In this same section, the Council includes its observations on amounts set aside for future taxation. Both Recommendations 18 and 19 state that these amounts, whether described as reserves or not, should be shown separately and should preferably not be aggregated with reserve nor, at the other extreme, should they be grouped with liabilities if relating to income tax assessed for any income tax year commencing after the balance sheet date. The present notes remark that 'amounts set aside for future tax are sometimes grouped with reserves, as part of a total comprising share capital and reserves'. All these references avoid a definite opinion as to whether or not this really is the place for them and a lead on this point would be welcome.

Another general point which the Council makes is that when items in accounts have to be amplified by notes the cross-references should be explicit. An irritating feature of many glossy financial statements is that these necessary addenda are as difficult to find as the auditor's report which may appear as anything from a preface to a tailpiece, or even as a little news paragraph at the foot of a page which the notes to the accounts or the chairman's inspiration have failed to fill. Time was when it was a point of honour that the auditor's report appeared at the foot of the balance sheet however precarious its foothold. In published accounts nowadays that is the one place in which it is seldom if ever seen. Being thus detached, as it were, and with no fixed abode, might have dangerous consequences. We read occasionally of a train leaving its guard behind on the platform. It would be ironic if one day, the auditor having waved his green flag, a company were inadvertently to omit his report from its circulated accounts.

Difficulty is often experienced in finding the right words in (unpublished) detailed accounts for the various stages of profits which begin by cascading like a waterfall from the manufacturing accounts and end as a trickle into the pool of undistributed net earnings. The same problem is relevant, although in lesser degree, in published accounts and it is not surprising that the Council found that the terms used to describe 'the principal item of income' differ considerably in the profit and loss statements both of single companies and of groups. Profits may be variously interpreted and it is important that the definitions employed should leave no doubt as to what they are and where they go. In these times profits are inevitably linked with politics and many bitter and futile arguments might be avoided if the parties concerned argued from agreed premises.

In framing its suggestions generally, the Council has kept a watchful eye on the Eighth Schedule of the 1948 Companies Act to which more than a score of references are made in the text. If new company legislation is introduced as a result of the present deliberations and future findings of the Jenkins Committee on Company Law Amendment, much of the material in the *Members' Handbook* would have to be revised and that in itself would be a task of some magnitude. Commendably, the Council does not seem to be deterred by this prospect from continuing to produce new guides when it thinks they are necessary and likely to be helpful. This latest addition will be welcomed by accountants and secretaries now in the middle of this the high season for preparing annual financial statements.

Disputed Debts of Insolvent Companies

by W. H. D. WINDER, M.A., LL.M.

AS it has been pointedly expressed in *Buckley on the Companies Acts*, 'a company may be at the same time insolvent and wealthy'. The wealth of the company may not be realizable and if it does not have assets available to meet its current liabilities it is commercially insolvent. If it is insolvent, then the way is open to present a successful petition for compulsory liquidation. A creditor may do this. But may the company argue that, even though insolvent, the petition should not succeed if the company disputes the debt?

'A winding-up petition is not a legitimate means of seeking to enforce payment of a debt which is bona fide disputed by the company', says *Buckley*. The truth of this statement is qualified by the consideration that if the debt is not disputed on some substantial ground, the Court may decide it on the petition and make the winding-up order. The Court is still more likely to make the order if it is merely the amount of the debt which is disputed by the company and not its existence. This distinction was acted on by the Court in the recent case of *In re Tweeds Garages Ltd* ([1962] 2 W.L.R. 38). There was no previous ruling on the question whether, for a company to be able to stave off compulsory winding up, the existence of the debt must be disputed, or whether it is sufficient that the amount of the debt should be disputed.

A petition for the compulsory liquidation of a company was based on an alleged debt of £20,039 19*s* 3*d*. The evidence showed, to the satisfaction of the Court, that the company was insolvent. The company admitted the existence of a debt to the petitioners but disputed the amount of the debt alleged in the petition. Mr Justice Plowman said that it would be wrong to put the petitioners to the trouble and expense of quantifying in other proceedings the precise amount which was owing to them. He made the usual compulsory order.

Proving Insolvency

A company may be wound up by the Court if it is 'unable to pay its debts' (section 222, Companies Act, 1948) and a number of instances in which 'a company shall be deemed to be unable to pay its debts' are set out in section 223. One instance is the familiar one of the creditor to whom the company is indebted in a sum exceeding £50 who serves on the company a written demand requiring payment, followed by neglect to pay or compound. The issue of execution in favour of a creditor which is unsatisfied is another instance. And there is the residuary instance to the effect that a company shall be deemed to be unable to pay its debts if it is proved to the satisfaction of the Court that the company is unable to pay its debts, the Court taking into consideration the contingent and prospective liabilities of the company.

Applying the statutory test of insolvency to the company in question, the Court in *In re Tweeds Garages Ltd* had no doubt that it was insolvent within the meaning of the Act. A finance company presented a petition against the insolvent company, which carried on business as garage proprietors and car dealers. The petitioners' debt arose out of hire-purchase and credit transactions on the sale by the company of cars. The transactions were financed by the petitioning company and guaranteed by the car company. The alleged indebtedness was in two parts. First, £19,619 was said to be the subject of a settled account and to be the amount which was agreed to be due from the car company to the petitioners on April 19th, 1961. Secondly, £420 19*s* 3*d* was said to be the amount which had become due from the company to the petitioners between April 19th, 1961, and the presentation of the petition.

The petition was supported by an ex-employee of the car company, who claimed to be a creditor for £95 in respect of wages due to him at a time when he was employed by the company some time before the end of 1960. He was said to have been paid this debt a few days before the hearing of the petition by the Court. The petition was also supported by a person who had very recently before the hearing obtained judgment against the company for £114. It was said that the company proposed to appeal against this judgment in due course. In dealing with the company's contention that it was not insolvent, Mr Justice Plowman quoted the following passage from

Buckley (thirteenth edition, 1957, page 460) regarding the particular indications of insolvency in section 223 of the Act:

> 'The particular indications of insolvency . . . are all instances of commercial insolvency, that is of the company being unable to meet current demands upon it. In such a case it is useless to say that if its assets are realized there will be ample to pay 20*s* in the £: this is not the test. A company may be at the same time insolvent and wealthy. It may have wealth locked up in investments not presently realizable; but although this be so, yet if it have not assets available to meet its current liabilities it is commercially insolvent and may be wound up.'

As examples of the 'abundant evidence that the company is insolvent' the following examples were given in the judgment. At the date of the presentation of the petition there were at any rate three employees or ex-employees of the company in addition to the ex-employee who supported the petition. To each of them a sum in the neighbourhood of £100 was owed for arrears of wages, although it was true to say that they had in fact since been paid. Further, the Post Office had obtained judgment against the company for telephone bills on three accounts amounting to £118 in all and the company's telephone was cut off. Sixty pounds of that judgment had been paid by the time of the hearing of the petition but the remainder was still owing. An electricity board had obtained judgment for £45 and the company had had its electricity cut off. The amount of that judgment had been paid three weeks before the hearing of the petition. Two other plaintiffs had also obtained judgment against the company. These examples were apart altogether from the petitioners' alleged debt.

The company's contention that it was not insolvent failed, but there was more to be said for its other argument for resisting winding up, even though this also failed.

When Amount of Debt is Queried

The argument that the debt was disputed so far as the amount was concerned rested on the fact that the account between the petitioners and the company was a running account. The nature of the transaction was such that the actual financial position between the parties varied from day to day. Ultimately, at some future date, it was conceivable that there would be a credit balance in favour of the company. That depended on a number of things, in particular, of course, on whether sufficient money was recovered from the persons who had bought cars on hire-purchase. But all this, according to the judge, was 'irrelevant to the question of the indebtedness of the company at any particular point of time'. And there was no agreement between the parties which precluded the petitioners from launching a winding-up petition based on the debt owing to them at the date of the presentation of the petition.

The company argued that by reason of a number of claims which the company had against the petitioners there was a number of deductions which fell to be made from the sum claimed by the petitioners to be due to them; that these were bona fide claims of the company; and that the amount of the petitioners' debt was, therefore, bona fide disputed. It was not suggested that at any material time the amount of the company's claims was in excess of the petitioners' claim so as to leave a credit balance in favour of the company. Although there was no dispute that the petitioners were at all material times creditors, there was a dispute as to the amount of their debt and it was argued that such dispute was within the rule that the Court would not make a winding-up order on a disputed debt. That rule is expounded by *Buckley* (page 451) as follows:

> 'A winding-up petition is not a legitimate means of seeking to enforce payment of a debt which is bona fide disputed by the company. . . . Great damage might obviously be done to a solvent company by a winding-up petition presented by an unreasonable creditor, whose debt the company are able and willing to pay if established, but to whom they bona fide believe they are not indebted.'

This rule is well supported by the judicial precedents but they were not directly concerned with disputed amounts of admitted debts.

Debt Admitted: Amount Disputed

In the old case of *In re Brighton Club and Norfolk Hotel Co Ltd* ((1865) 35 Beav. 204) the side-note to the report reads that the provisions of the Companies Act, 1862, 'for winding up a company, in default of its paying a debt three weeks after notice, do not apply, where there is a bona fide dispute as to the amount due, though there may be an admitted debt exceeding £50'. This was a case where the debt was a statutory demand, not an ordinary debt as in *In re Tweeds Garages Ltd.* Moreover, in this old case it was quite clearly established in the evidence that, apart from the alleged statutory demand, the company was not insolvent. As the judge trying that case said:

> 'Far from being insolvent, this company is carrying on a thriving business, which I am asked

to stop, merely because there is a quarrel between the company and their contractor as to what is due to him.'

Similarly, *In re London & Paris Banking Corporation* ((1874) L.R. 19 Eq. 444) was also a case which was concerned with a statutory demand; and the point there was really whether the company had neglected, within the wording of the statute, to pay a debt which it disputed. After referring to the *Brighton Club* case, the Master of the Rolls at that time said:

'I should be bound by authority (even if I entertained a different opinion, which I do not) to hold that if the debt is bona fide contested, and there is no evidence other than non-compliance with the statutory notice to show that the company is insolvent, and the company denies its insolvency (as this company does), I ought to dismiss the petition.'

Mr Justice Plowman in *In re Tweeds Garages Ltd* was not moved by these precedents, or by any other precedents, to dismiss the petition for winding up in the case before him. He thought that dismissal was not justified merely because the amount of a commercial debt was in issue still. The following passage from his judgment explains the principle of the precedent which he has set for future guidance:

'Moreover, it seems to me that it would, in many cases, be quite unjust to refuse a winding-up order to a petitioner who is admittedly owed moneys which have not been paid merely because there is a dispute as to the precise amount owing. If I may refer to an example which I suggested in the course of argument, suppose that a creditor obtains judgment against a company for £10,000 and after the date of the judgment something is paid off. There is a genuine bona fide dispute whether the sum paid off is £10 or £20. The creditor then presents a petition to have the company wound up. Is the company to be entitled to say: "It is not disputed that you are a creditor but the amount of your debt is disputed and you are not, therefore, entitled to an order"? I think not.'

The final conclusion reached in the judgment was expressed in a manner which leaves no doubt as to the present law:

'In my judgment, where there is no doubt (and there is none here) that the petitioner is a creditor for a sum which would otherwise entitle him to a winding-up order, a dispute as to the precise sum which is owed to him is not of itself a sufficient answer to his petition.'

Tax Liability on Mortgage Interest

by EDMOND GABBAY

THE subject of taxable interest is not one which can be said to be free from difficulties. Rules applicable to Case III and Schedule D rules provide that tax shall extend to any interest of money whether yearly or otherwise. A yearly interest derived from types of income such as money deposit, mortgage or loan is generally taxable against the recipient of the payment at the standard rates (section 169 of the Income Tax Act, 1952). If tax is not deducted on payment of interest, the payer would be precluded by section 169 (1) (*b*) from deducting such payment out of his own taxable income. Section 170 which deals with payment of any interest requires the payer to deduct tax on the payment or be assessed for it. Where the payer fails to deduct tax under this section, recent authority has shown that the tax-free recipient would not escape liability (*Grosvenor Place Estate Ltd v. Roberts* (39 A.T.C. 77; 39 T.C. 433)), affirmed by the Court of Appeal (39 A.T.C. 442; 39 T.C. 441).

This was a case where the National Coal Board as lessees of the appellant company omitted to deduct tax on the quarterly instalments of its annual rents. Assessments were accordingly made by the Additional Commissioners under Case VI of Schedule D on the company. The company appealed on the grounds that these assessments were not properly made and that the Commissioners were without power to make such assessments. Danckwerts, J., held, however, that the assessments were good and valid, and the majority of the Court of Appeal affirmed the decision. Harman, L.J., held a dissentient view, regarding the 'annual payments' as 'profit or gains', and accordingly, no assessment could be made against the recipient.

Interest may accrue annually, half-yearly or at regular periods of not less than a year (*C.I.R. v. Hay* (3 A.T.C. 661; 8 T.C. 636)), or by way of an annual payment like rent. A 'yearly interest' was described as an interest derived from an investment payable at a future date and accountable by periods not less than a year, although the obligation to pay may end before the year is out (*In re Craven's Mortgage, Davies v. Craven* ([1907]

2 Ch. 448)). It emerges from this authority that arrears of mortgage interest paid in one lump sum together with the capital on which it had accumulated are taxable.

How the purchase price of a property is realized often turns on the true construction of a contract between the vendor and purchaser or mortgagee. Lord Greene, M.R., in the Court of Appeal in *C.I.R. v. Wesleyan & General Assurance Society* (25 A.T.C. 311; 30 T.C. 15), affirmed by the House of Lords (27 A.T.C. 75; 30 T.C. 24), clearly and succinctly explained that although one method of realizing the purchase price of a property does not attract tax, yet another would. This he illustrated as follows:

> 'If a piece of property is sold for £1,000 and the purchase price is to be paid in ten instalments of £100 each, no tax is payable. If, on the other hand, the property is sold in consideration of an annuity of £100 a year for ten years, tax is payable.'

Distinguishing Capital and Interest or Income

In *Vestey v. C.I.R.* (40 A.T.C. 325), the High Court considered the question whether a purchase price could be split into a capital and an interest element. Here the appellant sold two blocks of shares to trustees of a settlement for a total of £5½ million, and by agreement provided that the purchase price was to be paid without interest by way of 125 instalments of £44,000 each. A proviso in the agreement stated that in the event of default in paying any of the instalments for ninety days, the whole of the unpaid instalments would become payable and carry interest. It was held that each sum should be dissected into principal and interest.

Interest which was capitalized and on the sale of the mortgaged property was received as part of the purchase price must carry tax (*C.I.R. v. Lawrence, Graham & Co* (17 A.T.C. 105; 21 T.C. 169)). In this case, the reversionary interests devised under a will were mortgaged for a £10,000 loan at 5½ per cent per annum (reducible on punctual payment to 4½ per cent per annum) payable half-yearly after deduction of tax. Since the paid interest had already suffered tax it was held that the respondents were not liable to further tax.

Again, where no payment of interest had been handed over to B., a mortgagee of his reversionary interest, in exercise of an option to capitalize interest as granted to B.'s trustees under a deed of settlement, it was held that payment over and above the original capital loan was a payment of interest and taxable, since such interest never lost its character (*C.I.R. v. Oswald* (24 A.T.C. 120; 26 T.C. 448)).

Income may be separated from capital accretion for purposes of taxation, according to *Wilson v. Mannooch* ([1937] 16 A.T.C. 121; 21 T.C. 178). Here a partner in a firm of solicitors agreed with a builder to grant him a personal loan or arrange for a loan for the purchase of property in return for a lump sum (one-third of the profit up to £500) on resale of the property. In one instance of a resale the solicitor became entitled to a £500 profit and in another to £300. These sums were held to be annual profit and therefore liable to tax.

Taxing Vendors' Deposits with Mortgagees

An arrangement to promote the sale of houses between a builder and a building society whereby interest on deposits was allowed, was considered in *Harrison v. John Cronk & Sons Ltd* (15 A.T.C. 518; 20 T.C. 638). The respondents carried on business as speculative builders. They purchased areas of suitable land, made the road and sewers and built small dwelling-houses which they sold for £500 to £600 to persons of small means. The purchasers were able to pay a small sum down, between £20 and £30, and the balance of the price was obtained by each purchaser from a building society and secured by a mortgage on the home. The respondents, however, guaranteed to the building society the difference between the full sum advanced and the sum amounting to three-quarters of the value of the house which would have been advanced in the ordinary course.

The building society required the respondents to deposit an amount which was usually one-third of the sum guaranteed, upon which the building society allowed interest to the respondents at the current rate payable by the society on ordinary deposits, subject to the society's right to apply the amount of deposit towards the reduction of the loan. As soon as the liability under the guarantee ceased, the deposit was returned to the respondents.

The Crown contended that these amounts should be based on the face value of each sale. The Court of Appeal held against the Crown, which appealed to the House of Lords. There was no cross-appeal by the respondents, and therefore the House of Lords was bound to confirm the decision of the Court of Appeal, upholding that the respondents were to be assessed to tax on the sums deposited with the building society as a receipt of trading profit on proper actuarial valuation at the completion of each sale, and not on their face value.

Terms used in Published Accounts of Limited Companies—I

ISSUED BY THE INSTITUTE OF CHARTERED ACCOUNTANTS IN ENGLAND AND WALES

It is important for shareholders and others interested in published accounts that the items appearing in them should be described in terms which are clear and significant. The Council of The Institute of Chartered Accountants in England and Wales therefore issues these notes in the hope that they will be helpful to members of the Institute in advising on the use of appropriate terms.

The Council wishes to emphasize that the terms used in accounts should be those which are most appropriate in any particular circumstances. The issue of these notes is not intended to imply that the terms suggested herein should be used slavishly and without regard to the circumstances of the company concerned. Members who are advising as to the terms to be used should suggest the use of terms other than those set out in these notes where those other terms would be more appropriate in the circumstances, particularly where they would facilitate the presentation of the true and fair view which the balance sheet and the profit and loss account are required to show.

The notes are concerned only with terminology and not with the form in which the accounts are presented, the manner in which assets and liabilities are classified or the grouping and location of items in the accounts. On these matters reference should be made to the Council's series of Recommendations on Accounting Principles, particularly numbers 18 to 22.

These notes have been prepared as a result of an examination of the published accounts of a large number of companies. The main selection for this purpose was of companies shown in the Stock Exchange Daily List, the selection being made approximately proportionate to the number of companies shown in each classification of that List. In addition the accounts of a number of small and medium-sized companies which were considered to contain points of special interest were included. The examination has included the accounts of breweries, commercial and industrial companies, land and property companies, investment trusts, iron and steel companies, mining, oil, rubber, tea, shipping and transport companies.

In each section of these notes the suggestions made are preceded by a commentary on the terms found in published accounts. These commentaries are throughout related to the accounts examined for the purpose of preparing these notes.

INTRODUCTION

1. There are two principal aims to be kept in mind when deciding on the terms for use in published accounts:

(*a*) **Clarity.** This involves attention to the following points:

(i) *Simplicity.* Concise expressions and simple words should be used, subject to the adoption where necessary of terms used in the Companies Act, 1948, or in tax legislation, or terms having an accepted accounting significance. Technical terms peculiar to the business or industry should in general be avoided unless they are essential to a correct description.

(ii) *Presentation of detail.* Where it is necessary or desirable to amplify items by means of notes or in statements annexed to the accounts, the items and the relevant details should be identifiable by appropriate reference numbers or letters and the wording used in the notes or statements should correspond with the descriptions used in the items to which they relate.

(*b*) **Significance.** The accounts should be so presented as to enable significant descriptions to be applied to the figures. This involves attention to the following points:

(i) *Composite items.* The inclusion of dissimilar components in one narrative is to be deprecated; it is preferable to state them as separate items.

(ii) *Immaterial items.* Where a single amount comprises several components no useful object is attained by referring in the narrative to any component which is not material in amount.

(iii) *Sub-totals.* Appropriate descriptions are desirable for all significant sub-totals; and it is desirable to avoid sub-totals having no significance.

2. The word 'year' has been used in these notes to indicate the accounting period of the company. This procedure is similar to that adopted in the Companies Act, 1948, where, for convenience of terminology within the Act, 'financial year' is defined in section 455 as meaning the period in respect of which any profit and loss account is made up, whether that period is a year or not. In practice, where a company prepares its profit and loss account for a period other than twelve months (for example where there has been a change in accounting date, or where it is the practice to make up the accounts for fifty-two or fifty-three weeks) the company will make the situation clear by appropriate wording in the heading and in the terms used in the account itself. Similarly, the corresponding figures for the previous accounting period will indicate clearly the period to which they relate.

SHARE CAPITAL AND RESERVES

3. A heading is sometimes used to describe the items summarized in that section of the balance sheet which shows the members' interests in the company. Varied expressions are used to describe these interests,

such as 'Capital and reserves', 'Capital, reserves and surplus'. Sometimes the word 'Share' or the words 'Total share' precede the word 'Capital'. Other examples found are expressions such as 'Members' interests', 'Capital employed', 'Total capital, reserves and retained earnings', 'Funds employed', 'Total funds' and 'Shareholders' capital'.

Suggestion

4. Where a heading is used above the items comprising the members' interests in the company, the heading should be factual, such as SHARE CAPITAL AND RESERVES. *Expressions such as 'net worth' which are liable to be misunderstood should be avoided.*

Share Capital

5. The heading 'share capital' or the single word 'capital' is generally used. The single word 'capital' may be misleading, as it has various meanings and frequently comprises not only issued share capital but also reserves retained in the business.

6. Section 455 of the Companies Act, 1948, states that share means a share in the share capital of a company and includes stock except where a distinction between stock and shares is expressed or implied.

7. Headings are usually provided to distinguish between the authorized share capital and the issued share capital. The word 'authorized' is almost invariably found, but the issued capital is described in a variety of ways. The single word 'issued' is found frequently. Other expressions are 'issued and converted into stock', 'issued and fully paid' and 'issued, fully paid and converted into stock'.

8. The items summarized under the appropriate headings vary considerably according to the simplicity or otherwise of the capital structure.

Suggestions

9. (*a*) *The heading* SHARE CAPITAL *is preferable to the single word 'capital'. The heading* SHARE CAPITAL *is appropriate whether or not shares have been converted into stock.*

(*b*) *When the authorized and fully paid share capitals are identical, the description and amount need be stated once only and may be described as* AUTHORIZED, ISSUED AND FULLY PAID. *Where the authorized and issued share capitals differ the first description should be* AUTHORIZED *and the second, where appropriate,* ISSUED AND FULLY PAID. *If, however, some part of the issued share capital is not fully paid, other suitable descriptions should be used.*

(*c*) *The description of each class of share capital should, so far as is practicable, follow the wording of the company's memorandum and articles of association.*

(*d*) *Shares of a class which differs from another class solely or mainly by reason of the absence or restriction of voting rights should be described to show this limitation.*

(*e*) *Any issued share capital converted into stock should be described as* STOCK.

Share premium account

10. The description 'Share premium account' is usual, but there are variations such as 'Share premiums', 'Premium on shares' and 'Premium on shares less expenses of issue'.

11. Section 56 of the Companies Act, 1948, requires that a sum equal to the aggregate amount of the premiums on shares shall be transferred to an account to be called the 'share premium account'.

Suggestion

12. The statutory expression SHARE PREMIUM ACCOUNT *is normally appropriate.*

Reserves

13. The requirement of paragraph 6 of the Eighth Schedule to the Companies Act, 1948, that the aggregate amounts of capital reserves and revenue reserves shall be stated under separate headings, is usually met by the use of the headings 'Capital reserves' and 'Revenue reserves', frequently followed by items indicating the nature of these reserves. Occasionally a heading 'Reserves' is found followed by sub-headings 'Capital' and 'Revenue'.

14. The heading 'Revenue reserves' is sometimes amplified or varied, for example, 'Revenue reserves and surplus', 'Revenue reserves and unappropriated profits', 'Revenue reserves and undistributed profits', 'Earnings retained in the business', 'Retained earnings'.

15. Varied descriptions are used for reserves which appear to be of the same nature. Where there are reserves of a special nature the descriptions usually indicate either their source or the specific purpose for which they have been set aside, although examples are found where the descriptions employed are uninformative, for example, 'Contingencies reserve'.

16. Various descriptions such as 'Fixed assets replacement reserve', 'Fixed assets replacement', 'Reserve for replacement of fixed assets' and 'Freehold buildings replacement reserve' are used to describe amounts so set aside.

17. Reserves which represent realized surpluses from the sale of capital assets are usually described by expressions indicating their source, such as 'Surplus on realization of investments'. Examples of a less specific nature are 'Realized capital profits' and 'Capital accretions reserve'.

18. Another reserve which is described by its source and not the purpose for which it has been set aside is that which arises on a revaluation of fixed assets. Descriptions used include 'Arising from revaluation of fixed assets', 'Revaluation reserve', 'Fixed assets revaluation reserve' and 'Surplus on revaluation of freehold premises'.

19. Under the heading of revenue reserves there is a wide variety of items although 'General reserve' and 'Profit and loss account' are almost invariably found. Examples of other descriptions are 'Stock depreciation', 'Reserve for variation in raw material prices', and 'Stock financing reserve'.

Suggestions

20. (*a*) *The descriptions* CAPITAL RESERVE(S) *and* REVENUE RESERVE(S) *are normally appropriate as headings to groups of reserves or as descriptions of single items.*

(*b*) *The expression* CAPITAL RESERVE *is appropriate for a reserve which for statutory reasons or*

because of the provisions of the memorandum or articles of association of a company or for other legal reasons is not free for distribution through the profit and loss account.

(*c*) *The expression* CAPITAL RESERVE *may also be applied to any other reserve which although legally distributable is regarded by the directors as not available for distribution through the profit and loss account at the date of the balance sheet.*

(*d*) *Subject to any provision in the articles of association prescribing another name, it will normally be appropriate to describe a reserve as* GENERAL *to distinguish it from another reserve specifically described, or in the case of a revenue reserve to distinguish it from the profit and loss account balance.*

(*e*) *The description* RESERVE FUND *is not appropriate unless the reserve is represented by specifically earmarked investments (or other assets) realizable as and when required at not less than the amount of the 'reserve fund'. Exceptions arise from the statutory requirement to describe a 'capital redemption reserve fund' as such and from any provision of the memorandum or articles of association, or other instrument constituting or regulating a company, requiring a reserve to be described as a 'fund'.*

Profit and loss account

21. The expressions used in the balance sheet for the unappropriated balance of profit are varied, the most common being 'Profit and loss account'. This wording is often expanded by the addition of such words as 'Balance unappropriated', 'Balance per annexed account', 'Balance carried forward', and other expressions in which the word 'Balance' is incorporated. Other descriptions used are 'Unappropriated profits', 'Undistributed profits', 'Undivided profits' and 'Surplus'.

22. Some companies, primarily those of the investment trust or property owning type, use the expression 'Revenue account' or 'Revenue appropriation account'.

Suggestions

23. (*a*) *The expression* PROFIT AND LOSS ACCOUNT (*or* REVENUE ACCOUNT *if that designation is used*) *or the expression* UNAPPROPRIATED PROFITS *is normally appropriate for this item in the balance sheet.*

(*b*) *Where there is a debit balance, the expression* PROFIT AND LOSS ACCOUNT (*or* REVENUE ACCOUNT) – ADVERSE BALANCE *is normally appropriate.*

(*c*) *The term 'surplus' is liable to be misunderstood as implying that a valuation of the assets has been made and that the amount shown as 'surplus' represents the valuation excess, over the book amounts, which is not reflected in the share capital and reserves shown.*

Amounts set aside for future taxation

24. Amounts set aside for future tax are usually shown as separate items, not aggregated with reserves, and the word reserve is not generally used. The more usual expressions employed to describe these items are 'Future taxation', 'Future United Kingdom taxation', 'Future income tax', 'Amounts set aside for future taxation'. The description 'Reserve for future tax' is sometimes found.

25. In order to comply with paragraph 11 (10) of the Eighth Schedule to the Companies Act, 1948, additional words are normally included to indicate the basis on which the amount has been computed. This is usually done by stating the year of assessment and/or the date on which the amount will be payable. Where amounts have also been set aside because tax has been deferred by capital allowances, this is shown by describing the relevant part of the amount set aside for future tax as 'Taxation deferred by capital allowances', 'Deferred liability due to initial allowances', and 'Taxation equalization account'.

26. Amounts set aside for future tax are sometimes grouped with reserves, as part of a total comprising share capital and reserves. The amount is usually extended separately but sometimes it forms part of a sub-total of revenue reserves. The most common expressions used are 'Reserve for future taxation', 'Future taxation', and 'Future income tax'. The year of assessment, or the basis on which the amount set aside has been computed, is generally also given.

Suggestions

27. (*a*) *The description* FUTURE INCOME TAX *is normally appropriate to describe an amount set aside for this purpose. An alternative is* INCOME TAX 19...../.....

(*b*) *To comply with paragraph 11 (10) of the Eighth Schedule to the Companies Act, 1948, if the basis on which the amount, if any, set aside for United Kingdom income tax is not given elsewhere in the accounts, the wording should be supplemented by descriptions such as:*

YEAR 19...../.....

or

BASED ON THE PROFIT OF THE YEAR TO DATE

(*c*) *If the full amount of income tax which is expected to be payable by reference to all profits to date is not set aside in the balance sheet, any amount set aside in respect of income tax which is not a liability at the date thereof may be suitably described as* AMOUNT SET ASIDE TOWARDS FUTURE INCOME TAX.

(*d*) *Where the total amount set aside for future tax includes tax deferred by capital allowances, a suitable heading for the group is* FUTURE TAXATION *accompanied by sub-divisions such as:*

FUTURE INCOME TAX

TAX DEFERRED BY CAPITAL ALLOWANCES (*or, if appropriate,* TAX EQUALIZATION ACCOUNT; *an item so described may need to be amplified by note*).

(*e*) *Where tax deferred by capital allowances takes into account only tax deferred by initial allowances the word* INITIAL *should replace* CAPITAL *in (d) above.*

LIABILITIES

Liabilities other than current liabilities

28. Where a group heading is given to liabilities other than current liabilities, the heading 'loan capital' or 'loans' is usually found. Other variations are 'unsecured loan stocks' and 'debenture stocks'.

29. Normally the terms used to describe such liabilities follow the description of the loan used at the time of its issue. Where debentures are secured they are described as 'secured' or as 'mortgage'. Where loans are not secured they are usually referred to as 'unsecured'. The date of redemption of loans and debentures is normally indicated by stating the years in which there will be power to redeem the particular loan. The rate of interest payable on a debenture or loan stock is usually indicated.

30. Information concerning redemptions and purchases of debentures and loan stock is given by describing the amounts redeemed or purchased as 'less redeemed and purchased', 'less purchased' or 'less redeemed and cancelled to date'.

Suggestions

31. (*a*) *Where a heading is given to a group of liabilities other than current liabilities, one of the following will normally be suitable:*

LOAN CAPITAL

DEBENTURE AND LOAN STOCKS

DEBENTURE STOCKS AND MORTGAGES

(*b*) *The description of each class of debentures or other loans should, as far as is practicable, follow the wording used in the documents relating to the terms of issue of the debenture or loan. The dates and material terms of redemption or conversion should be indicated.*

(*c*) *Loans and debentures redeemed and available for reissue may be described as:*

REDEEMED AND AVAILABLE FOR REISSUE

If the amounts redeemed are not available for reissue and it is desired to record the fact that they have been redeemed an appropriate expression would be:

REDEEMED AND CANCELLED

Interest accrued on debentures and other loans

32. Accrued interest on debentures and other loans is not generally shown separately. Where it is shown, its description depends upon its position in the accounts. Where interest is shown as an addition to the amount of the debenture or loan it is described as 'interest accrued' and 'interest accrued thereon'.

33. Where interest accrued is grouped with 'current liabilities' it is described as 'debenture interest', 'debenture stock interest less income tax', 'accrued debenture interest (net)', 'accrued interest on loan capital' and 'interest accrued on debenture stock (less income tax)'.

Suggestion

34. The description of interest accrued on debentures and other loans should indicate whether it is stated gross (which may be necessary if it is not covered by profits) or net. A description such as ACCRUED INTEREST ON DEBENTURE STOCK (OR LOAN) LESS INCOME TAX *would normally be appropriate.*

Provisions

35. Normally provisions are grouped with current liabilities and proposed dividends, but the term 'provisions' is sometimes found as a heading to a separate group. The provisions shown include those which relate to renewals, replacement and maintenance of assets and to amounts set aside for pensions and other benefits for staff. A variety of expressions is used to describe the different provisions. The terms used are generally related to the business operated by the company, but sometimes there is a reference to provision for contingencies.

Suggestion

36. The term PROVISION *with an indication of the purpose for which the amount has been set aside will normally be adequate to describe an amount retained by way of providing for any known liability of which the amount cannot be determined with substantial accuracy, such as:*

PROVISION FOR STAFF PENSIONS

PROVISION FOR DEFERRED REPAIRS

Current liabilities

37. The heading 'current liabilities' is generally used to describe the group of items which includes creditors, accrued expenses, provisions and proposed dividends. The group is sometimes described as 'current liabilities and provisions'. The word 'dividend' sometimes appears in the description of the group. The simple heading 'liabilities' is also sometimes found.

Suggestion

38. The terms CURRENT LIABILITIES *or (where there are provisions of material amount)* CURRENT LIABILITIES AND PROVISIONS *are suitable headings for a group of items shown separately thereunder, including creditors, proposed dividends, current taxation and (where appropriate) provisions.*

Bank advances

39. The expression commonly used to describe bank overdrafts is 'bank overdraft(s)'. Other expressions sometimes found are 'bank loans and overdrafts', 'bank advances', 'amount due to bankers', 'net amount due to bankers on current accounts' and 'owing to banks'.

Suggestion

40. The terms BANK ADVANCES, BANK OVERDRAFT *or where appropriate,* BANK LOANS AND OVERDRAFTS *are normally suitable to describe indebtedness to bankers.*

Secured liabilities

41. Paragraph 9 of the Eighth Schedule to the Companies Act, 1948, prescribes that where a liability is secured otherwise than by operation of law on any assets of the company, the accounts shall indicate that fact. The single word 'secured' is used for this purpose in some accounts but in others there is amplification

by the use of words such as 'secured by floating charge' and 'secured on freehold property per *contra*'.

Suggestion

42. Where a liability is secured it will be sufficient to include the word SECURED *in the description, unless there are reasons which make it necessary or desirable to amplify.*

Creditors

43. A variety of terms is used to describe the amount due to trade and expense creditors. The term most commonly used is 'creditors' but others are 'creditors and accrued charges', 'sundry creditors' and 'creditors and accrued expenses' with many other variations.

Suggestions

44. (a) The single word CREDITORS *is adequate to cover all amounts payable and may be used without additional wording if this is sufficiently explanatory and there is only one category of creditor. An alternative which may be suitable in some circumstances is* AMOUNTS PAYABLE.

(b) If there is more than one category of creditors the word CREDITORS *may be amplified and for a trading company the expression* TRADE CREDITORS *may be appropriate for items to which that term can fairly be applied, that is to say excluding bank accounts, taxes, liabilities on financing transactions and other items such as:*

ACCRUED CHARGES (*or* EXPENSES)
BILLS PAYABLE
ACCEPTANCE CREDITS
LOANS

Taxation

45. Current taxation normally appears as a separate item within the group 'current liabilities' but the descriptions used are very varied. The description 'current taxation' is often used but almost as frequently the term 'taxation' appears alone. Information is sometimes given to indicate the basis on which the amount set aside has been computed or the date on which it is due to be paid, or that the amount so set aside includes amounts for both income tax and profits tax. Occasionally the amounts set aside for tax are described as 'provisions for taxation' and sometimes reference is specifically made to 'United Kingdom taxation'.

Suggestions

46. (a) The liability for current tax may be described as CURRENT TAXATION *or* TAXATION, *with such amplification as may be necessary to indicate the basis on which the amount has been computed.*

(b) If a material part of the amount shown is uncertain or in dispute the words PROVISION FOR *should precede the description.*

Dividends

47. There is an extensive variety of terms used to describe dividends. The word 'proposed' is usually included where applicable. Preference and ordinary dividends are normally shown separately in detail. The words 'less income tax' are usually used to indicate net amounts.

Suggestions

48. (a) One or more of the following terms is normally appropriate to describe dividends paid or payable:

PROPOSED DIVIDEND(S)
PROPOSED FINAL DIVIDEND(S)
PREFERENCE DIVIDEND(S)
PREFERENCE DIVIDEND(S) ACCRUED
INTERIM DIVIDEND(S) PAID (*or* PAYABLE) ON.....

The words (less INCOME TAX) *or* (NET) *are appropriate to indicate the deduction of income tax.*

(b) DIVIDENDS *is a suitable heading for a group of two or more items.*

Contingent liabilities and future commitments

49. Paragraph 11 (5) of the Eighth Schedule to the Companies Act, 1948, requires the disclosure of 'the general nature of any other contingent liabilities not provided for and, where practicable, the aggregate amount or estimated amount of those liabilities, if it is material'. The accounts of some companies do not state the amount and/or the general nature of the contingent liabilities which are stated to exist. These accounts appear not to comply with the Act except where an amount is not stated because it is not practicable to make an estimate or because it is not material.

50. References to contingent liabilities or future commitments do not always make clear whether the amount stated is before or after taking into account potential tax relief for example:

'The company has obligations under guarantees in respect of their employees' pension schemes (not provided for in these accounts) which will be discharged by annual payments. These payments are £ . . . for next year, £ . . . per annum for a further ten years and £ . . . per annum for each of the following seven years.'

51. Paragraph 11 (6) of the Eighth Schedule to the Companies Act, 1948, requires disclosure of 'where practicable, the aggregate amount or estimated amount, if it is material, of contracts for capital expenditure, so far as not provided for'. Some accounts refer to 'commitments for capital expenditure' or 'capital commitments'. In Recommendation 18, paragraph 26, the Council indicated that 'contracts' is preferable to 'commitments' which may have a wider significance.

52. Examples of wording which gives useful information beyond the strict requirements of the Companies Act are:

'Capital expenditure sanctioned by the Board and outstanding at . . . , amounts to £ . . . (previous year £ . . .). Contracts placed against these sanctions and not provided for in these accounts amount to £ . . . (previous year £ . . .)'.

'Commitments in respect of contracts for capital expenditure amount to approximately £ . . . (previous year £ . . .). The unexpended balance of schemes approved by the Directors, in addition to commitments at . . . amounts to £ . . .'.

Suggestions

53. (a) The great variety of circumstances in which contingent liabilities and future commitments exist make it impracticable to suggest particular

terms (except as indicated in (b) below) but in determining appropriate wording regard should be paid to the following considerations:

(i) the general nature and, where practicable, the estimated amount should be made clear;

(ii) the wording should make clear, where relevant, whether the amount is stated before or after taking account of potential tax relief;

(iii) where the item relates to uncalled liabilities or partly-paid shares the wording should indicate, where applicable, that the shares held are shares in a subsidiary.

(b) In relation to capital expenditure the description CONTRACTS FOR CAPITAL EXPENDITURE *is normally appropriate, with suitable wording to indicate that the expenditure is not included in the balance sheet. Where additional information is also given beyond the contracts entered into an appropriate expression would be* FUTURE CAPITAL EXPENDITURE AUTHORIZED BY THE BOARD, *with suitable wording to distinguish that part of the total which represents contracts.*

FIXED ASSETS

Description of fixed assets

54. Assets which are not held for sale and are usually included under the heading 'Fixed assets' are: land and buildings; plant, machinery, equipment and utensils; tools, jigs, patterns; fixtures, fittings, office equipment and machines; and vehicles and other transport equipment. Assets such as goodwill, patents, trade-marks and mineral rights are usually shown under 'Fixed assets' but sometimes they are shown under a separate main heading such as 'Goodwill' or 'Goodwill, patents and trade-marks'.

55. Occasionally all the assets of the kind mentioned above are included in one composite heading (for example, 'Land, buildings, plant, machinery and equipment') but more frequently the assets are shown in at least two separate items. Where a composite heading is used further details of the assets included in the composite heading are usually given in a note or statement annexed to the balance sheet; this practice is often also followed where there is a limited subdivision of assets in the balance sheet.

56. Land and buildings are generally shown together as a separate item rather than merged with other fixed assets. 'Land and buildings', 'Property', 'Properties' or 'Premises' are apparently used as synonymous terms and it is common practice to prefix the description with 'Freehold' or 'Leasehold' or with both. 'Freehold land and buildings' and 'Leasehold land and buildings' are each shown separately in an appreci-

[redacted]

single item. 'Plant and machinery' is the simplest form of this type of item, but 'Plant, equipment and vehicles' is also used. Motor vehicles, furniture, fixtures, office machinery, and other equipment are not in general stated separately except in companies owning only this kind of fixed asset or a relatively material investment in such assets.

58. Fixed assets are sometimes more specifically described, for example, rubber estates, mining property, reservoirs, shipyards, licensed premises, theatres, pipelines, refineries, tank installations, ships, rolling stock, coke ovens, barges, aircraft, amusement devices.

59. Occasionally the descriptions used include a reference to the geographical location of the assets (for example, 'Mine at Blanktown'; 'Fixed assets of overseas subsidiaries' (distinguished from those of the holding company and its United Kingdom subsidiaries)) or are sub-divided according to the different activities of the company or group.

60. Development expenditure is commonly grouped with fixed assets, though shown as a separate item, under such descriptions as 'Expenditure on development', 'Development schemes', and 'Mining property under development'. One balance sheet contained a separate item for uncompleted fixed assets, 'Capital works in progress and equipment therefor at cost, and payments on account of buildings and plant under construction'.

Suggestions

61. *(a) The heading* FIXED ASSETS *is appropriate for both tangible and intangible assets, development expenditure, and buildings or plant under construction.*

(b) Ordinary, rather than technical, language is preferable in describing fixed assets, but there may be advantages in showing separately special kinds of assets peculiar to the company's trade or circumstances if material in amount.

(c) The terms:

FREEHOLD LAND AND BUILDINGS

LEASEHOLD LAND AND BUILDINGS

are normally appropriate for those classes of asset.

(d) The word 'Property' may sometimes be used with advantage to indicate land and buildings which are owned for letting, or not occupied for the purpose of the company's main activity, for example:

HOUSE PROPERTY

SHOP PROPERTY

indicating whether they are freehold or leasehold

reasons which make them significant in the circumstances of the company.

Goodwill and other intangible assets

62. One composite item is generally used for such assets as goodwill, patents, trade-marks, mineral rights, licences and royalty agreements, and its description varies accordingly. Where there is more than one such item, the heading 'Intangible assets' is sometimes used.

Suggestion

63. The various kinds of intangible assets should bear their appropriate descriptions, e.g. GOODWILL, PATENTS. *Where the accounts show a sub-division of items of this kind the heading used should indicate the nature of the items it comprises.*

[NOTE. – For 'goodwill arising on consolidation' see paragraphs 179 to 181.]

Cost, valuation and net book amount

64. Paragraph 4 (3) of the Eighth Schedule to the Companies Act, 1948, requires the methods used to arrive at the amount of the fixed assets under each heading to be stated. Where the cost of the assets is stated, the term 'cost' or 'at cost' is normally used. Occasionally the adjective 'original' or 'aggregate' is introduced.

65. The net amount at which any assets stood in the company's books at the commencement of the Companies Act, 1948, is permitted, by paragraph 5 (1) of the Eighth Schedule to the Act, to be treated as if it were the amount of a valuation of those assets made at that date. 'Book value', 'net book value', 'net book amount' and 'net amount standing on the company's books' followed by the date adopted, are terms used, apparently synonymously. 'Subsequent additions at cost' and 'additions since at cost' are also found. The term 'gross book value' is sometimes used as a column heading to cover amounts arrived at by various methods, including valuation, before the deduction of depreciation.

66. The narrative varies widely where the figures shown have been determined by a valuation; for example, the date of the valuation may be given, it may be stated that the valuation was made by the directors, or that it was an 'independent valuation', or the fact that the valuation was approved by the shareholders at an extraordinary general meeting may be noted. Where the basis of a valuation is in the nature of a formula, rather than exercise of individual judgment, a note of the formula is occasionally given.

67. Sometimes there are separately stated items relating to such assets as 'loose plant', 'tools', 'dies', 'patterns', 'utensils' and 'sundry equipment' in respect of which figures of cost and depreciation are not shown. Presumably such assets are considered to be of the kind referred to in paragraph 5 (2) (*a*) of the Eighth Schedule to the Companies Act, 1948, namely, assets for which the separate figures of cost and aggregate depreciation cannot be obtained without unreasonable expense or delay. Examples of the terms used to indicate how the amount stated in respect of these items is arrived at are: 'at cost less amounts written off', 'at net book value', 'as valued by the company's officials', 'written down values' and 'annual valuation'.

Suggestions

68. (*a*) *The expression* COST *is appropriate where this is the sole method used to arrive at the amount of an item.*

(*b*) *The term* NET BOOK AMOUNT* AT..... *is appropriate for pre-1948 assets remaining and stated separately in the accounts on this basis, followed by* JULY 1ST, 1948, *or whatever date was selected for arriving at the amount.*

(*c*) *An item comprising both methods of arriving at the amount may appear as:*

NET BOOK AMOUNT* AT..... WITH SUBSEQUENT ADDITIONS AT COST

***The use of the term 'book value' is liable to be misunderstood as implying that an actual valuation was made and incorporated in the books at the date named; the expression 'net book amount' or 'amounts at which assets are carried in the books' is therefore preferable.**

(*d*) *The following expressions are appropriate where any assets are included at a valuation and it is desired to give an indication of the date of the valuation and also whether the valuation is internal or external:*

AS VALUED BY THE DIRECTORS IN 19.....

AT PROFESSIONAL VALUATION IN 19.....

with the addition, if appropriate, of the words WITH SUBSEQUENT ADDITIONS AT COST.

(*e*) *Where, by virtue of paragraph 5 (2) (a) of the Eighth Schedule to the Companies Act, 1948, for certain assets (such as jigs, tools, and fixtures) figures of cost and depreciation are not shown but only a net amount, a suitable indication of how this amount is arrived at would be either:*

AT COST LESS AMOUNTS WRITTEN OFF

or

AS VALUED BY THE COMPANY'S OFFICIALS

whichever is appropriate.

Depreciation

69. The single word 'Depreciation' is sometimes used to describe the aggregate amount provided or written off since the date of acquisition or valuation of the assets concerned. Among the other varied expressions used are 'Depreciation to date', 'Provisions for depreciation', and 'Accumulated provisions for depreciation'. The terms 'Amortization' or 'Depletion' are also found, indicating respectively the wastage of assets occurring by reason of the effluxion of time and by the extraction of minerals.

Suggestions

70. (*a*) *It is normally appropriate to describe the aggregate of amounts set aside for depreciation of fixed assets as:*

ACCUMULATED DEPRECIATION

or

DEPRECIATION

unless terms such as AMORTIZATION *or* DEPLETION *would indicate more precisely the nature of the provision.*

(*b*) *A deduction not being an amount calculated by reference to the expected life of the asset may be described as* AMOUNT(S) WRITTEN OFF.

(To be continued.)

Weekly Notes

THE INSTITUTE'S ANNUAL MEETING

THE eighty-first annual meeting of The Institute of Chartered Accountants in England and Wales was held last Thursday, after this issue had gone to press. The full text of the President's address, together with a report of the proceedings at the meeting, will appear in our next issue. The annual report of the Council and the accounts for the year 1961 were published in our issue of April 21st.

Following the Institute's meeting, the seventy-sixth annual general meeting of The Chartered Accountants' Benevolent Association was held, and a report of the proceedings at this meeting will also be published in next week's issue.

BUOYANCY AND BANK RATE

THE reduction in Bank rate from 5 to 4½ per cent last week was hardly a surprise. The markets had to some extent discounted it before it occurred. Nevertheless, when it was announced the Stock Exchange responded noticeably and the improvement has carried on into this week, shrugging off the poor sentiment in Wall Street as it has gone along.

It is not likely that the decline of ½ per cent will by itself have a big effect on business sentiment. The decision to change the rate was taken partly to further discourage the movement of short-term capital especially from New York and to give the domestic economy a nudge rather than a push. There will, of course, be an immediate benefit in the cost of servicing the National Debt and in the terms at which local authorities may borrow, but the effect on business is likely to take longer to work through. A change of confidence in the boardrooms takes longer to bring about and it is not until the benefits are felt there that there will be a change in decisions about the level of capital expenditure to put in hand.

Meanwhile the Chancellor of the Exchequer has made his own contribution to improve business sentiment. Speaking at Sheffield last Monday he said that another £25 million had been repaid to the International Monetary Fund. This means that about half the loan raised in that quarter last July has been returned. In confident mood, Mr Lloyd said that sterling was now secure and he went on to predict a substantial improvement in this country's balance of payments position this year.

A STRIKE BALLOT FAILS

THE decision of the rank and file in most of the member unions of the Confederation of Shipbuilding and Engineering Unions against strike action (not all constituent unions will have been against it) shows once again the different reaction which is likely to be favoured when the general membership have a chance to express their views as opposed to national delegates and executive committees. In these last two the militants in the union are usually well entrenched and calls for industrial action from them are not difficult to evoke.

The decision not to strike has sent the unions back to the employers for a further bout of negotiation and so about three months' negotiation time has been lost by the unions. Officially the full figures on the ballot will not be known for another ten days or so but there are plenty of straws as well as ballot papers in the wind and the final outcome is only too well known.

This conservatism, taking the form of a desire for industrial peace, is not difficult to understand. Several weeks on strike pay in days of a fairly high standard of living and heavy commitments on hire-purchase are the dread of housewives who will have to make ends meet. They have little influence at a union meeting when the militants get to work on a group loyalty theme but in the quiet of the home the distaff side is powerful and vocal. The ballot is clearly a useful instrument for the moderates just as the delegate conference is for the militants.

UNIONS AND THE E.C.M.

BY a coincidence, this week has seen the publication by Political and Economic Planning of a pamphlet called *Trade Unions and the Common Market* (P.E.P., price 4*s*). It has been written by Mr R. Colin Beever, assistant research officer of the Amalgamated Engineering Union. The coincidence lies in the fact that several trade union conferences have been in session round Easter and some of them have tried to tackle the question of membership of the European Common Market. In most cases they have approached the subject somewhat gingerly.

The pamphlet says that they need not be fearful. Mr Beever's preliminary point is, however, one of *force majeure*. He thinks that this country will go into the European Common Market if it can get a formula which is acceptable to the Commonwealth and that the Government will not wait for trade union approval. In his view, therefore, the trade union movement should not be asking whether this country should go in but what should be trade union policy when it is in. Workers on the Continent have had a major success, more so than those in this country, in winning fringe benefits, although often these have come through political pressure and been embodied in legislation rather than in union action. On the other hand the trade unions in this country are better organized.

In the last few days the agricultural workers have voted against entry unless there are safeguards – as the farmers have done. The Union of Shop, Distributive and Allied Workers has decided to remain on the fence and the engineers have been exhorted to take a favourable view. On the whole, organized labour remains cautious and suspicious on the issue.

APPRENTICES IN ENGINEERING

ACCORDING to a survey of apprentices recently carried out by the Engineering Employers' Federation, there has been a drop in the ratio of apprentices to skilled men from 1:4·6 in 1958 to 1:4·7 in 1961. In the companies taking part in the survey, the number of apprentices rose by 3 per cent over this period while the number of skilled men went up by 5 per cent.

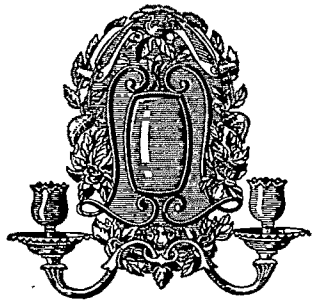
The investigation covered nearly 2,500 companies, a very big sample of the engineering industry. Last year these companies took on about 18,000 new apprentices net of wastage, a higher figure than they will take on this year. The wastage rate was 6 per cent last year.

There has been a notable increase in the number of companies operating 'technician' apprenticeship schemes. Some 10 per cent of the companies in the sample had such schemes in 1958, but by 1961 it was 15 per cent. There was also an increase in the number of companies running their own training schools. This is the latest indication that industry is increasingly training a 'technician' grade between the fully-fledged technologist and the skilled man.

LOOKING ABROAD

THE recently issued Spring 1962 number of *Moorgate and Wall Street*, a periodical review put out jointly by Philip Hill, Higginson, Erlangers Ltd and Harriman Ripley & Co Inc. of New York, has a useful Common Market flavour. There is an article by John F. Chown which takes a look at merchant banking in Britain and in the 'new Europe', and another on 'Investing in French securities' by Guy de Carmoy who, in a short section on company accounts, draws attention to the fact that while it is the policy of French companies to give only outline information to shareholders, since 1959 public companies are required to publish turnover figures every half-year. Consolidated accounts for parent or subsidiary companies are not required in France, and the presentation of accounts is neither uniform nor clear; invariably the method of stock valuation is not shown, nor is there always a complete statement on allowed depreciation.

There is also a lengthy review on 'United Kingdom capital exports and Canadian economic development' by Dr John Dunning, who comes to 'some new and somewhat depressing conclusions about the results of British investments' in Canada.



THE ACCOUNTANT

ANNUAL AWARDS for 1962

The two companies which have been selected to receive *The Accountant* Annual Awards for 1962 are:

ROLLS-ROYCE LTD
and
ATKINSON LORRIES (HOLDINGS) LTD

The reports and accounts of these companies were judged the best of the 1,250 entries for this year's Awards. The entry figure again exceeded those in previous years.

Each year's Awards are for reports and accounts presented at company annual meetings held during the previous calendar year. The Award to Rolls-Royce, therefore (which is that for large companies) is in respect of their accounts for the year ended December 31st, 1960, presented at the company's fifty-fourth annual general meeting on July 11th, 1961.

Atkinson Lorries receive the Award for 'smaller' companies requiring less complex accounts than those of a large group, in respect of their accounts for the year to March 31st, 1961, presented at the company's annual general meeting on October 3rd, 1961.

The Lord Mayor of London, Alderman Sir Frederick Hoare, has kindly consented to present the Awards at the Mansion House on May 29th, in the presence of a distinguished company representing the City, the professions, commerce and industry.

The Awards, which are of equal rank, each take the form of a pair of hand-made silver wall sconces inscribed with the name of the winning company and specially designed with ancient and modern symbolism depicting commerce and accountancy. They are made annually to companies whose shares are quoted on a recognized stock exchange in the United Kingdom in relation to the form and content of their published reports and accounts; particular importance is attached to the adequacy of the information given and its presentation.

Panel of Judges

The members of the Panel of Judges are: Mr K. W. Mackinnon, M.B.E., T.D., Q.C. (Chairman); Mr A. S. H. Dicker, M.B.E., F.C.A.; Mr C. D. Gairdner, C.A.; Mr A. W. Giles, M.A., C.A.; Mr J. E. Harris, B.COM., F.A.C.C.A.; Mr Donald V. House, F.C.A.; Mr J. A. Hunter, M.B.E., T.D.; Mr Ian T. Morrow, C.A., F.C.W.A.; Sir Richard Yeabsley, C.B.E., F.C.A.; Mr Arthur E. Webb, Editor of *The Accountant*.

SHIPBUILDING IN THE TROUGH

THERE has been a welcome recovery in shipbuilding orders for export account over the last few weeks, thanks to some extent to the better credit facilities which can be offered. But the prospect for the industry as a whole will not be good until there is an improvement in the flow of orders from British shipowners.

Mr John Hunter, chairman of Swan, Hunter & Wigham Richardson (a company with a high record of technical and managerial efficiency) pointed out recently that the competition on credit terms had come to such a pitch in the international shipbuilding market that British owners can build ships on more advantageous terms abroad than can the local owners, and foreign shipowners can build on better terms in this country than can British ship-owners. The fact is that the shipbuilding industry in this country relies for about 80 per cent of its business on British shipowners and they are at present slow to order.

Last year's accounts for some of the biggest and most efficient shipbuilding companies compared favourably with those for the year before, but the figures of tonnage under construction in the first quarter of this year show the lowest volume of shipping under construction for seventeen years.

This is My Life . . .

by An Industrious Accountant

CHAPTER 122

I'D always wanted to arrange a reunion of those that are still to be contacted from the group that were articled clerks with me in our old office. Time passes so fast and people drift apart so imperceptibly, that old friendships lapse almost unnoticed. But I got down to the job recently, by telephone and letter, and finally gathered a few of the gang together again.

There was a pleasurable nostalgia in looking back on the old days, like *Forty Years On* translated to an industrial setting. That last year, for instance, when we were swotting for our Final exams., or had them behind us and were looking for fresh realms to conquer . . . that was the Golden Age. We were young and without ties or troubles; we could pick and choose from a wealth of varied careers opening before us; we planned our lives ahead – or so we thought.

But articled clerks, after all, really have much to learn. Or perhaps our crowd was just unlucky. Nobody advised us about our choice of careers; I never remember any of the partners in our firm counselling us about the pros and cons of the jobs that were on offer. We didn't even see the vacancies columns in *The Accountant*, as our firm's copies rarely filtered down to us juniors. If only we had our chance again, we murmured regretfully: *si jeunesse savait. . . .*

Of course, we didn't all complain; some had their cards well marked in advance. There was Bill, whose directorship in his family business was always waiting for him. He's rather smug now; even rather snobbish, it must be admitted; he's never had to worry financially; he was born to the surtax. Or Dick; his path ran straight. He just stayed on with the firm, over the years becoming the senior partner's trusted right-hand. He hasn't risen to a partnership; leadership isn't his *forte*; but few have his flair for liquidation work. With his specialized skill, his five-day week and his little cottage in the country – where he's proud president of the local pitch-and-put club – he's a happy man. I fancy we looked down just slightly at his aloofness from our industrial experience, just as Bill looked down on our struggles to rise towards his level of luxury.

We had honourable scars to show for those struggles. There was Charles who joined an old family company which was tottering towards insolvency through reckless mismanagement; his drive and ability were responsible for its recovery. They always encouraged him with hopes of top management, of a directorate; not yet, of course, but next year. But when a favourable merger took place the family nominees got the plums; he got demoted. Now he's soured; his views on what he calls 'bloodstock promotion' are unprintable.

My old friend Ned nearly blundered. He joined a plastic concern, but top-level promotion was naturally for the scientist or the chemical engineer. The jargon of senior management, the formulae and the hieroglyphs, were too technical for him. He got out at a sacrifice and tried again.

Peter picked aviation and has never looked back; Trevor selected tobacco and is worrying over his long-term forecasts; Leo moved out of textiles when they told him bluntly that promotion was only for the practical man from the factory floor. The common factor in every case was the unavailability of practical advice from senior men; even my own change from city to country town brought problems never anticipated.

The average accountant has to face prejudice on many fronts; even Dick had grim anecdotes of his skirmishes with legal opponents, bankrupts, swindlers. Let's face it, we always have a hard fight ahead of us; reminiscent of that immortal scrap of dialogue when Captain Walter Mitty, with his faint, fleeting smile, takes up the big bomber alone to get that ammunition dump: (*It's forty kilometers through hell, Sir*, said the sergeant. Mitty finished one last brandy. *After all*, he said softly, *what isn't?*)

One might say as much for an accountant's prospects.

Finance and Commerce

Clutsom & Kemp

SHAREHOLDERS in Clutsom & Kemp Ltd, the manufacturers of elastic fabrics, of Leicester, have recently accomplished something very unusual. They have persuaded the board to provide them with the accounts of a subsidiary, Flexor (Whitwick) Ltd. Prominent in this move was Mr Trayton Child, C.A., who maintained that shareholders needed the Flexor accounts to enable them to appraise the situation.

What led up to this can best be followed from a recital of the facts in chronological order. About the middle of last November, Clutsom & Kemp issued its preliminary statement of profits and dividend for the fifty-two weeks to September 2nd, 1961. The dividend to be recommended was a final of 11 per cent to maintain 15 per cent for the year.

On November 20th, the announcement was made that the board had become aware on Saturday, November 18th, that the Flexor stock had been substantially overstated. The board met on the Sunday, decided that the profit figure would have to be revised but that, on the information then available, the dividend recommendation could stand. Messrs Thomson McLintock & Co, one of the joint firms of auditors, were immediately instructed to investigate.

On January 24th, shareholders were informed that there was a deficiency in Flexor of approximately £357,000 of which about £341,000 occurred before September 3rd, 1960.

Dividend Changed

It had not been possible to ascertain the amount of the deficiency at August 29th, 1959, and it was therefore impossible to give any corrected profit figure for the fifty-two weeks to September 3rd, 1960. The deficiency at September 3rd, 1960, of £341,000, less the taxation relief obtainable, would be written off against revenue reserves. And as unaudited accounts for the first quarter of the current year showed a substantial fall in profits compared with the previous year, it had been decided to cancel the recommendation of an 11 per cent final dividend. Instead, the board declared a second interim dividend of 4 per cent to make a total of 8 per cent for the year, no final payment being recommended.

The deficiency, it was then stated, arose from overstatement of stock with a related overstatement of debtors and understatement of creditors. The directors were considering, with the company's legal advisers, all the implications involved.

In his statement with the accounts, the chairman,

CLUTSOM & KEMP LIMITED AND SUBSIDIARIES

CONSOLIDATED PROFIT AND LOSS ACCOUNT for the fifty-two weeks ended 2nd September, 1961

The notes referred to appear on page [579]

Sir Geoffrey M. Barnett, said that the deficiency in stock, debtors and creditors at September 3rd, 1960, was confirmed at £340,395. The amount has been dealt with by debit to reserve. So far as the year under review was concerned, it had been found that Flexor assets were overstated by £16,099 and the group profit before tax was therefore that much less than the amount originally announced in November.

Tax Recovery

Further aspects of the situation were being considered, said Sir Geoffrey in his statement with the accounts; shareholders would appreciate that under the circumstances, he could say no more at that time. But Flexor had been put under the control of an experienced executive director of another subsidiary and active measures were being taken to strengthen and improve the efficiency not only of Flexor but of all companies in the group. The board had retained the services of specialists 'well qualified in the management, consultancy and production spheres' to advise, and there was the added warning that the group's profits for the current year would be down.

At the annual meeting, Sir Geoffrey was able to announce that after discussions with the Inland Revenue, it was possible to say that the recovery of taxation in respect of the overstatement of assets would be at least £130,000.

Investigations were still proceeding into the circumstances that gave rise to the overstatement of assets. These investigations were outside the control and province of the board and in the circumstances, he said, 'it must be obvious to any fair-minded person that it would be quite improper for me to comment upon, or anticipate in any way, the outcome of such investigations'.

Those in Favour

Nevertheless, Mr Child persisted that shareholders really ought to have the Flexor accounts to enable them to see the position in that company. Sir Geoffrey at first maintained that it would not be in the company's best interest. But with a resolution to produce the Flexor accounts carried by twenty votes in favour and nine against, he agreed to respect the feeling of the meeting and not use his overwhelming number of proxies. The Flexor accounts would be sent to shareholders within a few days.

How overwhelming his voting power could have been was seen in the vote on a resolution that adoption of the accounts be deferred until the Flexor accounts had been made available. The resolution was defeated by 1,460,895 votes to 65,635.

Feeling at the meeting can be judged from an accusation that Sir Geoffrey was trying to 'steam-roller' the accounts through the meeting. He disclaimed any such intention and, from reports of the proceedings, it may justly be said that what ever may have happened with the group and whatever may be the final outcome, his decision to provide shareholders with the subsidiary's accounts must be commended.

NOTES ON AND FORMING PART OF THE ACCOUNTS

1. DIRECTORS' REMUNERATION:—

	1961	1960
	£	£
Fees	800	800
Other Emoluments	18,682	18,172
	£19,482	£18,972

2. The net assets of a subsidiary at 3rd September, 1960, were overstated in the accounts as at that date by an amount which cannot be precisely ascertained as the necessary records are no longer available but which has been estimated at £340,395. This amount is made up as follows:—

Overstatement of stocks	£291,889
Overstatement of debtors	46,576
Understatement of creditors	1,930
	£340,395

3. The comparative figures as at 3rd September, 1960, in the consolidated balance sheet and the balance sheet of the company have not been adjusted to take account of the errors shown in note 2.

4. The net overstatement of assets of the subsidiary at 29th August, 1959, cannot be ascertained and therefore the necessary corrections to the consolidated profit and loss account for the 53 weeks ended 3rd September, 1960, cannot be calculated.

5. The movement in the general reserve both in the balance sheet of the company and in the consolidated balance sheet have been as follows:—

	Company	*Consolidated*
General reserve as shown in the accounts at 3rd September, 1960	£650,000	£650,000
Less: Overstatement of net assets by a subsidiary at that date	—	340,395
Amount provided against interest in subsidiaries	340,395	—
	£309,605	£309,605
Add: Appropriated from profits of the year	140,395	140,395
	£450,000	£450,000

6. No credit has been taken in these accounts for Income Tax and Profits Tax recoverable in respect of the net overstatement of assets at 3rd September, 1960.

7. **FIXED ASSETS:**—(Consolidated Accounts)

	As revalued at 31.8.1953 or cost	Depreciation to date	Written down Value	*1960 Written down Value*
	£	£	£	£
FREEHOLD AND LEASEHOLD LAND AND BUILDINGS	571,725	131,939	439,786	*421,792*
PLANT AND MACHINERY	1,289,679	665,797	623,882	*618,818*
FIXTURES AND FITTINGS	191,498	100,779	90,719	*93,452*
MOTOR VEHICLES	62,754	32,088	30,666	*26,700*
	£2,115,656	£930,603	£1,185,053	*£1,160,762*

8. **FIXED ASSETS:**—(Holding Company)

	As revalued at 31.8.1953 or cost	Depreciation to date	Written down Value	*1960 Written down Value*
	£	£	£	£
FREEHOLD LAND AND BUILDINGS	259,106	61,562	197,544	*201,359*
PLANT AND MACHINERY	444,126	188,357	255,770	*247,360*
FIXTURES AND FITTINGS	61,621	26,935	34,686	*30,948*
MOTOR VEHICLES	27,519	12,519	15,000	*10,277*
	£792,373	£289,373	£503,000	*£489,944*

9. Commitments for Capital Expenditure not included in these Accounts are estimated at (i) Consolidated Accounts £177,000 (ii) Holding Company Accounts £48,000.

10. Options have been granted to certain executives other than directors of the company to subscribe for 85,500 Ordinary Shares of 5/- each at a price of 10/3 per share exercisable within the period 1st January, 1962, to 31st December, 1972.

CITY NOTES

THE further reduction in Bank rate, another reduction in I.M.F. borrowings and the Chancellor's unexpected bout of economic optimism have combined to underpin the better trend in the stock-markets.

Industrial equity shares have continued to show a rising tendency despite the obvious and continued pressure on earnings. The motor industry currently presents the type of puzzle the equity market faces.

Car production figures look impressive on paper. Output is up and exports are rising, but both British Motor Corporation and the Ford Motor company have pointed to materially lower earnings and have both forecast continued pressure on profits.

So much so that British Motor Corporation looks like having to draw on reserves to maintain the current year dividend. In this company's case, the position is that while the number of units produced is rising, a greater proportion of output is in small cars – particularly the 'Minis' – where the profit margin is narrow and a greater proportion of increased sales is going into export markets where margins are narrower still.

The industrial equity market is in danger of finding that trade and production statistics are not necessarily to be turned into terms of higher earnings and increased dividends, more particularly if the present battle for higher wages leads to increased costs at the best, and industrial stoppages at the worst.

Reviews

Cost Reduction in Industry

(Published by the Organization for European Economic Co-operation – European Productivity Agency. Available from H.M.S.O. 12*s* 6*d* net.)

This handbook is based on the material used in a series on conferences on Integrated Cost Reduction organized by the European Productivity Agency during the years 1958–1960; and is intended particularly to help small and medium-sized firms.

It must be recognized that cost reduction efforts, which are of the essence of successful business, should not be turned on and off like a tap; and if such efforts are in fact to be continuous, then it is often best to make the co-ordination of them a functional responsibility.

This is the meaning of integrated cost reduction; and the author presents this case modestly, without that undue emphasis on the appointment of high-powered special executives or that smug comparison of 'progressive' companies with the rest, which so often alienates the student of such treatises.

The philosophy of the relationship between job security and reduced operating costs is perhaps not so readily assimilable as he would have the reader believe; but is stimulating matter for discussion, and is, in any case, only part of the brief introductory matter which leads on to a most detailed examination of the practical means of cost reduction.

The book is divided into two parts, the first of which deals with the measurement of incurred costs against standards, that is to say, the operation of budgetary control and with the extension of that system into the day-by-day control of costs.

The author gives a sound practical exposition of the development and use of flexible budgets, avoiding the temptation to advise measures of variability for an excessively wide range of costs.

He also makes a sound distinction between con-

trollable and other indirect costs without, however, considering levels or responsibility at which various types of expense move from one category into the other.

In dealing with the appointment of a budget administrator it is stated that 'the selection of a man from the line organization in preference to a cost accountant was made on the premise that it is more practical to train an operating man in the necessary aspects of cost accounting than to give an accountant an equivalent practical knowledge of plant operations'.

It is undoubtedly necessary in some cases for the accountant to accept this division of responsibility; but the quotation does bring to mind again the valuable contribution which could be made to business efficiency if more accountants were better qualified to deal with the technical aspects of the businesses with which they are associated.

The latter part of the book examines methods of achieving cost reductions through various functions of the business – standardizations and simplification of products, processes, materials and tooling; work study, office work simplification, and improved personnel administration. The various suggestions made are summarized in a check list expressed as a questionnaire for the various management executives.

The book is copiously illustrated with specimen forms, charts and diagrams; and is marred only by a number of typographical errors which, no doubt, will be corrected in future editions.

Selling and Distributing Cost Accounting

Third Edition. (Published by The Institute of Cost and Works Accountants; distributed by Gee & Co (Publishers) Limited, London. 7*s* 6*d* net.)

It must be said immediately that this is not merely a reprint of the booklet that has been available from the Institute for the past twenty years.

The text has been so extensively re-written that it requires to be read and reviewed as a completely new publication.

The Research Committee of the Institute are to be congratulated on the expert manner in which the work of revision has been performed, and on the attractive format in which the result is now produced.

The accountant called upon to deal with a selling or distribution organization would value guidance as to the types of expenditure he might expect to encounter; the organizational cost centres through which control will be exercised; the means of identifying expenditure with product lines; and the legal, social and other factors affecting the level of costs.

In regard to income, he would require to consider the most suitable headings of sales analysis; the relationship of sales to market potential, and the non-accounting factors influencing selling prices in his particular field of activity.

All these matters, and others, are touched on in this useful booklet.

There are moments when one wishes the compilers had given themselves room to expand on certain points – the fleeting reference to minimum economic sizes of orders on page 27, for example; or an earlier statement, terse to the point of incomprehensibility that 'there are mechanical and other facilities available for analysis work'.

The Committee responsible for this publication have recognized that to deal adequately with all the problems of selling and distribution cost accounting and their solutions would call for a very big work. They have set themselves the limited objective, therefore, of stating both problems and solutions in precise tabulation form for easy reference. In this they have been abundantly successful, and the present volume should prove as popular as its predecessor.

The Growth of Public Expenditure in the United Kingdom

by ALAN T. PEACOCK and JACK WISEMAN. National Bureau of Economic Research. (Oxford University Press, London. 30*s* net.)

Since 1890 Government expenditure in the United Kingdom has risen tenfold in real terms and five times this figure in money terms. The economic significance of this development is not always appreciated, but as the British authors of this American sponsored study conclude, the ratio of public expenditure to the gross national product is not likely to decline in the years ahead.

The collection and collation of the data for this study has posed a very considerable task, partly because there exists no consistent classification over the years before the last war of many types of central and local government expenditure, and in many cases no series of such data are available for the earlier years. In consequence much of the data compiled in this volume had to be assembled from the primary sources, in particular the Appropriation Accounts, quite apart from necessitating a complete reclassification of central and local government expenditure.

A particular problem in this type of comparative study was the deflation of the money series to take account of the changes in the purchasing power of the currency. For this purpose separate price indices for services and capital goods were compiled. The extensive statistical material is linked by a clear exposition of the conceptual difficulties, as well as a commentary on the economic significance of the data.

Economics of Industrial Organization

by A. BEACHAM, O.B.E., and L. J. WILLIAMS. (Sir Isaac Pitman & Sons Ltd, London. 18*s* net.)

Undergraduate students of economics are frequently ill-informed, if not virtually ignorant, about the structure and methods of modern industry and more especially on subjects such as the raising of capital, the measurement of efficiency and monopoly in

practice, as distinct from economic theory. This useful little book by Professor Beacham, which has now been revised for its fourth edition with the assistance of Mr Williams, is aimed at providing this type of information for such students. It can be strongly recommended to students working for various professional qualifications, not least those in accountancy, since it will provide them with a broader perspective and analysis of industrial issues than they normally acquire from their professional studies alone.

Trade Unions in a Free Society

by B. C. ROBERTS. (Published for the Institute of Economic Affairs by Hutchinson & Co, London. 30*s* net.)

This is an enlarged edition of a shorter study of British trade unionism which first appeared in 1959. It has been revised and enlarged by the addition of a long section on American trades unions. The differing backgrounds and outlook of the unions in the U.S.A. compared with those in Britain make interesting reading. As far as solutions to the post-war wage inflation are concerned, Mr Roberts has no startling propositions to put forward. His thesis is quite simple; better understanding between management and labour, improved and better paid union staff, with greater emphasis on local negotiations rather than national. One could but wish that Mr Robert's could enjoy a wide circulation among the members of many British unions.

The Trustee Investments Act, 1961

by M. M. WELLS, M.A., Barrister-at-law, with accountancy examples by A. W. Nelson, A.A.C.C.A., A.T.I.I. (Butterworth & Co (Publishers) Ltd, London. 12*s* 6*d* net.)

The Trustee Investments Act, 1961, has revolutionized the law governing the authorized investments which a trustee may make. In particular it has introduced provisions which involve a good deal of accounting skill if the law is to be obeyed. This booklet consists of eleven pages of legal exposition, the Act itself, eight pages of arithmetical examples, and an index. It is based on material contained in the second supplement to the eleventh edition of *Underhill's Law of Trusts and Trustees.*

American Capital and Canadian Resources

by HUGH G. J. AITKEN. (Harvard University Press; Oxford University Press, London. 40*s* net.)

Those familiar with the Canadian political scene will be aware of the recent concern that has been evident over the increasing growth of the American financial stake in the Canadian economy. Not merely are there doubts as to the economic advantages of the continued reliance upon American capital, although its benefits to date cannot be gainsaid, but there are signs of rising resentment at American financial influence.

Professor Aitken's study of the factors which have contributed to the present situation and the problems which confront Canada in the future, especially if Britain and other parts of the world such as Latin America enter regional trading blocs, is exceptionally clear. His own solution is not to try and put the clock back, but rather to try and develop an integrated economy within the North American hemisphere. The political significance of his proposals will be evident, but his study throughout is readable and the historical perspective sound. This is a timely piece of work which deserves a wider readership than it will probably get on this side of the Atlantic.

The City of London as a Centre of International Trade and Finance

(The Institute of Bankers, London. 20*s* net.)

It is always a matter for rejoicing when a new volume of lectures delivered at the annual international banking summer school appears at so low a price. The latest volume deals with two main topics, the role of Britain and sterling in the sphere of international trade, and the functions of the City institutions in the provision of banking, insurance and shipping services to the trading world.

There is the customary roll of distinguished speakers, among them Lord Ritchie, Sir Oliver Franks, Mr Crick, Professor Sayers and Mr Bareau. The Institute deserves credit for publishing these papers, and many accountants and their articled clerks will find much of interest in them.

How to Decimalize the Currency

SIR, – I have read the many interesting letters and authoritative articles that have appeared in *The Accountant* over the past months on the subject of decimalizing the pound. I cannot help feeling that the most important factor has been abandoned at some stage or even overlooked, namely, simplicity.

Many of the views expressed have been admirable and would doubtless present few problems to the business trained mind, but I am sure that the majority of this country's population do not want to use a complicated method of converting £ *s d* to decimal currency.

Surely the simplest system of conversion would be:

100 pence = 8*s* 4*d* = 1 dollar (crown or royal)

Present-day currency may be converted with little trouble, namely, £1 = 240 pence or 2 dollars 40 pence. Florins and half-crowns become 24 pence and 30 pence respectively. All notes may be withdrawn (some coins also if found desirable) and a new dollar note issued.

I firmly believe that this method will not be too costly to the nation, nor will it cause a rise in the cost of living, however small, occasioned by the adjustments of fractions that would be a corollary to the many systems advanced by your correspondents and contributors.

Yours faithfully,

London W6. L. G. CHANDLER, A.C.A.

Assessment Query

SIR, – With reference to the inquiry of R. V. Maniar, in your issue of April 28th, the regulations require that unless notice of appeal against the assessment is given in writing to the Inspector of Taxes within thirty days of the date of the assessment notice, the assessment is binding on the company.

A return should have been made to the Revenue of the results of the company's trading for the period to the date of cessation in 1960–61, together with the relative claims for capital allowances etc. On the strength of these returns the Revenue had the option of raising the assessment for 1960–61 to the actual profits for the period April 6th, 1960, to the date of cessation of trade, and the assessment for 1959–60 to the actual profits for the twelve months to April 5th, 1960.

It is difficult to see how the Revenue were unaware of the fact that the company had ceased to trade if the company's return for 1961–62 had given the relative information. Surely even the Revenue would not be so unjust as to allow an assessment on an estimated sum to stand where there was no trading activity to be assessed.

Yours faithfully,

E. V. H. NASH.

London SW12.

Thinking in Figures

SIR, – Mr H. C. Edey in his paper in *The Accountant* of April 21st, is to be congratulated on a classic exposition of critical and analytical reasoning in retrospect, present and future, touching the whole conception of *thinking in figures* which, of itself, will invite resentment as well as acceptance.

Over-emphasis on figures can often give rise to misunderstanding as to the cause of difficulties unless the important question of human relationship and personality reflex be interrelated.

For instance it is significant to recall the reported business failures in the U.S.A. for 1961 as over 17,000, or 64·4 per 10,000 listed enterprises, and that the causes given by creditors are due to:

Inexperience	46·9 per cent
Incompetence	44·4 ,,
Neglect	3·0 ,,
Fraud	1·3 ,,
Disaster	·9 ,,
Unknown	3·6 ,,

This in itself serves to affirm how very easy it is to get into difficulties without the requisite experience and aptitude for business in either selling, manufacturing or administration. What the comparative situation is in this country would be interesting to know, but it is my guess the figures are lower and the causes different. There could be instances where the capital employed in, say, a manufacturing entity could be invested to more beneficial effect in other ways!

Yours faithfully,

FRANCIS B. WILLMOTT.

Birmingham 5.

SIR, – I have read with interest Mr H. C. Edey's paper 'Thinking in figures' (April 21st issue) and wonder whether the author would be so kind as to say what textbook best leads one from ordinary level in mathematics to the study of the principles of some of the new management mathematics.

Yours faithfully,

B. H. HARRIS.

Birmingham 14.

[Mr Edey comments: I think a book called *Basic Mathematics*, by Professor R. G. D. Allen, to be published later this year by Macmillan & Co will take your correspondent a large part of the way.]

Taxation Cases

Full reports of the cases summarized in this column will be published, with Notes on the Judgments, in the 'Annotated Tax Cases'.

C.I.R. *v.* Hood Barrs

In the High Court of Justice (Chancery Division)
March 29th, 1962
(Before Mr Justice WILBERFORCE)

Surtax – Dividends – Shares transferred to daughters – Appellant previously held beneficially entitled down to particular tax year – Whether beneficially entitled to shares in subsequent years – Income Tax Act, 1952, section 404 (2).

In 1938 the respondent transferred 60,000 shares in a company to one of his daughters, and in 1941 another 60,000 shares in the same company were transferred to the same daughter; and on each occasion she contemporaneously executed blank transfers. On September 16th, 1953, the daughter transferred 40,000 of the shares to one of her sisters and another 40,000 to another sister, thus leaving 40,000 shares in her own name. Each of these transfers was stamped 10*s* on the footing that the shares had been held as a nominee for the transferees. On November 17th, 1953, the two sisters were registered as the holders of the shares transferred to them, and they received the subsequent dividends.

In a previous appeal the Special Commissioners decided that until September 16th, 1953, the appellant had not divested himself of the income arising from the 120,000 shares. In respect of the period between September 16th, 1953, and April 5th, 1954, and in relation to the 40,000 retained by the transferor daughter and the 40,000 transferred by her to one of her sisters, the Special Commissioners decided that they had no evidence on which they would be justified in finding that either of them was beneficially entitled to the income from those shares for the period from September 16th, 1953, to April 5th, 1954. In relation to the 40,000 shares transferred to the other sister the Special Commissioners concluded that that sister was, during the same period, the absolute owner of those shares, in that the respondent had divested himself of the ownership thereof.

The present appeal was concerned with the years 1954–55, 1955–56 and 1956–57, as to which the respondent contended that the income from the two blocks of shares in question should be treated as his income, and the appellants contended that it should be treated as the income of the daughters. The Special Commissioners in this appeal found that the two daughters had received the dividends for the three years under appeal; that there had been no change concerning the beneficial ownership of either of the two blocks of shares; that on March 19th, 1957, the sister had transferred her shares to her husband; and that no further documents were executed by the respondent during the three years under appeal in relation to the two blocks of shares in question. The Special Commissioners decided that the respondent was beneficially entitled to the income arising from the shares in the three years under appeal.

It was contended by the appellants that the Special Commissioners had given too much weight to the decision of the Special Commissioners in the earlier case, and had given insufficient attention to the transfer on March 19th, 1957. It was contended by the respondent that the Special Commissioners in the present case were entitled to accept the evidence given in the previous appeal; that, in any event, as he had been held to have possessed the beneficial interest in the two blocks of shares down to 1953–54 he could not, pursuant to section 53 (1) (*c*) of the Law of Property Act, 1925, part with his interest without a document to that effect having been signed by himself or by his agent lawfully in writing; and that the Special Commissioners had found that he had not executed any such document.

Held: the Special Commissioners had placed undue weight on the decision of the Special Commissioners in the earlier case; that insufficient attention had been given to the transfer of March 19th, 1957; that there was not enough evidence on which to decide whether section 53 (1) (*c*) of the Law of Property Act, 1925, was applicable; that the case should be remitted to the Special Commissioners for reconsideration; and that any further evidence should be limited to the section 53 (1) (*c*) point.

Seaward Brothers *v.* Varty

In the High Court of Justice (Chancery Division)
March 16th, 1962
(Before Mr Justice WILBERFORCE)

Income tax – Builders – Houses built on contract – Others built on sites owned by the firm – Transfer of building business to company – Non-contract houses not transferred – Whether those houses investments or trading stock – Income Tax Act, 1952, section 143.

A firm consisting of two brothers carried on business as building contractors, and, when there was no contract work available, the firm built houses on sites which they themselves owned. On August 31st, 1949, the building contractors' business was transferred to a company, and at that date 123 houses had been built on the firm's own land. None of those houses were transferred to the company, but were retained by the two brothers. By August 31st, 1954, seven of those houses, and also one plot of land, were sold, and subsequently to July 30th, 1958, a further fifteen houses and two plots of land were sold. On the latter date one of the brothers died.

Assessments under Case I of Schedule D were made in respect of the surpluses arising from the sales between September 1st, 1954, and July 30th, 1958, and the subject-matter of the assessments was

stated to be 'sales of property'. The Special Commissioners decided that the houses and plots of land sold were part of the trading stock of a composite business carried on by the firm; and that after the transfer to the company on August 31st, 1949, those properties remained trading stock of a part of the business retained by the firm; and that the surpluses arising on the sales were profits assessable under Case I of Schedule D.

Held: there was no evidence to support a finding either that the firm carried on two trades, after the transfer to the company on August 31st, 1949, or that after that transfer the firm continued in business as building contractors; that the true conclusion from the facts was that the trade formerly carried on by the firm had ceased on the transfer to the company, and that the houses and land excluded from that transfer had been retained by the partners as investments; and that therefore the assessments should be discharged.

THE INSTITUTE OF COST AND WORKS ACCOUNTANTS

REPORT OF THE COUNCIL

We reproduce below extracts from the forty-third annual report of The Institute of Cost and Works Accountants for the year ended December 31st, 1961, to be submitted at the annual general meeting of members to be held at the Old Swan Hotel, Harrogate, Yorkshire, on Saturday, May 12th, at 10.30 a.m.

Membership

During the year, 595 persons were admitted to membership and after allowing for resignations, lapsed memberships and deaths, the total membership at December 31st, 1961, was 7,386, showing a net increase of 510 over the previous year.

Registered Students

During the year there were 4,173 new student registrations, and after allowing for transfers to membership, resignations, lapsed registrations and deaths, there were 17,007 names on the students' register at December 31st, 1961, as compared with 16,311 at the end of 1960.

Institute Awards

The Institute's Gold Medal was awarded to Mr Ian T. Morrow, C.A., F.C.W.A., for outstanding services to the Institute and to the profession.

The Institute's Silver Medal was awarded to Mr A. W. Muse, F.C.W.A., F.A.C.C.A., for long and meritorious service to the Institute; to Mr Arthur Hopewell, B.A., M.P., C.A.(S.A.), F.S.A.A., F.C.W.A., for special services to the Institute and to the profession in South Africa; also, jointly, to Mr Cornelis Mollink, F.C.W.A., and Mrs Mona Mollink, A.C.W.A., for devoted service to the Institute in South Africa.

Examinations

The examinations were held in June and December 1961, at thirty home and sixty-one overseas centres. A total of 11,346 candidates sat, including 2,114 overseas. The comparative figures for the past six years are as follows:

1956	8,478	1959	10,603
1957	9,332	1960	10,797
1958	11,121	1961	11,346

Branches

Branch meetings continue to be the principal corporate activity of the Institute; the wide range of subjects upon which papers have been given, together with visits to factories, discussions, and other activities, indicate the widening field of knowledge sought by members.

The branch affairs committee continually review the figures of attendance at branch meetings. The annual survey and analysis of programmes has been circulated to branch secretaries. A conference of branch secretaries was held in London in June; the value of these annual meetings was proved by the far-ranging discussion of numerous problems.

Regional Conferences

Conferences were held at the following places, the subjects and speakers being as shown:

WOLVERHAMPTON – March 25th:
- 'Budgetary control in a medium-size business', J. E. Smith, A.C.W.A.
- 'The effect on costs of policy and management decisions', G. Hanby, F.C.A., F.C.W.A.

LEEDS – October 21st:
- 'Future trends in employee remuneration', C. A. Herring, B.SC.(ECON.), F.C.W.A., M.INST.T.
- 'Research, development and other pre-production costs', L. N. Norton, F.C.W.A.

DUBLIN – November 4th:
on the theme of
- 'The measurement of performance in business'
- 'The economic viewpoint', Garret Fitzgerald.
- 'The technical viewpoint', H. H. Norcross, F.C.W.A.

LONDON – November 18th:
on the theme of
- 'Planning for the trade cycle'
- 'National policy and Government action', The Rt Hon. Harold Wilson, O.B.E., M.P.
- 'The cost accountant's role', D. A. J. Manser, F.C.A., A.C.W.A.

Overseas Centres

The Council approved the appointment of an Assistant Secretary of the Institute for South Africa. Miss K. M. Davidson, B.A., who previously served on the staff of the Institute in London as Deputy Examinations Officer, commenced duties in Johannesburg early in October. She will act as Secretary to the South African Council, and will provide a link between the five centres and two students' societies in the Republic of South Africa.

Thirty-second National Cost Conference

The thirty-second national cost conference, held at the Connaught Rooms, London, was formally opened on the afternoon of Thursday, June 1st, by the President of the Institute, Mr William S. Risk, B.COM., C.A., F.C.W.A.

The Rt Hon. F. J. Erroll, Minister of State, Board of Trade, then addressed the delegates, his talk being entitled 'Britain: an exporting nation'.

In the evening, the President gave a reception at Merchant Taylors' Hall in the City of London.

On Friday, June 2nd, the President gave his presidential address which was followed by two technical papers, the first, entitled 'The effective use of capital: fixed assets', was presented by Mr Ian T. Morrow, C.A., F.C.W.A., and the second on 'The effective use of capital: current assets', by Mr W. L. Spalding, B.SC.(ECON.), C.A., F.C.W.A., F.C.I.S.

The Institute's annual banquet and dance was held at The Dorchester on the evening of June 2nd, when the principal guests were Dr Hilgard Muller, His Excellency the Ambassador for South Africa, and Mrs Muller, and Sir Harold and Lady Roxbee Cox.

Institute Functions

The President of the Institute, Mr W. S. Risk, gave a dinner party at the House of Commons, by courtesy of Mr Geoffrey Stevens, M.P., F.C.A., on Wednesday, January 11th.

Mr Risk gave luncheon parties at the Central Hotel, Glasgow, on Tuesday, March 14th; at the Queen's Hotel, Birmingham, on Friday, March 24th; at the Institute on Thursday, April 27th, and at the Midland Hotel, Manchester, on Tuesday, May 9th.

Mr F. M. W. Hird, F.C.A., F.C.W.A., who became President in June, gave luncheon parties at the Queen's Hotel, Leeds, on Thursday, October 5th; and at the Grand Central Hotel, Belfast, on Friday, November 3rd.

At the members' dinner held in Grocers' Hall, in the City of London, on Tuesday, October 31st, the Lord Mayor of London, Sir Bernard Waley-Cohen, was the principal guest.

Research and Technical Activities

The booklet entitled *A Report on Marginal Costing*, published on December 1st, was very favourably reviewed. Nearly 1,600 copies had been sold by the end of the month.

The branch contributions on the 1959–60 research project 'The rising incidence of overheads and their control' were collated, and the first draft considered by the Research and Technical Committee in November.

Study continued in the branches on the next research project 'The profitable use of capital'.

A meeting of branch research officers was held in Birmingham on March 11th. This meeting provided a most useful opportunity for members of the Research and Technical Committee to meet the representatives of the branches. The exchange of views on Institute research materially helped to maintain enthusiasm for research by the branches.

A week-end course on management accounting was held at Droitwich Spa from April 14th to 16th. Three papers were presented: 'Management accountancy and its purpose', by Mr R. Warwick Dobson, C.A., F.C.W.A.; 'How the techniques of management accountancy should be used effectively for management', by Mr E. B. Bishop, F.C.W.A., F.C.I.S., and 'The function of management accountancy in the future and the task of the management accountant', by Mr Ian T. Morrow, C.A., F.C.W.A. The chairman of the course was Mr G. C. Stone, F.C.W.A.

Mr Derek du Pré, Secretary of the Institute, continued to serve as honorary editor of the Bulletin of The British Conference on Automation and Computation, and as a member of the Executive Committee of the Conference, Dr J. M. S. Risk, B.COM., PH.D., C.A., F.C.W.A., F.C.I.S., was elected a member of the Executive Committee of the Conference in September.

The first British Conference on the social and economic effects of automation, which the Institute assisted in sponsoring, was held at Harrogate from June 27th to 30th, Dr Risk presented a paper on 'Assessing the profitability of automation projects'. Mr K. S. Ayres, F.C.W.A., was chairman at one of the meetings, and Mr J. P. Wilson, F.C.W.A., F.C.I.S., at another.

The Council accepted an invitation to join in the activities of the National Productivity Year commencing in November 1962. The President, Mr F. M. W. Hird, consented to act as a Vice-Patron.

Mr Ayres represented the Institute on the National Council for Quality and Reliability.

Education and Training

A number of branches again organized short courses for registered students. A new and successful venture was the No. 1 Area week-end course for students arranged at The Queen's College, Oxford, in March.

The Institute played a full part in the Commonwealth Technical Training Week which took place from May 29th to June 4th, under the patronage of H.R.H. The Duke of Edinburgh. Members throughout the country took part in careers exhibitions, conventions and other functions.

The Institute is now in touch with 130 companies having schemes for training registered students.

The Council made a submission to the committee set up under the chairmanship of Lord Robbins to consider the long-term development of full-time higher education.

Summer School

The twelfth residential summer school was held at St Catharine's College, Cambridge, from September 18th to 23rd.

The Council record their appreciation of the facilities provided by the College authorities and the excellent arrangements made by them for the summer school; also their cordial thanks to the speakers, chairmen and group discussion leaders.

LONDON CHARTERED ACCOUNTANT STUDENTS' ANNUAL MEETING

The seventy-ninth annual general meeting of The Chartered Accountant Students' Society of London was held last Monday evening at the Chartered Insurance Hall, Aldermanbury, EC2, with the President, Mr W. E. Parker, C.B.E., F.C.A., in the chair.

The Committee's report for 1961, which was presented at the meeting, records a total membership of the Society at December 31st, 1961, of 9,257 – an increase of 435 over the year. Student members number 7,399.

Mr W. E. Parker

During 1961, the Society organized thirteen lecture courses, including two week-end residential courses at Oxford and Cambridge. A meeting for newly articled clerks was held in January when 130 students were welcomed by the President of the Institute, the President of the Society and the Chairman of the Committee. In June, a supper was arranged for new members at which the President of the Society and the Chairman spoke on the Society's activities.

The annual President's meeting in Guildhall was once again well attended when the Hon. George A. Drew, P.C., Q.C., LL.D., High Commissioner for Canada, gave an address on "The value of Commonwealth trade' (reproduced in *The Accountant* of October 28th, 1961). Other activities included visits to banks and industrial undertakings and speakers' courses, while the major social activities were the annual dinner held at Grosvenor House (reported in *The Accountant* of December 16th, 1961) and Christmas and summer dances.

Committee Chairman's Remarks

In seconding the reception of the Committee's report and accounts for 1961, the Chairman of the Committee, Mr Brian J. Arthur, A.C.A., said that the one bright spot in a rather sombre picture of poor attendances and increased costs was the continued expansion of the week-end courses at Oxford and Cambridge which had attained a total of over 500 students for the first time during 1961. He felt that the utmost effort was required to impress upon principals the importance of the wider professional education provided by the Students' Society. The recommendations of the Parker Report to this end were most welcome. All students were interested in the discussion and recommendations in this report, and members of one of the Society's social clubs had given their own opinions in the professional Press. He emphasized especially the proposal that the suggested introductory courses 'should be identified as part of the activities of students' societies'. It was up to the Society to show that it was fit to take part in this important development.

He drew attention to the section of the Committee's report referring to the Students' Centre, and emphasized that, though the existing 'Students' Club' catered for social demands, they should not lose sight of the project for a real students' centre under one roof.

He thanked the editorial board which had recently produced the first number of the Society's magazine, and the administration staff, the treasurer and the auditors for their work which made possible the whole running of the Society.

After a number of questions had been answered, the meeting received the report and accounts and passed resolutions altering the Society's annual accounting date from December 31st to April 30th and correcting the rule about half-yearly subscriptions.

A motion was proposed calling for an additional annual levy of £1 1s on student members, not to be payable by principals but to be used to bring training under articles into closer parallel with training at universities. After considerable discussion, an amended motion was accepted that the Committee give consideration to the proposal. An undertaking was given on behalf of the Committee to submit the proposal, after revision, to a referendum of the members and if the result were favourable, to consider calling a special general meeting to make the necessary alterations of the rules.

The meeting then carried a motion adding to the Society's objects clause a reference to education on the lines of university training, and also a further motion calling for more general sports facilities.

Officers of the Society

The following officers were re-elected with the thanks of the Society for their active support and encouragement in the past and their willingness to continue in the future:

President: Mr W. E. Parker, C.B.E., F.C.A.

Retiring Vice-Presidents: Sir Harold Barton, F.C.A., and Mr George R. Freeman, C.B.E., F.C.A.

Hon. Treasurer: Mr W. K. Wells, B.A., F.C.A.

Hon. Auditors: Mr H. O. H. Coulson, F.C.A., and Mr R. G. Leach, C.B.E., F.C.A.

The following elections to the Committee were made:

Re-elected: Mr B. J. Arthur, A.C.A., Miss E. A. Hattley, Mr G. B. C. Hughes, M.A., A.C.A., Miss H. J. Minton, and Mr T. G. N. Sylvan.

New Members: Mr W. J. H. Everitt, B.A., Mr D. S. R. Finning, B.A., and Mr G. R. Freshfield.

The meeting closed with a hearty vote of thanks to the President, Mr W. E. Parker, C.B.E., F.C.A., for his friendly conduct of the meeting.

A monthly feature designed to keep readers – whether in practice or in commerce – abreast of the latest developments in the field of office equipment.

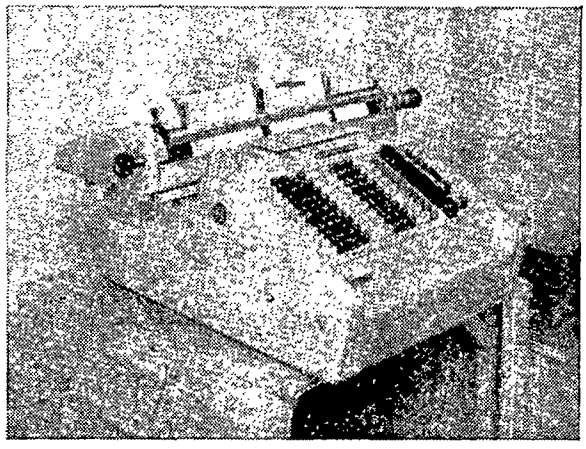
New Offic

New Accounting Machines

THE addition of a new series of accounting machines has been announced by Burroughs Machines Ltd. Called the Series F.6000, the new line is specifically designed to handle the growing and complex requirements of modern businesses.

Available in over twenty-five standard models, with and without punched tape output, the F.6000 has many other features which can be added to the standard models to enhance the flexibility of programming over a wide variety of applications.

The new line incorporates the latest principles of advanced design plus impressive, modern styling and attractive colours. The machines are capable of producing up-to-the-minute management reports in a form which makes it easy to analyse past results and to formulate future plans more accurately. Applications include payroll, stores and order control, accounts receivable and payable and billing.



Burroughs F.6000 Accounting Machine

Dry Copying Process

AT last October's Business Efficiency Exhibition considerable public interest was aroused by the Eichner *Drycopy*, on show for the first time in this country. The machine, which employs an unique process, is now generally available.

Facsimiles of documents are produced by the use of a special carbon-like sheet and the application of infra-red heat. The original, a sheet of *Drycopy* paper and a piece of unsensitized copy paper are fed together into a slot in front of the machine which, within about four seconds, produces a dry, permanent and smear-proof copy. Production cost is about 4*d* for a quarto sheet, 4½*d* for foolscap, though, if the *Drycopy* paper is re-used (which is often possible) costs drop accordingly.

The makers say that short-run offset litho plates produced by this method give service comparable to that provided by other means and, in addition, need no further processing such as fixing or etching. Spirit duplicator masters can also be made direct from originals of any thickness.

As in some other processes where heat is used, the machine will not copy from originals whose printing, writing or other ink has no metallic content. However, so many organizations now use these metal-containing materials that no serious inconvenience should result from this limitation.

Price £89.

T.S. (Office Equipment) Ltd, 140–148 Borough High Street, London SE1.

Photocopier Selection Centre

EXCEPT at exhibitions, there is seldom an opportunity to view several different makes of the same type of office machine in the same place. That such a facility is appreciated is demonstrated by the success of Conroy Copying Consultants who, after just over a year in business, have opened new and larger premises in central London.

Visitors may see, examine and test about fifty different machines. Conroy claim that their staff are in a position to analyse requirements and circumstances and thereafter to give an unbiased recommendation of the right machine for each customer.

After a purchase is made, they will train customers' staffs to use the machine and guarantee to service each one bought from them every month for five years, free of charge. They will also maintain paper stocks at an agreed level.

Conroy Copying Consultants Ltd, 33 New Cavendish Street, London W1.

Compact Microreader

A SMALL, lightweight microreader is a boon to those who lack space or wish to use the instrument in more than one place. Such a one is the new *Ross* model, which weighs just over 22 lb. and is 17 in. high, 8 in. wide and 13 in. deep. It is made by a company who specialize in optical equipment.

Various easily clipped on attachments are provided to adapt the viewer for 35 or 16 mm. roll film, microfiches or opaque microcards. Images, magnified fifteen times, are displayed on a 7 in. by 9 in. glass screen and can be studied without eye strain in normal day or artificial light.

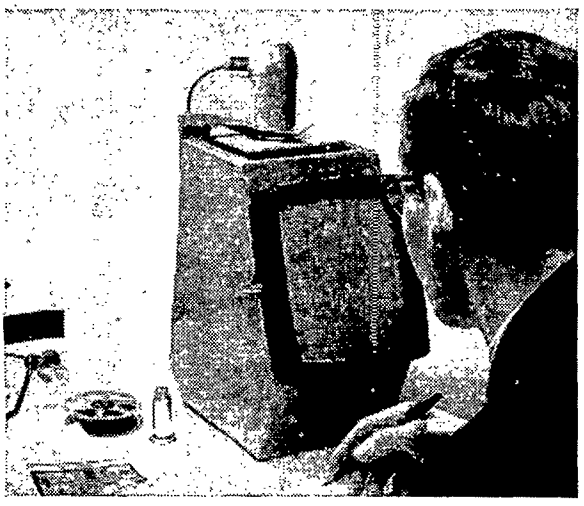
There is a wide range of accessories which may be purchased separately. These include an extension unit to increase magnification to X18, a photographic attachment with focus screen which accommodates 8½ in. by 6½ in. document papers, extension arms, and a carrying case (the instrument itself is fitted with a carrying handle). Some customers have already found the reader highly satisfactory for examining solid objects as diverse as watch gears, lace and medical charts written by an automatic pen.

Alternative models run from 200–250v. or 100–130v.

Equipment

A.C. mains; maximum current consumption is 24W. Price of the basic unit is £78 15*s*, and those of accessories range between about £3 and £8.

Ross Ltd, Clapham Common North Side, London SW4.



Ross Microreader

Economical Addressing

THREE or four address labels may be prepared simultaneously by a new time-saving system known as *Mail-Aids*. These comprise sheets of perforated gummed labels, in sets of three or four, interleaved with one-time snap-apart carbon, and available in boxes of fifty sets.

This stationery could be most useful for applications where, for example, an order is split into two deliveries, a customer's order is received and acknowledged at one address and filled from another, or a series of three or four mailings, without repeats, is sent out. Usually these and similar procedures require repeated typing of addresses, since the making of an address plate or duplicator master would not be economical.

Goodstrack Ltd, Industrial Sales Department, 41–43 King Street, Wallasey, Cheshire.

A.D.P. at Low Cost

AUTOMATIC data processing offers so many benefits in terms of increased efficiency and better, more accurate and more up-to-date information and paperwork that it cannot be disregarded by the business that wants to keep abreast of competitors. And costs are now so much lower that quite sophisticated methods are now within the reach of organizations with modest budgets.

A case in point is an installation comprising an *Addo-X* book-keeping machine linked to an *IBM* card punch and used in conjunction with a card sorter. Capital cost of this equipment works out at around £1,200 plus a monthly rental of about £45 for the *IBM* machines.

In a typical set-up, the book-keeping machine would be used in the normal way, while cards were punched automatically as a by-product of work on the keyboard. These cards would then be mechanically sorted into any grouping required, and run through the punch again. The punch, which is programmed by a card, would automatically read selected columns of the cards and transfer the data back to the *Addo-X* which would, in effect, be operating as a slow-speed, small capacity tabulator. At the end of each group, a total would be taken and a summary card, for subsequent use for cumulative analysis, would be punched.

Four other *Addo-IBM* systems are now available. Type 1 provides card punching only. Type 2, for punching only, has multiple posting facilities, providing duplication of fixed data into related cards and zero proof facilities to test for zero at certain stages. Type 3 is similar to 2, but also includes reading; an alternative set-up provides for reading and tabulating only. Type 4 permits normal punching operations from the *IBM* keyboard, with simultaneous entry of one or two selected fields into the *Addo-X* to provide batch control totals.

Addo Ltd, 47–51 Worship Street, London EC2.

Motorized Card Index

MORE than 200,000 cards in 5 in. by 3 in. size are accommodated in the *Super Elevator*, an American-made motorized rotary file now available in this country. Also suitable for cards in many other sizes, the cabinet houses its contents in removable lightweight trays which are only 13 in. in back-to-front depth.

The open file front provides a working surface and knee space for the operator who brings any chosen section of the file to the working position by touching a button.

Slight pressure on any part of a guard panel which runs the entire width of the file will stop the motor if the operator inadvertently starts it while working on records.

Price on application.

Sankey Sheldon Ltd, 22 Kingsway, London WC2.

Super Elevator Rotary File

UNIVERSITY ACCOUNTING STUDENTS' ANNUAL CONFERENCE

The annual conference of the Association of University Accounting Students of the United Kingdom was held recently in the Council Chamber of Bristol University and was attended by members from Manchester, Liverpool, Sheffield, Cardiff and Bristol universities.

The opening address was given by Mr R. Egarr, assistant city treasurer of Bristol Corporation, on 'The capital finance of local authorities'. He gave an interesting account of the sources open to local authorities for their capital finance and showed the need for a national lending agency to assist the small, but no less credit-worthy authorities. Many questions were asked, showing that this subject – little mentioned in the syllabus for the courses – was of considerable interest.

At the dinner in the evening Mr S. V. P. Cornwell, M.C., M.A., F.C.A., who practises in Bristol and is also a lecturer at the University, gave a light-hearted address on 'The lighter side of auditing'.

On the second day of the conference, Mr F. J. Weeks, F.C.A., chief accountant of W. D. & H. O. Wills Ltd, gave an address on 'Profit planning and variances' in which he dealt with the principles on which the internal control of a large undertaking was achieved and demonstrated the build-up of the costs. He also spoke on the problems of stock control with particular reference to tobacco.

The fourth address was on 'Income tax appeals' given by an inspector of taxes from Bristol, who afterwards answered a considerable number of questions from the audience.

New Officers

At the annual general meeting held during the course of the conference the following officers were elected for 1962–63:

Chairman: Mr M. J. Mumford (Liverpool).
Vice-Chairman: Mr C. Carter (Bristol).
Hon. Secretary: Miss M. Pritchard, Dale Hall, Elmswood Road, Liverpool 18.
Hon. Assistant Secretary: Mr J. Glover (Sheffield).
Hon. Treasurer: Mr G. Mott (Bristol).
Editor: Mr K. Lehrer (Manchester).
Hon. Conference Organizer: Mr J. L. Lichtner (Sheffield).

Notes and Notices

PROFESSIONAL NOTICES

MESSRS CHENNELL & CO, Certified Accountants, of 3 St Peters Place, Brighton 1, announce that they have taken into partnership Mr GEOFFREY GILBODY, A.A.C.C.A., and Mr JULIAN JOURNEAUX, A.A.C.C.A., both of whom have been engaged with the firm for many years. They also announce that within the next few weeks they will be opening a branch office at 45 Church Road, Burgess Hill, Sussex. This branch will be supervised by Mr H. F. H. SHARP, F.A.C.C.A., as resident partner although he will not be severing his connection with the present office.

MESSRS HILL, VELLACOTT & BAILEY, Chartered Accountants, of Belfast, announce that Mr W. CRAIG GARDINER, F.C.A., their senior partner, retired from the partnership on March 31st, 1962, after an association of forty-eight years with the firm. Mr A. MACDONALD GAMBLE, A.C.A., a senior member of their staff for some years, was admitted as a partner on April 1st, 1962.

MESSRS HUDSON SMITH, BRIGGS & CO, Chartered Accountants, of Bristol and London, announce that Mr M. B. NICHOLS, F.C.A., and Mr C. G. I. ROSE, A.C.A., were admitted as partners on April 1st, 1962. On the same date Mr ROSE was also admitted a partner in the associated firm of Messrs HENRY ANSTEY, GROVER & CO, of Bristol, in which firm Mr NICHOLS has been a partner since 1954.

MESSRS JOSOLYNE, MILES & CO, Chartered Accountants, of 28 King Street, London EC2, announce that Mr R. B. BARKER, F.C.A., retired from the partnership at his own request on April 5th, 1962.

MESSRS KEMP, CHATTERIS & CO and Messrs HUDSON SMITH, BRIGGS & CO, Chartered Accountants, of London and Bristol, announce the formation of an associated firm under the name of KEMP, CHATTERIS, HUDSON SMITH & CO, at St Swithin's House, Walbrook, London EC4, and St Giles House, 11 Quay Street, Bristol 1. The partners in the associated firm are Messrs LEONARD PELLS, ARTHUR D. WARDLE, C. GORDON JOHNSTON and ALLAN D. INGLIS, of London, and Messrs ARTHUR L. BARNETT, WILFRED E. DEWDNEY, JOHN BIRKETT and JOHN D. W. MARLE, of Bristol. In furtherance of this arrangement the four London partners have retired from HUDSON SMITH, BRIGGS & CO. The separate firms of KEMP, CHATTERIS & CO, and HUDSON SMITH, BRIGGS & CO will continue to practise under their respective names.

JOHN FOORD & COMPANY
56 VICTORIA STREET, LONDON, SW1 Telephone: Victoria 2002 (3 lines)
REVALUATION OF ASSETS
WORKS, FACTORIES, PLANT & MACHINERY, Etc.

MESSRS SINGLETON, FABIAN & Co, Chartered Accountants, of London, announce that Mr T. A. MORTON, F.C.A., who has been a partner for sixteen years, has withdrawn from the firm in order to take up commercial appointments.

MESSRS W. VINCENT VALE & Co, Chartered Accountants, of 16 Waterloo Road, Wolverhampton, announce the retirement of their senior partner, Mr H. R. HARPER, F.C.A., who has been associated with the practice for forty-eight years. As from April 8th, 1962, Mr M. H. GILBERT, A.C.A., has been taken into partnership. Mr GILBERT has been a senior member of the staff for a number of years. The name of the firm remains unchanged.

MR R. S. WALDRON, F.C.A., and Mr R. G. CHANDLER, D.F.C., F.C.A., who have been associated with Mr W. J. KENNY, F.C.A., announce with deep regret his death after an illness of some months. The practice founded by Mr KENNY, and carried on from 297 Dashwood House, Old Broad Street, London EC2, is being continued by Mr WALDRON and Mr CHANDLER from the same address under the style of KENNY, WALDRON, CHANDLER & Co, Chartered Accountants.

Appointments

Mr H. W. Archibald, A.C.A., has been appointed general manager of Lastex Yarn & Lactron Thread Ltd, an associated company of the Dunlop group.

Mr D. E. Bristow, F.C.A., has been appointed a director of Aberforth Holdings Ltd.

Mr H. L. Cocks, F.C.A., has been appointed a director of Duncan Fox & Co Ltd.

Mr John S. Dent, B.A., F.C.A., has been appointed chairman of Santa Rosa Milling Co Ltd.

Mr Paul D. Irons, B.COM., F.C.A., has been appointed a financial controller of William Baird & Co Ltd and will be primarily concerned with their industrial companies at their London office.

Mr Ian C. McAllester, A.C.A., has been appointed secretary of English National Investment Co Ltd.

Mr William J. Todd, A.C.A., F.A.C.C.A., has been appointed general manager and secretary of the Belfast Co-operative Society Ltd, and Mr James G. McCay, A.C.A., has been appointed deputy general manager and assistant secretary.

Sir Douglas Waring, C.B.E., F.C.A., has been appointed a director of Consolidated Tin Smelters Ltd.

DOUBLE TAXATION: DEATH DUTIES

Discussions were recently concluded in London between representatives of the Italian Ministry of Finance and officials of the Board of Inland Revenue on the making of a double taxation agreement on death duties. Agreement was reached subject to further consideration of certain points.

ESTATE DUTY
Delivery of Inland Revenue Affidavits

The Board of Inland Revenue have announced that, in the case of persons dying on or after April 10th, 1962, where the total value of the property included in accounts 1 to 5 of the Inland Revenue affidavit is under £3,500 net and a domicile outside Great Britain is not claimed, the Inland Revenue affidavit should be lodged at the Principal Probate Registry or a District Probate Registry without prior reference to the Estate Duty Office.

Where the date of death is:

(*a*) after July 29th, 1954, and before April 10th, 1962, the figure remains at £2,500 net;

(*b*) after April 9th, 1946, and before July 30th, 1954, the figure is £1,500 net.

TAX RESERVE CERTIFICATES

The Treasury has announced that Tax Reserve Certificates of the Ninth Series issued from April 28th, 1962, until further notice, under the terms of the prospectus dated March 21st, 1961, will bear interest at the rate of 2¾ per cent per annum.

The rate of interest on certificates of the ninth series subscribed before April 28th, 1962, will remain unchanged.

THE LEEDS, BRADFORD AND DISTRICT SOCIETY OF CHARTERED ACCOUNTANTS

Mr Thomas Whitehead Hibbert, F.C.A., has been elected President of The Leeds, Bradford and District Society of Chartered Accountants for 1962–63.

Mr T. W. Hibbert

Mr Hibbert, who was admitted to membership of the Institute in 1935, is the first accountant in industry to be elected President of the Society. He is assistant managing director of Jeremiah Ambler Ltd, Bradford, and serves on the executive committee of the Employers' Council, is a director of the Worsted Spinners' Federation and a governor of the Works Study Centre for the wool industry. During the war he served for six years at home and abroad with the Duke of Wellington's Regiment, from which he retired with the rank of Major.

He has been a member of the Society's committee since 1953.

Other officers elected for the ensuing year are as follows:

Vice-President: Mr G. D. Paterson, M.A., F.C.A.

Hon. Secretary: Mr James Whitehead, F.C.A., City Chambers, Infirmary Street, Leeds 1.

Hon. Treasurer: Mr T. L. Waring, B.A., F.C.A.

THE INSTITUTE OF COST AND WORKS ACCOUNTANTS

List of Members 1962

The 1962 edition of the *List of Members* of The Institute of Cost and Works Accountants has now been published. The format has been greatly improved by the use of a new type face which enables the geographical section to be included in double column style as opposed to the previous single column form, the bulk of the volume being thereby reduced. This slimming process has been continued by an increase in the overall page size. These innovations facilitate ease of reference to the year-book.

The book extends to 306 pages and contains information about the Institute's branches, sub-branches and students' societies, and its seven 'centres' in South Africa and Southern Rhodesia. Other information includes the names of past presidents and the composition of the Council and the Institute's committees.

CITY DISCUSSION GROUP

The next meeting of the City Discussion Group of Chartered Accountants will take place on Wednesday next, May 9th, at the Tiger Tavern, 1 Tower Hill, London EC1, at 6 o'clock for 6.30 p.m. The topic for discussion will be 'The 1962 Finance Bill', introduced by Mr B. C. Dixie, F.C.A.

THE ACCOUNTANTS' CHRISTIAN FELLOWSHIP

The monthly meeting for Bible reading and prayer will be held at 1 p.m. on Monday, May 7th, in the vestry of St Mary Woolnoth Church, King William Street, EC3. The scripture for reading and thought will be 2 Kings, Chapter 4, verses 1 to 7 (The resources of the Spirit).

DEFENCE BONDS: CONVERSION OFFERS

The Treasury has announced that a conversion offer will be made to holders of 3 per cent Defence Bonds (Conversion Issue) issued on September 1st, 1952 and maturing on September 1st, 1962, of which £9 million are outstanding.

These holders will be invited to exchange their holdings into 5 per cent Defence Bonds (Conversion Issue) on September 1st, 1962. Holders who accept will receive a final interest payment of six months' interest at 3 per cent per annum on September 1st, 1962. Acceptance of the offer of conversion will not involve any break in the holders' encashment rights. If the offer is not accepted, interest on the maturing bonds will cease with the payment due on September 1st, 1962. The list of acceptances will be closed on June 1st, 1962.

They also announce that a conversion offer will be made to holders of 3 per cent Defence Bonds purchased between March 15th, 1952 and August 30th, 1952, and maturing on September 15th, 1962, of which £2·7 million are outstanding.

These holders will be invited to exchange their holdings into 5 per cent Defence Bonds (Conversion Issue) on September 15th, 1962. Holders who accept will be paid interest at 3 per cent per annum on September 15th, 1962, for the period from March 15th, 1962 to September 14th, 1962. Acceptance of the offer of conversion will not involve any break in the holders' encashment rights. If the offer is not accepted, interest on the maturing bonds will cease with the payment due on September 15th, 1962. The list of acceptances will be closed on June 15th, 1962.

ASSOCIATION FOOTBALL

The Birmingham Chartered Accountants' annual inter-office association football tournament was won by Messrs Bowker, Stevens & Co, who defeated a team drawn from the combined offices of Messrs Heathcote & Coleman and Charlton & Co, 3–2 in a match played on April 15th.

Finance Bill Debate

IN reviewing the contents of the new Finance Bill two weeks ago we forecast that something not already in it would soon be added; a clause setting right the somewhat inept drafting of the penalty provisions in the Finance Act, 1960. Closing the debate on the second reading of the Bill on May 3rd, THE ATTORNEY-GENERAL told the House of Commons that a decision of the Divisional Court showed that the language of the 1960 Act 'was not fully effective to make the new [penalty] code apply in relation to taxpayers who defaulted before the passage of that Act'. He was referring, of course, to the case of *Fysh v. Martin* which we reviewed two weeks ago.

THE ATTORNEY-GENERAL said that, on appeal, the decision of the Divisional Court might be reversed but some time would elapse before that could happen. Accordingly THE CHANCELLOR OF THE EXCHEQUER had come to the conclusion that the matter should not be left in doubt and that it should be dealt with in the current Finance Bill. He said that the CHANCELLOR would accordingly be tabling a new clause and added, with understandable caution, that it would be 'designed' to secure the desired result beyond further question. It seems very unfortunate that Parliamentary time should have to be wasted in this way over a simple drafting matter. Moreover, not only Parliamentary time will be wasted, for it seems clear that back duty settlements cannot be arrived at in the present state of doubt; and there is no guarantee that the proposed clause will be passed in its original wording, even when that wording is known.

Referring to a member's observation on the lack of speeches in the debate directed to the contents of the Finance Bill itself, THE ATTORNEY-GENERAL commented that one reason was the fact that this year a White Paper had been published explaining the clauses in a major part of the Bill, so that there had been less seeking for explanations in the House. Referring to the suggestion that a White Paper should cover all the contents of each Finance Bill, THE ATTORNEY-GENERAL said that this would involve great difficulty. The drafting of the White Paper would have to proceed side by side with the drafting of the Bill; it would have to be published on the same day, 'with the clauses in the right order as well'. We would add that there is also the difficulty that the draftsman is sometimes surprised to find that his Bill means something different from what he meant it to mean.

Opening the debate, THE CHIEF SECRETARY TO THE TREASURY gave a brief but lucid explanation of the new Case VII tax. He dealt with the point to which we referred when we reviewed the

Bill, namely, the illogicality of taxing the switching profits of mutual assurance companies. The *raison d'être* of the new provisions is to tax what the Government have called 'spendable income'. Hence the comparatively short period within which property has to be bought and sold if the profit is to attract Case VII tax. In this context it is absurd to tax mutual insurance companies on their short-term gains, for they hold the profits on trust for the policy-holders and of course the policy-holder does not receive them until his life assurance matures. Indeed, profits on a with-profits assurance policy are the antithesis of short-term gains. MR HENRY BROOKE told the House of Commons that a deputation had already been received on this topic. THE CHANCELLOR OF THE EXCHEQUER was considering the matter, and Mr BROOKE expressed the hope that it would not prove to be an insuperable difficulty. There should be no difficulty at all in drawing the provisions in such a way that mutual insurance companies are not taxed. No doubt the true answer is that the draftsmen did not think of this aspect. There is, of course, no specific mention of insurance companies. The difficulty arises because the Bill naturally exempts income which is already taxed under Case I; mutual insurance companies do not pay Case I tax.

Mr BROOKE had a word to say about the new inquisitorial powers in clause 15 (5). He denied that there was any unjustifiable breach of confidentiality in the subclause. He put the object of the subclause in this way:

> 'If the Inland Revenue thinks that a false return has been made it can ask for simple factual information, that is to say particulars of purchases or sales in which the agent concerned has acted on behalf of a named client. There is no ground for suggestions I have heard that various inquiries – for example, into advice given by an agent to his client about transactions . . . '

Here he was unfortunately interrupted by a question about the length of time during which a stockbroker would have to keep records. However, it does seem that there is at present no intention to have the Inland Revenue asking accountants and other tax advisers about advice they have given in relation to short-term transactions. That being so, one is tempted to ask why clause 15 (5) has been so worded as to give power to require information from any person who has acted on behalf of the taxpayer 'in connection with any acquisition or disposal of assets by that person'. The phrase 'in connection with' is just about as wide a phrase as could possibly be used, and would certainly cover the giving of advice in relation to the transaction.

There was a half-hearted attempt from the Government to defend the absence from the Bill of any implementation of the CHANCELLOR's promise to abolish Schedule A tax on owner-occupiers. He gave the promise in order to restrain owner-occupiers from appealing against the new rating assessments which will be going out during the coming year, and which will be based on the full value. As there is no definite statement in the Bill that Schedule A will in fact be abolished, or even reduced, owner-occupiers may deem it wiser to ignore the CHANCELLOR's oral assurance. It is clear that if a Schedule A revaluation does take place, then assessments on owner-occupier residential property will follow the then existing rating assessments. An owner who fails to appeal against his rating assessment (on which the rate of tax is usually much higher) may jeopardize his prospects of keeping the Schedule A assessment within bounds.

The point was made in the House, as it has often been made in the past, that changes in estate duty law have in one sense a retrospective effect, in that they cover property acquired before the Budget. However, THE ATTORNEY-GENERAL rejected a plea that immovable property abroad which had been acquired before Budget day should not be subject to the new rule bringing it into charge to estate duty. SIR REGINALD pointed out that when estate duty was first imposed in 1894, it applied to all property (apart from foreign land) whenever it was acquired. No one criticized the present proposal to allow relief in respect of foreign property, movable or immovable, where the property has borne duty in the country of *situs*. Nor did anyone criticize the increase in the minimum estate, from £3,000 to £4,000. There is no doubt that a great deal of unproductive administrative time is devoted to small estates at the margin, and this new increase is unlikely to cost much in real terms. The time is also ripe for an increase in the single and married income tax personal allowances, for they have got out of line with the present value of money and standard of living.

On a Teaching Vocation

by T. E. GAMBLING, B.Com., A.C.A.
Lecturer in Accounting, University of Birmingham

WHILE reading Professor Baxter's concluding remarks in his article on the Parker Report in *The Accountant* of January 20th, I recollected my own entry into teaching. When a qualified accountant announces his intention to take up teaching, the reactions of his colleagues do not seem to differ very greatly from what they might have displayed had he proposed to enter a monastery! A high degree of vocation is needed for both callings, so this may not be too inappropriate; but since the puzzled concern felt by one's friends in such cases proceeds largely from complete ignorance of the issues involved, it seemed to the writer to be a useful piece of work to prepare an abbreviated *apologia pro vita sua*, setting out some of the facts about the work and prospects of a teacher.

Misconceptions

The lack of awareness of the possibility of a teaching career for a qualified accountant is in part due to misconceptions as to the nature of the work and its rewards; however, an even greater cause is the apparent disbelief of some accountants that their art is capable of being taught at all. They feel that since accounting is a practical subject, it can only be acquired through practical experience and therefore that theoretical instruction can count only for very little. Mention must also be made of Mr R. J. Carter's article on this topic which appeared in *The Accountant* of April 7th; this was a forthright statement of the traditionalists' point of view, and it is a good thing that it should have been so forcefully expressed that the reader is left in no doubt as to the nature of the dispute about the method of professional training. It is very tempting to think of the heart of our professional expertise as an arcanum of wisdom of such a refined nature that it can only be acquired by a sort of osmosis. This seems to me to be a denial of the existence of any sort of scientific basis for accountancy. The accountancy profession is not alone in this; the engineering trades were firm believers in the superior virtues of 'sitting next to Nellie' over technical instruction until comparatively recently, and even now one still sees evidences that suggest that the current reverence for technological education in industry may be little more than lip-service in the case of many firms, both large and small.

Without for a moment denying the essential part that the practice of acquired knowledge must play in the training of anyone who proposes to use his art in the field, whether as doctor, engineer or accountant, I want to place on record my own conviction that it is a logical proposition that anything which it is possible to *learn* must be capable of being *taught*, and that practice can only usefully be undertaken after adequate instruction.

Some practitioners might argue that at least, in some instances, the trouble is that the practical experience and knowledge of the teachers themselves is inadequate and that their instruction requires amplification and even correction in the course of practical experience. It may well be that no accountant can have had practical experience of absolutely everything, and thus the teacher of accounting can find himself in the position of one man trying to teach the equivalent of all branches of medicine and surgery. This dilemma is not confined to the teachers alone in our profession and one sometimes feels that our lack of specialization, especially at the humbler levels, leaves us with all the vices and virtues of the horse-and-buggy age of medical practice.

However, it was not so very long ago that medical schools did in fact consist of one or two people telling the students all they needed to know, and it is on the foundations which they laid that the present structure of medical knowledge has arisen. There is a very great need for more teachers of accounting, certainly in technical and commercial colleges; in these institutions the expansion of accounting studies has been very marked in the last few years and is likely to continue as the 'bulge' starts to make itself felt and more and more firms release their commercial apprentices for day-time study. A fair proportion of a teacher's time is taken up with non-specialist students following general business administration courses, or alternatively, as part of courses in mechanical engineering and so on. It is important that this type of course should be in the hands of well-qualified and experienced accountants.

I hope I shall not offend any former colleagues

too greatly in suggesting that the demand for good-quality financial accountants is even more acute than for cost and works accountants. The world of university teaching in this subject is at the moment a small one and detailed comment on 'trading prospects' should perhaps be avoided. Nevertheless, it is probable that opportunities of entry into this branch of teaching will also arise from time to time. Certainly some dramatic developments would be seen if the profession extends its use of the Joint Scheme for the training of our articled clerks.

Teaching Qualifications

When a member of the profession first considers his suitability for a teaching post he has to give some thought to the training and qualifications required. Apart from professional qualifications and very adequate experience (students are very adept at discovering any substantial lacunae, if they exist), the exact requirements are not fixed, as regards further education at least.

Local education authority colleges, as a rule, like a candidate for a lectureship to have taken a one-(academic)-year course at one of the training colleges in Huddersfield, Bolton and London that prepare technical teachers for further education work. This is a fairly serious step to take, because although suitable candidates will receive a reasonable grant-in-aid, a married man is still likely to suffer some loss during the months of training. However, they are also prepared to accept a moderate period of part-time teaching in lieu of formal teacher training. Moreover, in view of the extreme shortage of suitable material, I should be telling something less than the truth if I did not add that appointments are occasionally made without these formalities if the candidate can in some other way demonstrate a genuine interest and probable ability in teaching.

As regards university appointments, apart from a decided preference for graduate members, it is probable that a modest history of publications and, were it possible, research experience would be an asset.

A word might be said on the sources from which an inquirer might obtain detailed information on these matters. The local education authority is invariably glad to give details of part-time teaching opportunities, as well as advising those anxious to take up teacher training. The various training colleges themselves advertise in the professional Press from time to time and some of the vacant appointments in local education authority colleges are also advertised in these periodicals. However, another source of these advertisements is in the back pages of *The Times Educational Supplement* and perhaps in *Technology* (for advanced colleges). University appointments are sometimes to be found in *The Times Educational Supplement* and the professional Press, but more often perhaps in such dailies as *The Times* and *The Guardian*, and in *The Observer*.

Salary Prospects

The struggles of school teachers to improve their conditions have, I fancy, had an adverse effect on recruitment of technical teachers of all sorts. Technical teachers have their own Burnham 'technical' scale which is linked with the main scale in that the lowest grade on the technical scale is the same as the basic grade on the main scale. Thus the ranks at which accountants are likely to be appointed are substantially above the basic grade for school teachers, and in any case practical experience over the age of 21 is usually taken into consideration when arranging a starting salary; moreover, a professional qualification will often be accepted in lieu of a degree in those grades where graduates get an additional allowance.

Following the recent and well publicized pay rise for teachers in the local education authority service, I personally would hazard a guess that the salaries of these accounting teachers are not much below the income which they might have received in industry or practice; that is not to say a further claim is necessarily inappropriate, to the extent that outside salaries continue to rise and that above-average personnel is required for teaching. The additional income possible from incidental sources such as authorship, examinership and consultancy should be borne in mind, as these are encouraged and in some cases they may be substantial. 'Fringe benefits' of the generally accepted 'company car' type are rare, but the vacations and opportunities for overseas visits should not be overlooked.

In conclusion, at the risk of sounding like a latter-day Mr Chips, there are many non-financial compensations in the career of a teacher. Unlike other teachers, an accountancy lecturer has the facility to follow the careers of his students from year-books if not from personal acquaintance; and even after comparatively few years in the teaching profession, I can already see quite a few of my 'young men' at least on the first steps of sound professional careers. There is a sense of having achieved something of very real benefit for one's profession.

Terms used in Published Accounts of Limited Companies—II

ISSUED BY THE INSTITUTE OF CHARTERED ACCOUNTANTS IN ENGLAND AND WALES

CURRENT ASSETS

THE heading 'current assets' is used almost invariably. Some companies deduct the total of current liabilities from the total of current assets. Where a description is given for the resulting net figure, it is most frequently called 'Net current assets', although occasionally it is called 'Working capital'.

Suggestions

72. (*a*) *The heading* CURRENT ASSETS *is appropriate.*
(*b*) *If current liabilities are deducted from current assets, the resulting balance may be described as* NET CURRENT ASSETS, *or* CURRENT ASSETS LESS CURRENT LIABILITIES.

Stock-in-trade and work in progress

73. Stocks are frequently shown as 'stocks', or 'stock-in-trade' or 'stock on hand'. Work in progress is sometimes referred to, usually by the addition of the words 'and work in progress', but occasionally as a separate item. The accounts examined for the purpose of preparing this document were, however, all issued prior to the Council's Recommendation 22, *Treatment of Stock-in-trade and Work in Progress in Financial Accounts*,[1] which is now having its effect on company accounts.

74. Recommendation 22 makes special reference to the description of these items in the annual accounts. In particular the following should be noted in addition to the suggestions below:

> 'The expression "market value" does not indicate whether it implies net realizable value or replacement price and is therefore not regarded as an appropriate description. Such terms as "at or under cost" or "as valued by the company's officials" are also not regarded as suitable.'

75. The following suggestions, after paragraph (*a*), are based on the advice given in Recommendation 22.

Suggestions

76. (*a*) *A simple description such as* STOCK *or* STOCK-IN-TRADE *is normally adequate unless there is a material amount of* WORK IN PROGRESS *or of consumable* STORES *in which case these words may be included in the description. If the total is sub-divided into its component parts, an appropriate description should be applied to each separate amount.*
(*b*) *Where the amount carried forward for stock is material in relation to either the trading results or the financial position, the descriptions should indicate concisely the manner in which the amount has been computed. Normally suitable descriptions, in the appropriate circumstances, might (subject to (c) below) be:*

AT COST

AT THE LOWER OF COST AND NET REALIZABLE VALUE

AT THE LOWEST OF COST, NET REALIZABLE VALUE AND REPLACEMENT PRICE

AT COST LESS PROVISION TO REDUCE TO NET REALIZABLE VALUE (*or* TO THE LOWER OF NET REALIZABLE VALUE AND REPLACEMENT PRICE)

(*c*) *The use of the word 'cost' may require an explanation (possibly by way of note) of the extent to which overhead expenditure is included.*
(*d*) *Where the basis of the amount shown for stock is of a special nature, appropriate descriptions should be used, for example, in a rubber producing company:*

RUBBER ON HAND AT PRICES SINCE REALIZED LESS SELLING COSTS

Debtors

77. There is considerable variety in the description of debtors including 'Debtors', 'Sundry debtors' and 'Trade debtors', with or without the inclusion under the same heading of particular items such as 'Bills receivable', 'Claims', 'Interest accrued', 'Prepayments' and 'Payments in advance'.

78. It would appear that prepayments, although not strictly debtors, are included generally without separate narration.

79. It is not the general practice to record that bad debts have been written off or that a provision has been made for doubtful debts, but this is sometimes done by reference to the deduction of provisions for 'Doubtful debts', for 'Bad and doubtful debts' or for 'Discounts'.

Suggestions

80. (*a*) *The single word* DEBTORS *or the expression* AMOUNTS RECEIVABLE *is adequate to cover all amounts receivable in the ordinary course of business and may be used without additional wording if this is the only material category of debtor.*
(*b*) *If, however, there is more than one category, the word* DEBTORS *may need amplification and for a trading company the expression* TRADE DEBTORS *may be used where appropriate. Suitable descriptions for other material items are:*

PREPAYMENTS

LOANS

BILLS RECEIVABLE

Paragraphs 1–70 of these notes were reproduced in last week's issue.

[1] Reproduced in *The Accountant* of November 19th, 1960.

(c) *Reference to the deduction of provisions for discounts and doubtful debts is usually unnecessary unless the amounts are of special significance.*

Tax reserve certificates

81. Tax reserve certificates are generally shown as a separate item and so described.

Suggestion

82. TAX RESERVE CERTIFICATES *should be so described.*

Liquid resources

83. The general practice is to group together bank balances and cash in hand.

84. Bank balances are frequently described as 'Cash at bank' or 'Cash at bankers'. No less frequently these are described as 'Balances at bank' or 'Balances with bankers'. Sometimes the wording is amplified by reference to particular descriptions such as 'Cash in hand, at bank and at short notice', 'Deposits, bankers' balances, cash and Treasury bills', and 'Money at call and short notice'.

Suggestion

85. Suitable descriptions are:

TREASURY BILLS

MONEY AT CALL AND SHORT NOTICE

BANK BALANCES AND CASH *or (if there is no bank balance)* CASH

Investments

86. In addition to the matters referred to in paragraphs 71 to 85 above, current assets may also include investments dealt with below.

INVESTMENTS OTHER THAN INTERESTS IN SUBSIDIARIES

Trade investments

87. Trade investments are sometimes classified as fixed assets and less frequently as current assets; but generally they are shown under a separate intermediate heading.

88. The words 'trade investments' are most commonly used without further description, although there is a considerable variety of terms less frequently used of which the following are examples:

'Trade and other investments'

'Investments in associated companies'

'Trade investments:
Shares (quoted)
Shares (not officially quoted)
Loans'

'Shares in and loans to associated companies'

'Trade interests:
Shares
Advances'

In some accounts they are grouped with subsidiary companies as in the following example:

'Investments:
Shares in subsidiary companies
Trade investments'

89. The terms generally used for stating the method of arriving at the amount of the trade investments are 'at cost', 'at valuation', 'at directors' valuation at.....'. Where provision has been made for diminution in value, this is usually described as 'amount written off', 'provision for depreciation', 'provision for losses', or 'provision for fall in value'. Paragraph 4 (3) of the Eighth Schedule to the Companies Act, 1948, would not be complied with if the amount of such provision is not shown where the investments are fixed assets, for example, if the asset is stated 'at cost less amount written off' without the amount written off being stated.

Suggestions

90. (a) The description TRADE INVESTMENTS *is normally appropriate. Where a company has investments representing substantial but not controlling interests in other companies or undertakings, particularly where the company has a right to appoint its own representatives to take part in the management, these may be described as* ASSOCIATED COMPANIES *under the general heading* TRADE INVESTMENTS.

(b) One of the following expressions would normally be appropriate for stating the basis on which trade investments are shown in the accounts:

AT COST

AT COST .. .. .. £

Less AMOUNTS WRITTEN OFF £

£

AT DIRECTORS' VALUATION *(with a note of the date of the valuation where it is not the balance sheet date)*

AT MARKET VALUE

Investments other than trade investments

91. Investments other than trade investments may be classified as fixed or current assets according to their character or the circumstances in which they are held. Readily realizable investments which represent funds available but not immediately required for use in the business are generally classified as current assets; both quoted and unquoted investments are generally treated in this way.

92. The following are examples of the many terms used to describe investments (in which connection the requirements of the Companies Act, 1948, particularly paragraph 8 (3) of the Eighth Schedule, are relevant):

'Quoted investments'

'Unquoted investments'

'British Government securities'

'Marketable securities'

'Government and trustee securities'

'Investments:
Quoted in Great Britain
Quoted abroad
Unquoted'

'Investments quoted on a recognized stock exchange:
British Government securities
Other investments'

'Corporation loans'

93. Full details of the investments held are sometimes given.

94. Paragraph 11 (8) of the Eighth Schedule to the Companies Act, 1948, requires the aggregate market value of a company's quoted investments (other than trade investments) to be shown by way of note where it differs from the amount of the investments as stated in the balance sheet. This applies whether the investments are classified as fixed or current assets.

95. The above-mentioned requirement to disclose the market value of quoted investments (other than trade investments) where this differs from the amount stated in the accounts means that there is no necessity (under paragraph 5 (1) (*c*) of the Eighth Schedule to the Companies Act, 1948) to show the method of arriving at the amount of such investments, even where these are classified as fixed assets. The method of arriving at their amount is not usually stated, but where it is stated some of the terms used, in conjunction with the statement of the market value, are:

'At cost'

'At or under cost'

'At cost less amounts written off'

'At cost less surplus on realization'

'At valuation at.....'

'At market value'

The actual amount written off is rarely stated separately.

96. Where unquoted investments are classified as current assets the method of arriving at their amount is not required to be stated, but where they are classified as fixed assets paragraph 5 of the Eighth Schedule to the Companies Act, 1948, requires that the prescribed method shall be shown unless their market value, or if they do not have a market value their value as estimated by the directors, is shown either as the amount of the investment or by way of note.

Suggestions

97. (*a*) *The single word* INVESTMENTS *is normally an appropriate description for investments (other than trade investments and investments in subsidiaries) amplified to indicate whether the investments are 'quoted' or 'unquoted'. The market value of quoted investments will also require to be shown. For investments classified as current assets suitable description would be:*

INVESTMENTS

Quoted – market value	£
..... (19..... £.....)	£
Unquoted	£
	£

Sub-division may be needed to comply with paragraph 8 (3) of the Eighth Schedule.

[NOTE. – Paragraph 28 of the Eighth Schedule to the Companies Act, 1948, provides that the expression 'quoted investments' means an investment as respects which there has been granted a quotation or permission to deal on a recognized stock exchange, or on any stock exchange of repute outside Great Britain, and the expression 'unquoted investments' is to be construed accordingly.]

(*b*) *If investments are classified as fixed assets the prescribed method of arriving at the amount of unquoted investments must be stated, unless their market value, or if they have no market value, their value as estimated by the directors, is shown. The descriptions suggested in paragraph 90 (b) above (in connection with trade investments) would be suitable for the other investments referred to here.*

GROUP INTER-COMPANY INTERESTS

98. There are many variations in the descriptions which are applied to the interests of companies in their subsidiaries. The items concerned fall into five classes:

(*a*) shares in subsidiaries

(*b*) long-term debts owing from subsidiaries

(*c*) current accounts and other short-term debts owing from subsidiaries

(*d*) long-term debts owing to subsidiaries

(*e*) current accounts and other short-term debts owing to subsidiaries.

There is a further complication in that some or all of the amounts in classes (*b*), (*c*), (*d*) and (*e*) may be wholly or partly secured.

99. Before dealing with the choice of terms used as headings when similar items are grouped, it is convenient first to consider divergencies in the descriptions of the items themselves.

Shares in subsidiaries

100. Although most companies, in describing holdings in subsidiaries, refer simply to 'shares', others prefer to use such terms as 'shareholdings', 'investments', and 'investments in shares'. Some companies give full details of their holdings in subsidiaries. The method of arriving at the amount at which the shares are stated is usually given; for example, 'at cost, less amounts written off', 'at cost', or 'as valued by the directors'.

Suggestions

101. (*a*) SHARES IN SUBSIDIARIES *should be so described.*

(*b*) *If the accounts give the basis used in arriving at the amount at which the shares are stated, one or other of the following expressions is generally appropriate:*

AT COST

AS VALUED BY THE DIRECTORS (*as on (date) if not the date of the balance sheet*)

COST LESS AMOUNTS WRITTEN OFF

Amounts owing from and to subsidiaries

102. Numerous expressions are used to describe the indebtedness of subsidiaries to their holding companies, and there is divergence of practice regarding the details of the indebtedness shown in the balance sheet. Some companies show aggregate amounts described by such terms as 'Amounts owing from subsidiaries', 'Advances and current accounts', or 'Current and loan accounts', and not infrequently such descriptions are amplified by a reference to the fact that the amount shown includes unpaid dividends, for example, 'including dividends receivable'.

103. Where there is more than one type of indebtedness of subsidiaries, terms such as the following are used: 'Debentures', 'Mortgage bond', 'Loans –

secured', 'Loans – unsecured', 'Advances on capital account', 'Capital loans', 'Current accounts', 'On current account', 'Amounts due on trade account'. Often when a dividend receivable is included in one of the foregoing headings, specific reference is made thereto, but usually without mentioning the amount involved. There are, however, accounts which show as distinct items 'Interest and dividends receivable', 'Dividends declared but not received', 'Dividend (since received)'.

104. Terms used to describe the indebtedness of holding companies to their subsidiaries are 'Amounts owing to subsidiaries', 'Owing to subsidiaries', 'Amounts due to subsidiaries' or, used as a sub-heading under 'Liabilities', simply 'Subsidiaries'. The fact that the indebtedness relates to 'Advances', or to 'Current accounts' is sometimes mentioned.

Suggestions

105. (*a*) *The expression* AMOUNTS OWING FROM SUBSIDIARIES *may be used to describe the aggregate amount of the indebtedness of subsidiaries to their holding company. If more than one item is shown under this heading the following are examples of appropriate terms:*

CURRENT ACCOUNTS

DIVIDENDS RECEIVABLE (*or* PROPOSED) (*or* SINCE RECEIVED)

LOANS

MORTGAGES

UNSECURED NOTES

(*b*) *The expression* AMOUNTS OWING TO SUBSIDIARIES *may be used to describe the aggregate amount of the indebtedness of a holding company to its subsidiaries. If more than one item is shown under this heading the following are examples of appropriate terms:*

CURRENT ACCOUNTS

LOANS

MORTGAGES

(*c*) *Where security has been given the addition of the word* SECURED *is normally adequate to comply with the requirements of paragraph 8 (9) of the Eighth Schedule to the Companies Act, 1948.*

Grouping of shares in subsidiaries with amounts owing to and/or from subsidiaries

106. Examples of the expressions used to describe the aggregate amount consisting of shares in and amounts owing from subsidiaries (see paragraph 15 (2) of the Eighth Schedule to the Companies Act, 1948) are: 'Shares in and amounts owing by subsidiaries', 'Investments in and advances to subsidiaries', 'Subsidiary companies', 'Subsidiaries' and 'Interest in subsidiaries'.

Suggestion

107. Where the balance sheet of a holding company shows an aggregate amount consisting of shares in subsidiaries and amounts owing to the holding company, without deducting amounts, if any, owing by the holding company to subsidiaries, the expression SHARES IN AND AMOUNTS OWING FROM SUBSIDIARIES *is an appropriate heading. An adequate description of items grouped in this way is:*

SHARES IN AND AMOUNTS OWING FROM SUBSIDIARIES:

SHARES	£
AMOUNTS OWING	£
DIVIDENDS RECEIVABLE (*or* PROPOSED DIVIDENDS)	£
	£

108. Some companies find it appropriate to show in their balance sheets the net amount invested in subsidiaries by deducting from the total of share investments in and amounts owing from subsidiaries, any indebtedness of the holding company to subsidiaries.

Suggestion

109. Where amounts owing from the holding company to subsidiaries are deducted from shares in and amounts owing from subsidiaries, the expression INTERESTS IN SUBSIDIARIES *is suitable. An adequate description of items grouped in this way is:*

INTERESTS IN SUBSIDIARIES:

SHARES	£
AMOUNTS OWING FROM SUBSIDIARIES	£
DIVIDENDS RECEIVABLE (*or* PROPOSED DIVIDENDS)	£
DEDUCT: AMOUNTS OWING TO SUBSIDIARIES	£
	£

This heading is also suitable where no amount is owing from the holding company to its subsidiaries.

Shares in fellow subsidiaries

110. 'Shares in fellow subsidiaries' is the description usually found in the accounts of a subsidiary which holds shares in another subsidiary of the same holding company.

Suggestion

111. SHARES IN FELLOW SUBSIDIARIES *should be so described.*

Amounts owing to or from the holding company and/or its other subsidiaries

112. The balance sheet of a subsidiary may include amounts owing to or from its holding company or holding companies; and may sometimes include amounts owing to or from other subsidiaries of that holding company.

Suggestion

113. Normal descriptions for the above-mentioned items would be:

AMOUNTS OWING FROM/TO (HOLDING) COMPANY

AMOUNTS OWING FROM/TO FELLOW SUBSIDIARIES

AMOUNTS OWING FROM/TO (HOLDING) COMPANY AND ITS OTHER SUBSIDIARIES

AMOUNTS OWING FROM/TO GROUP COMPANIES

AMOUNTS OWING FROM/TO IMMEDIATE HOLDING COMPANY AND OTHER HOLDING COMPANIES

PROFIT AND LOSS ACCOUNT

Profit (or loss) balances

114. The expressions employed to describe the principal item of income differ widely. In some instances the expression is confined to the words 'Trading profits', or the words 'Manufacturing' or 'Operating' are used instead of the word 'Trading'. Occasionally the words 'Surplus on trading' or 'Deficit on trading' are used.

115. Where the account includes what is merely a balance struck before deducting certain outgoings shown in the accounts the description used is sometimes 'Balance on trading' which may or may not be amplified by words such as 'before dealing with the items in this account' or 'subject to the following items' or 'before charging amounts shown opposite'.

116. Other amplifications of the description include references to:

(i) outgoings deducted in arriving at the amount of the opening item in the account or the non-trading items included, for example, 'including transfer fees, after deducting wages, salaries; . . .'
(ii) provisions charged in arriving at the profit figure
(iii) adjustments of prior year's income or non-recurring items

117. Mining and plantation companies normally show sales and details of outgoings.

118. Balances (or sub-totals) designated as 'profit' balances appear at various points in the same account and narratives including the word 'profit' sometimes recur at each successive stage as the account deals with taxation, outside shareholders' interest, and exceptional items. The principal 'profit' figure is sometimes given before and sometimes after deducting tax and the other items mentioned above. Even in accounts in which the treatment is similar, the variation in terminology is considerable.

119. The words 'for the year' are generally, but not invariably included in the description of the profit. The word 'net' is frequently used. The words 'carried down' or 'carried to appropriation account' are generally used in the double-sided form of profit and loss account. In some accounts there is no indication of whether the result is a profit or loss, for example, 'Balance carried down'.

[NOTE. – No. 18 of the Council's Recommendations on Accounting Principles was not issued until October 1958. The practices referred to in the preceding paragraphs are now being superseded to an increasing extent by those recommended by the Council.]

Suggestions

120. (*a*) *One of the following expressions:*

TRADING PROFIT FOR THE YEAR

OPERATING PROFIT FOR THE YEAR

TRADING SURPLUS FOR THE YEAR

is suggested as an appropriate description for trading companies for the principal item of income provided that it is stated after deduction of depreciation and all other trading expenses including those which are also disclosed separately in the accounts.

(*b*) *An appropriate description for the total of trading and non-trading income, less outgoings, is* PROFIT BEFORE TAXATION.

(*c*) *After charging taxation a suitable description for the resulting amount is* PROFIT AFTER TAXATION.

(*d*) *Where applicable, the words* LOSS *or* DEFICIT *are appropriate instead of* PROFIT.

(*e*) *The use of the word 'balance', without further amplification, is not an appropriate description for significant amounts carried down or forward.*

Depreciation

121. Depreciation is most frequently indicated by the single word 'Depreciation' although it is sometimes preceded by the words 'Provision for'.

122. Occasionally the analysis over various assets is shown, but more frequently the assets concerned are indicated without separate amounts being given, or the words 'on fixed assets' are included. Obsolescence is sometimes mentioned and the word 'Amortization' is occasionally introduced as an addition to the wording, not only for leaseholds and patent rights. Reference to provision for renewals or replacements is occasionally added.

Suggestions

123. (*a*) *The single word* DEPRECIATION *is appropriate to describe amounts charged to provide for that part of the cost or book amount of a fixed asset which is not recoverable by an owner when it is finally put out of use by him.*

(*b*) *Amounts written off mining properties, gravel-pits and similar wasting assets by reference to physical consumption may appropriately be described as* DEPLETION. *The word* AMORTIZATION *is appropriate for leaseholds and patent rights.*

(*c*) *A suitable description of amounts charged with the intention of providing for the cost of renewals of fixed assets is* PROVISION FOR RENEWALS.

Directors' remuneration

124. The expressions used to satisfy the requirements of section 196 of the Companies Act, 1948, as to disclosure of amounts receivable by directors are seldom identical. The various items generally appear under a heading which is most frequently described as 'Directors' emoluments', although 'Directors' remuneration' is also used. Sub-headings giving the required distinction between amounts receivable for services as directors and those receivable for other services, generally appear under this heading; for example:

'Remuneration of directors:

Fees

Other emoluments'

125. In distinguishing amounts receivable for services as directors the expression most commonly used is 'Fees', although the additional words 'as Directors' or 'for services as Directors' are also found.

126. There is a greater variation in the description of amounts receivable other than for services as directors. A frequently used expression is 'Other emoluments'. The word 'Management' or 'Managerial' is sometimes included. Words such as 'Service in executive capacities' occur occasionally. The distinction is sometimes made in the form 'as directors' and 'as executives'.

127. References to 'Pension scheme contributions' are found as part of amounts receivable other than for services as directors and also as separate items. Separate items also occur for 'Pensions' and 'Compensation for loss of office' as required in appropriate circumstances by section 196 of the Companies Act, 1948.

Suggestions

128. (a) One of the terms DIRECTORS' REMUNERATION *or* DIRECTORS' EMOLUMENTS *is appropriate.*

(b) In a consolidated profit and loss account it is desirable to introduce an identifying reference such as REMUNERATION OF DIRECTORS OF (HOLDING COMPANY) LIMITED.

(c) Where, in order to comply with the requirements of section 196 of the Companies Act, 1948, the total remuneration to be stated includes payments outside the scope of the account (for instance, payments made to directors of a holding company by subsidiaries not consolidated) a suitably worded note would be REMUNERATION (INCLUDING THAT FROM SUBSIDIARIES) OF DIRECTORS OF (HOLDING COMPANY) LIMITED £.....

(d) The statutory distinction between emoluments for services as directors and other emoluments may be indicated as follows:

DIRECTORS' FEES
OTHER EMOLUMENTS
or
FOR SERVICES AS DIRECTORS
FOR OTHER SERVICES
or
AS DIRECTORS
AS EXECUTIVES

(e) Reference to pensions and special payments will be required in appropriate circumstances, for example:

PENSIONS:
FOR SERVICES AS DIRECTORS
FOR EXECUTIVE SERVICES
COMPENSATION TO DIRECTOR FOR LOSS OF OFFICE
PAYMENT TO DIRECTOR ON RETIREMENT
LUMP SUM PAID TO DIRECTOR IN COMMUTATION OF PENSION RIGHTS

Auditors' remuneration

129. Auditors' remuneration is commonly described as either 'Remuneration' or 'Fees', often with an additional reference to 'Expenses'. Where the word 'Fees' is used it is prefixed by 'Audit' more commonly than by 'Auditors'.'

Suggestion

130. The statutory expression AUDITORS' REMUNERATION *which, in accordance with paragraph 13 of the Eighth Schedule to the Companies Act, 1948, will include expenses, is normally appropriate.*

Interest paid (or payable)

131. Interest paid (or payable) is most commonly designated 'Interest on debentures' or 'Debenture interest' (or 'Debenture stock' instead of 'Debentures'), or 'Interest on loan stock'. Additional wording, such as 'and mortgages' or 'and Secured loans' is often found. The use of the expression 'Fixed loans' does not often occur despite its use in paragraph 12 (1) (*b*) of the Eighth Schedule to the Companies Act, 1948. Where interest other than that on debenture and other fixed loans is shown, the descriptions include the expressions 'Bank interest', 'Interest on overdraft' and 'Bank and other interest'. Where different types of interest are detailed under a heading, this heading is usually 'Interest' or 'Interest payable'.

Suggestion

132. The wording used for interest paid (or payable) should identify it with the relevant liability item in the balance sheet. Where interest paid (or payable) on more than one item is shown, a heading such as INTEREST PAID (*or* PAYABLE) *would normally be satisfactory. This would be followed by the relevant liability items, for example:*

INTEREST PAID (*or* PAYABLE) ON:
DEBENTURES
UNSECURED LOAN STOCK
(or other fixed loans)
} as described in the balance sheet.
BANK OVERDRAFT

Dividends and interest received or (receivable)

133. Accounts often contain two or more items of dividends and interest received (or receivable) and the expressions used depend partly on whether the items are grouped under a heading. In some accounts a heading is used, this being most frequently 'Dividends and interest' (occasionally with either 'received' or 'receivable' added) although 'Income from investments' also appears. Where no heading is used, the prefatory words 'Income from' or 'Dividends from' are found with, occasionally, an additional item introduced by 'Interest on'. A composite prefatory expression found occasionally is 'Dividends and interest from' (or 'on').

134. Indications of the type of investment, other than 'Trade investments', are not generally given, a common description being 'Other investments'. References to 'Associated companies' and 'Government securities' are the most usual exceptions. Interest on Government securities is sometimes combined with income on other types of investments. Other classifications found are as between quoted and unquoted investments, and as between industrial companies and Government securities. Sometimes there is no classification, for example, the single word 'Investments' is used or the item is designated 'Dividends and interest'.

135. The treatment of interest other than that on investments is not consistent. Occasionally it appears under the heading for interest and dividends and sometimes it is stated separately. Descriptions of such interest include 'Sundry interest', 'Bank and other interest' and 'Interest receivable'.

Suggestions

136. (a) Where dividends and interest received (or receivable) are grouped under one heading a suggested heading is INVESTMENT INCOME *with the addition of the words* AND OTHER INTEREST *when non-investment interest is included. Alternatives are* DIVIDENDS RECEIVED (*or* RECEIVABLE) *and* INTEREST RECEIVED (*or* RECEIVABLE).

(*b*) *The description of investment income, where detailed, should correspond with the analysis of investments shown in the balance sheet.* TRADE INVESTMENTS, QUOTED INVESTMENTS *(with reference to Government securities where appropriate) and* UNQUOTED INVESTMENTS *will normally therefore be appropriate. Interest such as that on* BANK DEPOSITS *and* TAX RESERVE CERTIFICATES *should be so described.*

Taxation

137. The terms used to describe the tax items in a profit and loss account depend to a very great extent upon the way in which the information concerning the tax charge is presented. In general the item for tax is given a main heading and then supplemented by note or otherwise. A heading such as 'Taxation based on the profit for the year', or minor variations of that wording, is often found. The word 'Taxation' is also often used as a heading. The charge for taxation is seldom described as 'a provision'.

138. Usually the charge for income tax is described simply as 'Income tax' or as 'United Kingdom income tax'. When the main heading is merely the word 'Taxation', words such as 'based on the profit for the year' are sometimes added to the words 'income tax', or an indication is given of the basis on which the tax has been computed by showing the year '19...../.....'.

139. Profits tax is usually described simply as 'Profits tax' or as 'United Kingdom profits tax', sometimes with an indication of the period covered by the charge.

140. A variety of expressions is used to describe charges in respect of overseas taxation. The description 'Overseas taxes' with variations such as 'Dominion', 'Colonial' and 'Foreign', is often used. In some accounts where the company concerned has interests in only one overseas territory the name of the country is included in the description of the tax charge.

141. Double taxation relief is normally described as such or as 'Double taxation credit'.

142. Adjustments relating to previous years are described by expressions such as 'Provision for taxation not required', 'Over-provision for taxation in previous years', 'Provision for taxation in previous years no longer required'. The items are sometimes shown as adjustments to the year's tax charge and sometimes as separate items in the profit and loss account.

143. The practice of setting aside tax deferred by capital allowances appears to be growing. Where the amounts set aside only take into account the effect of initial allowances the description of the item includes the words 'Initial allowances'. The word 'equalization' is used in some accounts. The effect on the tax charge of investment allowances is sometimes stated. In general, however, the wording for these matters varies greatly.

Suggestions

144. (*a*) *An appropriate expression as a heading to describe the tax charge is:*

TAXATION

or

TAXATION BASED ON THE PROFIT OF THE YEAR

Where appropriate the words 'UNITED KINGDOM' *may be included before the word* 'TAXATION'.

(*b*) *The charge for income tax may be suitably described as:*

INCOME TAX

or

INCOME TAX BASED ON THE PROFIT OF THE YEAR

Where the heading or the description does not include the words 'Based on the profit of the year' the year of assessment or other indication of the period of accrual should be given.

(*c*) *A suitable description for the charge for profits tax is:*

PROFITS TAX

or

UNITED KINGDOM PROFITS TAX

It should only be necessary to indicate the period covered by the charge for profits tax if it does not relate to the period covered by the profit and loss account.

(*d*) *A charge in respect of overseas taxation may be described as:*

OVERSEAS TAXATION

or

OVERSEAS TAXES

Where the charge in respect of overseas taxation relates solely to a charge under the tax laws of one country, it is appropriate if thought desirable to include the name of the country in a description of the tax charge. Similarly, where a tax charge relates solely to Dominion, or to Colonial tax, then the charge may be described as:

DOMINION TAXATION

or

COLONIAL TAXATION

(*e*) *Suitable descriptions of credits in respect of double tax relief are:*

DOUBLE TAXATION RELIEF

DOUBLE TAX RELIEF

(*f*) *Adjustments of the taxation charge in respect of previous years may be described as:*

OVER-PROVISION (*or* UNDER-PROVISION) IN RESPECT OF PREVIOUS YEARS

PROVISION NO LONGER REQUIRED

ADJUSTMENTS IN RESPECT OF PREVIOUS YEARS

(*g*) *Where amounts are set aside for taxation deferred by capital allowances, transfers to and from this account may be described as:*

TAX DEFERRED BY CAPITAL ALLOWANCES

TRANSFERS TO (*or* FROM) AMOUNTS SET ASIDE FOR TAX DEFERRED BY CAPITAL ALLOWANCES

TRANSFER TO (*or* FROM) TAX EQUALIZATION ACCOUNT. (*An item so described should preferably be amplified by an explanatory note.*)

(*h*) *Suitable narrative indicating the extent to which tax charges are reduced by investment allowances is:*

TAX RELIEF ON INVESTMENT ALLOWANCES

(To be concluded.)

The Accounting World

TOPICS OF PROFESSIONAL INTEREST FROM OTHER COUNTRIES

CANADA

Imps of Canada Blazes an Accounting Trail

AT the time of the release of its 1961 financial statements, early in March, the Imperial Tobacco Co of Canada Ltd called a meeting of business executives, investment analysts, professors of accounting and other interested persons to explain a revolutionary change in its published accounts. The company's auditors were officially represented.

It was announced that in the 1961 published accounts and also in the redrafted 1960 accounts, for comparative purposes, the fixed assets had been converted to current replacement cost, and the year's depreciation provision charged in determining profits had been calculated on the same basis. What is more, the company expressed its intention to adopt the same procedure each year in the future.

Comments on the year's operations, in the annual report, state that for some time past the company has been charging an amount to operations, through both depreciation and fixed asset replacement, which in the opinion of management would prevent any erosion of real capital. Complete revaluation of fixed assets would, in the past, have imposed too heavy clerical burdens, but with the advent of business machines of increasing flexibility, this problem has been largely removed.

The buildings and land have been appraised by stated independent appraisal companies, while machinery and equipment have been valued by company officials at replacement cost. The increase in the stated value of fixed assets before depreciation is $23,918,000, which has been credited to capital increment, under the heading of shareholders' risk capital, in the balance sheet. The original cost was $59,493,000. The charge of $3,482,000 for depreciation in 1961 is $475,000 more than historical cost. In addition to this current year's charge the accumulated depreciation based on replacement cost, amounting to $42,654,000, has been made up by a transfer of $2,464,000 from a replacement reserve already available and another of $1,008,000 from retained earnings. It is thus represented by actual funds retained within the business from past or present operations.

It was announced at the meeting that elimination of inflation profit resulting from the company's large inventories of leaf tobacco, etc., valued at $90 million at average cost, had been considered but deferred. Clearly, with such a huge and slow-moving inventory, there must still be a lot of inflation here.

Imperial Tobacco is the first company in Canada to take drastic action of this sort on a continuing basis. Apart from a necessary exception to the usual statement that the accounts are as shown by the books, the auditors' opinion is unqualified. The accounts are thus accepted as being 'in accordance with generally accepted accounting principles'. Where does the accountancy profession now stand in this matter?

UNITED STATES

Accountants and Tax Law

MR MARK E. RICHARDSON, C.P.A., a former Vice-President of the American Institute of Certified Public Accountants, and at present a member of its Council, states in a recent issue of *The Journal of Accountancy*, that the determination of income for Federal tax purposes should not differ basically from that which is founded on the principles of accounting theory. Because of a lack of accounting knowledge many concepts have been applied to the tax law, resulting in a mathematical answer which was anything but net income.

The basic precept that related items of income and cost should be reflected in the same chronological period has been so often vitiated by strained construction that Mr Richardson considers it fortunate to have survived at all. He cites illustrations such as taxation of a bus company on gross receipts from ticket sales in the year of receipt, though all the services have still to be rendered. These are just as applicable, it may be noted, to the past history of Canadian taxation.

Quoting a judge of the Tax Court of the United States, Mr Richardson urges that accounting problems require flexible and sound, but not doctrinaire, techniques and that the determinations of income for tax purposes should do the same, for it is the interpretations of law by rigid legal rules that result in distorted accounting. The more doctrinaire techniques are applied, the more tax avoidance becomes a paramount game.

Mr Richardson calls on the accounting profession to make a deliberate renewed attempt to reverse the trend towards variances. He thinks that the establishment of basic principles of taxation, within which framework a taxing statute could apply, should be within the abilities of experienced and dedicated members of the profession.

AUSTRALIA

Society's Seventy-fifth Anniversary

THIS year the Australian Society of Accountants celebrates the seventy-fifth anniversary of the oldest of its antecedent bodies.

To mark the occasion, anniversary dinners have

been held throughout Australia during March and April, attended by leading representatives of Government departments, industry, commerce and the professions.

The credit for originating the idea that accountants in Melbourne should join together to form a local branch of The Society of Incorporated Accountants and Auditors, London, is accorded to the late Mr Charles A. Cooper, and a meeting to further this purpose was held in December 1885. Thus, on March 1st, 1887, the Incorporated Institute of Accountants, Victoria, was incorporated with a foundation membership of forty-five. In 1921 the name was changed to the Commonwealth Institute of Accountants. Its contemporary, the Federal Institute of Accountants which was incorporated in Victoria in 1894, had in the meantime made considerable strides in developing the profession by forming branches outside Victoria. In 1952, however, a plan to merge the two Institutes was approved and the Society under its present title was incorporated.

We take this opportunity of extending our congratulations to the Australian Society of Accountants on this memorable occasion in its history.

INDIA

Indian Cost Accountants New President

MR G. BASU, F.S.A.A., relinquished the office of President of The Institute of Cost and Works Accountants of India on April 10th, following his election to the Indian Parliament. Mr J. N. Bose, M.A., A.C.W.A., a member of the Council of the Institute and who has served as Vice-President for several terms, has been elected President.

BRAZIL

The Abacus Society

THE annual report for the year ended March 31st, 1961, of The Abacus Society of São Paulo, presented at the ninth annual general meeting, held on April 25th, records a total membership of the Society at March 31st of forty-seven – twenty-three being members of the English Institute, five of the Scottish Institute, one of the Irish Institute and four of The Association of Certified and Corporate Accountants.

A wide variety of monthly meetings were held during the year when addresses were given on such topics as 'Finance and investment companies in Brazil', 'The accounting profession and tax administration', 'Some unsolved problems facing the accounting profession', 'Projected changes in Brazilian income tax law' and 'Computers'. The committee wished to encourage younger members of the profession in Brazil to take a more active part in the administration of the Society. In order to assist in achieving this, Messrs C. K. Atkinson, F.C.A., and C. J. Cross, F.C.A., both former Presidents of the Society, indicated that they would not be available for re-election to the committee. The report referred with gratification to the outstanding services which these two founder members have rendered to the Society since its inception.

The officers and committee members of the Society for 1962–63 are as follows:

President: Mr R. H. Rogers, F.C.A.
Hon. Secretary: Mr C. E. G. T. Kirk, F.C.A., The Abacus Society, Caixa Postal 2922, São Paulo, Brazil.
Hon. Treasurer: Mr P. C. G. de Kersaint Giraudeau, A.C.A.
Other Committee Members: Messrs G. H. Osborn, A.A.C.C.A., D. M. Delaney, A.C.A. In addition, the Immediate Past-President, Mr G. L. Bishop, A.R.A.N.Z., will serve as an *ex-officio* member.

OVERSEAS TAX DEVELOPMENTS

THE following notes have been made available by the Inland Revenue Library (Foreign Section).

Canada

Recent Budget proposals include:

(1) The tax payable by companies on income arising from increased sales will be reduced by half for the first $50,000 of such income and by 25 per cent on any excess.
(2) The child allowance will be increased from $250 to £300.
(3) The maximum dependent relative allowance will be increased from $500 to $550.
(4) The additional capital cost allowance (depreciation) available for investment in new industries or areas of unemployment will now be available for assets acquired before January 1st, 1964.
(5) 150 per cent of amounts expended by companies on scientific research is to be deductible.
(6) Non-resident companies whose principle business is mining iron-ore in Canada will be exempt from the 15 per cent non-resident tax.
(7) The deduction of logging taxes in computing income will no longer be allowed but a credit of two-thirds of the provincial tax or two-thirds of 10 per cent of the income from logging will be given against the Federal tax.
(8) Various concessions to encourage exploration for oil and natural gas, including the right to charge prospecting and drilling expenses against income.

Italy

It is reported that a 'tax on dividends' – presumably a withholding tax – is to be introduced.

India

The Budget presented at the end of April is understood to include the following proposals:

(1) To increase the rate of tax on Indian companies, on income other than certain dividend income, from 45 per cent to 50 per cent.
(2) To abolish the expenditure tax.
(3) To increase the rate of wealth tax.
(4) To subject capital gains to the normal income tax and supertax.

Weekly Notes

THE INSTITUTE'S COAT OF ARMS

MANY readers will remember the colour reproduction of the coat of arms of The Institute of Chartered Accountants in England and Wales included as a supplement to *The Accountant* of October 1st, 1949 – our seventy-fifth anniversary issue. Since then, and particularly since the integration of the Society of Incorporated Accountants in 1957, many requests have been received for copies, the supply of which has long been exhausted. We therefore have pleasure in including with this week's issue, which contains reports of the Institute's eighty-first annual meeting and Guildhall banquet, a further colour plate of the coat of arms.

The armorial description from the grant of arms of 1881 is as follows:

> 'Argent on a Mount in Base in front of a Rudder in bend sinister a Female figure proper representing "Economy" habited Gules mantled Azure about the temples a Wreath of Olive in the dexter hand a Rod and in the sinister a pair of Compasses also proper a Chief of the second thereon a Balance suspended also Or, as the same are in the margin hereof more plainly depicted [not reproduced] together with the Motto "Recte Numerare".'

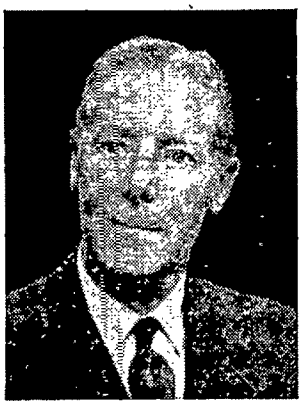
OPPORTUNITIES FOR SERVICE

THE impact on the accountancy profession in this country if the United Kingdom joins the European Common Market – and, also, the opportunities for providing professional services which would accrue from this step – were considered by Mr P. F. Granger, F.C.A., in his Presidential address at the eight-first annual meeting of The Institute of Chartered Accountants in England and Wales held on Thursday of last week and reported elsewhere in this issue. It has long been the belief of the Institute Council that a properly qualified accountant should be free to practise wherever he elects but, as Mr Granger pointed out, 'there are many differing conceptions of the profession on the Continent of Europe'. There will be, as he suggested, difficulties to be overcome before a world-wide, unilateral level of professional accounting standards can be agreed, but two early opportunities of tackling this vital question will be in September of this year at the Eighth International Congress of Accountants and twelve months later when the European Congress of Accountants takes place in Edinburgh.

Another timely point touched on by the President is the position of the qualified accountant regarding the examination of Government records. It is the proud boast of Parliament that it operates an internal system of financial control which honourably accounts for every penny but it is equally important to ensure that the money is being wisely as well as honestly spent – particularly in the cases of nationalized industries where vast sums are sunk annually in capital expenditure. Part of the training of the qualified accountant is directed towards being able to investigate the financial aspects of such projects and in this, as in other directions, it might well be to the advantage of the Government and, consequently, of every taxpayer to employ independent professional accountants to a greater extent than it does at present.

IRISH INSTITUTE'S NEW PRESIDENT

MR ROLLO ELLIS McCLURE, M.B.E., F.C.A., a partner in the firm of Rawlinson, Allen & White, Chartered Accountants, of Belfast, was elected President of The Institute of Chartered Chartered Accountants in Ireland at the Institute's annual meeting held in Dublin on May 5th.



Mr McClure, who was educated at Mourne Grange and Sedbergh, served under articles with his father, the late John D. McClure, F.C.A. and passed the Institute's Final examination in November 1932. He was admitted to membership of the Institute in the following year and in 1935 became a partner in the firm of John D. McClure & Co.

From 1939–45 Mr McClure served with the Royal Artillery in a light anti-aircraft regiment and was awarded the M.B.E., being demobilized with the rank of Major.

On returning to civilian life he resumed practice and was elected a Fellow of the Institute in 1946. A past treasurer and chairman of the Belfast Society of Chartered Accountants, Mr McClure was elected to the Council of the Institute in 1954 and was appointed Vice-President at the annual meeting last year.

The new President is an enthusiastic golfer and is keenly interested in motor sport.

The new Vice-President is Mr Robert Patrick Feltham Olden, F.C.A., a partner in the firm of Atkins, Chirnside & Co, Chartered Accountants, of Cork and Dublin.

COMPANY FINANCE

AN article by the Board of Trade in the April issue of *Economic Trends* discusses the income and finance of 2,600 quoted industrial companies in the United Kingdom over the period 1949 to 1960. The total income of these companies is shown to have increased by about 8 per cent per annum but over the period as a whole £11,000 million was added to capital and reserves and the ratio of incomes to total assets has tended to decline, though a slight recovery in the ratio occurred in 1959 and 1960.

For all manufacturing industries and distribution the ratio fell from a peak of around 16 per cent in 1954 to only about 10 per cent in 1958. In retail distribution, however, the ratio increased from about 14 per cent in the early 1950s to about 19 per cent in 1960, while the chemical industry has also shown a rise against the general trend, in this case from about 12 per cent in 1952 to about 16 per cent in 1960. In the latter case, however, there were three distinct periods, a rise between 1952 and 1954 followed by a fall to 1958 and a fairly sharp recovery in the next two years.

Over the period 1953–55 to 1958–60 the average increase in annual income per £100 of new capital was £12. The highest ratios were shown by retail distribution (£21), metal goods (£18), chemicals (£17), and drink (£17). At the other end of the scale the figure for electrical engineering was only £7.

NATIONAL INCOME AND EXPENDITURE

THE statistics of national income and expenditure for the fourth quarter of 1961 show a fall in gross domestic product (at average 1958 prices and seasonally adjusted) from £5,530 million in the third quarter to £5,459 million, a figure almost exactly equal to that for the first quarter of the year, and about 0·8 per cent above that for the fourth quarter of 1960.

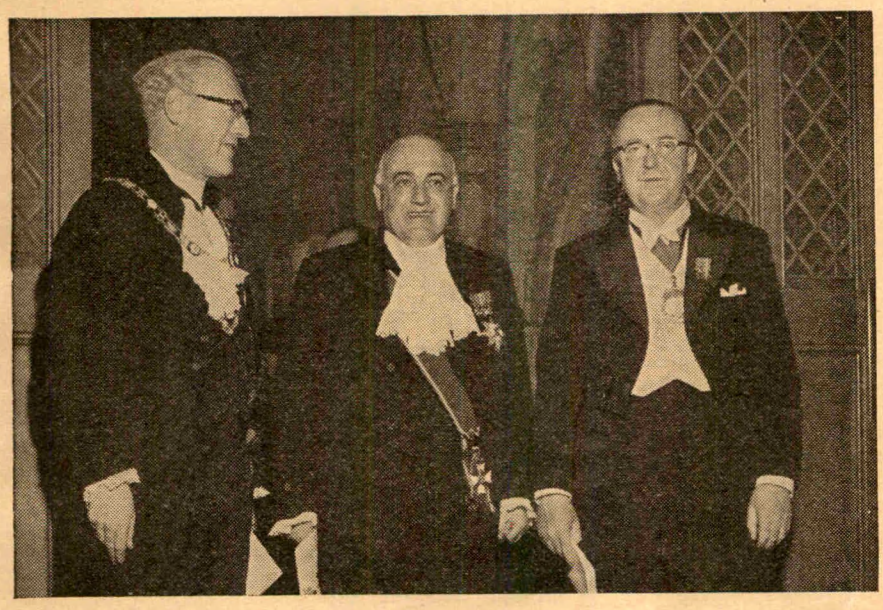
Between the fourth quarter of 1960 and the corresponding period of 1961 total domestic income rose by over 4 per cent as a result of the growth in income from employment. The total wage and salary bill rose by 6¼ per cent and domestic factor costs per unit of output by over 3 per cent. In spite of the increase in fuel tax imposed in the 1961 Budget and the 10 per cent surcharge on purchase tax and customs and excise duties imposed at the end of July, the rise in prices was comparatively modest and company profits were 5½ per cent lower in the fourth quarter of 1961 than a year earlier.

Fixed investment by all sectors and industries together was 2¼ per cent higher in 1961 than in 1960 but after a continuous rise from the last quarter of 1959 to the third quarter of 1961 fell back in the fourth quarter.

One of the major factors affecting domestic output was, of course, the substantial fall in stockbuilding from £584 million in 1960 to £358 million in 1961 (at 1958 prices), a decline equal to over 1 per cent of total demand. There was, however, a small rise in stockbuilding in the fourth quarter.

INSTITUTE OF TAXATION

ADDRESSING the annual meeting of the Institute of Taxation held in London last Tuesday, the President, Mr Frederick Bidston, F.A.C.C.A., F.C.I.S., F.T.I.I., said that some of the critics of the recent Budget proposals might not fully have appreciated such underlying factors as the uncertain future economic position, Britain's possible entry into the Common Market, and what he hoped were



At the banquet of The Institute of Chartered Accountants in England and Wales, in Guildhall, London, last week. The Lord Mayor, Alderman Sir Frederick Hoare (*right*), with the Lord Chancellor, Viscount Kilmuir, and the President of the Institute, Mr P. F. Granger, F.C.A.

Report and more pictures on other pages.

preparatory moves which would eventually lead to the simplification of income tax as a whole.

If the Chancellor were to be criticized, Mr Bidston said, the major criticism ought to be against the high volume of Government expenditure and his permitting vague and uncertain draftsmanship in taxing statutes. At the same time, he added, it had to be appreciated that a progressively-minded Chancellor who might personally be most anxious to pursue the general subject of simplification was bound to meet with resistance from the permanent officials who seemed rather averse to any change of traditional procedures.

Whilst Mr Bidston welcomed the Chancellor's promise to abolish Schedule A on owner-occupied property, he felt that Mr Selwyn Lloyd should have been more specific. Most people would regard the changes in estate duty as being fully justified, he said, and no one could quarrel with the additional reliefs on small fixed incomes.

Although the speculative gains tax was less onerous than had at one time been anticipated, it was nevertheless true that it provided yet one more case where information had to be provided at no cost to the authorities, and it added to such existing burdens as collecting P.A.Y.E., and graduated National Insurance contributions, and the completion of trade census returns. Sooner or later, he declared, the professions, industry and commerce would refuse to continue to meet the necessary overhead costs entailed, as the argument that expenses were allowed for income tax purposes was not a complete answer in many cases.

STOCK EXCHANGE MEMBERS' ACCOUNTS

THE Council of the London Stock Exchange recently confirmed the revision of Rule 79a relating to members' accounts, briefly mentioned in our issue of March 17th (page 326). The rule formerly provided for the preparation by an independent accountant of a balance sheet and report, the 'presentation' of these to the member firm, and notification of presentation to the Council. The new rule contains five significant amendments; these are that:

(*a*) adequate records of the firm's transactions and finances must now be maintained;

(*b*) the balance sheet must give a true and fair view of the state of the firm's affairs;

(*c*) the balance on the firm's capital account must be sufficient to ensure the 'minimum margin of solvency';

(*d*) an examination by an 'independent qualified accountant' is required and a copy of the accountant's report must be submitted by the firm to the Council within six months of the balance sheet date;

(*e*) all the partners in the firm must sign the balance sheet.

A few words of explanation and elaboration may be useful. Clause 1 of the rule lists the records mentioned at (*a*) above. They add nothing to the ordinary requirements of sound business practice. Clauses 6, 7 and 8 give the information essential to disclosing a 'true and fair view' (*b*). Here it is worth noting that option money receivable by a firm is still not to be regarded as an asset until the option is exercised or abandoned.

The minimum margin of solvency (*c*) as previously stated is: £10,000 per firm of brokers and £15,000 per firm of jobbers, and not less than £5,000 per partner in either case. Assets eligible for computing the margin may be said, in general, to include only those that are readily realizable; but the Council is empowered to allow assets, or disallow liabilities, other than those specified in the rule.

The independent accountant is required to state in his report whether:

(1) the balance sheet shows assets in excess of liabilities to an extent not less than the minimum margin of solvency;

(2) (i) the firm is maintaining the required records;

(ii) the balance sheet is in accordance with the records; and

(iii) the balance sheet complies with the disclosure requirements of the rule.

The report will also include any reservations the accountant may put upon his statements. The interesting point here is that the scope of his examination remains a matter for arrangement between the firm and the accountant. There is thus no provision in the rule (as there is in at least one American counterpart) for spot checks; these could only arise by arrangement. If the accountant is prevented, as a result, from carrying out an adequate examination, his duty is then to make whatever reservations are necessary in his report; upon which the Council may require further information and a report from independent accountants appointed by itself, and may suspend the partners of the firm from trading.

It is appreciated that in many cases the accountant who reports on the balance sheet will also assist in its preparation, and there is nothing in the rule to prohibit this.

The 'independent qualified accountant' must be in public practice, independent of the firm reported upon, and a member either of one of the three Institutes of Chartered Accountants in the British Isles or of The Association of Certified and Corporate Accountants.

DECIMALIZATION DEBATE

TO the millions of words which have been spoken and written during the past two years on the advisability of introducing decimal coinage to the United Kingdom, there may now be added the 20,000 of the *Hansard* report of the debate in the House of Commons on Friday of last week on the inconclusive

second reading of the Decimal Coinage Bill presented by Mr William Proudfoot. Although the measure was 'talked out', the occasion gave members a chance to air again individual preferences and prejudices; one positive piece of information was produced by Mr Anthony Barber, Economic Secretary to the Treasury, when he announced that the report (which was expected this year) of the Halsbury Committee now deliberating on the most suitable form of decimal coinage system, will not be available till early in 1963. Thereafter, the Government will have to consider the recommendations made and it will probably be in the light of those dealing with timing and phasing of the operation (with a view to minimizing costs) that the actual date of the changeover will be determined.

In the course of the debate, Mr Proudfoot pointed out that of the 231 currencies in use in the world today, 203 are decimal currencies. There is still time, therefore, for the Government to avoid the dubious distinction of being the last of the stragglers to fall into line with the other great commercial countries; but, as has so often been emphasized, the longer the delay in taking action, the greater will be the transitional costs involved.

This is My Life . . .

by An Industrious Accountant

CHAPTER 123

WE got a shock recently. We found we were losing money – and the discovery all but precipitated a nasty quarrel in the boardroom.

Our practice nowadays is to hold brisk meetings of directors as soon as the trading and profit and loss accounts for the preceding month are available for review. The balance sheet is attached to enable us to see the liquid asset position, and every now and then I hazard a tentative forecast for the forthcoming months. This, however, is rarely a good idea, as the predictions of my operational colleagues about markets or price trends are notoriously fallible. When Prinny, our personnel director, wants to indulge in one-upmanship he blandly produces a six-months'-old forecast; we watch the sales manager wriggling and talk loftily about trade cycles.

Speaking personally, my worry is always the value of our trading stocks. We keep a regular running estimate in each section, based on the value at the last stocktaking, plus the purchases, less the assumed cost price of the sales. This latter figure we obtain by reducing the turnover figure by the forecast profit margin; its accuracy is kept under constant scrutiny by means of sample stock-checks.

But we apparently didn't check often enough. We had let things lapse between mid-January and the end of March, when a full check showed the overall gross profit to be 2½ per cent below the target figure. In addition, expenditure had risen imperceptibly. Wages had increased owing to extra overtime, salaries owing to a revised grading system. Bank overdraft interest had soared suddenly owing to the long-drawn-out construction of our new wing; and maintenance of property had reached an all-time high. The gap between expenses and gross profit had narrowed alarmingly. In the classic phrase, something must be done.

For the first time, our chairman seemed to falter. I suddenly saw him as an old man. He was hesitant; he seemed curiously out of touch. The managing director took over the lead smoothly, referring to an urgent need for revising our sales budgets and profit percentages; new goals and quicker departmental reports were needed. He was incisive and inspiring. The other directors were nodding acquiesence when the deputy-chairman, who had been chafing in his chair, interrupted aggressively. He tends to have quick impulsive reactions of anger in moments of stress.

'We're missing the key factor,' he blustered. 'We need to concentrate on pruning expenditure drastically; cut out these new illuminated display-counters and the enlargement of the cosmetic section . . . and reduce staff at once.' I knew what was coming next. 'Too many unproductive people, typists, accountants . . . just churning out figures . . . what we need is to cut costs.'

I was right. There never yet was an economy-minded executive but felt he had achieved something notable if he sacked a junior book-keeper. I didn't let it pass, perhaps inadvisedly, though choice of reply needed a delicate touch. Pointless to say we were below our staff quota, risky to refer to panic stations; the light touch was indicated; something suave, the Noel Coward approach. 'Better keep the wages clerks anyhow, sir,' I commenced, and he literally snorted at me. The managing director cut in firmly with 'First things first. Suppose we concentrate on increasing the gross profit at this stage.' But the deputy-c.didn't co-operate; again he inveighed against high salaries, and in the ensuing altercation their old enmity was suddenly very apparent.

It was awkward that the chairman couldn't control the quarrel; more awkward that everyone realized his inability to do so. Further, he was at a loss for a directive on policy. If he implements his promise to retire this year we can look out for squalls. King Log has served well enough; neither of the King Storks seem attractive replacements.

Finance and Commerce

Statutory Report

PRESENTATION of a statutory report by New Issue Permanent Investments Ltd provides the opportunity for a reprint that seldom occurs. As stated in the report of the directors, normal practice is for a public company to be formed as a private company and converted into a public company shortly before the issue of a prospectus, thus avoiding the requirement for a statutory meeting. In this case, the company was formed as a public company and it is stated 'your directors welcome the opportunity to report progress'.

The report is undoubtedly interesting for it deals with the beginnings of a company with a popular appeal. One may read in the City columns of public offers for shares, of their tremendous over-subscription – the allotment often by ballot (more often than not attested by a notary public), and of a well-worth-having premium when dealings start on the stock exchange. When the cost of an application for publicly-offered shares is a matter of pence, it is not surprising that some are thirty, forty and fifty times over-subscribed.

It is not surprising either that a public issue of 5*s* Ordinary shares in N.I.P.I. at par was well covered, especially in view of the fact that the prospectus was not advertised. The company's objective was to get in on new share offers and the prospect was supported in its prospectus by the opportunities which had occurred in the previous two years. In some cases, the capital appreciation was moderate: in others fortune-making.

NEW ISSUE PERMANENT INVESTMENTS LIMITED

STATUTORY REPORT

No. of Company: 713348

THE COMPANIES ACT 1948

REPORT

(Pursuant to Section 130 (3) of the Companies Act 1948)

of NEW ISSUE PERMANENT INVESTMENTS LIMITED

1. The total number of shares allotted is 400,000.

2. Of the shares so allotted 400,000 have been allotted on the footing that they are to be paid for in cash on the terms in the Prospectus, and 5s. has already been paid up on each share.

3. The total amount received by the Company in respect of the 400,000 shares issued wholly for cash is £100,000.

4. The following are the Receipts and Payments of the Company to within seven days of the date of this Report:—

Particulars of Receipts

	£ s. d.	£ s. d.
Application money for Shares	112,242 10 0	
Less application money for Shares returned	12,242 10 0	
		100,000 0 0
Proceeds of Sale of Treasury Bills		34,801 11 8
Repayment of Loans to Discount Houses		10,000 0 0
Sale of Quoted Investments (Cost £8,950)		8,973 17 8
Interest received—gross		186 3 8
Interest received—nett		104 14 3
Sundry Receipts		3 0
		£154,066 10 3

Particulars of Payments

	£ s. d.	£ s. d.
Purchase of Treasury Bills		34,668 15 5
Loans to Discount Houses		18,500 0 0
Loan to Local Authority		40,000 0 0
Purchase of Quoted Investments		58,588 11 7
Formation Expenses:		
Stamp Duty & Fees	533 5 0	
Legal Fees	106 0 0	
Printing	124 4 2

AUDITORS' REPORT

WE HEREBY CERTIFY that so much of this Report as relates to the shares allotted by the Company and to the cash received in respect of such Shares and to the receipts and payments of the Company on Capital Account is correct.

WOOD, ALBERY & CO.,
Chartered Accountants

40/42, COPTHALL AVENUE.
LONDON E.C.3.

6th April, 1962.

New Issue Rush

The company was registered on January 19th last, authorized capital being £100,000, principally to apply for new shares made available by way of offers for sale, placings, tenders and introductions and to hold such allotments as might be obtained as long-term investment. It was also to buy for long-term, shares temporarily depressed by rights issues, and to endeavour to obtain shareholdings in companies which proposed to seek a quotation in the near future.

It was pointed out that the desire to give a share a successful start often meant an initially higher yield than on comparable shares; that purchases were normally free of 2 per cent stamp duty; that brokerage was reduced to a minimum when 'rights' were bought in the market in the form of nil paid allotment letters; and that companies seeking new money were likely to be progressive.

The six directors were all engaged in the management of investment funds as part of their day-to-day business; two were London stockbrokers; one a chartered accountant.

The company obtained a certificate to commence business on February 2nd and ran right into one of the most active periods for new share offers that has been seen for a long time. The pre-Budget rush, it was called.

By April 6th, investments had been acquired in twenty-one companies and included Imperial Chemical Industries 6½ per cent Unsecured Convertible Loan Stock and John Summers 6½ per cent Convertible Second Debenture Stock. They cost £57,338 and their middle market valuation on April 6th was £60,078. The company's own 5*s* shares have yet to be officially quoted but stock exchange dealings have taken place under Rule 163 (2) between 5*s* 1½*d* and 5*s* 7½*d* the directors report.

The board, obviously with the effect of the capital gains tax in mind, gives its view that the Budget has

improved the company's prospects. 'It seems probable that a larger proportion of new issues will now be available to long-term investors, and the terms might well be rather more attractive.'

They state their intention to raise further capital from time to time, and the statutory meeting on May 1st passed a resolution to create a further 1,600,000 5*s* shares 'to be offered for issue at the discretion of the directors'.

There was no prospect of a dividend in the prospectus for the financial period to December 31st, 1962, but 'reasonable distributions' are anticipated thereafter. It will be interesting to see how it all works out. An early stock exchange quotation for the shares is being sought.

Norton Motor Cycles

IT may reasonably be assumed from the comments in our issue of April 21st on the report and accounts of Associated Motor Cycles Ltd that all the products of the group – which includes Norton, Matchless, A.J.S., James and Francis Barnett – are distributed in the U.S.A. by the American subsidiary. The Indian Company, which last year had 'a very poor year', and in addition to a loss of £113,000, was left with 'considerable stocks of motor cycles'.

We have been informed, however, that Norton motor cycles are distributed in the United States through Berliner Motor Corporation and that orders this year have been twice as many as for the complete year to August 31st, 1961.

Hartley Baird

IT so happened that on the morning of the day of the annual general meeting of Hartley Baird Ltd (whose accounts we reprinted on March 31st) an announcement appeared in the Press that Camp Bird had sold its 80 per cent interest in the company. But the buyer was not identified.

An obvious question for a shareholder at the meeting therefore was. Who now controlled the company? Mr A. W. M. Hartley, the chairman, refused to give the information. The announcement, he said, would be made in due course. The buyer is an investment trust buying on behalf of clients.

Another interesting question of an accountancy nature was from a shareholder who wanted to know why the auditors should state: 'The freehold land

CITY NOTES

THE pace at which the equity markets cracked off after the Budget now seems to be telling. Business has tended to dry up and industrial company evidence – of at best a slowing down on the rate of growth, and at worst of a significant down-turn in earnings – has made the equity investor think again about becoming too venturesome.

While the Treasury economic line is to rely on an anticipated increase in demand later in the year to take up the industrial production slack, there is little for the share market to go for in terms of early growth in industrial earnings. The Treasury does not seem in any hurry to urge the Chancellor towards any more vigorous re-expansion of the economy.

In the stock-market, new issue and take-over developments are now tending to attract more interest than company results and economic trends. The Treasury's provision of another 'tap' stock for the gilt-edged market was well received and technically well timed.

The call for industrial new money has, this week, brought the Ranks Hovis McDougall combine to the market with loan stock and Ordinary share issues involving well over £11 million. Other new industrial capital calls are said to be in the offing with possibly another banking new issue to follow the Lloyds Bank rights offer. An active new issue market will keep stock-market interest lively.

and buildings of Hartley Baird Ltd have been out of full operational use for several years and we can express no opinion as to the value of these items.' The shareholder maintained that property values, especially in these days, were ascertainable. Possibly he had noticed the stream of property share offers to the public backed by valuations.

Whatever may have prompted the auditors' qualification of their report, there can be no doubt that auditors are not valuers, as their representative at the meeting emphasized. The properties might be worth book value, or more, or less.

The shareholder hoped that before the next meeting was held, the properties would either have been sold or valued. The chairman thought the asset could command its book value at least; possibly more.

Specialism in the Profession

SIR, – In *The Financial Times* of May 2nd, 1962, the following letter was published:

Functions of Management Consultants

SIR, – Mr E. F. Stanton (April 25) refers to "the present anomalous position of management consultancy" and the anxiety of its members to achieve professional status.

I should have thought that the body longest established and already well qualified in this field was one which achieved professional status long ago. I refer, of course, to The Institute of Chartered Accountants.

One has only to watch the progress made in recent years by the Institute, through its training of articled clerks in management accountancy, budgetary control and method study to realize that the role of the professional accountant as a business adviser has changed dramatically in recent years. If the Institute allows this, its birthright, to be snatched from it, it will have only itself to blame.

The danger to management is in regarding the consultant as the universal panacea for troubles in a sick company, thereby confusing knowledge with ability. Most of us who have reached fairly senior positions in our companies are only too painfully aware that we acquire knowledge at a greater rate than our ability to exploit it to the full. The stumbling block is, of course, the human factor at all levels in the management chain.

Portsmouth. MANAGING DIRECTOR.

May I suggest that this is further evidence that the Institute should seriously consider the advantages of recognizing the development of the management consultancy function as a form of specialism suitable for 'post-gradute' studies by chartered accountants under the guidance of their own professional body. If this were encouraged, it seems to be that the remarks of 'Managing Director' quoted above would have even greater force.

Yours faithfully,

London EC2. R. S. WALDRON.

Annuity Problem

SIR, – I wonder if any of your readers can help me on the following point.

Under the terms of her late husband's will F. receives an annuity of £500 per annum 'free of tax'. This has been paid for the last thirty years and the trustees feel that it is desirable to close the estate. This could be done by the purchase of an annuity by the trustees but under section 8 paragraph (*c*), Finance Act, 1956, the whole of the annuity payments would be considered income and liable to tax. It has been suggested that there is nothing in the Act to prevent F. selling her annuity to the trustees for a lump sum (one presumes the consent of all the ultimate beneficiaries is necessary and obtainable) and thereupon investing the sum so received in the purchase of an annuity. F. is now over 80 years of age and the new annuity would consist so largely of capital that her net income would be substantially increased.

This seems to me to be a perfectly legal way of increasing F.'s spendable income and placing her more in the position which the will of 1932 envisaged.

I shall be most grateful for any help or advice on this point.

Yours faithfully,

Beckenham, Kent. GILBERT DYER.

How to Decimalize the Currency

SIR, – I agree with J. R. Speed, in your April 28th issue, that the most convenient unit of decimalized money is 5*s*, divided into one hundred parts. I advocated this twenty years ago, with slight differences.

I do not see, for instance, the necessity for a new name 'Royal' for a 5*s* piece. What is wrong with its present name, the Crown?

Also, I don't think we need call the units – cents. Why not keep the word penny? In value, the new penny would be roughly equivalent to the old halfpenny with twenty to the shilling and fifty to the half-crown. I should call in the present pennies and half-pennies (to everybody's relief) and reissue the new pennies in the size of the old farthing.

Yours faithfully,

London N12. ARNOLD LEVER, F.C.A.

Banquet in Guildhall

The Institute of Chartered Accountants in England and Wales held a banquet in Guildhall, London, on May 3rd. The President, Mr P. F. Granger, F.C.A., was in the chair and the principal guests included the Lord Mayor and Sheriffs, the Rt Hon. the Viscount Kilmuir, G.C.V.O., Lord High Chancellor of England, and the Rt Hon. John Boyd-Carpenter, M.P., Minister of Pensions and National Insurance. About 600 members and guests attended.

GUESTS

The full list of guests is as follows:

Messrs C. Anderson (*Editor, 'Investors Chronicle'*); R. W. Bankes, C.B.E.; P. Bareau (*Editor, 'The Statist'*); Sir Eric Carpenter, O.B.E. (*President, The Institute of Bankers and Chairman, Williams Deacon's Bank Ltd*); Messrs L. F. Cheyney, O.B.E. (*Secretary, The Institute of Municipal Treasurers and Accountants*); J. M. Clarke, C.B.E. (*Inspector-General of Companies, Companies Liquidation and Bankruptcy, Board of Trade*); W. M. Clarke (*City Editor, 'The Times'*); H. A. L. Cockerell (*Secretary, The Chartered Insurance Institute*); Sir George Coldstream, K.C.B., Q.C. (*Clerk of the Crown in Chancery and Permanent Secretary to the Lord Chancellor*); Sir Edmund Compton, K.B.E., C.B. (*Comptroller and Auditor-General*); Mr K. R. Cork, C.C.; Sir Cecil Crabbe (*Chief Registrar of Friendly Societies and Industrial Assurance Commissioner*).

Messrs P. C. Davie (*The Remembrancer*); A. E. Dawson (*President, The Institute of Chartered Accountants in Ireland*); A. L. de Bruyne (*Director, Nederlands Instituut van Accountants*); Mrs Olive G. Deer, J.P. (*The Rt Hon. the Chairman of the London County Council*); Alderman and Sheriff J. L. P. Denny, M.C.; Messrs E. H. K. Dibden (*Secretary, University of London Appointments Board*); A. J. Driver (*President, The Law Society*); Colin Duncan; H. Eason (*Secretary, The Institute of Bankers*); E. D. Foster (*Editor, 'The Director'*); Sir Robert Fraser, O.B.E. (*Director-General, Independent Television Authority*); Messrs J. French (*London Financial Editor, 'The Scotsman'*); R. Fry (*Financial Editor, 'The Guardian'*).

Mr J. W. Gauntlett; Miss B. Anne Godwin, O.B.E. (*Chairman, Trades Union Congress*); Brigadier R. F. S. Gooch, D.S.O., M.C. (*Private Secretary to the Lord Mayor*); Councillor Harold Gould, J.P. (*Mayor of Holborn*); The Rt Hon. William Grant, Q.C., M.P. (*Lord Advocate*); The Rt Hon. J. Grimond, M.P.; Messrs J. H. Gunlake, C.B.E. (*President, The Institute of Actuaries*); G. H. Heywood (*Senior Vice-President, The Royal Institution of Chartered Surveyors*); Lieut-Col D. V. Hill (*Steward, Christ Church, Oxford*); Mr F. M. W. Hird (*President, The Institute of Cost and Works Accountants*); Sir John Hobson, O.B.E., T.D., Q.C., M.P. (*Solicitor-General*); Mr C. B. Hodgson (*New Zealand Society of Accountants*); Sir Harold G. Howitt, G.B.E., D.S.O., M.C. (*Past President of the Institute*); Mr Percy F. Hughes.

Messrs A. L. Imrie, C.B.E. (*President, The Institute of Municipal Treasurers and Accountants*); A. G. Jenkins (*City Editor (Thomson Newspapers)*); The Rt Hon. Lord Jenkins (*Lord of Appeal*); Sir Russell Kettle (*Past President of the Institute*); Sir Norman Kipping, K.B.E., J.P. (*Director-General, The Federation of British Industries*); Sir Joseph Latham, C B.E.; Messrs G. Lawrence, Q.C. (*Chairman, General Council of the Bar*); C. F. Lewis (*Chief Commoner*); Alderman Sir Denys Lowson, Bt (*President, The Chartered Institute of Secretaries*); Sir Thomas Lund, C.B.E. (*Secretary, The Law Society*); Mr E. H. V. McDougall (*Secretary, The Institute of Chartered Accountants of Scotland*); Sir Roger Makins, G.C.B., G.C.M.G. (*Chairman, United Kingdom Atomic Energy Authority*); Messrs M. Masson (*Vice-President, Collège National des Experts Comptables de Belgique*); T. G. Matheson (*Chairman, The Association of Scottish Chartered Accountants in London*); Sir Theobald Mathew, K.B.E., M.C. (*Director of Public Prosecutions*); The Very Reverend W. R. Matthews, C.H., K.C.V.O., D.D. (*The Dean of St Paul's*); Messrs L. W. Millett, D.F.C. (*Assistant Secretary, The Institute of Cost and Works Accountants*); P. W. Milligan (*Chairman, Lloyd's*); H. P. J. Milmo, Q.C.; The Lord Milne (*Master, The Grocers' Company*).

Sir John N. Nicholson, Bt, C.I.E. (*Chairman, Martins Bank Ltd*); Mr P. S. Noble (*Vice-Chancellor, University of London*); Sir Edward Norman (*Chief Inspector of Taxes*); Sir Charles Norton, M.B.E., M.C.; Messrs W. Stuart Orr (*Secretary, The Institute of Chartered Accountants in Ireland*); F. C. Osbourn, M.B.E. (*Secretary, The Association of Certified and Corporate Accountants*); Alderman E. Ewart Pearce, M.B.E., J.P. (*The Rt Hon. The Lord Mayor of Cardiff*); Mr J. F. Phillips, O.B.E. (*Secretary, The Chartered Institute of Secretaries*); Sir Richard Powell, K.C.B., K.B.E., C.M.G. (*Permanent Secretary, Board of Trade*); Mr L. B. Prince, C.C.; The Rt Hon. Lord Radcliffe, G.B.E. (*Lord of Appeal*); Mr Sheriff C. S. P. Rawson; Messrs D. Renton, T.D., Q.C., M.P. (*Minister of State, Home Office*); F. M. Richard (*President, Conseil Supérieur de l'Ordre des Experts Comptables et des Comptables Agréés*).

Dame Evelyn Sharp, G.B.E. (*Permanent Secretary, Ministry of Housing and Local Government*); The Rt Hon. Sir Jocelyn Simon (*President, Probate, Divorce and Admiralty Division of the High Court*); The Viscount Simon, C.M.G. (*Chairman, Port of London Authority*); Sir Basil Smallpeice, K.C.V.O.; Dame Mary Smieton, D.B.E. (*Permanent Secretary, Ministry of Education*); Messrs C. R. Sopwith (*The Public Trustee*); Edgar Spencer (*President, The Association of Certified and Corporate Accountants*); J. W. S. Sprigge (*Under-Secretary, The Royal Institution of Chartered Surveyors*); R. J. W. Stacy, C.B. (*Under-Secretary, Insurance and Companies Department and Bankruptcy Department, Board of Trade*); T. H. Starling (*Joint Council of the Societies of Chartered Accountants of South Africa*); James C. Stewart (*President, The Institute of Chartered Accountants of Scotland*); J. Harold Stewart (*Past President, American Institute of Certified Public Accountants*); D. A. Stirling (*Chairman, Westminster Bank Ltd*); Deputy O. G. Sunderland; Mr J. W. Symonds (*President, The Institute of Arbitrators*).

Messrs J. Thomson, T.D., D.L. (*Chairman, Barclays Bank Ltd*); H. C. Treffers (*President, Nederlands Instituut van Accountants*); D. B. Tregoning, T.D. (*President, The Chartered Insurance Institute*); Arthur E. Webb (*Editor, 'The Accountant'*); F. Whitmore (*City Editor, 'The Daily Telegraph'*); Dr J. M. Whittaker, F.R.S. (*Vice-Chancellor, University of Sheffield*); Mr J. M. Williams; together with Past-Presidents, members of the Council and officials of the Institute.

CIVIC TOAST

The toast of "The Right Honourable the Lord Mayor, the Corporation of London and the Sheriffs' was proposed by Sir Thomas Robson, M.B.E., F.C.A., Senior Past President of the Institute, who said in the course of his speech:

The large company here assembled demands that the warmest thanks be expressed to my Lord Mayor, Alderman and Sheriff Denny and Mr Sheriff Lawson and to the City Corporation for the privilege accorded to us tonight of dining within the hallowed walls of Guildhall, and to you, my Lord Mayor, and to the Sheriffs, for the particular privilege we enjoy in having your personal presence with us here. (*Hear, Hear.*)

I am told, my Lord Mayor, that the first of your predecessors held office for over a score of years. That was over 750 years ago when, I imagine, the tempo of mayoral life was somewhat slower than now. I cannot believe that even your iron constitution could withstand such a number of tours of duty today with the strains which are now imposed by your great office.

Service and Sacrifice

There is undoubted satisfaction in a piece of public work well done without monetary recompense. It pleases him that gives as well as the service in which it is given, but no such service is given without sacrifice. Those who are assembled here this evening are glad to know that there are still men, including many of their own number who are as ready as our Lord Mayor, Sheriffs, and members of the City Corporation, Parliament, and even, I should add, the Council of the Institute of Chartered Accountants, to give of their time and energies and of their leisure to help the common good.

Our Institute, and by our Institute – we have some Scottish, Irish and American Institute members here – I mean The Institute of Chartered Accountants in England and Wales, is not only imbued with a sense of pride because its headquarters lie within the heart of the City, and indeed, near to this Guildhall in which democratic government has continued as an unbroken tradition for over a thousand years, but also because the Institute's own members have rendered distinguished service on the Court of Common Council and other forms of public service in the City and elsewhere. And more than one such member has attained to the high office which you, my Lord Mayor, now adorn, the latest of them being Sir Harold Gillett, Lord Mayor in 1958, who appears here this evening – I am not sure in what capacity, either as a former Lord Mayor or in the humbler capacity of Member of the Council of the Institute. (*Applause.*)

I believe that members of the chartered accountants' profession have much to contribute in the way of skill and knowledge, experience and trained judgment, to the solution of public problems of the day, and we are delighted to find them serving on the Corporation and helping to uphold the integrity of City life. Let us see to it that we take every reasonable opportunity of making such a contribution as a modest return for the generosity of the Corporation which has been extended for so many years to our Institute.

Sir Thomas Robson

There is no room for complacency in public life, nor in the accountancy profession. There is nothing more irritating than self-satisfaction in others, whoever they are (*laughter*). We must avoid it like the plague and never be so pleased with our own achievements that we become like the clergyman who was giving an account of his own past glories over others to a fellow minister. At last the sense of Christian charity and courtesy of his companion could bear no more. 'Aye, James', he said, 'the Lord knows you did your best for Him in your way as I have done my best for Him in His'. (*Laughter.*)

Well, ladies and gentlemen, let that be a lesson for those of us who hold positions of responsibility – and who here does not hold a position of responsibility? We cannot expect long-term success in any such position unless we are prepared to put into it at least as much as we take out. The City of London will not hold its position of financial leadership in Western Europe under the conditions developing in the Common Market and Free Trade Area unless its citizens are prepared to make sacrifices of time and leisure which are imposed on you, my lord Mayor and Sheriffs, by the duties of your great offices. The accountancy profession recognizes with gratitude the living example which you and your colleagues continuously and unconsciously set before us, and we will strive to copy it. (*Applause.*)

LORD MAYOR'S RESPONSE

In his response, the Lord Mayor said:

I would like to thank you, Sir Thomas, for the very kindly and felicitous way in which you have proposed this very ancient toast.

'The City of London shall have all the old liberties and customs which it used to have'. You may think that that is a quotation from Sir Edwin Herbert's Royal Commission on Greater London Government – one of that Commission's members is here tonight – but in fact that quotation is slightly older. It comes from the Magna Charta signed nearly seven and a half centuries ago, and I like to think that history is repeating itself once again, and that the ancient privileges of the City are being left relatively untouched.

But this City has not survived during such a very long period of time by reason of its treasures and position. We all know that Ethelred the Unready's cowardly policy of trying to buy peace at any price from the Danes met with the fate it deserved. Down through the centuries the City has built up a reputation for trust and integrity because the livery companies were able, from the earliest days, to enforce the highest standards on their members.

With new speeds of communication the world has become a natural economic unit for commerce and industry. Most of us hope that sanity will prevail amongst the human race and that we will gradually move to one world. I rather doubt if we in this country are really moving fast enough in that direction. We certainly have one of the highest standards of living in the world but our people don't seem to be really contented with that. They certainly don't accept that ancient Chinese proverb that you all know so well: 'I was angry because I had no shoes until I met a man with no feet'. With our standard of living no one should steal or defraud or kill, yet, despite this, greed does something to produce a situation in which the greater the prosperity, the greater the amount of crime. But alongside this crime wave there are most heartening signs of a totally different spirit amongst a great number of our young people.

I feel that many aspects of British life need a new impetus. In the financial world great responsibility rests on this Institute because directors of companies rely heavily on the advice your members give over the financial implications of many of their actions.

I firmly believe that the Institute of Chartered Accountants plays an immensely important part in the maintenance of the very highest standards of business integrity. Our

The Lord Mayor

country's present economic performance is certainly not the best of which we are capable but I greatly hope that every member of this Institute will do everything possible to stimulate far higher productivity at this vital moment in our history. (*Applause.*)

TOAST TO THE INSTITUTE

Proposing the toast of "The Institute of Chartered Accountants in England and Wales', Viscount Kilmuir, the Lord Chancellor, said he had a host of happy memories of his contacts with members of the accountancy profession while he was at the Bar and he remembered the many valued friendships which these contacts had given him.

After referring to the sort of work and conditions with which members were concerned in the early years following the foundation of the Institute, he went on:

I doubt whether even your founding fathers could have prophesied the manner of the development of industry and commerce, the increasing diversity and complexity of all forms of social affairs and economic activities, and the result of two world wars in a generation which were to test and, I believe, to justify their stable foundation for your profession.

Among the many, there seem to be four main essentials of these changes which particularly affected your profession. I think the first is that since the end of the nineteenth century, limited liability companies became recognized as the only practical way of carrying on large private enterprise business. The modernity of this change I can tell you from my own personal experience, for it was only in about 1944 that I, as Solicitor-General, induced the House of Lords to accept a decision in a tax case. It was that of *Gilberts v. Ferguson*, 1881. There is no doubt that in *Gilberts v. Ferguson* the Courts were still looking upon a company as an enlarged partnership. But it was soon recognized that the most important form of protection for shareholders and the public consisted in satisfactory requirements for books, accounts and the annual presentation of a balance sheet and profit and loss account which an independent auditor must report to the shareholders and the public – whether the accounts were both true and fair. And the utter integrity required made the accountant a pillar of respectability instead of a concomitant of insolvency.

The second point which I venture to choose is the fact that we have had two total wars in our lifetime and apart from the vast numbers of lives lost and the social changes which have followed, there is a further aspect. In 1914, for the first time in our history, an easy-going and highly individualistic democracy had to organize itself for war, and this meant an examination, a calculation, of the national resources in order that they could all be used to produce victory. And I would like to say most sincerely, as a member of Sir Winston Churchill's Government during the second war that had again to consider these points, how much we owe to members of your profession who enabled us to examine, to perceive our resources, and try to use them for the best benefit of the country.

The third item which I have in mind is taxation; and as one who has had varying responsibility, whether on the back benches, on the front Opposition bench or as a Minister in Parliament, for some thirty Finance Acts, I ought to be very quiet about it. I ought to remember the unfortunate American citizen who looked at his tax demand and said: 'Our forefathers fought against taxation without representation – but look what taxation with representation can do'. (*Laughter.*) I simply note two clear and obvious results. The first is that no major decision of business policy today can be made without largely deliberating upon the incidence of taxation which it entails. The second is that the whole machinery of taxation would rapidly, hurriedly and immediately collapse into chaos without the services of chartered accountants.

Extending Activities

The fourth point is the extension of your activities. I think it is one of the most notable developments, and again hardly foreseen by those admirable petitioners of 1880, that so many of you who qualify should go into industry and commerce and take on so many and so varied jobs. I need only mention your success in management accounting and cost accounting to illustrate fully what I have in mind. And equally notable are the members of your profession who have become part-time directors in various firms, not as specialists, but bringing to the firm their knowledge, experience and judgment in financial and business matters.

Mr President, the explanation usually given for the relative youth of your profession is that the need for it was only made manifest by the nineteenth century developments after the industrial revolution. It has often been said that young men – and in this context as in every sensible context 'young men' embrace 'young women' (*Laughter*) – see visions. I venture to suggest to this great company that the second half of this mad century of ours requires visionaries who produce achievements. When we consider that your membership has increased from 599 in 1880 to over 35,000, including the valued influx of Incorporated Accountants, and that you have helped so much to establish your profession in the British Commonwealth and the United States, then indeed you have a large and important holding in the stock of Practical Visionaries Unlimited. (*Applause.*)

PRESIDENT'S REPLY

In the course of his reply, the President said:

I suppose there is no greater honour can befall a professional man than to stand here on historic soil and reply to the toast of his Institute on an occasion such as this. (*Hear, hear.*) It is a peculiar pleasure, too – and one granted to very few of Her Majesty's subjects – to have the last word when the Lord Chancellor has spoken. (*Laughter.*) It was very pleasant to hear such kindly remarks from him because there were earlier occasions when the law and its representatives were not quite so polite. I have only to refer to the remarks of Mr Justice Quain at Bristol Assizes on August 18th, 1875. He said that the trustee in a particular bankruptcy case was a professional accountant and was an incom-

petent busybody who wasted the time of the court. He compared accountants generally, debt collectors and others to detriment with solicitors, 'the latter being gentlemen, members of a respectable body'. It is also on record that in times of stress such as in 1866 when a very celebrated house called Overend Gurney failed and Bank rate – shades of today – went up to ten per cent, no true citizen of the City of London would be seen talking to an accountant. (*Laughter.*)

Such is the strange mobility of human fortune, however, that in a relatively few years time all this seems to have changed and on May 29th, 1894, there was a glittering assembly of guests at Moorgate Place and amongst them Lord Randolph Churchill who proposed the toast of The Institute. He paid tribute to the way two members – he referred to them as Waterhouse and Whinney – whose names are commemorated in their firms known all over the world today – had examined the accounts of the Ordnance Department. It took them four months, which he thought was pretty quick, to complete their long, lucid and valuable report; and the Government, unlike today when we make recommendations, accepted all their recommendations. (*Laughter and applause.*)

Now one can go on looking at these matters over the years but I do not propose to do that. We have somewhere in the region of 35,000 members and there is an intake of some 3,000 articled clerks each year. Furthermore, as and when these young men and young women qualify, they don't seem to find any difficulty in finding a job. So it looks as if the sort of training we give is one which is of some benefit to the community.

Advice to the Government

It is our privilege to assist the Government with willing advice on matters which fall within our competence as members of the Institute, whether we are in practice or in industry, and this year has seen no lack of calls made on us. I mention this because we recognize and welcome the obligations to the State which our status as an Institute lays upon us. Service to the community must be an essential essence of our Institute. 'All our past proclaims our future', and I for one have little doubt that there will be new horizons emerging through the development of the computer or, if you will, the application of machinery to the record, the collection and use of business information and its interpretation for management, shareholders and the State, and the assurance that the information is accurate within the limits of a particular case. Certainly if our members, whatever they are doing, look at the future they are not going to find life dull.

Now these are days when human organizations tend to get bigger and bigger and there is a constant risk that those who labour at the perimeter may get overlooked by those who work at the centre. It is one of the paradoxes of modern life that while communications are speeded up, likewise has the growth of business organizations, with the resultant risk of neglect of the individual as an individual. I hope our members realize that the Council has this particular point in mind. No profession worthy of its name can ignore it, but it will – and this is not exclusive to us – be a problem of the future. (*Applause.*)

THE GUESTS

The toast of 'The Guests' was proposed by the Vice-President, Mr P. F. Carpenter. They were, he said, honoured by the presence of a large number of distinguished people. After thanking the Lord Mayor and Sheriffs for their presence, the Lord Chancellor and other members of the judiciary, and mentioning particularly the Lord Mayor of Cardiff, Alderman Ewart-Pearce, with the remark that this was the first time they had been privileged to entertain the civic heads of the two cities at the same time, Mr Carpenter said:

Mr Boyd Carpenter

It would perhaps be invidious to mention by name the many representatives of universities, industry, commerce, the Civil Service, banking, the Press and other professions, but they are all both individually and collectively very welcome. I would, however, like to welcome the representatives of other accountants' bodies, in particular those from overseas. We are delighted to have with us leaders of the profession from the United States, South Africa, New Zealand, Belgium, France and Holland, and we thank them for sparing time to be with us tonight. (*Applause.*) Many of them are, in fact, very old friends of ours and we are delighted to see them again. I am not forgetting the representatives of the Scottish and Irish Institutes for it is always a very great pleasure to see them. (*Applause.*)

RESPONSE TO 'THE GUESTS'

The response to the toast of 'The Guests' was made by Mr Boyd-Carpenter in a highly entertaining and witty speech, typical of which is the following:

When I was a child my parents, who understood me better, I think, than was altogether comfortable for me, tried to introduce an element of rudimentary good manners by telling me that if I did not say 'Thank you' nicely when I had been entertained I would never be asked again. That memory has remained very firmly with me. Indeed, not long ago it lead me somewhat astray. In the course of my speech I overlooked, for a moment, the fact that we were attending a quincentenary dinner, the next of which would occur in one hundred years time. I think I exaggerated somewhat the effects of my dynamic colleague, Mr Enoch Powell in the Health Service, when I ended the speech in a passionate appeal to be asked to the next dinner. (*Laughter.*) It was perhaps an error of the same character as that which is recalled by the Coronation of His very late Majesty, King George III when almost everything went wrong. Finally, the much-tried monarch complained to the Earl Marshal of the day who apologized and said in careful terms that he would ensure that everything would be right on the next occasion. (*Laughter.*) The King had the laugh on the Earl Marshal for he lived for another sixty years. It is my duty, on behalf of all, to thank you for a most agreeable evening spent in most agreeable company. (*Applause.*)

THE INSTITUTE OF CHARTERED ACCOUNTANTS IN ENGLAND AND WALES

EIGHTY-FIRST ANNUAL MEETING

The eighty-first annual meeting of The Institute of Chartered Accountants in England and Wales was held in the Hall of the Chartered Insurance Institute, Aldermanbury, London, on May 3rd. The President, Mr P. F. Granger, F.C.A., was in the chair. With him on the platform were: the Vice-President, Mr P. F. Carpenter, F.C.A.; Sir Thomas Robson, M.B.E., F.C.A., Senior Past President; Mr W. L. Barrows, LL.D., F.C.A., Sir William Carrington, F.C.A., Mr D. V. House, F.C.A., Mr W. H. Lawson, C.B.E., B.A., F.C.A., and Mr S. J. Pears, F.C.A., Past Presidents; Mr A. S. MacIver, C.B.E., M.C., B.A., Secretary, and Mr F. M. Wilkinson, F.C.A., Deputy Secretary.

ADDRESS BY THE PRESIDENT

Addressing the meeting, the President said:

The 1961 report and accounts have been in your hands for a little time and the report reviews in some detail the activities of the year. However, before I move the adoption of the report and accounts, I would like to use the privilege which I have as President to draw your attention to various matters which I think are important.

Mr P. F. Granger

TECHNICAL ACTIVITIES

Statements on Auditing. Twenty years ago the Council broke away from all previous tradition by commencing its series of Recommendations on Accounting Principles. Since that time a great many technical documents have been issued by the Council for the guidance of members. In this technical field the Council created a new landmark last August when it issued the first of a series of Statements on Auditing. The No. 1 Statement dealt with *General Principles of Auditing* and the No. 2 Statement, issued last March, dealt with *Stock-in-trade and Work in Progress*. With the invaluable assistance of the Taxation and Research Committee further statements on auditing are in preparation, but it will take time for them to be issued.

I commend these new statements to you for your earnest consideration. The Council regards them as most significant additions to the range of important technical documents emanating from the Institute. The No. 1 and No. 2 Statements have been issued in quantity to the students' societies for distribution to all their student members.

I must, however, emphasize that in issuing these auditing statements the Council is doing no more than offer guidance to members. It must still remain with the individual auditor to decide, in the circumstances of each particular audit, the nature and extent of the tests and examinations he should make in order to enable him to discharge his responsibility. In doing so he must rely on his professional training, experience, skill and judgment. It is not for me or the Council to tell him what he should do.

Terms used in published accounts. We are issuing as part of a supplement to the *Members' Handbook*, a statement entitled *Terms used in Published Accounts of Limited Companies*. It is intended for reference purposes as and when the occasion arises. I think you will find that it will come to be in frequent use as a means of helping you to decide what would be the most suitable description for particular items in accounts which you are preparing or auditing.

Here again, however, I must emphasize that the terms suggested by the Council are suggestions only and will not necessarily be appropriate in the circumstances of a particular business. The Council is not aiming at regimentation or standardization. I do not think that standardization is compatible with the presentation of a true and fair view.

Technical activities generally. I will not take you in detail through the many other technical matters on which the Council has been engaged during the past year. Those which have been brought to a conclusion are referred to in the annual report. There are many others which continue as work in progress and we have something of a stock-pile of subjects for future consideration.

You will have seen from the annual report that the Council has now received the report of the Technical Activities Committee. This committee was appointed to review the whole question of the Institute's activities in the technical field and to report with recommendations on objectives, how those objectives can be achieved and the associated problems of staff and office accommodation and cost. It is too early yet to make any statement though I hope that the Council will be able to do so in the near future.

Any consideration of this subject, however, leads to the inevitable conclusion that the Institute's technical activities and their cost are bound to increase. The work of the profession is constantly increasing in range, complexity and importance and in this dynamic development the Institute must obviously play its full part.

Taxation. It is natural that over a long period of years our profession should have become closely associated with taxation matters. Our taxation system depends upon accounts and this is precisely our sphere. The Council is able to draw upon a vast amount of experience throughout the country and in this way is well fitted to direct the attention of the Chancellor of the Exchequer and the Board of Inland Revenue to anomalies and uncertainties in existing taxation

legislation and in Finance Bills. We are not by any means always successful in our representations and indeed there are some which we keep on repeating in the hope that one day something will be done. For example we are still hoping for amendment of the Schedule E expenses rule to allow deductions on a more reasonable basis. On the other hand, the Chancellor has this year adopted our often repeated suggestion that Finance Bills should be accompanied by explanatory memoranda.

Our representations are often the subject of discussion between representatives of the Council and representatives of the Board of Inland Revenue. We do not always agree with the Revenue view but we greatly value these opportunities for discussion and we believe them to be of mutual benefit.

Our appreciation of the Board's readiness to talk to us does not, of course, do anything to temper our disappointment when our suggestions are not adopted. Equally we must recognize that the Board, too, has its disappointments. For example the Board believes that the profession could do a lot to expedite the submission of accounts and returns. Now this is a very big subject and there are many causes for delays. Many of these lie with the taxpayer himself but some also lie with the Inland Revenue and some with our profession. In so far as the faults may lie with us I hope that we may all do whatever we can towards reducing arrears and preventing them from arising in future. I hope, too, that inspectors of taxes will not impede us in our efforts by making their queries unnecessarily extensive and detailed.

EDUCATION AND TRAINING

No subject is of greater importance to us than the education and training of our future members. Unless we recruit well educated young men and women of the right calibre and give them thorough training in the work of the profession we shall not be able to maintain and enhance our professional standards. You all know that this matter has been examined by the Committee on Education and Training and the report of that committee has been considered in detail by the Council in the light of the comments made by its committees and by the committees of the district societies. As you will have seen from the annual report, the Council has now been able to announce that it has adopted in principle many of the recommendations made in the report and that others are still under consideration. I am sorry that I cannot be more specific at this stage. Indeed, the annual report contains a warning that no one should take any course of action based on the assumption that a particular recommendation will be implemented. Announcements will, however, be made from time to time and in the course of the next twelve months the full pattern of the proposals will probably have been made known.

Some of the recommendations can be implemented almost immediately. Others require lengthy periods of notice and preparation. Some require alterations to the Royal Charters and bye-laws. In addition there are important financial implications. Earnest attention is being given to these matters.

Quite apart from our own education and training requirements we need to recruit more university graduates and I hope that this will be achieved as a result of the activities of the Committee on Relations with the Universities which the Council appointed last October.

THE SMALL PRACTITIONER

The majority of our articled clerks are trained in the offices of the smaller firms and these firms therefore have a special interest in the outcome of the Report on Education and Training. They also have many other problems and I am indeed most gratified by the response to the inquiry which was instituted last year. You will remember that the presidents of the district societies were asked for their assistance in making an inquiry into the problems and difficulties of the small practitioner and for this purpose a questionnaire was issued. We owe a debt of gratitude to the presidents of the district societies, their committees, branches and groups for having responded so nobly to this appeal. Throughout the country some eighty meetings have been held, attended by over 2,000 members, and as a result we now have for the first time a collection of views of a large number of small practitioners and this should be of the utmost value to the Council in its efforts to overcome problems and difficulties. I must, however, ask for a little patience. There is no easy and rapid solution to most of our problems.

I may say that the inquiry indicates that there is great interest in matters such as fees, competition, registration, publicity, staffing, recruitment of articled clerks, relations with the Inland Revenue and relations with members of other professions.

In response to one of the questions, members have shown a remarkable willingness to give information on fees, salaries and costs. There appears to be a strong feeling that detailed information on these matters should be obtained at an early date through a survey on an anonymous basis and this we intend to arrange.

MEMBERS IN COMMERCE AND INDUSTRY

One of the outstanding features of our Institute has been the extent to which members enter industry and commerce. More and more members earn their living in these spheres and many of them add distinction to themselves and the Institute by occupying executive positions carrying very heavy responsibilities. Not a few of them are called on by the Council to assist in matters where their experience and advice are of the greatest value; and of course the profession in industry is represented – and well represented – on the Council.

I am anxious to emphasize this aspect of our profession because there may be a tendency to regard the Institute's activities as being unduly weighted in favour of the practising side. I regard it as wrong to think of the profession as being divided into two. I am of the opinion that the profession and membership of the Institute are synonymous and that in whatever capacity a member earns his living, fundamentally he is concerned with the true and fair view, the accuracy of the record, the integrity of the professional man and the quality of the service he provides.

I hope for example that members in industry and commerce regard the Recommendations on Accounting Principles as being of no less importance to them than to the practising members. Conversely our publications on management accounting are directed no less to the practising member than to the industrial member.

PUBLIC RELATIONS

A little over a year ago the Council appointed a Public Relations Committee in order to co-ordinate and expand our public relations activities. The committee has the advice of a professional publicity consultant who attends all its meetings. The committee has been busily engaged during the past year in laying the foundations for what we hope will be worth-while projects. We are fully conscious of the potentialities not only of the written word but also of radio and television. Incidentally you may have noticed that our Hall in Moorgate Place was used on Budget day for the purpose of televising comments by leaders of various walks of life in the City and one of our members participated.

INSTITUTE FINANCE

A year ago my predecessor drew attention to the satisfactory state of the Institute's finances but warned that a period of development and expansion lay ahead in which additional revenue would be required in order to avoid income deficits. The Council is not yet able to announce its building development plans, as certain negotiations are still in process; but taking that matter in conjunction with the implementation of recommendations in the Report on Education and Training, expansion of the Institute's activities in the technical field, publicity and so on, it is inevitable that large amounts of money will be involved in the immediate future. The financial implications are being worked out and it seems inevitable that members will in due course be asked to approve increases in subscriptions and fees.

So much for domestic matters but before I conclude I will refer to two matters which I will call International Affairs and National Finances.

INTERNATIONAL AFFAIRS

In September of this year, the Eighth International Congress of Accountants is to be held in New York. We expect our Institute to be well represented by several hundreds of our members. Then in September next year there is to be a European Congress of Accountants in Edinburgh with The Institute of Chartered Accountants of Scotland acting as the host organization. His Royal Highness The Duke of Edinburgh has been pleased to give his patronage to the congress. Such international gatherings of accountants are of immense importance to the profession. The profession in its widest sense exists largely to provide essential services for industrial, commercial and financial organizations and because of this the profession is essentially international in outlook. It is therefore important that there should be opportunities for international exchanges of view, sometimes on a world platform and sometimes on a regional platform. New York and Edinburgh will provide these opportunities.

The international nature of the profession has always been of importance to us. Since the very earliest days of the Institute, chartered accountants have ventured overseas and we now have over 4,000 members outside the United Kingdom. Over the years our members have taken a major part in the creation and development of an organized profession in many overseas countries. This was a necessary accompaniment to the opening-up and development of overseas countries. Today the vast organism of trade and commerce sprawls all over the world and it is in greater need than ever before of the services which our members are well fitted to provide.

This question of practice abroad and restrictions on it is of particular importance to the profession and to the business interests which rely upon it in connection with the development of the European Common Market. The Council is watching the situation closely. There are many differing conceptions of the profession on the continent of Europe and many difficulties will need to be overcome in order to apply the liberalization requirements of the Treaty of Rome. Our hope of course is that the Common Market countries will be placed on a basis comparable with that in the United Kingdom so that accountants with suitable qualifica-

During the Institute's annual meeting. *Left to right:* Sir Thomas Robson, Senior Past President; Sir Charles Norton, Solicitor to the Institute; Mr Alan S. MacIver, Secretary; Mr P. F. Granger, the President; Mr P. F. Carpenter, Vice-President.

tions will be able to practise the profession irrespective of their nationality and place of residence, with freedom to enter into international partnership arrangements of the kind which are so well understood in the English speaking world. We shall continue our efforts to that end.

I must also refer to those of our members who are employed overseas in industry or commerce or in Government service. There are many of them. They do work which redounds to the credit of our Institute by reflecting our standards of business integrity and competence. Moreover, they have made and are making a great contribution to our exports. One cannot run a business abroad unless one is satisfied about the soundness of the financial planning and administration, the accuracy of the accounts and returns and the competence of those responsible for them.

Last September I had the privilege of representing the Institute at the annual meetings of the World Bank and its associated organizations. These were held in Vienna. So far as I am aware no other accountancy body from any part of the world was represented on this occasion and I regard the invitation which was extended to us as being an indication of the international reputation which our Institute possesses. The World Bank and its associated organizations, particularly The International Finance Corporation, have a great deal to do with the provision of funds on a large scale for development projects in many parts of the world. My attendance in Vienna led me to believe that there must be great scope in these matters for the use of the world-wide professional services which members of our Institute can provide.

NATIONAL FINANCES

Civilization and bureaucracy seem inevitably to go hand-in-hand. It is, therefore, very comforting to remind ourselves that as a profession we are not subject to any form of Government control. We have in this country a taxation system under which it is virtually unheard of for Inland Revenue officials to examine the books of taxpayers; such a system would be impossible but for the trust placed in us by both the Inland Revenue and the taxpayers for whom we negotiate. I am a great believer in the importance of the individual and I believe that our profession does a great deal to help preserve that importance. As responsible professional men whose training and experience bring us into direct contact with every conceivable kind of industrial, commercial and financial activity we have a very important role in national affairs. This is a position we must strive to maintain and improve. We can do so by maintaining and improving our own standards and by resisting firmly any encroachment upon the range of our activities.

With the exception of the Exchequer accounts there is in this country very little auditing by Civil Servants. This is as it should be. Auditing is fundamentally a skilled professional job calling for great breadth of training and experience and best carried out by the independent professional man. Auditing by Government department as a compulsory requirement is to be deplored and we must continue to be alert and ready to deal with any movement towards any extension of the present narrow field in which audit by Government department is compulsory.

Professional audit of nationalized undertakings is now a well-established principle but I would like to see a realization by the Government that the accountancy profession could readily provide additional services which would be of great value in relation to the enormous amount of money and manpower involved in the nationalized undertakings. Ten years ago the Council submitted a memorandum to the Select Committee on Nationalized Industries indicating how professional accountants could be of substantial assistance to Parliament in addition to what they now do as auditors. We suggested that the professional accountant could participate in periodical reviews of the nationalized industries; that he could make special *ad hoc* investigations into particular phases of the undertakings if called upon to do so by the Public Accounts Committee; that he could assist the Public Accounts Committee as to the lines its inquiries might take when it is considering the voluminous annual reports and accounts of the undertakings; and that his normal duties as auditor could with advantage be extended so that he would make a supplementary report on matters which appear to need examination, for example where Government grants have been given on the basis of estimates furnished by the undertaking and the subsequent results have differed materially from the estimates; or where an undertaking has incurred substantial capital expenditure which was intended to be productive but which has not proved productive or upon which an adequate return has not been received.

There is great scope for useful work by the profession in these important matters and not only in the nationalized undertakings. It is surprising to me that the Government has not long ago realized that we have available for the asking the professional ability and experience to make an immense contribution to the economic welfare of the country.

APPRECIATION

I conclude by expressing my thanks to all the members of the Council for their kindness and assistance in what is obviously the outstanding year of my professional life; to the district society presidents whose guest I have been and from whom I have received great hospitality; and finally to the Institute staff who have helped what I think at times has been a rather lame dog over some difficult stiles. This is Mr MacIver's last annual meeting and although he does not retire until September it would ill become me to let this meeting pass without a 'thank you' on your behalf and my own and on behalf of all those he has guided and helped during his long and able period of service to the Institute and its members.

I now propose, and I ask the Vice-President to second, the adoption of the report of the Council and the accounts for the year ended December 31st, 1961.

The Vice-President, Mr P. F. Carpenter, seconded the resolution and the President then invited questions from members.

DISCUSSION

Mr C. H. Chidgey, A.S.A.A.: In the annual report there is a number of references to the Society of Incorporated Accountants. I do not think I need refer to these in detail but I would like to draw attention to the now diminishing but none the less still substantial number of our members who are incorporated accountants. There is, of course, nothing derogatory in this title, but nevertheless I think it would be fair to say that the majority still desire full

integration with other members of the Institute. If you are able to make any statement about developments in this matter it would be greatly appreciated.

The President: This is not an easy problem as you can imagine, because it was very much an essential part of the integration scheme. It has, however, recently been referred to a special committee for examination and I know that the committee will approach its task with a desire to be helpful and to try and overcome the difficulties. More than that I am afraid I cannot say at this stage.

Mr S. L. T. Crawford, F.C.A.: I would like first of all to draw attention to the very short period of notice which is given for this meeting. The day has been changed this year and, as far as I am concerned, I received my notice on the Thursday afternoon immediately before Easter, and including the Easter week-end had a bare fourteen days' notice of the meeting. Comparing that with the twenty-one days that limited companies are required to give, I consider, and suggest to you, that the Institute is setting a very bad example. I hope that that sort of thing will be corrected in the future and that we shall have at least a clear twenty-one days' notice.

Secondly, while welcoming this small practitioner inquiry, I would like to draw attention to one or two points. You have emphasized in your statement that it is a small practitioner inquiry, but I rather feel it is an 'all-practitioner' inquiry, embracing the larger firms as well as the smaller firms. I attended some of the inquiry meetings in East Anglia and emphasized there that in my view – and I had a good deal of support – the problems of the small practitioner, the true small practitioner, let us say those who have under ten total personnel and under £10,000 a year gross fees, are very different from the larger firms; and there are larger firms in the provinces who have eight or ten partners, three or four offices, up to eighty staff, whose problems are vastly different. Yet in East Anglia, as I understand it, the whole of the members were asked to contribute to this inquiry. In my submission, this is entirely wrong. In a small practitioner inquiry we should define what a small practitioner is and restrict it to the small practitioner so that we get the small practitioner's views.

Thirdly, I would like to refer to the district societies. Am I right in thinking, Mr President, that so far as East Anglia is concerned – in which I practise – that it is necessary for me to apply for membership of the district society and to get elected and to pay a separate subscription before I can take part in the district society's affairs? How much that subscription may be I have not been able to find out. I raised the point at two of the small practitioner meetings and nobody was able to say what the subscription was to the East Anglian District Society. I think it is entirely wrong that the district society should have the right to nominate members for the Council and get the support of the Council to those nominations if they do not truly represent all the members of our Institute. In other words, if the membership of the district society is not automatic, instead of the district societies being a channel for communication to the members, it seems to me that they must act as a bar to communication between the Council and the members, and vice versa, if membership is not open to all.

Finally, may I refer to Mr Barlow's nomination, and say that I am very sorry that in paragraph 7 of the report there is no mention of Mr Barlow's nomination although there is mention of the other members.

The President: As regards the notice of the meeting the bye-law stipulates not less than fourteen and not more than twenty-one.

Mr Crawford: I did not criticize it, Mr President, as being out of accord with our rules. I simply drew attention to the short period and contrasted it with limited companies who give at least twenty-one days' notice.

The President: We can note that. The reason that the meeting is held today, instead of the usual Wednesday, which incidentally I think gave you an extra day, is that we have a banquet at Guildhall tonight and the only way we could arrange this for the same day as our annual meeting was to have both today, instead of our usual Wednesday.

On the question of the small practitioner, it is not very easy to define 'small' and we left it to the individual district societies to make up their own minds as to whom they sent the questionnaire. Personally, I have no doubt whatsoever that in the returns we have received, the small practitioner, however defined – that is to say ten, nine, eight, down to one staff – is very well covered. We could not, nor would we wish to, interfere with the way districts conducted this inquiry. It would depend on how the individual committees felt about it; but the emphasis all the way through has been on the small practitioner.

I really cannot help you over the rules of the districts regarding rates of subscription. What I suggest you do is look in the early pages of the *Red Book* where you can see the name of the secretary of the district society and write to him.

There was no deliberate omission of Mr Barlow's name from the report – we will look into that point. I think it was merely a question of timing and printing. There was no intended reflection on him in any shape or form.

Mr Robert Barlow, V.R.D., F.C.A.: As a small practitioner in all senses of the term, both as regards fees and stature, I have attended three of these inquiry meetings, ranging from going as a guest to the East Anglian meeting and to the Southend Group of the London District and one of those held in London, and it is perfectly clear to me that the problems encountered in London are far different from those encountered in the country. I am in the London District, practising in Chelmsford, but my practice is very rural in concept. Our problems are quite different and I hope that if anything comes of this inquiry they will be noted.

The other point is regarding what Mr Crawford raised about the district societies. I am perhaps privileged in that I can automatically, if I wish, join the London District Society – I believe without further subscription. The point is that if I were in Colchester and wished to join the district society and become a representative on the Council in some way or another, I should have to pay a further subscription to the East Anglian District Society or whatever the district would be. Thereby, as I see it, those members who are not in the London District Society who wish to have any voice other than at this annual meeting in the conduct of the affairs of the Institute have to pay a further subscription to get a voice, to join their district society other than, of course, by direct representation to the permanent officials.

The President: Well, of course, you are speaking to one who has paid the district society subscription for practically the whole of his life. Surely, if you want the privilege of taking part in these Institute activities, the amount of the subscription to a district society should not be a factor in stopping you taking such action as you want to take.

Mr Barlow: It is not a question of the amount. It is a question of principle. It is what many people spent the years 1939–45 fighting for. It is a question of principle; not a question of money.

The President: I do not think I can help you any further on that, Mr Barlow.

Mr Crawford: Do we understand . . .

The President: Really, there is an awful lot of other people in here. Before I continue with questions from that particular corner, could I ask if anybody in some of the other corners wishes to ask a question. I do not want to stifle discussion in any shape or form but I do not want this to start as an argument between the President, on an occasion like this with the vast number of members here, and two or three members. (*Hear, hear.*) Has anybody got any other question they would like to ask? (*A pause.*) Now, Mr Crawford? (*A pause.*) I now put to the meeting the

resolution for the adoption of the report of the Council and the accounts for the year 1961. Those in favour? Those against? That is carried.

APPOINTMENTS TO THE COUNCIL

The appointment of two members of the Council, Mr Ralph Gordon Slack, M.A., F.C.A. (Hull), and Mr Alfred Gordon Thomas, F.C.A. (Sheffield), to fill vacancies arising since the last annual meeting, was confirmed.

The President: The next item is that relating to the election of eleven members of the Council and in order to make it perfectly clear as to what the present procedure is and has been I am going to take a few minutes of your time by reading something which I have had prepared and which is, as far as I can make it, as neutral as possible.

You will see from the notice convening the meeting that in addition to the eleven members of the Council who retire by rotation and are nominated for re-election under bye-law 6, there is also the nomination of Mr Robert Barlow under bye-law 7. In accordance with bye-laws 8 and 9 we must therefore vote at this meeting. Voting papers have been issued to you. Before the vote is taken, however, I will remind you of the procedure which has been followed for many years in appointing members of the Council. There is no secret about it. It is already on record.

There are fifty-five seats on the Council. Of these, ten were created under the Scheme of Integration and filled by ten members who were members of the Council of The Society of Incorporated Accountants. None of these ten Council members can be replaced. When any of them ceases to be a member of the Council, his seat will automatically lapse and in due course, therefore, the number of seats on the Council will revert to the normal number of forty-five.

Of these forty-five seats, five are reserved for members not in practice. This is not required by the Royal Charters and bye-laws. It is an arrangement which, on the recommendation of the Council, was adopted by members at the annual meeting in 1950.

The remaining forty Council seats are divided over the areas of the district societies (which cover the whole of England and Wales), so that each area has an appropriate representation on the Council. When a Council member dies or retires, the committee of the appropriate district society is asked to submit names and it is from the names so submitted that the Council elects a new member in place of the member who has died or retired.

Each year one-fifth, that is to say eleven, of the members of the Council retire by rotation, and they are eligible for re-election. Two of these are Society's appointed members. The names of the other nine are submitted to the relevant district societies who thus have the opportunity of putting forward any other names if they wish to do so.

These arrangements have been followed for a great many years and in the opinion of the Council they provide the most suitable method of recruiting to membership of the Council those who have already demonstrated both their readiness and their ability to serve the Institute, particularly through the district societies.

It is because the Council believes firmly in the procedure which I have just outlined that the Council recommends, as stated on the notice convening the meeting, that the eleven vacancies be filled by the re-election of the retiring members.

Now, that is exactly how it has been done and has been laid on for this meeting today. Before I ask members to complete their voting papers would any member wish to speak on this?

Mr G. R. Appleyard, F.C.A.: Mr President, I think you have explained to all of us very clearly the constitution of the Council as it now stands, and I think there is very little more to be added to it except the fact that so far as the district societies are concerned anybody can join a district society, and if they are really interested in Institute affairs they can get themselves elected to the committee of the district society. The committees of these district societies do a tremendous amount of work on behalf of the Council and on behalf of the local geographical members, and that seems to be a splendid training ground before a member is elected to the Council.

The Council in the past, I think it can be fairly said, has served this Institute very well. Ladies and gentlemen, what we want is the best men we can get; men of integrity; men of responsibility and most important of all, men who have got the time to give to this all important job. It is my sincere wish that this procedure is continued with. (*Hear, hear.*)

Mr E. A. Bland, D.S.O., F.C.A.: Mr President, I would like to say, as a member of perhaps the smallest district society, that I entirely support what Mr Appleyard, coming from the largest district society, has said.

The President: Thank you, Mr Bland. Does anybody else wish to speak on this?

Mr C. V. Best, F.C.A.: On behalf of the London District Society, and I think most people here will know that I am interested in the London Society, I would like to support the comments which have already been made and suggest that Mr Barlow takes up some lesser duty and lesser responsibility in the Institute in order that he can thereby get the requisite training to become a member of the Council. As far as London is concerned, I think most of you will know that the area covered by the District Society is – I will try to remember – the counties of London, Middlesex, Hertfordshire, Bedfordshire, Buckinghamshire, Berkshire, parts of Essex, parts of Oxford, part of Kent, and for some reason unknown to me, the Channel Islands. (*Laughter.*) In this area, Mr President, I am told there are something in the region of 16,000 Institute members – practically half of our membership. Mr Barlow has himself this afternoon said that the problems he has are entirely different from those in London. I agree with him in that respect and I would like to suggest to him that he helps the local members and the members of the London District Society and their committee by helping to form a group or a branch of London District Society in Chelmsford. If he is willing to do that and will meet me after this meeting, or at any time, I will be delighted to help him to get this venture going. While at the moment, for the reasons that I have stated, I will vote against his appointment to the Council, I trust that on some future occasion, he having proved himself, I shall be justified in supporting his nomination.

The President: Does anybody else wish to speak on this?

Mr Crawford: I would like to say, Mr President, that I should be directly in favour of Mr Best's remarks if, and only if, membership of the district societies was universal to all our members and were not the subject of a separate subscription. I think therein lies the wrong principle.

The President: Does anybody else wish to speak? (*A pause.*) Well, now, would you please complete your voting papers. The auditors are acting as scrutineers.

APPOINTMENT OF AUDITORS

Now, gentlemen, I hope you do not mind if I proceed with one or two other matters.

The next item on the agenda is the important one of appointing auditors. You will have seen from the report that the Council is recommending an increase in the fees from 1,000 to 1,250 guineas, not only for the present year but also for 1961. Accordingly, a higher amount has been charged in the 1961 accounts. Now, under Bye-law 115, Mr Bingham and Mr Pells retire and are eligible for reappointment. May I have a proposal please?

A Member: I have pleasure in proposing the re-appointment of the auditors, at the increased fee for 1961 as well as for the future.

The President: Thank you very much.

A Member: I would like to second that, Mr President.

The President: Thank you very much. All those in favour? Thank you.

FIRST DECIMAL COINAGE RESOLUTION

Now, we have a rather more thorny one, I think. We come to item 5 on the notice convening the meeting. Mr Armitage and some others have given notice that they wish to bring a motion before the meeting and therefore I will call upon Mr Armitage.

Mr R. L. Armitage, F.C.A.: Mr President, this motion is brought before the annual meeting of members for two main reasons. First, because decimalization of the currency is sufficiently important to all of us to deserve considerable care and thought, and secondly, because there is hope that those things which are matters for concern will be remedied now that attention has been drawn to them.

The motion is not intended in any way as an assault on the Council or on our constitution; it is not that at all, and I should like to say straight away that I very much appreciate the time, given freely and without financial recompense, by those members who serve on our Council and its committees. I am sure that we all desire to thank them sincerely, but that does not mean that our administrative body wishes to be considered infallible, and, in fact, the founders of our Institute who framed its constitution foresaw that there would be occasions when members felt that there were matters which required to be ventilated, and accordingly, they made express provision in our bye-laws to enable this to be done – and it is strictly in accordance with these constitutional provisions that this motion is brought before this annual meeting.

It is not an attempt by a handful of eccentrics to hold an inquest on something that is mere theoretical nonsense. Decimalization of our currency may have been viewed like that in the past, but now it is an issue which the Government has said is to be decided this year; it accepts it in principle; it wishes to determine which system is best.

When reading the motion, you will have noticed that it does not oppose decimalization of the currency, and also that it does not speak either for or against retention of the £ sterling. Those are matters which more properly fall under a separate motion standing in the name of another member, and which is to be considered later. What the present motion does say is that the manner in which the subject has been handled 'leaves much to be desired'; and the element of criticism is essentially contained in these five words – 'leaves much to be desired'. These words are meant to be taken literally, and by *doing* what is desired, the Council can remove the objections, and we can all hope to be reasonably well satisfied. It may help if I read it at this stage. The motion is:

> 'That this meeting considers that the handling of the subject of decimalization of the currency leaves much to be desired, inasmuch as the Council:
>
> (*a*) has published two opposing views on the question of the system to be adopted, by giving one opinion to the Committees appointed by the British Association for the Advancement of Science and the Association of British Chambers of Commerce, and a different opinion to the Chancellor of the Exchequer, without explaining the change;
>
> (*b*) has not taken steps to ascertain, and to present, the views of the general body of members of the Institute, though there is evidence that they are not unanimously in support of either of the opinions referred to in (*a*) above;
>
> (*c*) marked the relative documents private and confidential when it referred the matter to the Taxation and Research Committee, which precluded their discussion with other members of the Institute; and
>
> (*d*) expressed its opinion to the Chancellor in terms which presupposed that members of the Institute as a whole approved both the adoption of a decimal currency and the abandonment of the £ sterling, and that there was no other worth-while opinion within the Institute.'

The four sub-headings need a little amplification. The first deals with the contrast between the two different answers on the question of the choice of systems. Briefly, the circumstances were that the British Association sent a questionnaire to our Institute. Here is the first question:

> 'Does your profession consider it would be advantageous to decimalize the coinage in the United Kingdom?'

The reply was:

> 'In the opinion of the Council a majority of the members of the Institute would consider it to be advantageous.'

You will note the careful and modest answer. It refers to the members of the Institute and says that it is the Council's opinion that a majority of them would consider it to be advantageous, and I suggest that that is a right and proper answer.

Then, later on, replying to a question setting out various possible systems, it says:

> 'Systems (i) or (ii) would be suitable as both retain the £ as a basic unit of currency. . . . Systems (*iii*) or (iv) would not be considered suitable as they each depart from the £ as the basic unit.'

I am not concerned with which system was favoured, because I think that the Council had made clear at the outset that there had not been a referendum, and it was simply answering a privately-sponsored questionnaire by considering what, in its view, a majority of the members would think.

The results of this, and the many other replies, were summarized in a joint report published in 1960, one of its main conclusions being as follows:

> 'There is some disagreement as to the preferred method of decimalization but there is an overwhelming wish to retain the £ as the major unit.'

The Government took favourable notice of the joint report, and the matter was pursued by means of a speech in the House of Lords by the Earl of Dundee, inviting further expressions of view.

The next thing that members of the Institute learned was that the Council had accepted the invitation by sending a memorandum to the Chancellor of the Exchequer which advocated abolition of the £ sterling and adoption of the South African system. There was no prior warning to members that there had been a change, and no explanation of it was given.

Now, suppose that I say that the Council should have looked at the question like this: that, before the Government makes a final decision it ought to get as many views as it can from all those people who do not belong to industrial and commercial firms and chambers of commerce, so that it knows how the country really feels about it.

Well, someone will say, why should the Council look at it like that, why not take a decision? Surely the Council was replying to the Government, and the memorandum is

clearly headed that it is 'In response to the Government's request for expressions of view, made by the Earl of Dundee in the House of Lords on November 10th, 1960'.

Well, here are his words:

'. . . Before we make a final decision we should like to get as many views as we can from all those people who do not belong to industrial and commercial firms and chambers of commerce, so that we know how the country really feels about this. . . .'

As we know, the general body of members has not been consulted, and I do not see that there was any mandate for the issue of the memorandum. The subject is not a matter like company law or taxation, which are under review year in and year out, and which constantly are being reported in *Accountancy* and *The Accountant*. The fact is that decimalization of our currency is something exceptional and is a new subject to the present generation, and, once this country is committed, it will be non-recurring.

As regards secrecy, I should have thought that if ever there was a subject which could and should be dealt with by the Institute openly and freely, then surely this is it. It is understood that certain documents on the subject had been prepared by the Institute and had been disclosed to representatives of district societies, but whether the contents gave a balanced and satisfactory commentary on the problem, I am unable to tell you, because, on applying to the Institute for a copy, I received the reply:

'I am sorry that I am unable to make Council documents available to you as they are always considered to be confidential.'

And the last point is that the memorandum sent to the Chancellor is expressed as though a decision had been taken by the Institute. There is no reference in it to other or alternative views within this body. It not only reverses the earlier expression of opinion regarding the £ sterling, but it also drops any mention of the word 'members'. Yet it was a volunteered statement, and, clearly, it purported to be on behalf of the Institute as a whole, because otherwise there could be no justification for sending it. It is an example of what is referred to in *The Organization Man* as 'harmonious group thinking'.

It implies a unanimity which does not exist. Why mislead the Chancellor on this point? Why not face up to the fact that there is a good deal of scope for differences of opinion, and that members appear to be divided on the question as to which system to adopt. That is the answer to the question which was asked.

You may have seen a recent article on the Institute examinations which said:

'Countless thousands of examinees have received this advice: "Read the question!" Many of them still fail to do so . . .'.

Taking the motion as a whole, then, what is it that has been left to be desired? I suggest:

(1) that the subject of decimalization of our currency should now be treated openly and frankly;

(2) that the arguments for and against the various possible systems, as already known to the Council, should be supplemented if necessary and made available to all members by circular or by publication in the journals;

(3) that an *ad hoc* committee be set up:
   (*a*) to review the work already done;
   (*b*) to issue information to members;
   (*c*) to consider what can best be done to ascertain the views of members;
   (*d*) to advise the Council on the form of statement required to remove any misunderstandings arising from the memorandum;
   (*e*) to issue a statement setting out in the fairest possible way the expressions of opinion found to be held by members of the Institute, or else to state clearly that this *has* not, and cannot, be done.

I have not come forward from any desire for personal publicity, but solely in order that these points may be presented to you. I hope that prompt and suitable action will be taken, and that I may be allowed to return to well-merited obscurity.

Thank you, Mr President, and members, for allowing me to present this motion; I have already read the text of it to you, and I move accordingly.

The President: Thank you Mr Armitage. Now I shall want a seconder for that.

Mr B. J. M. Boys, F.C.A.: The proposer of the motion which is now before you has made it clear that, though it is admittedly critical, it is not an attack upon our Council or on any of its members. I associate myself completely with that approach to this debate, as I have the greatest admiration and gratitude for the work done by our Council on our behalf. I suggest, therefore, that the motion does no more than draw attention to the fact that even the members of our Council are human like the rest of us.

If I could have attended the annual meeting last year I should then have made some attempt to discuss the memorandum to the Chancellor. Unfortunately, I had a long-standing engagement on the Continent at that time, and could not be here in London as well. Mr Armitage, too, was abroad for some months in the early part of last year. I believe he went round the world, though not to study currency questions. The delay may not be a disadvantage, because decimalization being now the declared policy of Her Majesty's Government, the matter is more topical today than it was a year ago.

The motion specifies four reasons for the feeling that the treatment of the question has been unhappy, and the proposer in his remarks has dealt with them in some detail. The reasons given are stated as facts, which I believe cannot be contradicted and, if that is the case, then I suggest that the motion must be supported.

The first reason given makes reference to the difference between the recommendation made to the British Association for the Advancement of Science and that made to the Chancellor of the Exchequer. A change of mind is by no means a bad thing in itself. Emmerson wrote that 'a foolish consistency is the hobgoblin of little minds' but if a change of mind takes place, and certainly when that change purports to be made on behalf of the members of such a body as ours, the reasons for it should be clearly and forcibly stated. In the memorandum, however, there was not a word referring to the earlier recommendation which had had overwhelming support in the joint report and, as members of the Institute, we have never been given a word of explanation to account for the change of view.

Mr President, this subject is much too important for mere debating points, but I would suggest to you that the *in*consistency to which I have just been referring, contrasts oddly with the *con*sistency with which the general rule regarding the confidential nature of papers issued by the Council has been applied – I suggest, quite inappropriately, in this connection.

The background to this motion is, of course, the memorandum to the Chancellor.

It was there that the change of mind was made apparent, and I must submit that, on other grounds also, that paper was not worthy of the Institute.

Its subject was a matter of outstanding public importance and one would have expected, therefore, that it would have been drafted with, if anything, even more care than that given to the Council's normal pronouncements which deal with matters of much more limited interest. Such papers are usually carefully reasoned and tend, if anything, to err on the side of caution. The memorandum, however, is full of emphatic expressions of opinion stated as if they were facts and is almost completely barren of reasoned argument based on facts and supported by evidence.

I do not wish to be accused of following that example and I, therefore, choose just two of the many points which might be instanced to justify my opinion. They both

occur in the very first sentence of the paper which ran thus: 'The advantages of possessing a decimalized currency are widely known and not seriously disputed.'

That sounds like a statement of fact, but I suggest that it is merely an expression of opinion, and perhaps just a little smug. 'Widely known' may, of course, be intended to refer to members of the Institute, but it does not say so. I would suggest that, except perhaps in the City of London, a considerable majority of the replies to a Gallup Poll on the subject would show a complete ignorance of decimalized currency and only a tiny fraction would have a clue as to its advantages.

If I may digress for a moment, Mr President, I would ask you to remember that those replies would be given by the people mainly concerned by any change, because it would affect their daily dealings. Surely, their convenience is worth some consideration. That point was clearly made in the joint report, but it was ignored in our memorandum and, as a body of professional people, have we not a responsibility to the community as well as to our clients' convenience?

Then for my second point – advantages are 'not seriously disputed'. That may be true, though not quite true of members of the Institute, but it is not restricted to them and, in any event, they had not been asked. It is certainly not the universal truth which the statement seems to imply.

The advantages are, in fact, disputed by Professor Aitken, a most distinguished mathematician, who also happens to write English which it is a pleasure to read for its clarity and precision. Then Mr Phillips, an actuary, disputes the advantages. He wrote a delightful article which appeared in *The Accountant* three weeks ago, and which dealt with the matter in devastating fashion. There are others who have similar views, even in the Institute and, at the risk of an anti-climax I would add that I am one of them myself.

Mr President, those remarks of mine dealt with one sentence of a document of getting on for 1,000 words. If I were to go through them all there would be no Guildhall banquet this evening; but I trust I have made my point.

To sum up the memorandum, Mr President, the impression it made upon me was that, though the members of the Council are undoubtedly expert on matters of accounts, company law, taxation – and, no doubt, many other matters too, they were not so fully informed on this question of the currency; as a result, they had been carried away by the enthusiasm of a few who had formed a definite view of the matter. It is, I think, pertinent to add that there is one member of the Institute who probably has access to the largest fund of information at present available on the subject, but he was at no time consulted in connection with the preparation of the memorandum.

In conclusion, Mr President, I believe that before a soundly based view on this matter can be expressed on behalf of our Institute, much more thought and much more inquiry is needed than it has yet received. I believe that the importance of the subject and the effects on the community of any change have been underrated.

I have expressed the opinion that the quality of the memorandum to the Chancellor fell very much below what might reasonably be expected of a pronouncement made in the name of our Institute, and I suggest that the unexplained change of mind which the motion criticizes is a matter on which members should feel concern. Mr President, I therefore feel obliged to ask that members will support the motion, which I accordingly formally second.

The President: Thank you Mr Boys.

Mr H. A. Benson, C.B.E., F.C.A.: As you know Mr President, I am chairman of the Parliamentary and Law Committee which is the committee of the Council which was responsible for dealing with these matters, and it may be thought appropriate that I should give some answer to the four points which were raised in the motion.

I would like to make it quite clear to this meeting straight away, lest there be any imputation cast upon the Council, that during this month a further reaffirmation has been made to Lord Halsbury's committee of the views which were expressed in the document of February 1961. The Parliamentary and Law Committee and the other supporting committees which I will refer to in a minute, and the Council, have reaffirmed the views they expressed in 1961 and see no reason to change them.

I think perhaps my best process to deal with this matter would be to take the four points which Mr Armitage has raised.

The first is the complaint that the Council has changed its mind. That is quite correct. In 1958 the Institute was asked to reply to a questionnaire issued by the Association for the Advancement of Science, which to the best of its ability it did. The Association made a long report and in the interim period a great deal of thought was given by a great many people and documents and memoranda were published. South Africa and Australia gave a great deal of time to this; South Africa to the point where it did, in fact, in February 1961 change its currency.

The Institute therefore re-examined the matter in the light of that new volume of information that was available. We went through the usual procedure which again I shall refer to in a minute, and, in the light of all that, the Council of the Institute changed its mind. You may think it right to make sport of the Council because it changed its mind: I would like to suggest to you that the Council might at least be respected, if not commended, for having the courage to do so in the light of the additional information which was then available to it.

Mr Boys: I would like to make it perfectly clear that there was no criticism whatsoever of that fact that the Council changed its mind. It was the fact that we were not told why.

Mr Benson: The second point which was raised in the motion was 'that the Council has not taken steps to ascertain and present . . .'. There are some minor imperfections in the wording and drafting of this motion and I do not know whether it means that a referendum should have been taken. If that was intended by the motion I say bluntly that the suggestion is absurd. It would be quite impossible for the Council to take a referendum of 35,000 members before it issued its views on the very large number of subjects which come before it day by day and week by week. The particular point goes on to say that there is evidence that they, that is the members of the Institute, are not unanimously in support of either of the opinions. Of course they are not unanimously in support. Anybody who has done any work for the Institute will be only too conscious of the fact that practically no document which is issued has unanimous support. Every document is debated. There are many conflicting and different views, and all that the Council can do, and all that it does, is to give what it believes to be the sum total of the balance of opinion in one direction or another. That has been recognized for a great many years.

The third point which is made is that the documents were marked 'Private and Confidential'. I do not know whether that was intended to suggest that the Council acted in a furtive and secretive way. If that was the intention I bluntly repudiate it, and the imputation should not have been made. But I have gone further than that. I have asked for an inquiry to be made as to the facts on this point. None of the documents which were passed from the Institute to the Taxation and Research Committee were marked 'Private and Confidential'. None of the documents issued in the Taxation and Research Committee were so marked either. There was not the slightest intention that there should be anything furtive about it which should prevent free discussion. The only point on which I should inform members is that the envelopes which were used by the Taxation and Research Committee in sending the papers to districts were so marked, because they are always so marked for all documents which are sent out.

In relation to both those points I would like to make it plain that the Council took every step, as it does in respect of all the documents which it issues, to try through the

established machinery to get the best informed opinion throughout England and Wales from its members. This document was considered by the Taxation and Research Committee; it was then circulated to the districts and considered by them; it came back to the Taxation and Research Committee in London; it then went to the Parliamentary and Law Committee and finally it went to the Council. At each stage the document was considered by people who may have been misguided, but at least they did their best. I do not want anybody to think that this document received any different treatment from any other document of this character which is issued by the Council.

The final point is that the Council 'expressed its opinion to the Chancellor in terms which presupposed that members of the Institute approved', and so on. I think that this meeting, Mr President, should be aware that the wording used at the heading of this document is precisely the same as the wording *mutatis mutandis* which is used for all documents which are issued by the Council. It implies this was the Council's view. Nobody in their senses would believe that every time the Council issued a document it took a referendum of its 35,000 members. But there is something else which I think this meeting also ought to be aware of. This document was issued in February 1961. I have caused an inquiry to be made and there has not been one single protest received by the Institute from any single member until this motion was put before this meeting. In fifteen months not one single member thought fit to protest, to object, to take any view whatsoever to the contrary. I read the professional Press as best I can, and I cannot remember in that fifteen months any protest of any substance which has been ventilated in the professional Press. It makes me feel, Mr President, that the views which Mr Armitage and Mr Boys have expressed are not widely supported.

But, there is one wider issue, Mr President, which I think I must draw the meeting's attention to, and that is the time and effort that goes into the study of these matters – it is very considerable. It involves a very large number of people in all parts of the country. It is extremely dispiriting, however it may be dressed up at this meeting, to have a public rebuke addressed to the Council on the work which has been done by the members of the profession who have voluntarily given their time to do it. I do think that those members who have strong views on technical subjects, who wish to have their views represented to the Chancellor, and the other people to whom the Institute directs its documents, if they wish those views to be known, should come and work on the Taxation and Research Committees throughout the country, and on the district societies and on the main Taxation and Research Committee, and eventually maybe, on the Council itself, where full weight to their views will be given. But it will do no possible good, not having done any of those things, publicly to rebuke the Council at a General Meeting. In the light of those observations, Mr President, I suggest to this meeting that it would be quite inappropriate to allow this motion to be carried. (*Acclamation.*)

The President: Does anybody else wish to speak?

A Member: May I ask on this topic, did the Council refer this question to the district societies for their opinions.

Mr Benson: It went through the usual machinery to all the Taxation and Research Committees throughout the country, which is the normal channel for technical documents.

The President: Mr Armitage, do you wish to press this? If so, I shall have to put it to the vote. I do not want to have a vote if I can avoid it. I think I know the way it will go. I do not want to, but I am prepared to put it to the vote here and now.

Mr Armitage: Mr President, I thank you very much for those remarks. If I may be permitted to make just two comments on Mr Benson's remarks, I think I will have no hesitation at all in withdrawing this motion because I think sufficient has been said to show that it is worthy of thought. You see, we are told that these documents were not marked 'Private and Confidential'; it was only the envelopes in which they were sent. I do not think that that is any answer to my statement that there has been secrecy. I do not think that is any answer to the fact that when I wrote to inquire what this new information was that caused this change of mind, I was told it was not available to me. I am supposed to take an interest, and I do take an interest, in the Institute's affairs, but no, 'I am unable to make the documents available'.

This fresh information; I still ask for it and Mr President, in withdrawing the motion I do ask that fresh information should be made available to me – in confidence if you like – and I shall say no more about it. I shall leave it to the wisdom of the Council to publish such as it considers fit. Equally it is very fit that the Halsbury Committee which is in session I understand at the moment should have this information. You see, last year, quite apart from the fact that I was abroad, the Council had written to the Chancellor of the Exchequer giving this statement. Members were not invited to say anything. You say there were no complaints; but how can you complain – the Chancellor might at that very moment have agreed and said, yes, we are going to decimalize on this ten-bob basis. We were stopped from any comments.

Now, the sole reason why I felt sufficiently that there is an opportunity for bringing it up at all is because the Chancellor did not accept that and the other statements as being conclusive and he did appoint the Halsbury Committee at the end of last year. That was my opportunity, having already written to you, sir, proposing that we should have a further look at the matter, and I wrote again in January saying, 'Right, well now the Halsbury Committee has been appointed, can we have some further information about this?' Nothing was published as a result of that either. No; there is no question of an attack, Mr President. If you will look at the facts, and I only ask that, you will see that the memorandum sent to the Chancellor was not a reply to the Earl of Dundee's request for information, and with the permission of my seconder I do formally, Mr President, out of respect to you and the Council, withdraw the motion. (*Acclamation.*)

Mr Boys: Mr President, that does require my consent, and it will be given. I do, however, resent, if I may say so, the tone of Mr Benson's remarks. He accused the proposer and myself of making innuendoes, and I am quite certain that there were none in anything that we said. I think he must have written his remarks before he heard what we had to say.

The second suggestion that Mr Benson made was that if we wanted to do some work let us get into the district societies and do it. Mr President, I have been president of my society; I was one of the original members of the Taxation and Research Society when it was Taxation and Financial Relations Committee – almost prehistoric – and I was chairman of my own district society. (*Applause.*)

The President: I think, Mr Boys, I will say that Mr Benson made one or two of his remarks in a Pickwickian sense.

RESULTS OF VOTING FOR THE COUNCIL

I have now received the voting paper setting out the votes recorded for the election of eleven members of the Council and this reads: R. Barlow, V.R.D., F.C.A., 62; H. A. Benson, C.B.E., F.C.A., 268; P. F. Carpenter, F.C.A., 285; D. V. House, F.C.A., 277; E. N. Macdonald, D.F.C., F.C.A., 281; J. H. Mann, M.B.E., M.A., F.C.A., 276; F. E. Price, F.C.A., 285; L. W. Robson, F.C.A., 278; J. D. Russell, M.A., F.C.A., 282; J. C. Montgomery Williams, F.C.A., 277; R. P. Winter, C.B.E., M.C., T.D., D.L., F.C.A., 279; Sir Richard Yeabsley, C.B.E., F.C.A., 281.

I therefore declare that the retiring Council members are re-elected.

A Member: Mr President, sir, in view of the fact that this vote represents under 1 per cent of the Institute membership, will you have a postal ballot in order that those members who are not present can participate?

Mr Appleyard: May we know what the cost of the posal ballot will be?

The President: The cost of a postal ballot would be – I do not want to be pinned down to the exact one hundred pounds – in the region of £3,500.

Mr R. E. Warlow, T.D., F.C.A.: I think this is perfectly ridiculous. It is just a pig in a poke. We are supposed to be reasonably intelligent and sensible people and to ask for a ballot thinking that it will go any different than it did today is impossible. I do think that on reflection the proposer of this motion – perhaps he will not find a seconder – but I do think that unless it is laid down in the bye-laws of the Institute that you must have a postal ballot this is the most impracticable thing I have ever heard of. (*Hear, hear.*)

The President: I must explain this. We must have a ballot if twenty-five members personally present sign a request for a poll. Can I ask if there are twenty-five members present who wish to sign a form asking for a poll? Will those who wish to sign a form to that effect please put up their hands? (*Eight hands raised.*) Then there is nothing you can do. (*Acclamation.*)

Does the meeting approve of the withdrawal of Mr Armitage's motion? (*Agreed.*) Thank you very much.

SECOND DECIMAL COINAGE MOTION

Now, the next item is in the hands of Mr Cleminson. (Motion in Mr Cleminson's name: 'That decimalization of the currency is to be welcomed, provided that the £ sterling is retained'.)

Mr L. P. Cleminson, M.A., F.C.A.: Mr President, I should very much like, in view of what has already been said, and in deference to you and the Council – I am sure you appreciate that no criticism was intended; I supported the previous motion – I should like permission to withdraw this motion also, in the hope that you will make available the reasons for the change in view which the Council announced, and also that further discussion may be held on this very important question which is a rather more important and widespread opinion than many of the ones which are discussed and will affect the lives of far more people in the country. May I have permission, Mr President, on those terms, to withdraw the motion?

The President: I do not think I can commit the Council in the form in which you have suggested that I should. . . .

Mr Cleminson: Mr President, I was expressing a hope.

SPECIAL MEETING

The President: Well, ladies and gentlemen, we now proceed to the special meeting and I take it you will accept the notice convening the meeting as read? (*Agreed.*) The special meeting is for the purpose of considering the adoption of a new bye-law 47. The reason for the proposal is fully explained in the explanatory note on the notice convening this meeting. There is no need for me, I think, to repeat it, and I therefore propose the resolution as set out in the notice for the adoption of a new bye-law 47 and I will ask the Vice-President to second that.

The resolution was as follows:

'THAT the following bye-law 47 be made and adopted as a bye-law of the Institute in substitution for and to the exclusion of the existing bye-law 47:

Proposed new bye-law 47

47. A member of the Institute practising under the title of a firm in partnership with any person not a member of the Institute or of any institute or society of chartered accountants in the British Commonwealth of Nations approved by the Council shall not use after the title of that firm the initials F.C.A. or A.C.A. or describe the firm in any way whatever as chartered accountants: Provided that where any such institute or society has been so approved the approval shall not cease to be effective for the purpose of this bye-law by reason only of the country concerned having ceased to be within the British Commonwealth of Nations.

PROVIDED ALWAYS that the Council be hereby empowered to accept any alteration in or addition to the foregoing new bye-law which may be required by the Lords of Her Majesty's Most Honourable Privy Council as a condition precedent to the allowance of such bye-law.'

Vice-President: I second the resolution.

The President: The resolution has now been proposed and seconded. Does any member wish to speak? (*A pause.*) Those in favour? Those against? Thank you very much indeed. Now, that, I think, concludes the business of the meeting.

VOTE OF THANKS TO THE PRESIDENT

Mr G. F. Ansell, F.C.A.: Ladies and gentlemen, there is one other very essential piece of business which does not appear on the order paper. I claim the privilege of proposing, in your names, a hearty vote of thanks to our President for presiding at the annual meeting and the subsequent special meeting. (*Hear, hear.*) There is a law attributed to a former City celebrity whose name is perpetuated in these parts, a law incidentally not inappropriate to this meeting. I refer to Gresham's Law which as you know, says 'bad currency drives out good'. Now, if that law can apply not only to currency but also to presidents, I am glad to say that our president is the exception which proves the rule. (*Laughter.*)

Those of us who have got to know the president during the last year are convinced that he is a good president and we are delighted that he has not been driven out during his year of success. In thanking you, sir, for presiding at today's meeting I think I should also, on behalf of all of us, thank you and your colleagues on the Council and if I may say so, to the Institute's staff, and in particular Mr MacIver, for all they have done for us during the past year. We do appreciate this, thank you for it, and offer you our best wishes for the future. Ladies and gentlemen, I am sure that does not require a seconder, and may I suggest we show our appreciation to the President in the usual way. (*Acclamation.*)

The President: Thank you very much indeed, Mr Ansell, for what you have said. I have no speech prepared because you do not do this job more than once, so all I can do is to say thank you all very much indeed for being helpful over this meeting. Thank you very much indeed, and I would also like to accept on behalf of the Council and the staff of the Institute their inclusion in that vote of thanks, and include them in these all too poor remarks. Thank you all very much.

THE INSTITUTE OF CHARTERED ACCOUNTANTS IN ENGLAND AND WALES

SPECIAL AND ORDINARY MEETINGS OF THE COUNCIL

At special and ordinary meetings of the Council held on Thursday, May 3rd, 1962, at the Hall of the Institute, Moorgate Place, London EC2, there were present:

Mr P. F. Granger, President, in the Chair; Mr P. F. Carpenter, Vice-President; Messrs J. Ainsworth, C.B.E., J. F. Allan, E. Baldry, O.B.E., C. Percy Barrowcliff, W. L. Barrows, T. A. Hamilton Baynes, J. H. Bell, H. A. Benson, C.B.E., Sir William Carrington, Messrs G. T. E. Chamberlain, D. A. Clarke, J. Clayton, C. Croxton-Smith, E. Hay Davison, W. G. Densem, S. Dixon, Sir Harold Gillett, Bt, M.C., Messrs J. Godfrey, G. G. G. Goult, L. C. Hawkins, J. S. Heaton, D. V. House, J. A. Jackson, H. O. Johnson, W. H. Lawson, C.B.E., H. L. Layton, R. B. Leech, M.B.E., E. N. Macdonald, D.F.C., R. McNeil, J. H. Mann, M.B.E., R. P. Matthews, W. Bertram Nelson, C.B.E., W. E. Parker, C.B.E., S. J. Pears, C. U. Peat, M.C., F. E. Price, L. W. Robson, Sir Thomas Robson, M.B.E., Messrs J. D. Russell, R. G. Slack, D. Steele, J. E. Talbot, A. G. Thomas, A. H. Walton, V. Walton, F. J. Weeks, M. Wheatley Jones, E. F. G. Whinney, J. C. Montgomery Williams, R. P. Winter, C.B.E., M.C., E. K. Wright, Sir Richard Yeabsley, C.B.E.

The late Harold Garton Ash, O.B.E., M.C., F.C.A.

The Council received with much regret notice of the death of Mr Harold Garton Ash, O.B.E., M.C., F.C.A., London, a member of the Council from 1938 to 1958 and President for the year 1950–51.

Terms Used in Published Accounts of Limited Companies

The Council's notes on *Terms Used in Published Accounts of Limited Companies* (announced by the Council in January 1962) will be distributed to members on May 4th, 1962, as part of Supplement No. 11 to the *Members' Handbook*. The notes are also available for purchase in booklet form on application to the offices of the Institute, price 5*s* per copy including postage. (*Remittances must accompany orders.*)

Decimal Currency

A memorandum has been submitted to the Committee of Inquiry on decimal currency.

Income Tax Return Forms

On the report of the Parliamentary and Law Committee, after consideration of a memorandum from the Taxation and Research Committee, the Council authorized the submission of a memorandum to the Chairman of the Board of Inland Revenue suggesting improvements which might be made in certain of the income tax return forms.

Registration of Articles

The Secretary reported the registration of 142 articles of clerkship during the last month, the total number since January 1962 being 849.

Admissions to Membership

The following were admitted to membership of the Institute:

Barrie, Geoffrey Richard Anthony, A.C.A., *a*1962; 55 Bernard Avenue, Toronto 5, Ontario, Canada.
Corry, Roger Clive, A.C.A., *a*1962; 21 Glennie Road, West Norwood, London SE27.
Cowie, (Miss) Rachel Margaret, A.C.A., *a*1962; 18 Tregunter Road, London SW10.
§David, Edward Gerhardt, A.S.A.A., *a*1962; c/o The Standard Bank of South Africa Ltd, 63 London Wall, London EC2.
Delahaye, Terence Donald, A.C.A., *a*1962; 11A Southfield Avenue, Castle Bromwich, near Birmingham.
§Horne, Peter Jeremy Chadwick, A.S.A.A., *a*1962; with Compton & Horne, 2nd Floor, Colonial Mutual Building, West Street, Durban.
Howell, David Glyn, A.C.A., *a*1962; 24 Langley Crescent, St Albans, Herts.
Lutfi, Madhat Izzat, B.COM., A.C.A., *a*1962; with †Whinney, Murray & Co, Balfour Beatty Building, Mansur Street, Karradat Marian (P.O. Box 108), Baghdad, Iraq.
Maher, Peter Joseph, A.C.A., *a*1962; Spring Bank, Moorend, Mellor, Stockport.
Morton, Michael, A.C.A., *a*1962; 60 Windsor Road, Forest Gate, London E7.
§O'Meara, Robert Barry, A.S.A.A., *a*1962; P.O. Box 20138, Nairobi, Kenya.
Owen, Hugh Charles, A.C.A., *a*1962; 42 Forefield Lane, Great Crosby, Liverpool 23.
Rogers, David Michael, A.C.A., *a*1962; 77 Combfield Drive, Darenth, Dartford, Kent.
Turner, Edward Morton, A.C.A., *a*1962; 13 Hall Place Gardens, St Albans, Herts.

Fellowship

The Council acceded to applications from fifteen associates to become fellows under clause 6 of the supplemental Royal Charter.

Members Commencing to Practise

The Council received notice that the following members had commenced to practise:

Alexander, Bernard, B.COM., A.C.A., *a*1958; Alexander, Meek & Co, 80 Wimpole Street, London W1.
Alton, Albert Geoffrey Robinson, A.C.A., *a*1961; *Hunter, Jones, Alton & Co, 36 Bridge Street, Belper, and at Derby.
Atkinson, Robert Bruce, A.C.A., *a*1962; Bruce Atkinson & Co, 11 St Leonards Gardens, Hove, Sussex.
Bailey, Roy Anthony, A.C.A., *a*1955; Baker, Sutton & Co, Eldon Street House, Eldon Street, London EC2.

---

a indicates the year of admission to the Institute.
aS indicates the year of admission to The Society of Incorporated Accountants.
§ means 'incorporated accountant member'.
Firms not marked † or * are composed wholly of members of the Institute.
† against the name of a firm indicates that the firm, though not wholly composed of members of the Institute, is composed wholly of chartered accountants who are members of one or another of the three Institutes of chartered accountants in Great Britain and Ireland.
* against the name of a firm indicates that the firm is not wholly composed of members of one or another of the three Institutes of chartered accountants in Great Britain and Ireland.

Ball, Robert Kenneth, A.C.A., *a*1958; Ford, Bull, Ellis & Sales and Walter Oppenheimer & Co, 1 Verulam Buildings, Gray's Inn, London WC1.

Barfoot, Paul Wildboar, A.C.A., *a*1961; W. T. Walton & Son and Basil L. Denton & Co, Marlow House, Lloyd's Avenue, London EC3, and at Liverpool and West Hartlepool; also at Stockton-on-Tees, W. T. Walton, Son & Rowland.

Berringer, John Francis, A.C.A., *a*1962; F. W. Berringer & Co, 8 Widmore Road, Bromley, Kent.

Bleazard, Keith, A.C.A., *a*1959; Bowman, Grimshaw & Co, 26 Birley Street, Blackpool, and at Fleetwood and Garstang.

Brown, John Auckland, F.C.A., *aS*1951; Leonard C. Bye, 80 Borough Road, Middlesbrough.

Bryan, James Charles, A.C.A., *a*1952; Bowman, Grimshaw & Co, 26 Birley Street, Blackpool, and at Fleetwood and Garstang.

Burch, William Edward Victor, T.D., M.A., F.C.A., *a*1932; Dene Cottage, Linersh Wood, Bramley, Guildford, Surrey, and at London.

Chance, Brian, F.C.A., *a*1951; Wilkins, Kennedy & Co, 8 Queen Street, Cheapside, London EC4, and at Amersham and Southend-on-Sea.

Cohen, Leonard, A.C.A., *a*1960; Leonard Cohen & Co, 11 Parsons Crescent, Edgware, Middlesex.

Cotton, Antony David, B.A.(COM.), A.C.A., *a*1957; Morris, Gregory & Co, 3 York Street, Manchester 2, and at Macclesfield, Oldham and Widnes.

Cross, John Dennis, A.C.A., *a*1958; *Chater & Myhill, 10 Jesus Lane, Cambridge, and at Ely and Saffron Walden.

Cundle, Alfred Ernest, A.C.A., *a*1961; Hinde, Galt & Co, 20 High Row, Darlington.

Darlington, Herbert Terrill, A.C.A., *a*1959; *Whitaker, Redfearn, Pappin & Co, Bryndon House, 5 Berry Road, Newquay.

Davis, David Philip, A.C.A., *a*1954; Roberts, Raynor & Co, 84 High Road, Beeston, Notts.

Denning, John Michael Dupre, A.C.A., *a*1958; Victoria House, Wogan Ter, Saundersfoot, Pembrokeshire.

Dore, Brian James, A.C.A., *a*1958; *Messenger & Kirkman, 4 King Edward Street, Oxford, and at Bicester.

Edwards, Peter George, F.C.A., *a*1939; F. Sykes & Co, 4 Tokenhouse Buildings, King's Arms Yard, Moorgate, London EC2.

Frost, Roger Nicholas, A.C.A., *a*1956; W. G. Hawson, Wing & Co, Hartshead Chambers, Sheffield 1.

Gilbert, Malcolm Henry, A.C.A., *aS*1956; W. Vincent Vale & Co, 16 Waterloo Road, Wolverhampton.

Goodin, John George, A.C.A., *aS*1955; Tayler, Hounsfield & Co, Coventry House, South Place, Moorgate, London EC2, and 10 Station Parade, Balham, London SW12.

Greenwood, Jeffrey Wyndham, A.C.A., *a*1956; Moore & Smalley, 9 Chapel Street, Preston.

Gregory, (Miss) Ethel Mary, A.C.A., *a*1961; Pulleyn, Heselton & Co, 10 York Place, Scarborough, and at Bridlington and York.

Griffiths, Robert Frederick, A.C.A., *a*1954; Clement Keys & Son, Chamber of Commerce House, Harborne Road, Birmingham 15, and at West Bromwich.

Ham, Roy, A.C.A., *a*1953; Percy Westhead & Co, 1 Cooper Street, Manchester 2.

Hay, John, A.C.A., *a*1962; W. T. Walton & Son and Basil L. Denton & Co, 135 The Albany, Old Hall Street, Liverpool 3, and at London and West Hartlepool; also at Stockton-on-Tees, W. T. Walton, Son & Rowland.

Henderson, Ian Ralph, B.SC.(ECON.), A.C.A., *a*1958; G. E. Holt & Son, 'C' Building, Queen Insurance Buildings, 10 Dale Street, Liverpool 2, and at London.

Hine, Peter Guy, A.C.A., *a*1962; Soole & Co, 22 Southampton Place, London WC1.

Hodgson, Cedric Jerome, A.C.A., *a*1959; A. & C. Surrey & Co, Portland House, 73 Basinghall Street, London EC2.

Honey, Derek Charles, A.C.A., *a*1959; *Messenger & Kirkman, 4 King Edward Street, Oxford, and at Bicester.

Howell, Anthony Edward, A.C.A., *a*1960; 49 Keevil Drive, Wimbledon Park, London SW19.

Hubbold, Clifford Edward, A.C.A., *a*1958; Herbert Pepper & Rudland, Beacon Buildings, Leighswood Road, Aldridge, Staffs, and at Walsall.

Inskip, John Geoffrey, A.C.A., *a*1960; 29 Goldington Road, Bedford.

Janney, Peter Richard, A.C.A., *a*1959; Shelvoke, Pickering, Janney & Co, 36 Cannon Street, Birmingham 2.

Kaplin, Alan Vernon, A.C.A., *a*1959; 15 Chagford House, Devons Road, Bow, London E3.

Kershen, Martin Bernard, A.C.A., *a*1961; Kershen, Fairfax & Co, 26 Dorset Street, Gloucester Place, London W1.

Ledward, John Miles, A.C.A., *a*1955; Central Hall, 268 High Street, Slough.

Le Neve Foster, Patrick Vivian, B.A., A.C.A., *a*1959; Hughes & Allen, Kingsway House, 103 Kingsway, London WC2.

Lickiss, Michael Gillam, B.SC.(ECON.), A.C.A., *a*1959; *H. P. Webster, Lickiss & Co, Britannic House, St Peters Road, Bournemouth.

Mace, William Edward, A.C.A., *a*1960; Brynmor Jones, Mace & Co, 17 Wyndham Street, Bridgend, Glam.

Millar, Ronald Norman, A.C.A., *a*1960; Clapton & Millar, Mitre Chambers, 75 New Street, Salisbury, Wilts.

Mills, Arthur Patrick, A.C.A., *a*1955; †Layton-Bennett, Billingham & Co, 23 Blomfield Street, London EC2.

Mills, Peter Derek, A.C.A., *aS*1954; W. G. Hawson, Wing & Co, Hartshead Chambers, Sheffield 1.

§Moate, Keith Alan, A.S.A.A., *a*1961; David Moate & Co, 40/41 St Andrew's Hill, London EC4.

Moritz, Brian Michael, A.C.A., *a*1961; B. M. Moritz & Co, 8 Moorfields, London EC2.

Munyard, Roger Charles, A.C.A., *a*1956; Temple, Gothard & Co, 7/8 Norfolk Street, Strand, London WC2, and 16 Newington Green, London N16.

Nash, Harry, A.C.A., *a*1962; H. Nash & Co, 24 Rostrevor Avenue, London N15.

Park, Ian Watret, A.C.A., *a*1958; *Messenger & Kirkman, 4 King Edward Street, Oxford, and at Bicester.

Parry, Mathew Wyn, A.C.A., *a*1961; J. Llywelyn Hughes & Co, 5 Denbigh Street, Llanrwst, Denbighshire, and at Blaenau Ffestiniog.

Pizzey, John Howard, A.C.A., *a*1962; Carnaby Harrower, Barham & Pykett, 28 Queen Street, London EC4.

Prest, Charles David, A.C.A., *aS*1957; 12 The Gallop, Sutton, Surrey.

Price, Peter Norman George, A.C.A., *a*1952; †Brown, Fleming & Murray, 4B Frederick's Place, Old Jewry, London EC2.

Quayle, James, B.COM., A.C.A., *a*1955; *Reginald Statham & Co, 11 Brunswick Street, Newcastle, Staffs.

Radford, Hugh John-Fisher, A.C.A., *a*1961; Radford, McColl & Co, 12 Portland Street, and 57/61 Shirley High Street, Southampton.

Radford, Michael Gordon Victor, A.C.A., *aS*1956; Radford, McColl & Co, 12 Portland Street, and 57/61 Shirley High Street, Southampton.

Read, Derek John, A.C.A., *aS*1957; *G. W. Hunt & Co, 29 Reckleford, Yeovil, Somerset.

Rex, Norman, A.C.A., *a*1960; *Parker & Glentworth, 17 Hainton Avenue, Grimsby.

Robinson, Peter, A.C.A., *a*1953; *Hare, Robinson & Co, Barclays Bank Chambers, High Street, Barmouth, and at Portmadoc.

Roby, John Latham, F.C.A., *a*1939; W. F. Bridgwater & Scurrah, 3 Cherry Street, Birmingham 2.

Rose, Charles George Ian, A.C.A., *a*1956; Hudson Smith, Briggs & Co, Stanley Holmes & Co, and Henry Anstey, Grover & Co, St Giles House, 11 Quay Street, Bristol 1; also at London, Hudson Smith, Briggs & Co.

Ryley, Clive Bernard, A.C.A., *a*1959; Austral Ryley & Co, Central Chambers, Bearwood Road, Smethwick 41, Staffs.

Sharp, Leslie Norman, A.C.A., *aS*1956; Arnold Smith & Co, Welland House, High Street, Spalding, Lincs.

Smith, David Mowbray, A.C.A., *a*1961; Arnold Smith & Co, Welland House, High Street, Spalding, Lincs.
Smith, David Revell, F.C.A., *a*1952; Day, Smith & Hunter, Star House, Maidstone, Kent, and at Gravesend and Harrow.
Starmer, Roger John, A.C.A., *a*1961; Howard Smith, Tinkler & Co, 16 Hazelwood Road, Northampton.
Stirling, William Leslie Paul, A.C.A., *a*1952; C. Percy Barrowcliff & Co, 68/70 Corporation Road, Middlesbrough, and at Leeds, Newcastle upon Tyne and Wakefield.
Thomas, Samuel Howell Davies, F.C.A., *aS*1938; White, Williams & Co, 9 Nevill Street, Abergavenny, Mon.
Townsend, George Bernard, A.C.A., *a*1960; 14 Church Road, Shaw, Oldham.
Turnbull, Ivor Stuart, A.C.A., *a*1958; Prior & Palmer, General Buildings, Bridlesmith Gate, Nottingham.
Vaux, Philip, B.A.(ECON.), A.C.A., *a*1962; Smith, Pugh & Co, Deason House, 23 Henry Street, Keighley, and at Skipton.
Wagstaff, Arthur Benjamin, A.C.A., *a*1962; Soole & Co, 22 Southampton Place, London WC1.
Wenborn, Colin Michael, A.C.A., *aS*1955; Davie, Parsons & Co, 18 Finsbury Circus, London EC2.
Whiteley, Arnold, F.C.A., *a*1933; 32 Northumberland Street, Morecambe & Heysham, Lancs.
Wilkes, David Leslie, A.C.A., *a*1960; *Dyke, Ruscoe & Hayes, 41 Mill Street, Ludlow, Shropshire.
Witherden, David Edwin, F.C.A., *aS*1951; 60 Rochford Avenue, Little Heath, Chadwell Heath, Essex.

Readmission to Membership

Subject to payment of the amount required by the Council, one former member of the Institute was readmitted to membership under bye-law 38. One application under clause 23 of the supplemental Royal Charter for revocation of exclusion from membership was refused.

It was reported to the Council that the following readmissions, made at the Council meeting on April 4th, 1962, subject to payment of the amounts required, had become effective:

Pond, Douglas Sidney, F.C.A., Oberons Glade, Farley Heath, Guildford, Surrey.
Wicks, William Leonard, A.C.A., 'Cornerways', 1 Donaldson Road, Salisbury, Wilts.

Resignations

The Council accepted the resignation from membership of the Institute of:

Odell, George William, F.C.A., *aS*1910; 41 Sutherland Avenue, Bexhill-on-Sea.

Deaths of Members

The Council received with regret the Secretary's report of the deaths of the following members:

Allen, Robert, F.C.A., Newcastle upon Tyne.
Caddick, Francis Arthur, F.C.A., Campden, Glos.
Dawson, Frederick Herbert, F.C.A., Chesterfield.
Elwell, Colin Edward, F.C.A., Wolverhampton.
Florence, George Douglas, B.COM., F.C.A., Sutton, Surrey.
Hamilton, Norman, F.C.A., Edinburgh.
Houghton, William Edward, F.S.A.A., Wylam, Northumberland.
Johns, Charles Walter, F.C.A., London.
Johnson, William Richard, M.B.E., F.S.A.A., London
Latimer, Robert Andrew, F.C.A., Liverpool.

THE CHARTERED ACCOUNTANTS' BENEVOLENT ASSOCIATION

Seventy-sixth Annual Meeting

The seventy-sixth annual general meeting of The Chartered Accountants' Benevolent Association was held on May 3rd following the Institute's annual meeting. Sir William Carrington, F.C.A., President of the Association, was in the chair.

Sir William Carrington

Sir William said: It is my pleasure and privilege to propose the reception and adoption of the report and accounts of the Benevolent Association for the year ended February 28th, 1962. There is little to add, so far as the events of that year are concerned, to what is set forth in the printed report. But I would like to give you the results, thus far, of the appeal which went out after the end of the year and to which reference has been made. We have received sixty-five donations totalling £1,580, including one most generous donation of £1,000 3½ per cent War Stock. In addition, we have received 488 new deeds of covenant for an aggregate sum of £1,625 per annum and 194 new ordinary subscriptions for an aggregate sum of £434; so we have added £1,580 to our capital and £2,059 to our income.

Now, quite frankly, ladies and gentlemen, I hope that that is only a beginning because it means that thus far, out of some 35,000 members of the Institute, less than 5,000 are members of the Benevolent Association; and frankly, I do not think that is good enough. The way this Institute has increased in numbers in recent years means that in the years to come the calls on the Association will be infinitely greater than they have been in the past and it is only right and proper that the people of the present generation should measure up to their responsibilities; because it is out of the present generation of Institute membership that the beneficiaries of future years will come. So, may I express the hope that you and the district societies you represent will do all in your power to obtain a very material

increase in the membership of the Benevolent Association? With those remarks I propose the reception and adoption of the report and I will ask the President of the Institute to second the motion.

Mr P. F. Granger: I will second that motion.

The President: Are there any questions on the report and accounts? (*A pause.*) If not, I will put that to the meeting. Those in favour? To the contrary? Carried unanimously.

Now, I would like someone from the body of the hall to propose the re-election of the honorary auditors, Mr Leonard Walter Bingham, and Mr Leonard Pells, and perhaps when their re-election is proposed the proposer would be good enough to couple with it thanks to them for their services during the past year.

Mr R. H. R. Marshall: I have great pleasure in proposing that the honorary auditors, Mr Leonard Walter Bingham and Mr Leonard Pells, be re-elected for the ensuing year and that our thanks to them for their honorary services during the past year will be recorded.

Mr E. G. Chadwick: I have pleasure in seconding the resolution.

The President: I put that to the meeting. Those in favour? Thank you, all. That concludes the business of the meeting. I thank you for your attendance.

Mr R. L. Wyllie: Mr President, may I propose a vote of thanks to you, not only for presiding at this meeting but for the work you have done for this Association over many years and for the efforts you have made in this last year to increase our funds. We deplore the fact that some of our fellow members are backward in coming forward, but we do hope that with the example which has been inspired by you this year, we may see a further increase in the figures which you mentioned earlier; and on behalf of all those here I do wish to express our very sincere thanks to you for all you have done for the Benevolent Association. (*Carried with acclamation.*)

The President: Thank you, Mr Wyllie. Thank you, ladies and gentlemen.

Taxation Case

Littlewoods Mail Order Stores Ltd *v.* C.I.R.

In the House of Lords – April 17th, 1962

(Before Viscount SIMONDS, Lord REID, Lord HODSON and Lord DEVLIN)

Stamp duty – Ninety-nine-year lease held – Shorter lease granted by landlord – This lease assigned to subsidiary – Underlease back to parent company – Subsidiary's lease exchanged for landlord's freehold – Whether assignment a transfer from one company to another – Whether deed of exchange a conveyance on sale – Stamp Act, 1891, sections 54, 55, 56, 57, 58, 59, 60, 73, Schedule – Finance (1909–10) Act, 1910, section 74 – Finance Act, 1930, section 32 – Finance Act, 1938, section 50.

The appellant company (Littlewoods) held a ninety-nine-year lease at an annual rent of £23,444 from the Independent Order of Odd Fellows, and the lease had about eighty years unexpired. On December 8th, 1958, Odd Fellows granted a lease to Littlewoods for twenty-two years and ten days at a rent of £6 a year, and there was automatically a surrender of the ninety-nine-year lease. On December 9th, 1958, Littlewoods assigned the new lease to a wholly-owned subsidiary (Fork). On December 10th, 1958, Fork executed an underlease back to Littlewoods for twenty-two years at a rent of £42,450 a year. On December 11th, 1958, a deed of exchange was made between Odd Fellows and Fork, whereby the latter assigned the lease of twenty-two years and ten days to Odd Fellows subject to an underlease by Fork to Littlewoods, and Odd Fellows conveyed the freehold to Fork subject to the lease of twenty-two years and ten days. On December 12th, 1958, Fork executed a deed guaranteeing to Odd Fellows the payment of the rent of £42,450, and charged the freehold with the payment. On December 13th, 1958, Littlewoods executed a deed of indemnity in favour of Odd Fellows against stamp duty and penalties. The effect of these transactions was that Odd Fellows conveyed the freehold to Fork, and Fork no longer held the lease of twenty-two years and ten days, and Littlewoods held the lease of twenty-two years.

The Inland Revenue claimed stamp duty in respect of the assignment on December 9th, 1958, by Littlewoods to Fork of the lease of twenty-two years and ten days, and in respect of the deed of exchange, on December 11th, 1958, whereby Fork assigned that lease to Odd Fellows and obtained the freehold. It was contended on behalf of Littlewoods that the deed of assignment of December 9th, 1958, was exempt from duty under section 42 of the Finance Act, 1930, as its effect was to convey a beneficial interest in property from one limited liability company to another; and that the deed of exchange of December 11th, 1958, between Odd Fellows and Fork, whereby the lease for twenty-two years and ten days passed to Odd Fellows and the freehold to Fork, was not a conveyance on sale.

Held (affirming the decision of the Court of Appeal): (1) the lease of twenty-two years and ten days granted by Odd Fellows to Littlewoods was a conveyance for the purposes of section 50 (1) (*b*) of the Finance Act, 1938; that section 42 of the Finance Act, 1930, applied; and that stamp duty on this transaction was payable; (2) that the deed of exchange of December 11th, 1958, by Odd Fellows to Fork, whereby the latter assigned the lease of twenty-two years and ten days to Odd Fellows, and the latter conveyed the freehold interest to Fork, was not a conveyance on sale; and that stamp duty in respect of this transaction was not payable.

Notes and Notices

PROFESSIONAL NOTICES

MESSRS BAILEY, PAGE & CO, Chartered Accountants, of A4 Queen Insurance Buildings, 10 Dale Street, Liverpool 2, announce that Mr EDWARD HUGH PAGE, A.C.A., has been admitted into partnership as from May 1st, 1962. The name of the firm remains unchanged.

MESSRS W. F. BRIDGWATER & SCURRAH, Chartered Accountants, of 3 Cherry Street, Birmingham 2, announce that Mr JOHN L. ROBY, F.C.A., has been admitted into partnership as from April 6th, 1962. The style of the firm remains unchanged.

As from May 1st, 1962, the practice formerly carried on under the name of LUCIAN J. BROWN & NOTLEY, at Friars Chambers, Dock Street, Newport, Mon, is being continued under the name of NOTLEY & PEARSON, Chartered Accountants, at 8 Friars Street, Newport, Mon. There is no change in the partners comprising the firm, or in the location of the offices other than a different entrance. The new telephone number is Newport, Mon. 63963–4.

MESSRS FRANK A. COOPER & CO (E. DAVID BARD, F.C.A.) Chartered Accountants, of 21 Copthall Avenue, London EC2, announce that as from May 1st, 1962, they have admitted into partnership Mr JOHN E. TAYLOR, A.C.A., who served his articles with them and rejoined the staff last year. The firm's name is unchanged.

MESSRS FOLKES & CAMPBELL, Chartered Accountants, announce that as from May 1st, 1962, they have taken into partnership Mr JOHN RODERICK MIDDLE, B.A., A.C.A., who joined the firm in 1951. The practice will continue to be carried on under the name of FOLKES & CAMPBELL, at 15 and 17 Church Street, Stourbridge.

MESSRS H. NOEL FRENCH, ORMROD & CO, Chartered Accountants, of 3 Fenwick Street, Liverpool 2, regret to announce that Mr H. Noel French, F.C.A., who founded their firm in 1896, died on April 16th, 1962. [An obituary notice appears on another page of this issue.]

MESSRS HAYS, AKERS & HAYS, Chartered Accountants, of 30 Cursitor Street, London EC4, announce the retirement from the partnership at April 30th, 1962, of Mr A. D'AGAPEYEFF, A.C.A., on his appointment to the board of Computer Analysts and Programmes Ltd.

MESSRS HILTON, SHARP & CLARKE, Chartered Accountants, announce that by mutual consent the London partners, Mr G. P. CLARKE and Mr C. M. BAKEWELL, resigned from the partnership on April 30th, 1962. The practice will continue to be carried on by the remaining partners, Messrs G. R. CRONE, W. A. SUTHERLAND and A. G. LEE from 12–13 Ship Street, Brighton 1, and the style of the firm will remain unchanged.

MESSRS MCCLELLAND, MOORES & CO, Chartered Accountants, Glasgow, announce that Mr J. GORDON HAMILTON has been assumed as a partner as from May 1st, 1962.

MESSRS ROOKE, HOLT & CO, Chartered Accountants, of 83 Ebury Street, London SW1, announce that Mr PETER DAVID LYON-MARIS, A.C.A., has been admitted as a partner as from May 1st, 1962. The name of the firm remains unchanged.

MESSRS SAKER & DAVIS, Chartered Accountants, of Dashwood House, Old Broad Street, London EC2, announce that as from May 1st, 1962, certain sections of their practice will be continued in association with MESSRS HARMOOD-BANNER, CASH, STONE & MOUNSEY, who, with associated firms have offices in London, Liverpool, Portsmouth, Southampton, Chester, Manchester, Wrexham, Dublin, Lagos and Nairobi. Mr R. LANGDON DAVIS will continue as senior partner and will be joined by MR R. A. W. CAINE, MR L. H. CLARK, Mr M. H. CABOURN SMITH, MR G. H. HOVEY and MR G. E. HEDGMAN. The close and happy association between Mr LANGDON DAVIS and Mr JAMES DE MESTRE will continue in unison with the additional partners. Other sections of the practice will be continued by Mr R. LANGDON DAVIS as a separate firm under the style of SAKER & LANGDON DAVIS.

MESSRS STOY, HAYWARD & CO, Chartered Accountants, of 97 and 99 Park Street, London W1, announce that Mr H. TARLEY, F.C.A., retired from the partnership on April 30th, 1962.

MR H. TARLEY, F.C.A., announces that, with effect from May 1st, 1962, he has commenced to practise at Clements House, Gresham Street, London EC2.

MESSRS WENHAM BROTHERS & CO, Chartered Accountants, and Messrs MAJOR & CO, Chartered Accountants, announce that they have amalgamated their practices as from May 1st, 1962. On the same date the amalgamated practice was joined by the London partners of Messrs HILTON, SHARP & CLARKE, Mr G. P. CLARKE and Mr C. M. BAKEWELL, and also by Mr D. MORGAN JONES who has for some time been a member of the staff of Messrs WENHAM BROTHERS & CO. The partners of the new firm, which will practise under the firm name of WENHAM, MAJOR & CLARKE, will be Messrs R. H. BURDON-COOPER, G. P. CLARKE, A. M. M. BURDON-COOPER, C. M. BAKEWELL and D. MORGAN JONES who will be resident in London, and Messrs E. P. MAJOR, J. D. BECK, D. F. DODD, G. S. MAJOR and P. A. WHITEHEAD who will be resident in Birmingham. For the time being the practice will be carried on from the present addresses in London, Birmingham and Walsall.

MESSRS WRIGHT, STEVENS & LLOYD, Chartered Accountants, of Norfolk House, 7 Laurence Pountney Hill, London EC4, announce that MR ARTHUR C. MCMILLAN, C.A., and Mr MICHAEL GOSLING, A.C.A., have been taken into partnership as from May 1st, 1962. The name, address and telephone number of the firm remain unchanged.

Appointments

Mr L. J. Barry, A.A.C.C.A., has been appointed chief accountant of the Electricity Supply Board, Dublin, in succession to Mr Joseph Fogarty, B.COMM., A.C.A., who has retired.

Mr J. W. Bowerman, F.C.A., financial comptroller of Niarchos (London) Ltd, has been appointed a director with effect from May 1st, 1962.

Mr H. L. Cadoux-Hudson, M.A., A.C.A., managing director of Charterhouse Credit Co Ltd, has been elected to the committee of management of the Finance Houses Association.

Mr P. Ewen, F.C.A., has been appointed a director of Westinghouse Brake & Signal Co Ltd.

Mr Donald Giles, F.C.A., has been appointed a director of Burtonwood Engineering Co Ltd.

Mr J. W. Hearnshaw, F.C.A., has been appointed a director of The John Folkes Group Ltd.

Mr Peter Hemingway, F.C.A., has been appointed secretary of Leeds Permanent Building Society.

Mr W. R. Jones, F.C.A., secretary of J. W. Jackman & Co Ltd, has been appointed a director of the company.

Mr T. D. Kelly, F.C.A., has been appointed a director of The Warwick & Warwickshire Permanent Building Society.

Mr H. T. Nicholson, F.C.A., has been elected chairman of R. E. Jones Ltd and its subsidiaries in succession to Mr D. V. House, F.C.A., who has resigned following his appointment to the Restrictive Practices Court.

Mr J. M. T. Ross, M.A., A.C.A., has been appointed managing director of Ross Trawlers Ltd.

Mr W. J. Willcocks, F.C.A., has been taken into partnership by Capel-Cure Linton, Clarke & Co, stockbrokers.

Mr Leonard A. Woodburn, F.C.A., has been appointed a director of The International Tea Company's Stores Ltd.

OBITUARY

Mr Herbert Noel French, F.C.A.

We have learned with regret of the death on April 16th, at the age of 91 of Mr H. Noel French, F.C.A., of Heswall, Cheshire. Mr French served his articles with the late Mr T. W. Read, who was a leading Liverpool accountant and who played a prominent part in the establishment of the Institute in Liverpool.

Admitted a member of the Institute in 1894, Mr French started in practice in his own name in 1896 and founded the firm of H. Noel French, Ormrod & Co, Chartered Accountants, of Liverpool. In 1919 he left the firm in order to take up an appointment in industry where he continued right up to the time of his death.

Mr French had many outside interests in the course of his long life. Apart from serving on numerous committees, where his business acumen and integrity were held in the highest esteem, he had a great love of music and was particularly attracted to the organ. In spite of his advanced years he had very many friends of all ages.

Always a great believer in doing good in secret, very few knew the full extent of the help and encouragement he gave to those who had the privilege of knowing him. Many will join with his widow and daughter in mourning the passing of a true gentleman.

GRADUATED CONTRIBUTIONS

New Draft Regulations

The Minister of Pensions and National Insurance has asked the National Insurance Advisory Committee to consider and report on draft regulations[1] concerning graduated contributions in respect of holiday pay. These regulations make a technical amendment to secure that for the purpose of graduated contributions, certain holiday payments can be treated as forming part of the employee's ordinary series of payments even though calculated on a quite different basis.

The Committee will consider representations on these draft regulations received by them not later than May 22nd, 1962. Representations should be made in writing and should be sent to the Secretary, National Insurance Advisory Committee, 10 John Adam Street, London WC2.

PREVENTION OF FRAUD: INVESTMENTS

The 1962 edition of the annual publication *Particulars of Dealers in Securities and of Unit Trusts under the Prevention of Fraud (Investments) Act, 1958*, containing particulars of persons and firms authorized to carry on the business of dealing in securities as at January 31st, 1962, has now been issued by the Board of Trade. The publication contains the names and addresses of holders of principals' licences, of members of stock exchanges and of associations of dealers in securities which are recognized by the Board, and of exempted dealers. Particulars of unit trusts schemes authorized by the Board are also included. Copies from H.M.S.O., price 3s 6d.

EXPORT CREDITS GUARANTEE DEPARTMENT

Nottingham and Manchester Offices

The Nottingham Office of the Export Credits Guarantee Department has moved to Equitable House, Old Market Square, Nottingham; the telephone number remains unchanged – Nottingham 46585, and the office is now also available through the telex service – number 37566.

The Manchester Office of the department has moved to Britannic Building, Fountain Street, Manchester 2, telephone number Blackfriars 6236, telex 66756. The move is a temporary one pending a permanent move to a building now under construction in the central area.

THE ASSOCIATION OF CERTIFIED AND CORPORATE ACCOUNTANTS

International Congress Charter Flight

The Association of Certified and Corporate Accountants has arranged a charter flight London/New York/London from September 6th–30th at a cost of £64 per passenger return for members wishing to attend the Eighth International Congress of Accountants.

The charter flight is open to all members of the Association and their immediate dependants. We are asked to say that there is a small number of seats still available and any members interested in joining the flight should write immediately to the Secretary, 22 Bedford Square, London WC1, for further details.

CHARTERED ACCOUNTANTS' WEEK-END CONFERENCE

The third week-end conference arranged by Messrs Thornton Baker & Co, Chartered Accountants, took place recently at University College, Oxford.

Over one hundred members of the firm including partners and office managers were present. Talks, which were followed by discussions and questions, included 'Raising money for clients', 'Computers', 'The work of an issuing house' and 'Investigations by the reporting accountant for a public issue prospectus'. On Saturday afternoon there was an informal discussion on matters of general interest for local partners, managers and seniors of the firm. Sunday morning was left free and the course concluded on Sunday afternoon with a general discussion under the title of 'Pool of knowledge', at which members were able to raise matters of general interest.

THE EAST ANGLIAN CHARTERED ACCOUNTANTS' STUDENTS' ASSOCIATION

At the recent annual meeting of The East Anglian Chartered Accountants' Students' Association, the following officers were elected for the year 1962–63:

President: Mr B. W. Barbour, A.C.A.
Vice-President: Mr G. Wadwell, F.C.A.
Hon. Treasurer: Mr R. M. Burgess.
Hon. Secretary: Mr R. D. G. Wardle, Slater, Dominy & Swann, Sussex House, Hobson Street, Cambridge.

CONFERENCE ON INVESTMENT

'Investments in the Common Market' will be the theme of a one-day conference organized under the auspices of the *Investors Chronicle* to be held at The Connaught Rooms, Great Queen Street, London WC2, on May 17th.

The opening address will be given by Lord Robbins, C.B., B.SC.(ECON.), M.A., D.LIT., L.H.D., LL.D., F.B.A., and subjects of other addresses will include investment in West Germany, Italy, Belgium, Holland and France. 'The British viewpoint' will be given by Mr Harold Wincott, Editor-in-Chief, *Investors Chronicle*. The organizing secretary is Mr Philip Syrett, Angel Court Consultants Ltd, 4 Angel Court, London EC2, to whom all applications for tickets should be addressed.

'CITY OF LONDON' COURSE

Sixty senior banking and insurance officials from nineteen countries will visit the City of London shortly under arrangements made by the British Council. The officials are coming at their own expense as members of the British Council's ninth annual 'City of London' course from May 20th–June 1st.

Lord Ritchie of Dundee, Chairman of the London Stock Exchange, is chairman of an advisory committee consisting of leading members from representative organizations of the City which are co-operating with the Council in the arrangements for the course. The director of studies will be Mr W. Manning Dacey, economic advisor to Lloyds Bank.

The main part of the course will consist of a series of lectures by experts describing their daily work. Subjects will include central banking, the operations of clearing banks, merchant banks, the discount market, the Stock Exchange, and the activities of London in the sphere of shipping. Consideration will also be given to the role of the insurance companies both as underwriters and investors, and to Lloyd's of London.

In addition, there will be visits to a number of City institutions, including the Bank of England, the Stock Exchange and the underwriting room at Lloyd's, and The Port of London Authority has invited the entire party to a tour by launch of the Royal Docks.

BEST BUILDING SOCIETY ACCOUNTS

The 'Sir Harold Bellman' Challenge Cup

The 'Sir Harold Bellman' Challenge Cup for the best-produced public accounts of a member of The Building Societies Association has been made this year to The City of London Building Society. Second place was awarded to the Grainger & Percy Building Society and third place to the Eastern Counties Building Society.

Thirty-five societies submitted their accounts for the competition and the accounts entered for the award were assessed on May 3rd. The cup will be presented to the Society on June 7th, at the Association's annual conference at Eastbourne.

ACCOUNTING BODY'S NEW REGULATION

Following the thirtieth annual general meeting of the Association of International Accountants on April 30th, a special resolution was passed at an extraordinary general meeting providing for the addition of a new article to the Association's regulations stipulating that no member of the Association shall practise

MOTOR — FIRE — CONSEQUENTIAL LOSS
MOTOR UNION INSURANCE COMPANY LTD.
10 ST JAMES'S STREET, LONDON, SW1

the profession of accountancy without having in force a certificate issued by the Association authorizing him to so practise.

Practising certificates will not be issued to members of the Association unless they have served under articles of clerkship with a qualified person or have been employed for a continuous period of not less than thirty months in a responsible position on public accountancy work by a qualified person. 'Qualified person' means a practising member of the Association who is himself the holder of or eligible to receive a practising certificate, or a person qualified for appointment as auditor of a company under section 161 (1) (*a*) of the Companies Act, 1948.

The conditions for the issue of a practising certificate will not apply to members of the Association admitted prior to December 31st, 1961, or to registered students or licentiates who were registered with the Association as at that date and who qualify and are admitted to membership of the Association within the three years next following that date.

ASSOCIATION OF SUPERANNUATION AND PENSION FUNDS

The fortieth annual general meeting of The Association of Superannuation and Pension Funds will be held at the Botanical Gardens, Edgbaston, Birmingham, on June 6th, commencing at 10 a.m. This will be followed by a regional conference which will have as its theme 'Pensions and inflation'.

Papers will be read by Professor Francois Lafitte, Professor of Social Policy and Administration, University of Birmingham; Mr A. C. G. Ponsonby, managing director, Helbert, Wagg & Co Ltd; and Mr L. K. Cope, chief superannuation officer, Birmingham Corporation. Further information regarding the conference is obtainable from the secretary of the Association, Bank Chambers, 329 High Holborn, London WC1.

CHARTERED ACCOUNTANTS' GOLFING SOCIETY

The Wood Cup

The annual match between the Association of Scottish Chartered Accountants in London Golf Club and the Chartered Accountants' Golfing Society for the Wood Cup was played at the Berkshire Golf Club on April 27th. The contest consists of Stableford foursomes competitions under handicap for the Red and Blue course rounds and over thirty-six holes. The six best scores of both the Scottish and English Societies decide who shall hold the cup for the year. On this occasion the Scottish Society won by 378 points to 360 points; the details as given in the next column.

C.A.G. Society	*points*
(1) E. H. Head and H. C. Staines	62
(2) J. F. Sloan and A. W. Coleman	62
(3) D. G. Richards and P. Hughes	62
(4) P. G. Barber and J. Shaw	62
(5) J. H. Bradfield and P. Knight	56
(6) A. B. Green and A. D. Inglis	56
	360

Scottish Association	*points*

Tax on Company Land Sales

THE new short-term gains tax under Case VII of Schedule D will hit the proceeds of resale of most land bought within the previous three years and after April 9th, 1962. One might reasonably have expected the Government to be content with Case VII, without at the same time broadening the scope of Case VI. However, clause 20 of the Finance Bill seeks to tax every company which has a long-term gain from land (acquired after April 9th, 1962) if any person 'connected with' the company is as it were tainted with a trade of land dealing or development.

Covering well over three pages and having fourteen sub-clauses, clause 20 has the unenviable distinction of being the longest in a Bill of long clauses. Perhaps the kindest thing which can be said about it is that if the comparatively minor extension of the scope of income tax which it seeks to impose cannot be achieved without enacting provisions of such baffling complexity, it would be far better to leave well alone.

The House of Lords has held that a purchase and sale does not produce a taxable profit unless made by way of trade. The Income Tax Acts do not define 'trade' beyond saying that it includes manufactures, adventures and concerns in the nature of trade. Activities, like statements, are infinitely variable. In matters of libel it has been said that words are defamatory if the twelve jurymen trying the case think they are. Similarly, a group of activities constitute a trade if the Appeal Commissioners hearing an appeal think so. It is not entirely a matter of fact, and there can be successful appeals, but the precise point at which a superior Court will intervene and set aside the Commissioners' finding as being unreasonable or unsupported by evidence, cannot be predicated with any certainty. In most cases an appeal from the Commissioners on these grounds is a gamble. Numerous as the reported decisions are, they are of only limited help.

Significant in the context of clause 20 is *Glasgow Heritable Trust Ltd v. C.I.R.* (32 A.T.C. 3, 300; 33 A.T.C. 151), where, after two remits, the Scottish Court of Session reversed the Special Commissioners' finding that the company was trading. A firm of speculative builders, whose business had become dormant in 1909, had a number of unsold let properties which were heavily burdened with mortgages. In 1918 the members of the firm promoted the company and sold forty-six of the properties to it for shares, the company taking over the liability on the mortgages. The company sold properties sporadically from 1918, and although its memorandum of association gave it trading powers, it was not at first assessed as a dealer in property. As from

1945 sales were stepped up and the Inland Revenue then raised assessments under Case I of Schedule D, which assessments the Special Commissioners upheld on appeal.

It seems to have been conceded that if the firm had retained the properties and then sold them, the sales would have been trading sales, the properties being stock-in-trade of the old business. The Special Commissioners asserted in the stated case that the intermediate sale to the company 'made no difference'. They said they regarded themselves as entitled to take into account the earlier activities of the firm and the fact that the partners and their families were the principal shareholders. The Court of Session held that the Special Commissioners had proceeded on a wrong basis, and the assessments were discharged. This can be said to be one of the many illustrations of the fundamental principle enshrined in the House of Lords' decision in *Salomon v. Salomon & Co Ltd* ([1897] A.C. 22), namely, that a company is not the agent of its shareholders.

Property speculators have not been slow to seize advantage of the Scottish Court's decision. How much revenue has been lost thereby cannot be known, but clause 20 is evidently intended to close the gap. It is, however, so drawn that it is likely to make the innocent suffer with the guilty. Subclause (1) imposes Case VI liability on the profit arising to a 'landowning company' on the disposal of its land, where two conditions are both satisfied. One has to ask two questions:

(*a*) Would a person who carried on the activities of the company, together with any 'related activities', be regarded as carrying on a trade of dealing in or developing land?

(*b*) If that person had disposed of the land, would the proceeds be regarded as a trading receipt of that trade?

To these questions there can be no certain answer; the first subclause plunges us at once into what Mr Justice DANCKWERTS called 'a dim world peopled by the indeterminate spirits of fictitious or unborn sales'.

What are 'related activities'? They are of two kinds:

> '(*a*) the activities with respect to land of any person with whom the company is *connected* at the time of the disposal; and
>
> (*b*) the activities with respect to land of any company not within paragraph (*a*) above, being activities of that company at a time when it was under such *control* as would have brought it within paragraph (*a*) above, if it had not ceased to be under that control, or ceased to exist, or both.'

This unilluminating definition at once gives rise to two further questions: When is a company 'connected with' a person? and What is the 'control' mentioned in (*b*)? The trail now leads to subclause (14) which says that 'control' has the same meaning as in section 333 of the Income Tax Act, 1952, subject to subclause (13). This subclause (13) extends the meaning of 'control', for clause 20 purposes, in two ways, (*a*) and (*b*). Under (*a*), a person or group has control if he or they

> 'can determine the manner in which one-half of the votes which could be cast at a general meeting of a company are to be cast on matters not of such a description as to bring into play any special voting rights or restrictions on voting'.

To the simple minded, this seems like a definition of the absence of control.

Under (*b*) the person or group has control if he (or they)

> 'is entitled to one-half of the profits of a company distributed by way of dividend, or would be entitled in the winding-up of a company to one-half of the net assets'.

A person who controls a company also controls, for clause 20 purposes, the companies controlled by the company.

This paves the way to finding out what 'connected with' means. Subclause (14) refers the reader to paragraph 18 of the Ninth Schedule, which deals with the same matter in relation to Case VII. But subclause (14) adds the warning that in paragraph 18 'control' is to have the extended meaning given to it by subclause (13).

An individual is 'connected' with (i) his spouse; (ii) his partner; (iii) his relative (i.e. brother, sister, ancestor or lineal descendant); (iv) a relative of his spouse or partner; (v) the spouse of any of the individuals in (ii), (iii) and (iv); (vi) a settlor of any settlement of which the individual is trustee (but this applies only to the person's capacity as trustee).

(To be concluded.)

Irish Institute Innovation

AS the report and accounts of its Council confirm, 1961 has been another busy and fruitful year for The Institute of Chartered Accountants in Ireland. Income from all sources rose by £1,135 to a record total of £14,357 and, despite increases in administration expenses and the net cost of examinations, both occasioned by the natural development and expansion of Institute activities, a surplus of £1,090 was achieved. This was added to the accumulated fund which at December 31st, 1961, stood at £18,112. At that date, the total membership of the Institute was 1,713 which is a net accretion of sixty over the year. It is interesting to note that just over 80 per cent of members are resident in Ireland.

At December 31st, 1961, there were 810 clerks currently serving under articles as compared with 730 the year previous. The number of new articles of clerkship registered during 1961 remained steady at 217. The last Final examinations of the Institute under the old syllabus were held in May and November when seventy-seven candidates passed. Under the new syllabus whereby the examinations are divided into five annual parts, 484 candidates in all were successful. As the total number of candidates sitting various examinations during the year was 1,203, the overall percentage pass was nearly forty-seven.

The Institute did not hold a residential conference in 1961 but one is being planned for October of this year. The venue is Newcastle, Co. Down. Instead, the Belfast Society of Chartered Accountants held a week-end conference at Portstewart, Co. Londonderry, last October at the same time as the Dublin Society of Chartered Accountants were in residence for a similar purpose at Tramore, Co. Waterford. October seems to be a time much favoured by Irish chartered accountants for their functions because the 1961 Institute dinner was held at the Gresham Hotel, Dublin, also in that month.

The retiring PRESIDENT's address – which we reproduce in this issue in a report of the seventy-fourth annual meeting of members held in Dublin on May 5th – is an admirable statement of the policy and aims of the Institute in matters of professional education and training. The proposed appointment of a full-time director of studies will help to co-ordinate the examination preparations of students and to ensure that the best uses are being made of the facilities provided for them. The decision to augment the existing libraries and, perhaps, to sponsor new textbooks is likewise a positive step which should further improve existing standards. Mr DAWSON's cautionary word to practising members about being discriminating in their selection of clerks will certainly not be taken amiss. Despite the intense competition created by commercial concerns with powerful inducements of almost immediate rewards in return for the minimum of study, the long-term prospects of entrants to the accountancy profession are superior, but they will remain so only if the high levels which the profession has set for its members are maintained, and that can best be done by attracting the finest material from the schools and universities. At the other end of the clerk's training, the PRESIDENT rightly refers to the importance of acquiring post-qualifying practical experience. Too many young chartered accountants rush into industry too soon and the consequent harm so often caused affects not only themselves but their commercial employers and, indeed, the accountancy profession itself.

Partly as a corrective to this precipitancy and partly as a means of better equipping members for the wide variety of services they are now expected to perform, the Council is considering extending fellowship status to non-practising members of the Institute. The opinions of members on what basis future fellowships generally should be awarded is now being sought and Mr DAWSON openly affirms that, in his own view, the only worth-while basis is by 'academic achievement' and examination and not merely by the efflux of time. In this he will have many supporters as well as a number of opponents and the outcome of this proposed innovation will be watched with keen interest by the profession at large.

Profits Tax: Effect of Change of Business

New Principle relating to Distribution

by T. J. SOPHIAN

POINTS of considerable interest with regard to profits tax were determined in the recent case of *E.Y.L. Trading Co Ltd v. C.I.R.* (40 A.T.C. 341).

Material Facts

The company was incorporated in 1941 with a share capital of 20,000 £1 shares, of which 8,002 ordinary and 1,000 5 per cent Preference shares had been issued.

On February 19th, 1955, the company sold its business and assets, with the exception of cash and investments, and on March 17th, 1955, transferred its credit balance of £297,341 odd to a new bank and changed its name the next day. On March 31st, 1955, this credit balance, together with interest earned on this sum in the meantime, was transferred to a new account in the name of the new company. New directors were appointed and resolutions were passed approving the transfer of the 1,000 Preference shares and 8,000 of the Ordinary shares to the W. company. The two remaining Ordinary shares were transferred to the W. company and one of the directors.

On the same date, March 31st, 1955, the directors passed a resolution that, as from that date, the company should be an investment company; while on April 1st, 1955, a sum of £288,327 odd, representing tax-free dividends of £27 10*s* 5*d* on the Preference shares and £288,300 on the Ordinary shares, was paid out of the above-mentioned credit balance of £297,647 odd to the W. company, and the balance of £9,319 odd was transferred to a new bank account.

In, and subsequently to, June 1955, the company bought and sold investments, and was treated as from this time by the Inland Revenue as an investment company. As at March 31st, 1955, the company's profit and loss account was credited with £305 odd as interest, and the balance sheet showed £9,002 in respect of share capital and £288,645 as revenue reserve. The assets at that date were shown as consisting of some £299,647 cash at bank.

To come within the charge to profits tax, it must be shown that a trade or business has been carried on; but section 19 (4) expressly ropes in the *holding* of investments by providing that it is to be *deemed* to be the carrying on of a business. Thus the mere receipt of compensation moneys under the Coal Industry Nationalization Acts would not be sufficient to constitute such a holding of an investment. (*Henry Briggs, Son & Co Ltd v. C.I.R.* (39 A.T.C. 437).) In this case a former colliery company continued in existence for the sole purpose of receiving the compensation moneys due, after the receipt of which it was the intention of the company to go into liquidation. It carried on no trade or activity.

This company was a subsidiary of the appellant company to whom it paid dividends, apparently out of the compensation moneys. The appellant company contended that these dividends were franked investment income which accordingly ought to have been excluded from the computation of their profits for profits tax purposes. Accordingly, it became necessary to determine whether the subsidiary was to be deemed to have been carrying on a business by virtue of section 19 (4), that question again depending on whether it could be said of the subsidiary that its functions were that of holding investments or property.

The House of Lords held that 'functions' and 'holding' could not be given so wide a meaning in section 19 (4), for whenever a company ceased to carry on its ordinary business, but did not immediately start a new business or go into liquidation, its functions would be to 'hold' its assets, i.e. 'property' (except in the unlikely case where the company had no assets at all), and the company, without carrying on any activity of any sort, could be deemed to be carrying on a trade. Sitting and waiting to collect compensation moneys as they fell due would not be so regarded. There would be no element in that of any object of making profits.

New Principle

Further, deeds and not words are necessary to prove that the functions of a company consist in the holding of investments. Accordingly, the mere passing of resolutions will be entirely ineffective unless they are implemented. This appears to be a new principle, which was determined in the *E.Y.L. Trading Co* case. Accordingly the company was held to have become an

investment company only when it started dealing in investments with a view to profit, in June 1955, and not when the directors passed, on March 31st, 1955, the resolution that the company was to be an investment company.

This determination that the company became an investment company in June 1955, and not at the date of the directors' resolution, immediately raised fresh problems as to the selection of the appropriate chargeable accounting period. Under section 20 (2) of the Finance Act, 1937, certain rules are laid down for the selection of the appropriate period. When the accounts of the trade or business are made up for twelve monthly periods, without any break, each such period will rank as a 'chargeable accounting period'. Where they have previously been so made up but have ceased to be made up in this way at the material time, then the Commissioners are given the option of declaring what periods, not in excess of twelve months, are thereafter to be treated as chargeable accounting periods.

According to the facts in the case, the accounts of the company had been made up for successive periods of twelve months ending on March 31st, up to the period ending March 31st, 1955, and the company therefore contended that as the twelve-monthly periods were 'successive' ones so that there was no break between the periods, the Commissioners could not exercise any right to select some other period, as they had purported to do by their selection of the period April 1st, 1954, to February 19th, 1955, the date on which the company had sold its business and assets (except cash and investments).

Distinction in Relation to Accounts

There is, however, a subtle distinction to be drawn, it might be said inferentially, from the language of section 20 (2): the accounts of a *trade carried on* by a company are one thing; the accounts of the *company itself* are something quite different. The periods of the two accounts might coincide or they might not. In the *E.Y.L. Trading Co* case, the period of the accounts differed from that of the company. The company's accounts were made up for twelve months ending March 31st, 1955, in the same way as for previous years. The accounts of the company's business, on the other hand, were not, and could not be, made up for the same twelve-month period ending March 31st, 1955, if only for the simple reason that the company had sold its original business of steel stockists on February 19th, 1955, on which date its business had automatically ceased. There was then a gap to June 1955, during which period no business or activity had been carried on.

In any view, as the directors' resolutions that the company should become an investment company were not passed until March 31st, 1955, there was still a gap between the sale of its business on February 19th, 1955, and March 31st, 1955, during which period there was no business or activity of any sort. It could not be said, therefore, that the accounts of the company's *trade or business* had been made up for a full twelve months period down to March 31st, 1955. That being so, there arose the right conferred by section 20 (2) (*b*) on the Commissioners to select what should be the appropriate accounting period. The last successive twelve-month period to which the accounts of the company had been made up on this view was the twelve months ending March 31st, 1954, and the next accounting period became the one that the Commissioners had selected, i.e. the period from April 1st, 1954, to February 19th, 1955.

Last Chargeable Accounting Period

The final question was as to what was to be regarded as the *last* chargeable accounting period of the business hitherto carried on by the company before it altered its status to that of an investment company. Was this period, April 1st, 1954, to March 31st, 1955, in which the break occurred, to be treated as the last chargeable accounting period?

The company, of course, carried on the activity of an investment company after March 31st, 1955, so that it was bound to have subsequent chargeable accounting periods, and in a sense, one could not say what would be its last chargeable accounting period until such time as the company went into liquidation or otherwise became defunct. Incidentally, determination of the last chargeable accounting period assumed importance on the facts of this case since the company, in the interval between ceasing its steel stockist business on February 19th, 1955, and commencing the new function of an investment company on June 19th, 1955, had, on April 1st, 1955, distributed the tax-free dividends of £27 10s and £288,300 on the Preference and Ordinary shares, respectively.

Section 35 (1) (*c*) of the Finance Act, 1947, becomes material in this connection, as it deals with the question of gross relevant distributions. At the same time, it should be pointed out that the Finance Act, 1958, changed the basis of the charge to profits tax and swept away the old

reliefs for non-distribution and distribution charges, as regards all chargeable accounting periods ending on or after April 1st, 1958. In the *E.Y.L. Trading Co* case, however, the periods still fell within the scope of the repealed provisions of section 35 of the 1947 Act. Under that section the gross relevant distributions to proprietors would be the total of the distributions, excluding distributions allowable as deductions in the computation of profits tax profits. They would comprise, firstly, dividends declared not later than six months after the end of the relevant period and expected to be paid in respect of that period or any part of such period (paragraph (*a*)); secondly, distributions other than dividends which, under paragraph (*a*) were to be treated as part of the gross relevant distributions for any previous chargeable accounting period (paragraph (*b*)); thirdly, in the case of the last chargeable accounting period in which the trade or business was carried on, so much of any distribution made after the end of that period (not being a distribution (within paragraph (*a*)) as was not a distribution of capital (paragraph (*c*)). For this last purpose, however, a distribution would not be treated as a distribution of capital to the extent to which it exceeded the total nominal amount of the paid-up share capital, plus any share premiums.

Now in the *E.Y.L. Trading Co* case the dividends in question were paid on April 1st, 1955, which was a date falling within the intervening period between the cesser of the original business on February 19th, 1955, and the commencement of the investment 'business' in June 1955. The nominal paid-up share capital of the company was £20,000 and the total distributions by way of dividends were £288,327 10*s*. If the period April 1st, 1954, to February 19th, 1955, was to be treated as the last accounting period of the company's trade as steel stockists, then the excess of the distributions over £20,000, the nominal paid-up capital, would be caught by the above paragraph (*c*). The company's contention, however, was that this distribution by way of dividends was to be treated as a distribution under paragraph (*b*) of a subsequent accounting period.

In this connection, the decision of the House of Lords in *C.I.R. v. J. B. Hodge & Co (Glasgow) Ltd* (40 A.T.C. 232) is relevant. There, a company carried on its trade from 1941 to April 5th, 1950, and obtained, during this period, non-distribution relief under section 30 (2) of the Finance Act, 1947. On April 5th, 1950, the company sold its trading assets and commenced a new business as an investment company. On March 18th, 1955, the company went into liquidation and distributed in the liquidation sums in excess of its nominal paid-up capital. The question arose whether the company's last chargeable accounting period was the period November 1st, 1954, to March 18th, 1955 (the date of winding up). The company contended that the profits which were distributed in the liquidation were the property of its former trade, and as that trade was not being carried on during the accounting period in question, it was not liable to a distribution charge under paragraph (*c*) of section 35 (1) of the Finance Act, 1947. In other words, the contention of the company was that the last chargeable accounting period of a trade meant the last accounting period in which that trade was being carried on.

Is Some Trading Necessary?

The House of Lords, basing its decision partly on section 43 of the 1947 Act (by which all trades carried on were to be treated as one trade), rejected the company's contention. The scheme of the 1947 Act, in the view of the House, was that the profits of each chargeable accounting period could no longer be put into separate water-tight compartments, as it were.

It was enough that during the relevant chargeable accounting period for which the assessment was made, a trade was being carried on, it being irrelevant whether it was the same trade or a new trade. If a trade was being carried on during the relevant chargeable accounting period, all that it was necessary to inquire was whether or not the company had, during that same period, made distributions (from whatever profits of whatever trade such distributions were made being immaterial) in excess of its nominal paid-up capital. Therefore, the fact that the trade from which the profit out of which the distribution was made was not being carried on, though some of the trade was in operation, during the relevant chargeable accounting period, was irrelevant.

In the *E.Y.L. Trading Co* case, however, the point was slightly different in that the distribution was made in a period during which *no trade at all was being carried on;* this period being between the cesser of one trade and the commencement of another. In holding in this case that paragraph (*c*) applied to the distribution, although it was made in a period when no trade at all was being carried on, the Court must be regarded as having extended the principles of the *Hodge* case in which a trade, though a different one, was in fact being carried on at the time.

Terms used in Published Accounts of Limited Companies—III

ISSUED BY THE INSTITUTE OF CHARTERED ACCOUNTANTS IN ENGLAND AND WALES

Exceptional or non-recurring items and adjustments for previous years (excluding tax)

IN some accounts these items are indicated in the narrative for the principal item of income, for example, '. . . including credits relating to earlier years £ . . .'. Generally, however, such items are shown as a separate amount under a general designation such as 'non-recurring income'. Many descriptions are used including such adjectives as 'exceptional', 'non-recurring' and 'extraneous'. Occasionally there is an indication of the circumstances which gave rise to the exceptional item.

146. It is doubtful whether a distinction is always made between adjustments for previous years and items which are exceptional for some other reason. Where the distinction is made, however, the adjustments for previous years are variously dealt with as provisions no longer required, or by such descriptions as:

'Net profit from earlier periods'.

'Adjustments in respect of previous years'.

Suggestions

147. (*a*) *Where items of an exceptional or non-recurrent nature are sufficiently material to come within the scope of paragraph 14 (6) (a) of the Eighth Schedule to the Companies Act, 1948, they should be appropriately described. Where a number of such items are grouped together suitable headings would be:*

EXCEPTIONAL NON-TRADING ITEMS

EXCEPTIONAL ITEMS

NON-RECURRENT ITEMS

NON-TRADING ITEMS

(*b*) *The following would be an appropriate expression to describe material adjustments of previous years' trading results where these are distinguished from exceptional or non-recurrent items:*

TRADING CREDITS (*or* CHARGES) RELATING TO PREVIOUS YEARS

(*c*) *Where the adjustments for previous years are credits arising from over-provisions, a suitable description would be:*

PROVISION(S) FOR . . . NO LONGER REQUIRED

Dividends paid, payable and proposed

148. There is considerable variation in the wording used for dividends payable. Some of this is attributable to differing circumstances, such as the structure of the share capital and the practice as regards the declaration of interim and final dividends; but to an important extent variation derives from differences in classification whereby in some instances the nature of the shares is taken as the primary factor and in others the grouping is as between dividends already paid and those recommended for consideration by the shareholders.

149. On the one hand there are groupings under the headings 'Paid' and 'Proposed' and on the other hand headings such as:

Dividends Paid and Proposed:

Preference Stocks (details given).

Ordinary Stock (details given).

150. The division of preference dividends as between paid and payable is frequently omitted. That of ordinary dividends is given by the use of separate items designated 'Interim' and 'Final' or 'Proposed final'. The words 'Provided' and 'Recommended' are also used for final dividends.

151. The periods to which dividends relate are sometimes indicated—usually, but not invariably, where these differ from the accounting period. The dates of payment are seldom indicated; where they are, it is usually where the dates are subsequent to the accounting date.

152. The rates of dividends are often given and there is generally an indication that the amounts shown are after deduction of income tax.

Suggestions

153. Examples of appropriate wording for dividend items are:

DIVIDENDS PAID AND PROPOSED, LESS INCOME TAX—

5 PER CENT CUMULATIVE PREFERENCE SHARES (PAID JUNE 30TH, 19..... AND DECEMBER 31ST, 19.....)

ORDINARY SHARES—

INTERIM OF 10 PER CENT (PAID AUGUST 17TH, 19.....)

FINAL OF 20 PER CENT PROPOSED (FOR PAYMENT JUNE 16TH, 19.....)

or

DIVIDENDS PAID AND PROPOSED—

5 PER CENT CUMULATIVE PREFERENCE SHARES (PAID JUNE 30TH, 19..... AND DECEMBER 31ST, 19.....), LESS INCOME TAX

ORDINARY SHARES—

INTERIM OF 10 PER CENT (PAID AUGUST 17TH, 19.....), FREE OF INCOME TAX

FINAL OF 20 PER CENT PROPOSED (FOR PAYMENT JUNE 16TH, 19.....), FREE OF INCOME TAX

CONSOLIDATED BALANCE SHEET

154. The terms used in consolidated accounts are generally identical, so far as applicable, with the terms used in the published accounts of the holding companies concerned. In this connection it is to be noted that paragraph 18 of the Eighth Schedule to the Companies Act, 1948, requires consolidated accounts to comply, as far as practicable, with the requirements of the Act as if they were the accounts of an actual company. There are, however, a number of items which arise solely in consolidated accounts and these items are dealt with in the following paragraphs.

Title

155. Examples of the titles used for consolidated balance sheets are: '(Holding Company) Limited and its subsidiaries, Consolidated Balance Sheet', '(Holding Company) Limited Consolidated Balance Sheet' and '(Holding Company) Limited and subsidiaries, Group Balance Sheet'.

Suggestions

156. (*a*) *The title* (HOLDING COMPANY) LIMITED AND SUBSIDIARIES (*or* AND ITS SUBSIDIARY COMPANIES): CONSOLIDATED BALANCE SHEET *or* (HOLDING COMPANY) GROUP: CONSOLIDATED BALANCE SHEET *would be appropriate where it is desired, having regard to the form of presentation of the accounts as a whole, to indicate in the title that the consolidated balance sheet relates to the holding company and its subsidiaries.*

(*b*) *Where the basis of consolidation would be too lengthy to describe in the title of the consolidated balance sheet, for example, where certain subsidiaries are excluded from the consolidation, it may be described simply as* (HOLDING COMPANY) LIMITED CONSOLIDATED BALANCE SHEET. *In this event the basis of consolidation would normally be described in a note to the accounts to which note a reference may be inserted under the title of the account.*

Share capital and reserves

157. Many consolidated balance sheets include a heading to describe the items summarized in that section which shows the interest of the members of the holding company. Varied expressions are used to describe these interests, such as 'Issued share capital and reserves attributable to members of (Holding Company) Limited', 'Capital and reserves of members of (Holding Company) Limited'. These and similar terms may be adequate descriptions where there are no outside shareholders in subsidiaries. Where there are outside interests it is normal to distinguish the share capital and reserves attributable to the shareholders of the holding company from the interests of outside shareholders in the share capital and reserves of subsidiaries.

Suggestion

158. *The description used should be such as to distinguish the interests of the members of the holding company from those of outside shareholders in subsidiaries. An example is:*

SHARE CAPITAL AND RESERVES ATTRIBUTABLE TO MEMBERS OF (HOLDING COMPANY) LIMITED

Share capital

159. Full details of the authorized and issued share capital of the holding company as given in that company's balance sheet are often repeated in the consolidated balance sheet. In some instances neither the heading nor the description, for example, 'share capital', indicates that the share capital appearing in the consolidated balance sheet is that of the holding company. In others such an indication is given, for example: 'Share capital of (Holding Company) Limited', 'Share capital (Holding Company)', 'Authorized and issued share capital of (Holding Company) Limited'.

160. Where the consolidated balance sheets do not give the amount of the authorized capital they give the amount of the issued capital with or without details of its composition. Examples of the headings used include 'Issued share capital of (Holding Company) Limited', 'Share capital of parent company', 'Share capital'.

Suggestions

161. (*a*) *Any heading used should indicate that the share capital is that of the holding company; for example,* SHARE CAPITAL OF (HOLDING COMPANY) LIMITED.

(*b*) *Since details of the authorized and issued share capital of the holding company are given in its balance sheet, it may not be wished to repeat them in the consolidated balance sheet. If, however, it is desired to show the details, the suggestions contained in paragraph 9 as to the description of share capital in the balance sheet of a company are applicable to its description in the consolidated balance sheet.*

Capital reserve arising on consolidation

162. In some consolidated balance sheets there appears under the heading of capital reserves an item which represents an amount arising from setting off the amounts at which the net assets of subsidiaries are brought into the consolidated accounts against the amount at which the holding company brings its shareholding in the subsidiaries into its own accounts. In others one total is given for capital reserves and it is apparent from the details of the movements in the reserves that they include reserves such as those just described.

163. No simple wording seems to have been found to describe this reserve adequately. Short forms of wording employed include 'Capital reserve arising on consolidation', 'Consolidation reserve', 'Surplus arising on consolidation'.

164. Other descriptions attempt to depict more explicitly the composition of the reserve. Examples (which are inaccurate for the reason indicated in the next paragraph) are:

'Arising on incorporation in the consolidated balance sheet of the tangible assets and liabilities of subsidiaries at book amounts.'

'Excess of the value of net assets appearing in the balance sheets of subsidiary companies over the value of shares in and advances to those companies in the balance sheet of (Holding Company) Limited.'

165. In another instance the capital reserves include

a 'consolidation reserve' which is referenced to a note giving details of the composition of this reserve in the following terms:

'Excess of discounts over premiums on purchase of shares in subsidiary companies .. .. £
Undistributed profits and reserves of subsidiary companies at date of acquisition by parent company, less proportion attributable to minority shareholders .. .. £
Adjustment on the capitalization of a subsidiary company's reserves in 19..... .. .. £
£'

166. The description in paragraph 165 accurately depicts the complex accounting processes involved in the ascertainment of this reserve, but the two examples in paragraph 164 may mislead the reader because they do not clearly indicate that it is the excess at acquisition which is carried to this reserve and not the excess which may have arisen since acquisition due to the retention of profits in the accounts of those companies. All the descriptions given in those two paragraphs, however, are probably difficult for a layman to grasp.

Suggestion

167. Under the heading capital reserves a simple form of wording such as (CAPITAL RESERVE) ARISING ON CONSOLIDATION *may be used to describe a surplus arising on the incorporation of the accounts of subsidiaries in the consolidated accounts.*

Revenue reserves – consolidated profit and loss account

168. The wording in the consolidated balance sheet describing the unappropriated balance of profit and loss account usually follows that used by the holding company. Examples are: 'Unappropriated profits', 'Profit and loss account', 'Surplus', 'Profits retained in the business and other reserves'.

169. In some instances the balance of profits carried forward is divided between the amount appearing in the profit and loss account of the holding company and the amount attributable to the holding company's interest in subsidiaries. Examples are:

'Unappropriated profits –
(Holding Company) Limited
Subsidiaries'

'Profit and loss account –
(Holding Company) Limited
Subsidiaries'

170. In other instances the profit and loss account balance appearing in the consolidated balance sheet is that of the holding company and the reserves and profits of subsidiaries are shown as a separate item. Examples of the descriptions applied to such items are:

'Subsidiary companies –
Undistributed profits subsequent to acquisition by the parent company'

'Miscellaneous reserves and undistributed profits of subsidiary companies'.

Suggestions

171. (a) The suggestions given in paragraph 23 as to the description of the profit and loss account balance of a company are applicable to the consolidated balance sheet subject to the modifications set out below.

(b) Where the balance of profits is divided between the amount appearing in the profit and loss account of the holding company and the holding company's interests in subsidiaries, examples of suitable wording are:

UNAPPROPRIATED PROFITS –
(HOLDING COMPANY) LIMITED SUBSIDIARIES
or
PROFIT AND LOSS ACCOUNT –
(HOLDING COMPANY) LIMITED SUBSIDIARIES

(c) Where revenue reserves of subsidiaries are included with the aggregate balance of profit and loss accounts of subsidiaries, examples of appropriate descriptions are:

SUBSIDIARY COMPANIES – UNDISTRIBUTED (*or* RETAINED) PROFITS

RESERVES AND UNDISTRIBUTED PROFITS OF SUBSIDIARIES

RESERVES AND UNAPPROPRIATED PROFITS OF SUBSIDIARIES

Outside shareholders' interest

172. The aggregate amount attributable to shareholders outside the group in respect of their interests on consolidation is described in a variety of ways. The use of the term 'minority interests' often occurs, but there are circumstances where this expression may be open to misinterpretation; although the holding company may control the majority of the voting power in a subsidiary, the majority of the capital may be held by the so-called minority shareholders, for example, in the form of preference shares. The significance of this item is not based necessarily on the minority aspect but rather on the fact that the interests concerned are outside the consolidation. It is probably for this reason therefore that many companies adopt such expressions as:

'Outside shareholders in subsidiary companies'
'Interest of outside shareholders in subsidiary companies'
'Capital held outside the group'
'Outside shareholders' interests in net assets of subsidiaries'.

173. The first and third of those examples do not indicate that anything other than share capital held outside the group is necessarily included in this item. The third example does not indicate that it is the capital of subsidiaries which is concerned, and may therefore be puzzling to the shareholder; moreover the description is appropriate only when no part of the reserves of the subsidiaries is attributable to such capital. The use of the word 'group' also requires careful consideration as indicated later in paragraph 188.

Suggestions

174. (a) The heading describing interests of shareholders (other than the holding company) in subsidiaries consolidated should be factual, and the word

'minority' should not be used unless the outside shareholders are minority shareholders. The following are examples of descriptions which are normally suitable:

INTERESTS OF OUTSIDE (*or* MINORITY) SHAREHOLDERS IN SUBSIDIARIES

OUTSIDE (*or* MINORITY) SHAREHOLDERS IN SUBSIDIARIES

OUTSIDE (*or* MINORITY) SHAREHOLDERS' INTERESTS IN NET ASSETS OF SUBSIDIARIES

OUTSIDE (*or* MINORITY) SHAREHOLDERS' INTERESTS IN CAPITAL AND RESERVES OF SUBSIDIARIES

(*b*) *Where sub-division of the item is appropriate, suitable descriptions of the details should be given, such as, for example:*

PREFERENCE CAPITAL

ORDINARY CAPITAL AND RESERVES

(*c*) *If proposed dividends to outside shareholders in subsidiaries are not grouped with current liabilities but included in the aggregate amount at which the interest of such shareholders are stated in the consolidated balance sheet, the description of the interest should indicate that proposed dividends are included therein.*

Differences in inter-company balances

175. A variety of expressions is used to describe the amount representing the net difference on inter-company accounts which arises owing to variations in the accounting dates of the individual companies included in the consolidation. Examples include 'Net balance on inter-company accounts due to variation in balance sheet dates', 'Net balance on inter-company accounts owing to variations in dates of balance sheets', and 'Balance arising from differences in accounting dates of certain subsidiaries'. Where accounts of overseas subsidiaries at March 31st, an earlier date than those of the holding company, were consolidated the difference was described as 'Advances to overseas subsidiaries (made since March 31st, 19.....)'.

Suggestions

176. (*a*) *Where balances appear in the consolidated balance sheet arising from transactions between companies in the group with differing accounting dates, an appropriate description would be:*

NET BALANCE ON INTER-COMPANY ACCOUNTS DUE TO DIFFERENCES IN ACCOUNTING DATES

(*b*) *Where it is possible to distinguish the difference, more specific descriptions may be suitable, such as:*

ADVANCES TO SUBSIDIARIES MADE SINCE .....19..... (*Being the accounting date of those subsidiaries.*)

(*c*) *Descriptions such as 'current account', 'suspense account' carry no information to the reader and are therefore inappropriate.*

Accounts of subsidiaries omitted from the consolidation

177. If the accounts of any companies in the group are omitted from the consolidation, paragraph 21 of the Eighth Schedule to the Companies Act, 1948, requires that items relating to such subsidiaries should be shown separately. Examples are:

'Investments in subsidiary company not consolidated'

'Subsidiaries –

Shares at cost in subsidiaries not consolidated'.

Suggestion

178. Expressions used in the accounts of holding companies to describe items relating to their subsidiaries (see paragraphs 92 to 103) may be used with appropriate amplification to describe similar items in a consolidated balance sheet relating to subsidiaries not consolidated. A suitable heading would be:

INTERESTS IN SUBSIDIARIES NOT CONSOLIDATED

followed by further details as indicated in paragraph 109.

Goodwill arising on consolidation

179. In some consolidated balance sheets there appears an item which represents an amount arising from offsetting the holding company's shareholdings in subsidiaries against the amount at which the net tangible assets of the subsidiaries attributable thereto are brought into the consolidated accounts at acquisition of such shareholdings. The descriptions used for this item are varied. They may be classified into those descriptions which refer to premiums on shares acquired, those which refer to the excess of cost of shares over book amounts of assets of subsidiaries, those which refer to the excess of cost of shares over the nominal amount thereof and reserves appropriate thereto, and other descriptions. Examples of descriptions in the various categories are:

'Goodwill and premium on acquisition of shares in subsidiaries'

'Goodwill representing premiums paid on acquisition of shares in a subsidiary company'

'Excess of cost of shares in subsidiary companies over the book value* of the net assets of those companies at the date of acquisition, less amounts written off'

'Goodwill, mainly represented by net excess of cost of shares in subsidiaries over appropriate proportion of book values* of net assets at dates of acquisition, less amounts written off'

'Goodwill, at cost less amounts written off including net excess of book values* over par values of inter-company shareholdings, less undistributed profits at the dates of acquisition'

'Goodwill, patent rights and trade-marks, arising on the incorporation of the book value* of the net assets of subsidiaries in the consolidated balance sheet'.

180. Those examples which attempt a description of the accounting processes involved in the ascertainment of the amount described are inevitably lengthy and unlikely to be understood by a layman. Where on a comparison of the cost of the shares acquired with the then amount of the tangible assets over which control was acquired, after making due allowance for interests

* See paragraph 181 (*b*) below.

not acquired and for liabilities, it appears that the cost exceeded the amount of such tangible assets the difference may be said to represent an intangible asset. The asset may be goodwill in the sense that it is a payment made in the expectation of the continuance of profits at a certain rate or it may represent payments made to obtain control over the company and the use of its assets in the operations of the group, the benefit of taxation losses or other benefits to be derived.

Suggestions

181. (a) The following are examples which indicate concisely the intangible nature of the item, without attempting a more explicit description which may not achieve its purpose:

GOODWILL ARISING ON CONSOLIDATION

EXCESS OF COST OF SHARES IN SUBSIDIARIES OVER THE AMOUNT ATTRIBUTED TO THE NET ASSETS OF THOSE COMPANIES AT THE DATE OF ACQUISITION

EXCESS OF COST OF SHARES IN SUBSIDIARIES OVER THE BOOK AMOUNT OF THE NET ASSETS OF THOSE COMPANIES AT THE DATE OF ACQUISITION

(b) The use of the term 'book value' is liable to be misunderstood as implying that an actual valuation was made and incorporated in the books at the date named; the expression 'book amount' or 'amounts at which assets are carried in the books' is therefore preferable.

CONSOLIDATED PROFIT AND LOSS ACCOUNT

(See comment in paragraph 154)

Title of the account

182. The title of the consolidated profit and loss account, whether or not a separate profit and loss account of the holding company is also given, sometimes makes reference to the fact that the account embraces the holding company and its subsidiaries, for example:

'(Holding Company) Limited and subsidiaries, Consolidated profit and loss account for the year ended.....'

Other companies describe the account merely as '(Holding Company) Limited, Consolidated profit and loss account for the year ended.....'. Others refer to the group preceded by a contraction of the full name of the holding company – for example: '(Holding) Group – consolidated profit and loss statement for the year ended.....'.

Suggestion

183. The title (HOLDING COMPANY) LIMITED AND SUBSIDIARIES (*or* AND ITS SUBSIDIARY COMPANIES) *or* (HOLDING COMPANY) GROUP: CONSOLIDATED PROFIT AND LOSS ACCOUNT FOR THE YEAR ENDED....., *would be appropriate where it is desired to indicate in the title that the account includes the results of the company and its subsidiaries. This may not be necessary where the description of the items in the account gives the necessary indication or where the information is stated by note.*

Profit (or loss) balances

184. In some consolidated profit and loss accounts the principal item of income does not include a reference to the results of subsidiaries. In others the principal item of income includes the words 'of the company and its subsidiaries', or 'of the group'. The words 'less losses' are sometimes found, presumably to indicate that some companies in the group have incurred losses.

185. The word 'group' is sometimes included to indicate the aggregate income of the holding company and subsidiaries, i.e. of all companies in the group before making allowance for amounts attributable to outside interests in subsidiaries. For example, 'Trading profit of the group', 'Profit of the group, subject to taxation', 'Profit of the group, after taxation'.

186. Following the adjustment for the outside shareholders' proportion of the profits or losses of subsidiaries the amount remaining is described in various ways, such as:

'Interest of (Holding Company) Limited'

'Balance for the year attributable to the interests of (Holding Company) Limited'

'Net profit of the group attributable to (Holding Company)Limited'

'Profit after taxation, attributable to (Holding Company) Limited'

'Group net profits'.

187. The balance of profit prior to appropriation is occasionally indicated as 'group', 'applicable to the group', 'attributable to (Holding Company) Limited', 'of the company and its subsidiaries', or 'consolidated', but these descriptions are not usual.

Suggestions

188. (a) The expression used to describe the principal item of income should be based on the suggestions contained in paragraph 120.

(b) Where an indication is not given in the notes to the accounts or in the title of the consolidated profit and loss account of the fact that the results of subsidiaries are included therein, it is preferable for the narrative of the principal item of income and of other items where appropriate to indicate that the amounts relate to the holding company and subsidiaries.

(c) Where the profit or loss of the company and the subsidiaries is stated before deducting the interest of outside shareholders therein, it may be described as 'GROUP PROFIT (*or* LOSS) BEFORE (*or* AFTER) TAXATION'. *Since the term 'group' is used to describe items which relate to all companies in the group before allowance for amounts attributable to outside shareholders it is preferable not to use this term, without qualification, to describe the balance of profits remaining after such allowance has been made unless it is clear from the context or wording that it is so used.*

(d) An expression such as 'PROFIT ATTRIBUTABLE TO (HOLDING COMPANY) LIMITED AFTER TAXATION' *to describe the profits attributable to the holding company would avoid the difficulty referred to in (c) above.*

Outside shareholders' interest in profits

189. Consolidated profit and loss accounts seldom describe the outside shareholders' interest in profits in identical terms. The many descriptions used include the following:

'Interest of outside shareholders in subsidiaries'

'Amounts attributable to shareholders outside the group'

'Profits of subsidiaries attributable to minority shareholders'

'Proportion attributable to outside shareholders' interests in subsidiaries'

'Profits of subsidiaries attributable to shares held outside the group'

'Profits applicable to shares in subsidiaries held outside the group'.

190. Sometimes there are references to dividends paid to outside shareholders, particularly where only preference shares are held externally and the dividend paid constitutes the full extent of the outside shareholders' interest, for example, 'Net dividends to outside preference shareholders of subsidiaries'. There are, however, instances where ordinary shares are held outside the group and the dividends thereon are shown separately from the undistributed profits attributable to such outside shareholders. Examples are:

'Interest of minority shareholders –

Dividends

Proportion of profit retained by subsidiary companies'

'Net dividends paid and provided –

By (Holding Company) Limited £

By subsidiaries to minority members .. .. .. £

£'

'Retained in the business –

By (Holding Company) Limited £

By subsidiaries – applicable to minority members .. .. £

£'

Where the item described relates only to preference shares held by outside shareholders, examples are:

'Net dividend to preference stockholders of a subsidiary'

'Dividends on preference capital of subsidiary companies publicly held'.

Suggestion

191. Appropriate expressions to describe the outside shareholders' interest in profits are:

OUTSIDE (*or* MINORITY) INTERESTS IN PROFITS OF SUBSIDIARIES

INTEREST OF OUTSIDE (*or* MINORITY) SHAREHOLDERS IN PROFITS OF SUBSIDIARIES

PROFITS (LOSSES) OF SUBSIDIARIES ATTRIBUTABLE TO SHARES IN SUBSIDIARIES HELD OUTSIDE THE GROUP

Year 2

Weekly Notes

THE POUND IN PERIL

IN the joint report of the British Association for the Advancement of Science and the Association of British Chambers of Commerce on decimal coinage and the metric system, published in 1960, it was stated that, on a 'count of heads' basis, 64 per cent were in favour of a currency system which retained the pound as the principal unit, 21 per cent the 10*s*/cent system and 15 per cent the 8*s* 4*d*/1*d* system. It was further stated that the first of these methods was strongly supported by 'learned societies and professional institutions'.

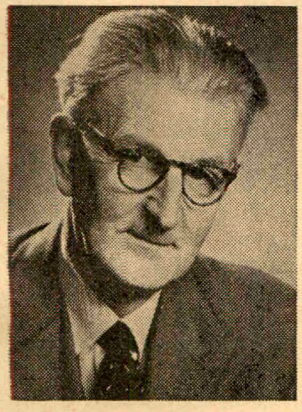
Included in this group were The Institute of Chartered Accountants of Scotland, The Institute of Chartered Accountants in England and Wales, The Association of Certified and Corporate Accountants and The Institute of Cost and Works Accountants, but this pleasing example of unanimity of professional opinion has been short-lived. At the recent annual meeting of the English Institute (reported in our last issue), Mr H. A. Benson, C.B.E., F.C.A., explained how the Council came to change its mind and, in the memorandum submitted to the Chancellor of the Exchequer in February 1961, advocate instead the adoption of the 10*s*/cent system. The views expressed in that document are reaffirmed and elaborated in the Council's recent memorandum to the Halsbury Committee, which we reproduce on another page. Now, in a memorandum addressed to the same committee this week, the Association has also had second thoughts and this time recommends the 8*s* 4*d*/1*d* system. So far as we are aware, neither the Scottish Institute nor The Institute of Cost and Works Accountants has yet submitted its views, old or new, to Lord Halsbury and his colleagues.

And what of the other authorities who originally plumped for the pound? The banking associations who gave evidence to the joint inquiry stressed the desirability of its retention. The British Transport Commission regarded it as 'fundamental that the basic unit should be the pound' and was opposed to 'any form of decimalization which uses another basic unit'; and to the County Councils' Association any suggestion that the pound should be abandoned was

'unthinkable'. Are they all still of the same persuasion? It seems certain that the abundance of evidence now being heaped upon the Halsbury Committee will not be lacking in variety and, even if in some instances opinions have been revised, that no more than reflects the influences of informed discussion which the whole question of decimalization of the currency has inspired during the past three years.

COST ACCOUNTANTS' NEW PRESIDENT

MR WILLIAM BISHOP, C.A., F.C.W.A., senior partner in the firm of William Bishop & Co, Chartered Accountants, of Edinburgh, and a director of a number of companies, has been elected President of The Institute of Cost and Works Accountants for the year 1962–63.



Educated at George Watson's College, Edinburgh, Mr Bishop served his apprenticeship with a firm of chartered accountants in that city and was admitted to membership of the former Society of Accountants in Edinburgh in 1925. He afterwards moved to Glasgow where he remained with a firm of chartered accountants until 1933 before taking up an appointment in the Birmingham office of Stewarts and Lloyds as one of three principal assistants to the chief cost accountant. He returned to Edinburgh in 1935 to become a partner in the firm of McKerrell Brown & Gray, Chartered Accountants, with whom he was associated until 1947 when he commenced in practice on his own account.

Mr Bishop was admitted an Associate of The Institute of Cost and Works Accountants in 1934 and became a Fellow in 1940. Ten years later he was elected to the Council and has served as chairman of the Examination Committee from June 1959 until this year. For a number of years, he represented the Society of Accountants in Edinburgh on the General Examining Board and lectured in costing and other accounting subjects at the Heriot-Watt College, Edinburgh.

Mr Bishop is an active member of the Edinburgh branch of the Institute having served as secretary and later as President. He is also an active social worker, being chairman of the Y.M.C.A. in Edinburgh.

Mr Charles Eric Power, F.C.A., F.C.W.A., A.M.B.I.M., chief cost accountant of the British United Shoe Machinery Co Ltd, Leicester, has been re-elected a Vice-President of the Institute for a second year, and Mr John Pearson Wilson, F.C.W.A., F.C.I.S., a consultant cost accountant in Coventry, has also been elected a Vice-President for 1962–63.

PROFESSIONAL TRUSTEES' REMUNERATION

IT was stated in the Court of Appeal last week that an accountant and a solicitor, who were trustees under a will, had paid themselves remuneration of £1,983 17*s* 3*d*, respectively, under the trustee charging clause. The beneficiaries had brought proceedings for breach of trust on the ground that the remuneration was excessive. The trustees had applied to the High Court for an order requiring the beneficiaries to give 'further and better particulars' of their claim, in particular stating precisely to what extent the remuneration was excessive.

Mr Justice Cross dismissed the application and the Court of Appeal has now affirmed his decision. Lord Denning said, according to *The Financial Times* of May 9th, that it was impossible for the beneficiaries to answer such a question until they had received from the trustees a detailed account of the moneys the trustees had paid themselves. Only then could the beneficiaries state in detail what were the charges to which they objected.

MODEL ACCOUNTS

A HAPPY feature of shareholder-relationships in the company world is the widespread improvement in the presentation and contents of annual reports which, as shown by entries for *The Accountant* Annual Awards, are having much more attention devoted to them. Amongst those closely concerned with the publication of adequate information are members of the Stock Exchange. It is therefore a pleasing reflection of this interest that the Council of the London Stock Exchange has redesigned its own annual report to fall into line with present-day practice. Clarity, simplicity and informativeness – basic factors which should be present in all annual reports – are the keynotes. An introduction refers to the fact that a wider circle of people than members are interested in the principal events which occurred in the administration of the Exchange during the year which ended on March 24th.

The Stock Exchange report opens with a summary of the year's work, much of it of general public concern. Rebuilding, which is now in hand, will improve market facilities and speed up communications, as also will the spread of mechanization. The Compensation Fund, which protects the public against 'House' failures, has been further strengthened to £437,374. New methods of conveying company announcements to the House are being considered.

On the accounts side, the balance sheet is the traditional double-page statement, with liabilities on one side and assets on the other – a method which many accountants still hold to be the simplest and best form of presentation. Sectional headings are pin-pointed in bold headings and comparative figures for the previous year picked out on a green background. The general effect is easy on the eye and simple to read – facts of importance when, as in the case of companies, most shareholders have little or no knowledge of

accounts. The revenue account gives the main figures and comparisons in tabular form on one page, with the detail as notes on the opposite page.

Two pages of simply-drawn charts show the importance of the Stock Exchange in the country's financial affairs, and as a securities market with a vast turnover. Lord Ritchie, the chairman, and his fellow Council members are to be congratulated on a document which could well be a model for many company reports.

MODEST PROGRESS ON E.C.M.

THE Ministerial meeting between the six members of the European Common Market and the United Kingdom last week-end made a certain amount of progress. They hope to have a broad outline of solutions to the problems of this country's joining the Common Market by July. According to the Italian Minister of Industry and Commerce who was speaking on behalf of the six members of the European Common Market, the period of investigation is over and that of negotiation has begun.

By the end of the week-end it had become apparent that more progress had been made at the meeting than many had dared to hope but that considerable differences still separate the two sides on the basic issues. For the first time since last autumn ministers were personally involved in the formal discussions. It still seems apparent that France will play for time. On the other hand the impression has gathered strength that a target date in July has been seriously accepted by all concerned.

This is My Life . . .

by An Industrious Accountant

CHAPTER 124

EXPENSE accounts are notoriously provocative of headaches. We read about expenditure wholly, exclusively and necessarily incurred for business purposes, but this generality isn't much help when we come to consider particular cases. I still remember the first shock I received in my early days; never a year has passed since without another.

I was then in charge of the company secretarial section of our professional office; pressure of work was intense; my staff was small. What could a conscientious and inexperienced young accountant do but work late to clear the overload? Evening after evening, crouched over the dictating machine, pouring out reams of minutes of meetings, statutory reports, file notes, correspondence of all sorts. . . . Those who have been secretaries will understand.

Of course, one must eat. There was a coffee-house near the office where thirty minutes sufficed for sausages on toast or an omelette; the dockets for the frugal few shillings were paid without comment. The senior partner probably felt that I'd learn sense soon enough; the directors never descended to such trivialities. When they incurred expense, it was rarely revealed in detail; their vouchers merely said things like 'Sundry out-of-pockets, May 2nd–4th; £42'. They were signed by a director and approved by the chairman; I vaguely assumed them to cover hotels and travelling and similar essentials. Looking back on those days, I fancy that my generation guarded their employers' interests with an austere zeal more fervent than those employers ever conceived.

One day, a crumpled bill was attached to the chairman's voucher, obviously overlooked by the busy claimant. I can see the itemized list yet in my mind's eye. Dinner for eight at the costliest dining resort in town . . . lobster, steak, Remy Martin, cigars, *crème de menthe* . . . it had been a good dinner. It was probably a special occasion, but it was a revelation to me, especially when I looked again at our own firm's skinflint schedule of permissible claims. But then, I was inexperienced in those days.

The expense claim for my trip to London last week with Prinny is before me now. It's not really based on frugality. Prinny bade me royally to pay our way, and now he's about to authorize my out-of-pockets, as is legal and proper. I wonder if I dare include a new shirt under 'sundries'; after all, the hotel laundry lacerated the right upper breast of the old shirt I sent to them? If it wasn't for this diabolical new form P.11D, with its hair-raising analyses, I might risk it.

In our company, we formalize our procedure nowadays. When I came here first, I was startled to discover that we had no laid-down system in our minutes for approving personal expenses. It was just an ancient tradition that all the directors were authorized to sign anything; being a closely knit group they naturally had a tacit agreement between themselves as to who looked after what expense. Even our auditor concurred in this arrangement; I still remember his cold annoyance when I tactlessly congratulated him on his trusting faith in human nature. But he squared the account. We also had an unwritten arrangement that the secretary could sign for his own outlay up to a five pounds ceiling; the auditor shrewdly raised this point with the directors as being unsatisfactory, and working from this start induced them to install the present systematic arrangement which spells out the authorization limits in detail.

This train of thought was set off by reading an entry in *Pepys' Diary* for February 1661:

> 'To my Lord in the morning, who looked over my accounts, and agreed to them. I do also get him to sign a bill (which do make my heart merry) for £60 to me, in consideration of my work extraordinary at sea this last voyage, which I hope to get paid.'

Is there an undercurrent of uncertainty implicit in his claim? I suppose 'twas ever so. But he had no P.11D to harass him.

Finance and Commerce

Minimizing Costs

THIS week's reprint provides the accounts of The Cornhill Insurance Co Ltd. They show underwriting results, says Sir William Christie, the chairman, which were 'excellent'. This was partly due to the outcome of improved claims experience but also, he says, to a lightening of the expense factor which runs through all the revenue accounts.

'For some years', Sir William explains, 'the management has devoted particular attention to the costs of administration. Major departments have been resited and office processes regrouped to advantage; repetitive human processes have been minimized and controls and routines simplified; paper work attendant upon the changing requirements of policy-holders has been abbreviated and documentation speeded up. In consequence of these measures, the ratio of management expense to the world-wide fire and accident premium income has fallen to the lowest level for the past six years.' Sir William expects the process to continue.

By the very nature of their work, accountants obtain a close insight to office administration. Their wide range of such experience in itself is a valuable asset. They also know only too well the conservatism that can exist with long-standing office procedures. Marks & Spencer made a clean break some years ago, saving millions of forms and tons of paper per annum.

Motor Risks

Cornhill Insurance is particularly proud of the results in its accident department. Sir William compares premiums, profit and percentage for the last three years: 1961 – £5,100,983, £282,976 and 5·5; 1960–£4,461,339, £51,791 and 1.2; 1959–£3,970,928, £173,622 and 4·4. Two-thirds of the motor accident premiums were for motor insurance in this country and the results of this major section were profitable.

'We feel sure', says Sir William, 'that this gratifying result, the best for some years, is a reflection of our emphasis upon underwriting by reference to the individual records and characteristics of drivers rather than to broad categories and classes of vehicles and areas. We work on the principle that discrimination by loaded rates on other penalties against the driver with an impaired record should be matched by factors which afford positive and substantial recognition to the policy-holder whose experience is lengthy and whose record is consistently good.'

'Hence', he says, 'the Cornhill plan of 1957 which first introduced a no-claim bonus scale under which discounts rising to 50 per cent were allowed for the driver with the long claim-free record.'

But motor insurance overseas, he adds, still presents many problems and resulted in an underwriting loss.

Trustee Status

ONE point in insurance accounts is the comparative small paid-up capital compared with the multi-millions in the balance sheet. Equity & Law Life Assurance Society Ltd, in its 1961 balance sheet totalling £95,376,945, has only £450,000 in one million £1 shares, 8*s* 6*d* paid. Yet despite the long-standing solidity of insurance shares as investment, some of these companies are non-trustee under the 1961 Act, paid-up capital being under £1 million.

Equity & Law Life is calling up the 11*s* 6*d* per share and splitting the £1 into four shares of 5*s*. Mr G. Godfrey Phillips, the chairman, points out that the 11*s* 6*d* is being called up and not paid up 'since it would not be proper, nor do our articles permit it, to use the reserves of the life assurance and annuity fund for this purpose; in other words, any such sum would have had to be paid up out of the proprietors' fund, which would not have been sufficient for the purpose unless we had been prepared to deprive proprietors of any but a minute dividend for the forthcoming triennium'.

Valuation

The Equity & Law Life 1961 triennial valuation is notable for a change in its basis, principally by the use of higher rate of interest. The valuation basis used in 1958, the chairman points out, had in one important respect remained unchanged for twelve years, namely, the rate of interest employed in the valuation of ordinary life assurance policies, which was put into force at December 31st, 1946, when 2½ per cent Consols yielded fractionally over 2½ per cent and when the gross yield on the Society's funds was 4¾ per cent.

The yield on 2½ per cent Consols, he points out, is now over 6 per cent and the gross yield on the Society's funds last year was 7½ per cent.

To continue the valuation basis unchanged, he says, would have caused 'an undue withholding of surplus from the current generation of policy-holders'. The bonus now declared was, he points out, earned during the triennium 1959–61 and the reserves released due to the change in the actuarial valuation basis and attributable to the period prior to 1959 have been used to increase the carry forward.

Mr Godfrey Phillips (who is a director of the merchant banking house of Lazard Brothers) has a word to say on the Common Market. 'While in my view this is an aim to be pursued with determination not only for its vital importance to the United Kingdom but also to the Commonwealth as a whole, it is difficult to see it being accomplished without a period of acute change for British industry.'

NOTES TO THE ACCOUNTS

1. Of the total Motor premium £3,102,890 was derived from home business; the profit on home Motor business was £226,096.

2. Directors' emoluments for the year ended December 31, 1961, were:—

	£	£
Directors' remuneration	5,392	(5,250)
Other emoluments	14,868	(10,225)
	20,260	(15,475)
Past Director's pension for services in a managerial capacity	2,000	(2,000)
	£22,260	(£17,475)

3. In the Revenue Accounts foreign currencies have been included at average rates of exchange for the year, except that the provisions for outstanding claims in the Non-Marine Accounts have been converted at the rates of exchange ruling at the end of the year.

In the Balance Sheet foreign currency assets and liabilities have been converted at the rates of exchange ruling at the end of the year, except that investments have been included at, or under, the sterling cost at the date of acquisition.

4. All British Government, and British Government Guaranteed, Securities are redeemable at fixed dates. The aggregate redemption value is £2,152,776.

5. Certain of the Company's assets are deposited out of the United Kingdom:—

(a) As required by local laws of various places as security for holders of policies there issued.

(b) As part of a fund created with other companies as a guarantee in U.S. dollars in respect of certain Marine policies.

6. The aggregate market value of the Stock Exchange securities at December 31, 1961, was in excess of the values included in the Balance Sheet.

7. In our belief the assets set forth in the Balance Sheet are in the aggregate fully of the value stated therein.

8. The Provision and Reserve for Unfunded Pensions is charged with all pensions not covered by the Company's pension scheme, and is credited with taxation relief on such pensions.

Current contributions to the Company's pension scheme have been charged in management expenses in the Revenue Accounts.

CITY NOTES

RELEASED from dock strike fears, the stock-market was able to make an impressively strong opening to the new account and the tone was subsequently assisted by some reasonably encouraging economic and industrial news.

'Buy on a strike' has invariably been proved correct in stock-market terms. The threat of a strike inevitably brings, if not selling, then a run down in buying. Settlement of a strike equally brings improvement in stock-market sentiment and temper.

There is, however, more to the current stock-market position than such short-term influences. There is now a tendency to look for good news rather than to harp on bad. That is usually a sign of a change for the better in the indefinable 'market tone'.

So far investors have obviously needed convincing of the reliability of the official economic line that recovery is setting in and that a normal process of reviving home demand, coupled with success in export markets, will take up the economic slack.

There is still a firm belief that if that process is to be achieved, there must be some definite credit-freeing move to help the development on its way. Something more seems to be needed than periodical half-point cuts in Bank rate.

The first sign of such a move could well turn a cautious stock-market into a really confident one.

The Training of Accountants

SIR, – In his article published in your issue of April 7th and entitled 'Training for the profession – fact and fantasy', Mr R. J. Carter says 'The most that the technical schools can do is to provide tuition in the technique of book-keeping which is the elementary skill the accountancy student must acquire before he can start his training in real accountancy'. Presumably Mr Carter includes under the heading 'technical schools' all colleges for further education.

It is interesting to note that in the issue of April 14th, the report of the meeting of the Council of The Institute of Chartered Accountants in England and Wales held on April 4th, 1962, includes this statement

'In view of the increasing part being played by technical and commercial colleges within the educational system, the Council has decided to examine the scope for assistance from such colleges on a wider scale than is envisaged in the report of the Education and Training Committee.'

Yours faithfully,
E. V. ROBERTS, B.COM., F.C.A.,
Principal,
Leeds 2. LEEDS COLLEGE OF COMMERCE.

Deposit Account Interest

SIR, – I am grateful for the opportunity of explaining the policy of this bank in dealing with interest allowed on deposit accounts which was referred to in the letter from Messrs Sanders, Millichamp & Co, in your issue of April 28th.

Interest is calculated upon the day-to-day balance of a deposit account and is totalled at the end of June and December. The general practice of the bank is to take instructions from each new depositor at the time of opening his account as to whether he wishes the interest to be credited half-yearly to deposit or to

current account, or to accrue until he gives further instructions. Many of our customers prefer the interest to accrue or to be credited to their current account, and accordingly we find the system has the merit of being flexible and is able to meet the varying wishes of our customers.

Yours faithfully,
F. C. BOOLEY,
Public Relations Officer,
LLOYDS BANK LTD.

London EC3.

Assessment Query

SIR, – With reference to E. V. H. Nash's reply in your issue of May 5th to my query published in the previous issue, it is not merely a question of whether the Revenue would be so unjust as to allow an assessment on an estimated sum to stand where there was no trading activity. In fact, it could work for the benefit of the taxpayer too. If the assessment raised for the year next after cessation became binding the preceding year would be the penultimate year, instead of the final cessation year, and in certain circumstances this would result in some saving of tax.

According to the provisions of the Income Tax Act, 1952, an assessment becomes binding unless appealed against within thirty days. Also, in the case of *Allen v. Sharp* (1848), it was held that when an assessment became final, however erroneous, it could not be questioned. However, the Revenue advance the following argument:

An assessment may be made on an assumption of fact which may later be found to have been without foundation, although thought to be otherwise at the time the assessment was made, or the facts assumed may be incorrect. An assessment is a consequence of the belief of the existence of facts giving rise to chargeability. It is illogical to say that an assessment is 'conclusive evidence' of the existence of such facts. It is only evidence of the belief and cannot create a chargeable source which does not exist. If, therefore, there is no source for 1961–62, no assessment is valid and cannot become final and conclusive.

From the above it can be seen that there are two schools of thought on the conclusiveness and bindingness of an assessment. I shall be glad of any other comments from readers.

Yours faithfully,
London W8. R. V. MANIAR.

Taxation Case

A full report of the case summarized in this column will be published, with a Note on the Judgment, in the 'Annotated Tax Cases'.

De Voil v. Welford Gravels Ltd

In the Court of Appeal – April 17th, 1962

(Before THE MASTER OF THE ROLLS (Lord EVERSHED), Lord Justice UPJOHN and Lord Justice DIPLOCK)

Income tax – Schedule A – Gravel-pit – Additional Schedule A assessment thereon – Whether assessment limited to annual value for previous year – Income Tax Act, 1952, sections 82 (paragraph 1 (c) of Schedule A), 84, 105, 106, 113.

A farm of about 115 acres included a gravel-pit of about twenty-one acres, and the whole farm was assessed under Schedule A at £108 gross and £80 10s net. Prior to 1956 the gravel-pit had been used as such to only a small extent, but in that year a large local demand for gravel arose, and the owners of the farm obtained development permission to extract gravel from the twenty-one acres. It was a condition of the permission that any machinery or structures should be erected on an adjacent wooded area. The owners of the farm sold the twenty-one acres and the wooded area, twenty-three and a half acres in all, and the sale was completed on February 22nd, 1957. The purchaser company let the respondent company into occupation, and the latter started operations for extracting the gravel at the end of March 1957. On December 31st, 1957, the purchaser company granted a lease of the site to the respondent company for twenty-one years from March 1st, 1957, at a rent of £60 a year. This lease denied the respondent the right to extract gravel or any other mineral from the land. On the same day, however, a licence was given by the purchaser company to the respondent to extract gravel in return for a payment of 4s a cubic yard.

In 1957, about 56,000 cubic yards of sand and gravel were extracted by the respondent, and in 1958 it extracted 60,000 cubic yards. The sums payable to the purchaser company for those years were £11,200 and £12,000 respectively. After the Schedule A assessment for 1957–58 on the farm as a whole had been made, the Inland Revenue became aware of the sale of the twenty-three and a half acres, and the annual value of the farm as a whole was apportioned between the owners and the purchaser company. Later the Inland Revenue learned that the respondent was extracting sand and gravel from the twenty-three and a half acres, and an additional assessment under Schedule A was made on the respondent in the sum of £5,000 gross and £3,475 net.

It was contended on behalf of the respondent that the additional assessment was invalid, in that the twenty-three and a half acres was not a new unit of assessment. The General Commissioners accepted this contention, and discharged the additional assessment.

Held (reversing the judgment of Mr Justice Plowman) (Lord Justice Upjohn dissenting): the twenty-three and a half acres were a separate unit of assessment; and the case should be remitted to the General Commissioners for the annual value to be determined accordingly.

The Institute of Chartered Accountants in England and Wales

Decimal Currency

Memorandum for the Committee of Inquiry under the chairmanship of Lord Halsbury

THE Council of the Institute has noted with satisfaction the Government's acceptance of decimal currency in principle and the appointment of a Committee of Inquiry with the following terms of reference:

(*a*) to advise on the most convenient and practical form which a decimal currency might take, including the major and minor units to be adopted;
(*b*) to advise on the timing and phasing of the changeover best calculated to minimize the cost;
(*c*) to estimate the probable amount and incidence of the cost to the economy of proposals based on (*a*) and (*b*).

2. After reconsidering the whole question of decimalization of the currency the Council reaffirms the views which it expressed to the Chancellor of the Exchequer in a memorandum of February 1961 [reproduced in *The Accountant* of February 11th, 1961]. The following observations are made in amplification of that memorandum.

The Most Convenient and Practical form of Decimal Currency

3. In the memorandum of February 1961, the Council expressed the view that the most appropriate basis for decimalization in this country is the ten shilling/cent system with one hundred cents equal to the present ten shillings and the half-cent as the smallest unit which would be approximately equivalent to the present halfpenny. Further study of alternative bases, in particular the possibility of a new major unit equal to one hundred pennies, has confirmed the Council's conclusion in favour of the ten shilling/cent system.

4. A study of the results of conversion in South Africa on the ten shilling/cent basis indicates that the transitional complications could all be satisfactorily resolved.

5. The ten shilling/cent system would have the following advantages:

(*a*) in day-to-day transactions the most generally used and generally expressed unit of value would still be the shilling, which would remain unaltered and thereby retain a ready associability with prices in shops and with share quotations;
(*b*) the two to one relationship between the new unit and the pound would make the conversion of financial and statistical records comparatively simple;
(*c*) all existing notes would be readily convertible on the two to one basis into the new unit 'N' (thus £5=N10, £1=N2, 10*s*=N1) and the new notes could be identical with the old except for the denominational marking.

6. The major disadvantage of the ten shilling/cent system would be the disappearance of the penny and its replacement by the cent having a value equal to 1·2*d*. This change in the value of the minor unit of currency would make it necessary to adjust (as distinct from merely convert) prices or charges in transactions where pennies are involved; for example a charge of 8*d*, being equal to 6·66 cents, would have no exact equivalent and would therefore need to be adjusted upwards or downwards.

7. The Council considers that this disadvantage is far less than the disadvantages of a system under which the penny would be retained at its present value with a new major unit equal to one hundred pennies. These disadvantages would include:

(*a*) the disappearance of the present shilling as a unit of value would create extensive difficulties in everyday transactions;
(*b*) the absence of a simple relationship between old and new units would create difficulties in the conversion of financial records and in financial and statistical comparisons;
(*c*) all existing notes and coinage except the penny would have to be changed. Moreover, during a transitional period great confusion would be caused if the present coins for 3*d*, 6*d*, 1*s*, 2*s* and 2*s* 6*d* (the value of which would still be respectively 3, 6, 12, 24 and 30 pence) were in circulation with a new major unit equal to one hundred pence and coins for 5*d*, 10*d* and so on.

8. Under the ten shilling/cent system the Council understands that in South Africa the difficulties of conversion from pennies to cents have been overcome satisfactorily by the use of three conversion tables; a 'popular' table for general use giving equivalents to the nearest whole cent for amounts of 1*d*, 2*d*, 4*d*, 5*d*, 7*d*, 8*d*, 10*d* and 11*d*, a 'bankers and accountants' table which avoids the use of 2½ cents and 7½ cents for 3*d* and 9*d*, and a comprehensive table for accurate conversion.

9. It seems likely that Australia and New Zealand will follow South Africa in adopting the ten shilling/cent system. There would be advantages in the United Kingdom being in line with them and full use could be made of South Africa's practical experience.

The Timing and Phasing of the Changeover Best Calculated to Minimize the Cost: and the Probable Amount and Incidence of the Cost to the Economy

10. The Council does not wish to comment in detail on these two items of the committee's terms of reference. It is, however, desired to emphasize the following points made in the memorandum of February 1961:

(*a*) the longer the decimalization of the currency is deferred the greater will be the cost and dislocation;

(*b*) a date should be specified for the introduction of decimal currency, being the earliest date consistent with an adequate preparatory period;

(*c*) the need to consider the question of Government compensation either by means of direct grants or by appropriate taxation allowances.

April 25th, 1962. *Moorgate Place, London EC2.*

THE INSTITUTE OF CHARTERED ACCOUNTANTS IN IRELAND

SEVENTY-FOURTH ANNUAL MEETING

The seventy-fourth annual meeting of The Institute of Chartered Accountants in Ireland was held in the Shelbourne Hotel, St Stephens Green, Dublin, on Saturday, May 5th. The President, Mr A. E. Dawson, F.C.A., was in the chair and there were fifty-seven members present.

PRESIDENT'S ADDRESS

In the course of his address Mr Dawson said:

In proposing the adoption of the accounts and and report I will confine my observations to a few of the main features.

The Institute's Accounts

Income was £1,135 in excess of the previous year's figure, the total from membership subscriptions having increased by £327, while students' registration fees, after excluding the proportion payable to the district societies, were £954 higher. In making the latter comparison, however, it must be borne in mind that the registration fees were only operative for eight months of the year 1960.

Two groups of expenditure showed substantial increases, administration costs having risen by £1,160 and the net cost of examinations by £1,260.

You will observe that examinations have been charged with a proportion of establishment and administration expenses. This is a matter which the Council has had under consideration for some time, the object being to show in proper perspective the cost of conducting the Institute's examinations. The year under review was, of course, a period of transition, in which were held the first sessions of the new Institute examination as well as the last of the examinations under the old syllabus of the Institute and those under the syllabus of The Society of Incorporated Accountants.

In this connection it has been decided as a matter of policy that the cost of conducting examinations should not be permitted to make inroads into resources earmarked for raising the standard of education in professional subjects and the provision of improved facilities for students.

Education and Training

The first steps towards achievement of the objectives mentioned have already been taken. On the recommendation of the Policy Committee the Council has – as you will have seen from recent advertisements – decided to appoint a full-time director of studies, who will be responsible to the Education and Training Committee for advising on educational facilities for Institute students and for the organization of studies. This is a step of far-reaching importance which emphasizes the Council's firm resolve to ensure that the best possible educational facilities are available to Institute students.

Here it may be appropriate to draw the attention of practising members to the importance of exercising due care in the selection of suitable entrants to the profession and the desirability of insisting upon a probationary period of service prior to entry into articles. The individual member in practice who undertakes the training of articled clerks assumes a twofold obligation: firstly, towards the clerk in the provision of suitable opportunities and experience for acquiring the skill and knowledge of a chartered accountant, and secondly, towards the Institute and the profession, the future standards of which depend to such a large extent upon the principal's choice of apprentice.

The Council is mindful of the dislocation arising in professional offices by reason of examination leave. This stems from the fact that all clerks serving under articles now take at least one examination each year; and it may happen that virtually all the articled clerks in an office are absent at the same time on examination leave. The difficulties may be increased as a result of failures at the first attempt and the necessity for re-sitting an examination in the same part. Nevertheless, the periods of leave stipulated in the articles are no more than are considered to be necessary; and while it has been suggested that some change in the examination dates would ease the position, it must be realized that these dates are related to the times of year when the

majority of students enter into articles on leaving school or university. The whole position is, however, being kept under review by the Education and Training Committee.

Here again, a more careful choice of apprentices could well prove to be an insurance against repeated examination failures and the consequent loss of office time.

It is too early to assess the benefits resulting from the spreading of the studies formerly concentrated in preparing for the Intermediate and Final examinations; but it is confidently anticipated that students who have commenced articles under the new syllabus will be better equipped, particularly in the latter part of their term of apprenticeship, to produce a higher standard of work, thus offsetting to a considerable extent the initial inconveniences which the new system imposes upon principals.

Notwithstanding the efforts being made to ensure better theoretical knowledge, the practical training resulting from actual work in a professional office remains of paramount importance. Furthermore, there is, in my opinion, no substitute for the real benefits to be derived by newly-qualified accountants, in whatever direction their ambitions for the future may lie, from continued service in their offices as senior assistants for at least one year – but preferably for a longer term. In the covering of mainly familiar ground on a higher plane of responsibility, the qualified assistant in a professional office has a unique opportunity of reaching maturity in a comparatively short time. The privilege, enjoyed to a limited extent during the apprenticeship period, of viewing in perspective a variety of businesses and undertakings can be turned to advantage in a clearer atmosphere, unclouded by the anxieties and distractions incidental to preparation for examinations, to acquire the degree of professional skill expected from a member of the Institute.

That this conception of what is required to complete the training of a chartered accountant has become unfashionable is evidenced by the present general scarcity of qualified assistants; and in urging the necessity for a return to the view that there is no substitute for practical experience of the kind obtainable in a professional office I would suggest that the seeking and securing of more remunerative employment in industry and commerce without the necessary background of solid practical experience is in the end good neither for the newly-qualified accountant, the business community nor the profession.

Fellowship

The future qualification for Institute fellowship is another matter which has been under consideration during the year by the Council and some of its committees.

The spheres in which chartered accountants exercise their skills have extended so far beyond the comparatively narrow confines envisaged by the Charter of 1888 that there now appears to be no justification whatever for the denial of fellowship to non-practising members of the Institute; but the problem of arriving at the most suitable basis on which it should be awarded is one on which the Council has decided to seek the widest possible expression of views from members before coming to a decision. Accordingly, the district societies have been requested to ascertain as far as is possible the wishes of the general body of their members; and to those who for one reason or another find themselves unable to attend any of the discussions envisaged, I would commend the matter as being generally appropriate and of sufficient importance for the correspondence columns of the *Members' Bulletin*.

To express a purely personal view, I see no good reason why – subject to the necessary transitional arrangements being made – fellowship in the future should not be obtainable only by academic achievement through postgraduate study and a qualifying examination in economics together with some specialized subject such as taxation or management accounting, which might well be conducted by arrangement with the universities or other educational establishments. Leaving any other considerations aside this would meet the existing demand for postgraduate study in such subjects, for which there is no room in the present examination syllabus.

Public Practice

The ever-increasing demands on the services of chartered accountants in public practice indicate the necessity for a greater measure of specialization on the part of principals as well as departmentalization of the office work; and while many of the larger firms are already organized on those lines, both the smaller firms and sole practitioners are faced with a problem, the solution of which is rendered more difficult by the comparatively small numbers of young qualified accountants who elect to remain on the practising side of the profession. The effects of this situation may become more apparent in the not too distant future; and I would suggest to the younger members of the Institute that they should not overlook the possibilities for advancement in professional offices, particularly if they have a desire to specialize and also to avail themselves of the opportunities for self-expression and service which are to be found in public practice in possibly greater measure than elsewhere.

The obvious alternative to the enlargement of firms by the admission of new partners, in order to provide the additional services which clients are now entitled to expect, is the merging of sole practitioners or small firms. There is already a trend towards amalgamations of this nature, which in addition to providing increased opportunities for specialization have the advantage of ensuring continuity.

Management Services

While management services to meet the requirements of medium or large-scale businesses may well be outside the province of the sole practitioner and of many of the smaller firms of accountants, there is no reason why the practising chartered accountant should not be able to cater adequately for the needs of small businesses through the application of management techniques; and the Institute's new examination syllabus is designed to ensure that future entrants to the profession are familiar with these techniques and their practical application.

Legislation

The 1960 Companies Act in Northern Ireland came into operation just over a year ago; and the benefits of the provisions relating to company accounts – especially in the importance attached to the profit and loss account

– are now becoming apparent. Similar provisions are expected in the forthcoming Companies Act in the Republic of Ireland; but pending the introduction of this legislation I would like to subscribe to the hope expressed last year by Mr Cameron, my predecessor in office, that our members will do all they can to influence their clients and boards of directors to present accounts which conform with modern accountancy practice.

In the Republic the recent announcement of the Government's five-year plan for amending and consolidating measures covering the law of contract and the laws relating to trustees, bankruptcy and the administration of estates was well received; and when this legislation emerges it will no doubt be welcomed by the profession.

European Economic Community

There has been considerable comment regarding the probable effects on the economy of the home countries consequent on admission to the European Economic Community. Some of this has been based on insufficient knowledge of the facts, thus rendering it more a matter of speculation than of reliable forecast; and I do not propose to venture any opinion beyond expressing the view that clients should be encouraged to explore the possibilities exhaustively in so far as their own businesses are concerned. In this connection our members have an important contribution to make towards promoting the increased efficiency which will be essential in the future whether or not membership of the Common Market materializes.

Consideration of the consequences of entry into the E.E.C. should, however, receive the serious attention of professional bodies such as ours, since one of the means of achieving the declared object of the community is the removal of obstacles existing between the member States with regard to the free exchange of persons and services as well as capital. Articles 48 to 66 of the Treaty of Rome deal specifically with these matters, which are of particular importance to the accountancy profession. Subsequent developments have resulted in the laying down of a specific time schedule; and it would appear that the programme provides for the liberalization of the accountancy profession before the end of the year 1965, this comparatively early date having been determined in view of the importance of the profession in the economic life of the community. In this connection the object is to allow the nationals of any one of the Common Market countries to practise freely in another member country, either by establishing themselves in that country or by visits from their own country. Standardization of the conditions of entry to the profession is also intended; and at a later stage any existing legislation of a member country which restricts free interchange is liable to be altered following the issue of directives.

Mr Dawson concluded with an expression of thanks to the Vice-President and his colleagues on the Council, and to the Institute Secretary, Mr Stuart Orr, and his staff.

He then formally proposed the adoption of the Council's report and statement of accounts.

The Vice-President, Mr R. E. McClure, having seconded the proposal, the resolution was put to the meeting and was carried unanimously.

ELECTIONS

Election of President and Vice-President

Mr Rollo Ellis McClure, M.B.E., F.C.A., Belfast, was unanimously elected President for the ensuing year on the proposal of the Chairman seconded by Mr G. E. Cameron. Mr McClure thereupon took the chair and thanked the members for the high honour they had conferred upon him.

Mr Robert Patrick Feltham Olden, F.C.A., Cork, was unanimously elected Vice-President on the proposal of Mr John Love seconded by Mr D. McC. Watson.

Elections to Council

The following six retiring members of Council were declared re-elected on the proposal of Mr C. Garrett Walker seconded by Mr J. C. Oakes: Messrs A. S. Boyd (Belfast); G. E. Cameron (Belfast); Frank Cleland (Belfast); M. M. Connor (Dublin); J. F. Dempsey (Dublin); H. W. Robinson (Dublin).

Mr W. H. O'Donnell, who retired in accordance with the provisions of Bye-law 9, was unanimously re-elected on the proposal of Mr John Bacon seconded by Mr D. W. Pratt.

Officers

On the proposal of Mr B. A. Courtney, seconded by Mr W. Edmiston Crawford, Mr Thomas Desmond Lorimer, F.C.A., Belfast, was unanimously elected Joint Honorary Secretary and Treasurer.

The auditors, Mr Harry Hollingsworth Forsyth, F.C.A., Dublin, and Mr Sydney H. Laughlin, F.C.A., Belfast, were unanimously reappointed on the proposal of Mr R. N. Crawford seconded by Mr S. H. Polden.

VOTE OF THANKS

At the conclusion of the meeting a vote of thanks to the outgoing President was proposed by Mr Frank Cleland who paid tribute to Mr Dawson's services to the Institute during his term of office. The vote was carried with acclamation.

BENEVOLENT ASSOCIATION

The thirty-third annual meeting of The Irish Chartered Accountants' Benevolent Association was held in Dublin, on May 5th, prior to the annual meeting of The Institute of Chartered Accountants in Ireland.

The President, Mr A. E. Dawson, F.C.A., was in the chair and there were thirty members present.

On the proposal of Mr D. W. Pratt, seconded by Mr John Love, the report of the Board of Management and the statement of accounts for the year ended December 31st, 1961, were unanimously adopted.

The honorary auditors, Mr Harry Hollingsworth Forsyth and Mr Sydney Harold Laughlin, were unanimously reappointed on the proposal of Mr T. D. Lorimer seconded by Mr D. McC. Watson.

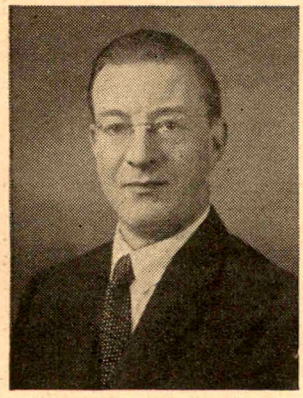
THE INSTITUTE OF COST AND WORKS ACCOUNTANTS

THIRTY-THIRD NATIONAL COST CONFERENCE

About three hundred members attended the thirty-third national cost conference of The Institute of Cost and Works Accountants held in Harrogate on Thursday, Friday and Saturday of last week.

Computers and Industry

After the conference was formally opened by the President, Mr F. M. W. Hird, F.C.A., F.C.W.A., on Thursday afternoon, the first paper was given by Dr M. G. Kendall, President of the Royal Statistical Society and managing director of C. E. I. R. (U.K.) Ltd, on 'The effect of the electronic computer on the organization and structure of industry'.



Mr F. M. W. Hird

Dr Kendall surveyed the application of computers to data processing, linear programming, simulation and forecasting techniques, and said that the main impact of the computer on data processing was in the speed with which data can be summarized and presented to management and the form in which records are kept. An enterprise would become more integrated as it became increasingly possible to receive data from outlying centres; this would reverse the current trend of decentralizing control. The computer offered a breakthrough in managerial technology by making possible the establishment of a sensitive nerve system in the rather unwieldy bodies of the larger corporations, and hence attaining speedy response, adaptability and economy.

Dr Kendall foresaw the time when, for example, trade organizations would use a computer for data collection and processing, when marketing boards would synthesize their controls on the computer, and when crime detection, traffic control, port control, food distribution, allocation of students to educational institutions or of patients to hospitals, were all organized on a large scale with computer aid.

PRESIDENTIAL ADDRESS

Mr Hird then delivered the following address:

When I was honoured by being raised to the highest office in the Institute my predecessors warned me that my hardest task would be to prepare a presidential address. Having now faced it, I cannot find that they were wrong.

Being your President is the peak in my career, and it is not surprising that I gave some little thought as to how it ever came about. One obvious point was that I had been a member of the Institute and the Council for a very long time, because it is quite clear that one's rise to the Presidency cannot be, and indeed should not be, anything meteoric. I succeeded in passing the Institute's examinations in 1932, but with intuitive wisdom the Applications Committee of the day refused me membership, which was accorded some years later. Although some might consider that there was an error of judgment in this reversal, I am happy to think that it did not do any actual harm.

It would be very wrong, however, to suggest that one can come to this position merely through the passage of time, so I sought for further reason and had the humiliation of finding it. Namely, that I have some capacity for focusing on the obvious, the larger intellects having visions of more distant horizons. My position, therefore, has been somewhat analogous to that of a blind man who mostly requires help from others, but on the occasion of a particularly foggy night can lead home those who normally lead him.

Prestige of the Institute

The growth of the prestige of the Institute in the past thirty years has been far greater than any of us would have dared to hope in those days, and whilst it is thoroughly well deserved, the cause has been the devoted work of so many members, some of them, alas, no longer with us, and of my predecessors in this office. The progress continues, and as your representative I have been honoured by invitations received for the first time from bodies and institutions by whom it is very proper that we should be known and respected.

My experience has been that we have reached a stage where the esteem in which the Institute is held, by those who know something about it, could scarcely be higher, but it has also been borne upon me that we still have a long way to go before the Institute and the reasons for its existence are known to all those we would wish to be aware of us. In my year of office I have been particularly fortunate in being able to make fresh contacts within the City of London. On these occasions I have received honoured and cordial welcomes, but in the course of conversation have come across rather startling unawareness of the purposes of the Institute and the work of its members. In the conversations naturally arising, it was not possible, of course, to say a great deal, but the liveliest interest was taken in the brief explanations I was able to give. This presentation of ourselves must go on, and I urge upon all members to take what opportunities they can, falling short of being tedious, to explain what the Institute is for and what its members do for the industry of this country.

Economic Developments

The past thirty years have probably been the most momentous in economic history. The developments have been masked by the horrors of the Second World War and present gloomy apprehensions about the future. 1931 saw the depths of the worst slump then known,

and the financial measures taken in those days to deal with the situation to save the value of the pound made everything else a great deal worse. J. M. Keynes was a lone voice unheeded in this country. As he himself has said, he was uttering 'the croakings of a Cassandra who was never able to alter the course of events in time'. However, in the United States, where the situation was at least as bad – if not worse – than here, he gained the ear of President Roosevelt and such phrases as 'the new deal' and 'pump priming' came into use. From that time onwards it was quite certain that future slumps would never again be met by the old economic approach of violent retrenchment. To those of us who have any recollections of the situation in the early 'thirties there can be no doubt that the new method has proved infinitely preferable to the old.

The Keynesian doctrines and the tremendous technical progress forced in the hot-house of war had two inevitable, but not widely foreseen, consequences. The first of these is, of course, Governmental interference in matters hitherto regarded as private, and the second, if not an entirely new industrial revolution, is an acceleration of progress such as has not been seen for at least 150 years.

I should like to revert to the new situation created by the Keynesian economics. It was very understandable that this radically new approach should give rise to some confusion and that its full implications were not immediately realized. However, a considerable time has elapsed since then, and there does not seem to have been the development of awareness of the present-day facts which so frequently confront us that some observance of them was reasonably to be expected. Please be assured that I was fully as mistaken in this matter as anybody else, and I find that in October 1949 I said the following:

'It seems absolutely certain that no Government can possibly incorporate into its taxation, or any other legislation, provision for future inflation. The one thing that any Government of any political colour would insist upon as its prime object would be the checking of inflation and the stabilization of the value of money. It is quite unthinkable that Governments should make special arrangements for funds to be accumulated which will only be needed if their own policies fail completely. One can, of course, point out that their policies have failed completely with monotonous regularity for the last half-century but any Government w… tell you that that is why it won the last election, and … never going to happen again so long as they are in offic…

It appears to me that that slightly inurbane statem… of the position not only was true then but repres… the thinking of the present time, and I am bound … wonder whether any such thoughts are still justified … basis for policy. After all these years it is surely … that inflation is now endemic and will remain … us for the foreseeable future. There are, of course, checks and spurts in its advance, but the one-way movement always progresses. If this painful fact can be publicly recognized it might well be that the problems it poses could be met by better solutions than those that are applied in the pious hope that it is not going to happen again.

We are frequently told, and rightly, that this creepi… inflation is the bane of people with small fixed inco… – old-age pensioners and the like. They do not ne… be reminded of the truth of this, all they bitterly … is the consistent failure of the various att… hold the value of currency stable for a… period of time.

It is the duty of a civilized nation to look well after its children, its sick and its aged, and the amount they receive is always that portion of the gross national product which the community is willing to concede. If the amounts allocated exceed this notional figure the result is immediately adjusted by a further batch of wage and salary claims to offset the taxation which has been involved.

Now it is often and very understandably said that it is dangerous to attach such matters as old-age pensions to a cost-of-living index because to do so is inflationary. This is a view that need not be denied, but as an argument it loses its force when once it is accepted that an inflationary position exists in any case.

It must be remembered that we are not alone in this predicament and that every nation's money is steadily growing worse at the same time. The social benefits accorded in some of the countries with economies with a record of substantial inflation are quite comparable with anything we have here; I have France particularly in mind on this point, and it does appear that the unfortunate erosion of the value of the currency has not prevented the development of a welfare state. The danger to this country, or indeed to any other, is not particularly in the inflation of its currency, but in that its inflation has exceeded the rate achieved by its neighbours and competitors. This, of course, can lead immediately to the balance of payments crises with which we are painfully familiar.

It may be that I have been tactless in stating publicly the position as I see it, and that it is better to pretend that inflation has been checked, and then to make a graceful apology every three or four years, admitting that some new adjustments are necessary – but I cannot really feel that this latter position is one which accountants would relish.

New Industrial Developments

The new industrial developments have created and are creating, more and more, a position which I think is not yet being fully recognized. It is not merely that there are vast numbers of new materials and techniques, but that the capacity of modern productive equipment is so greatly expanded over and above anything hitherto … We now have a situation where the output of a … if it is to be operated economically, … sale of the products must be three … This is the explanation behind … not all, of the take-over bids … receive such publicity today.

… Production

…ep this fact of continually …oughly in mind. This … harmful, and if harm … in economic policy. …cost of production …up on the old … product was …f one is so …nk it can …rything …ever

…espite …costs …. It …re.

propound some solution, but I cannot do so. All the same, I may say that better answers to problems emerge when all the facts of the situation are faced, and it is my belief that at the present time this is just what we are not doing.

I should like to end with a brief excursion into the uncivil and touch upon the subject of electronics. I have always maintained that a man with a pencil or even a quill pen, armed also with data concerning the activities of an industrial organization, can produce a substantial quantity of misleading information. No one particularly appreciates being led up the garden path, however slowly, but to be jet-propelled up it at the rate of 25,000 characters a minute creates in me a distaste which I am at no pains to conceal.

There is not, and never has been, any substitute for the accuracy of basic information and the utmost care needs to be taken before giving data to an instrument which thinks of three as four yeses and a no.

Presentation of Medals

On Friday morning, Institute silver medals were presented by the President to Mr S. C. Tyrrell, F.C.W.A., and to Mr E. B. Bishop, F.C.W.A.

The award to Mr Tyrrell was made in recognition of his long and distinguished service to the Institute and to the profession; that to Mr Bishop for his original thought and outstanding powers of exposition of the techniques of cost and management accountancy.

TECHNICAL S

The first of the two papers
by Mr C. E. Sutton, F.C.A.,
Metal Box Co Ltd, entit
people'. Mr Sutton poin
of cost or profit, were t
actions of numerous
influence. Efficien
of the contributi

thousands of people must finally be measured in figure
Against this background Mr Sutton surveyed t
functions of purchasing, stores control, transpo
quality control, information and forecasting service
market research and personnel policy, including t
selection and training of employees in a large industr
organization.

The second paper, on 'The cost of quality' was giv
by Mr K. S. Ayres, F.C.W.A., a member of the Coun
of the Institute, who said that the establishment of
National Council for Quality and Reliability and t
announcement of the National Productivity Ye
emphasized the growing concern of this country wi
quality and productivity; an interest which deriv
from the necessity of matching the increasing efficien
of the rest of the industrial world.

Mr Ayres, who is the Institute's representative
the National Council for Quality and Reliability, sa
that, perhaps not unnaturally, the public was reluct
to accept the fundamental truth that quality mu
be paid for. There seemed to be a growing tendency
expect that however cheap an article or service mig
be in the monetary sense, its reliability must be impe
cable. It was therefore most important that produc
should know the cost of quality and reliability and th
consumers should realize that such costs were just
much part of the cost of a product as the labour a
materials. It seemed that some manufacturers have ma
no serious attempt to ascertain the cost of quality, whi
may, in fact, be segregated into the cost of attainir
maintaining, and failing to attain or to maintain, quali

He then went on to outline a system of to
quality control which sought to measure quality and
control its cost.

BANQUET

At the banquet held on Friday evening at The C
Swan Hotel, presided over by the President, t
principal guests were the Mayor and Mayoress
Harrogate, and Sir Robert Shone, Director-Gener
National Economic Development Council, who
sponded to the toast of 'The Guests' proposed by t
President.

The guests also included: Mr P. F. Grang
President, The Institute of Chartered Accountants
England and Wales, and Mrs Granger; Mr E. Spenc
ident, The Association of Certified and Corpor
untants, and Mrs Spencer; and Mr A. L. Imr
ident, The Institute of Municipal Treasurers a
untants, and Mrs Imrie.

ANNUAL GENERAL MEETING

The forty-third annual general meeting of the Institu
was held last Saturday morning when, as noted el
where in this issue, Mr William Bishop, C.A., F.C.W
was elected President for the ensuing year. Mr Cha
Eric Power, F.C.A., F.C.W.A., was re-elected a Vi
President, and Mr John Pearson Wilson, F.C.W
F.C.I.S., was also elected a Vice-President.

Notes and Notices

PROFESSIONAL NOTICES

MESSRS BOALER, FLINT & HURT, Chartered Accountants, of 5 Regent Street, Nottingham, announce that Mr D. G. PARRIS, A.C.A., and Mr M. H. T. SIMPSON, A.C.A., have been admitted into partnership as from May 1st, 1962.

MESSRS CITROËN & PARTNERS, of 19 Upper Brook Street, London W1, announce that from May 1st, 1962, they have taken into partnership Mr BENJAMIN POLLARD, A.C.A. The name of the firm remains unchanged.

MESSRS DAVIES, WATSON & Co, Chartered Accountants, of 52 Belgrave Road, London SW1, announce that Mr PETER JOHN BRUNSDEN, A.C.A., who has been associated with the firm for a number of years, was admitted into partnership on May 1st, 1962.

MESSRS DEACON & Co, Chartered Accountants, of Lloyds Bank Chambers, Greyfriars Lane, Coventry, announce that as from May 1st, 1962, Mr J. NOEL THOMAS, A.C.A., who was articled to Mr DEACON, has been admitted into partnership. The name of the firm remains unchanged.

MESSRS FITZPATRICK, GRAHAM & Co, Chartered Accountants, London and Manchester firms, and MESSRS JACKSON, MORTON & PARTNERS, of Nottingham and London, announce that they are associating in practice at Nottingham. The practice will be carried on as from April 1st, 1962, by the firm of FITZPATRICK, GRAHAM & Co and JACKSON, MORTON & PARTNERS, the partners of which will be the existing partners of JACKSON, MORTON & PARTNERS and MESSRS W. J. LEEMING, G. GOLDING, W. G. MEDLAM, F. A. H. SKINNER and G. W. MURPHY of the London and Manchester firms of FITZPATRICK, GRAHAM & Co. The London practice of JACKSON, MORTON & PARTNERS will be incorporated as from April 1st, 1962, in that of FITZPATRICK, GRAHAM & Co. FITZPATRICK, GRAHAM & Co have admitted Mr C. W. H. JACKSON and Mr C. W. H. MORTON as partners of their London firm and Mr C. W. H. MORTON as a partner of their Manchester firm.

MESSRS KEMP, CHATTERIS & Co, Chartered Accountants, announce that Mr PATRICK CARROLL MACNAMARA, F.C.A., has been admitted to the partnership.

The Glasgow firms of MESSRS MCCLELLAND, MOORES & Co, MESSRS BROWN, FLEMING & MURRAY, and MESSRS THOMSON MCLINTOCK & Co, announce that, whilst their separate practices will continue, they have formed a joint firm with the name of MESSRS MCLINTOCK, MOORES & MURRAY which will practise meantime from 213 West George Street, Glasgow C2. The partners in the joint firm are Mr S. E. HOUSTON, C.A., and Mr G. A. ANDERSON, C.A. (of MESSRS MCCLELLAND, MOORES & Co), Mr L. T. MILLER, C.A., and Mr T. D. LYNCH, C.A. (of MESSRS BROWN, FLEMING & MURRAY), Mr T. I. MCLINTOCK, C.A., and Mr J. N. ANDERSON, C.A. (of MESSRS THOMSON MCLINTOCK & Co), and Mr C. I. BUYERS, C.A., A.C.W.A. Mr BUYERS has been a senior member of the staff of MESSRS THOMSON MCLINTOCK & Co for a number of years.

MESSRS BEAT, MARWICK, MITCHELL & Co, announce that as from July 1st, 1962, Mr R. E. GRAY, F.C.A., is being admitted as a partner in their Newcastle upon Tyne office.

MESSRS ERIC PHILLIPS & Co, Chartered Accountants, of London SW3, announce that on May 1st the style of the practice was changed to Messrs SURMAN, BEAT, PHILLIPS, GALE & Co; and that on that date Mr DOUGLAS THOMPSON, F.C.A., who has been a member of the staff for several years, was admitted as a partner.

LIVERPOOL SOCIETY OF CHARTERED ACCOUNTANTS

The annual meeting of the Liverpool Society of Chartered Accountants was held on May 7th, and the ninety-second annual report, which was presented, records a total membership at December 31st, 1961, of 1,006 – an increase of seventeen members over the year.

In the course of his address, moving the adoption of the report and accounts, the President, Mr Philip C. Lloyd, F.C.A., said:

'To all members of the committee and to those who have served on the subcommittees of the Society I must express my most grateful thanks. There have been many important matters to consider during the past year and the thorough and enthusiastic way in which these gentlemen have attended to the various tasks entrusted to them more than justifies the confidence which you have placed in them.

'During the past year a great number of courses and lectures have been held in the Society's area; whilst many of these have been directly sponsored by the Society others have been arranged jointly with the Liverpool College of Commerce and the Merseyside Productivity Association, and by these various means we have endeavoured to provide study facilities not only for our articled clerks but also for audit assistants and qualified members and – at the Management Accounting Conference – for business executives as well.

'Reference is made in the annual report to a pilot scheme which was voluntarily undertaken by a number of firms

MOTOR — FIRE — CONSEQUENTIAL LOSS
CAR & GENERAL INSURANCE CORPORATION LTD
83 PALL MALL, LONDON, SW1

from this area and elsewhere whereby a survey was made and a report prepared on accountants' remuneration, salaries and costs. Your committee felt that the work of this group deserved every encouragement and authorized expenditure to enable the report to be printed and circulated to all our practising members and to the Institute. To my knowledge this was the first report of its kind ever to have been produced and its contents have prompted similar surveys to be made in other areas and it has, no doubt, been partially responsible for the Council's subsequent decision to conduct a nation-wide survey which has already accumulated details of the problems and difficulties of the smaller practitioners and which will shortly collect financial information relative to accountancy practices. I am sure that you will all agree with me when I say that we are greatly encouraged by the action of the Council in this respect and are indebted to them for their initiative in the matter. Our collective reply to the first part of the small practitioners' survey is, in common with others, now under active consideration by the District Societies Committee, but in view of the implications of many of the matters covered I know you will await the outcome with patience and understanding.'

A vote of thanks to the President was proposed by Mr J. M. Harvey and Mr Lloyd replied.

New President

At a committee meeting of the Society held on May 9th, Mr Stanley Morris, F.C.A., a partner in the firm of Hodgson, Morris & Co, Chartered Accountants, was elected President of the Society for the ensuing year.

Born in 1915, Mr Morris was educated at Sedbergh School and was admitted an Associate of The Institute of Chartered Accountants in England and Wales in 1939. In August of that year he was mobilized in the Territorial Army in a Birkenhead R.A.S.C. unit as a lance-corporal, subsequently being commissioned early in 1940 in the 59th Division. He later served as staff-captain of one of the infantry brigades in that division, before being promoted to command 176 Company R.A.S.C. with the division.

He attended the Staff College at Camberley in 1943 and afterwards took up a staff appointment on the general staff in the Middle East, later commanding 332 and 37 Companies R.A.S.C. in Egypt, Palestine and Syria.

Since the war, Mr Morris has held a number of honorary appointments in Liverpool and since 1954 has been the honorary treasurer of the Liverpool Child Welfare Association. He was elected a magistrate for the City of Liverpool in 1954.

He is the chairman of J. Mawdsley & Son Ltd and George Reed & Co (Printers) Ltd, two Liverpool printing concerns, and holds other directorships including those of several South African companies.

Other officers of the Society for 1962–63 have been elected as follows:

Vice-President: Mr John Howard Bradley, F.C.A.
Hon. Secretary: Mr Kenneth Duncan, F.C.A., B22 The Temple, Dale Street, Liverpool 2.
Hon. Treasurer: Mr Clifford Pearson, F.C.A.
Hon. Assistant Secretary: Mr John Spencely Ellison, M.A., F.C.A.

MANCHESTER SOCIETY OF CHARTERED ACCOUNTANTS

Mr George Wm. Murphy, J.P., B.A.(COM.), F.C.A., has been elected President of the Manchester Society of Chartered Accountants for the year 1962–63.

Mr Murphy was articled to the late Mr Wm. A. Nixon, J.P., F.C.A., and was admitted an Associate of The Institute of Chartered Accountants in England and Wales in 1938.

Founder of the firm Murphy, Bailey & Co, of Manchester, which has been amalgamated with Fitzpatrick Graham & Co, of London, Manchester, Nottingham, Macclesfield and overseas, Mr Murphy was elected to the Committee of the Manchester Society in 1953, and is in charge of Accounting and Financial Studies in the Faculty of Economics in the University of Manchester. He is the author of several books and articles on accounting and economics and has lectured extensively in the United States and the Far East. He is particularly interested in local government finance and is at present a councillor of the Corporation of Macclesfield.

The new Vice-President of the Society is Mr J. V. Eastwood, F.C.A.

Annual Report for 1961

The eighty-first annual report of the Manchester Society presented at the annual meeting on May 7th, shows that there was an increase in membership during the year of 122 bringing the total to 1,720. This increase was in large part due to a special membership drive conducted during the summer months, as a result of which eighty-eight new members joined the Society.

The monthly luncheon meetings, which have been a successful feature of the Society's activities in past years, were continued and interesting talks were given by guest speakers. Eight evening meetings were held at which subjects ranged from 'Equities and all that' and 'The Trustee Investment Act, 1961' to 'Commercial fraud' – an address given by a member of the Manchester City Police, Commercial Branch. The discussion group also held a number of meetings.

Social functions included the annual dinner, attended by 405 members and guests, and again over-subscribed. Two informal sherry parties were held in May and September, to which all successful Finalists in the area of the Society were invited.

The North Lancashire Branch of the Society passed an active year and there was a substantial increase in membership, which now stands at 441. The Bolton Branch, with a membership of 103, also held a number of meetings during the year.

CORRECTIONS

In the caption to the photograph on page 620 of last week's issue, it is regretted that the solicitor's name appeared as Sir Charles Norton, instead of Mr John W. Gauntlett.

In the banquet photograph on page 607, the Lord Mayor is, of course, on the left and not, as indicated, on the right of the picture.

THE INSTITUTE OF CHARTERED ACCOUNTANTS OF SCOTLAND

Spring Diet of Examination, April 1962

PART IV

Of the 506 candidates who sat Part IV of the Institute's examination on April 3rd, 5th and 4th, 1962, the undernoted 207 (40·9 per cent) candidates passed. Their names appear in alphabetical order and are followed by the names of the firms of the masters to whom they were indentured or assigned.

The Albert J. Watson Prize (in two parts for the two candidates whose performances are the most meritorious) was awarded to

Whither Guiding Light?

FOLLOWING the settlement of the dock labour pay dispute and, more especially, the statement this week that workers in no less than seventy-seven industries have received increases over 2½ per cent, it would be fair to suggest that the adage, 'he's dead, but he won't lie down' could be applied to the Government's policy on incomes. For the Government adamantly insists on enforcing wage-restraint for employees in the public section – despite massive demonstrations of public support for the nursing profession.

That public opinion should be more concerned with the apparent inequity of the workings of this dual system of income determination, than with the economic issues to which it gives rise, is natural. While it might be possible to make the 'pay pause' effective in the short run without seriously affecting the economy, in the long run it is quite illogical, if not impracticable, to tie every class of labour to a given fixed rate of increment. In the long run a policy of maintaining unchanged the differentials between wages in different industries and occupations is the negation of growth.

The Government must therefore find a new long-term policy for fixing wages and salaries which can operate in both the public and private sectors of the economy. The need for this policy is underlined by recent events in the United States and Western Germany, whose Governments are striving to prevent further price increases which might produce a renewed bout of inflation in their train. So far, President KENNEDY seems to have been more successful than Dr ERHARD, but the real significance of these events is the determination of Britain's two main trade competitors to avoid a further bout of 'cost-push' inflation. For the sake of this country's external trade prospects it is imperative that Britain should follow suit and it is undoubtedly this reason which has compelled the Government to remain so obdurate over its incomes policy. In fairness to the Government, it is not sufficiently realized by the public that however deserving the nurses' case may be, the same arguments apply to most of the workers in the welfare services. Those increases once granted, new demands from employees in the local government service are inevitable, to be followed by new demands from teachers, and so the spiral will go on if it is once allowed to start.

Nevertheless, the dual system of 'pay pause' in the public sector and 'catch as catch can' in the private sector is certainly no solution. Nor does the National Economic Development Council hold out any real hope – at least, not for the time being. To entrust to Neddy at this stage the task of evolving an incomes policy

would be to condemn it to the same fate as overtook the now defunct Council on Prices, Productivity and Incomes. For the foreseeable future the traditional system of collective bargaining will have to function in the public as well as in the private sector. What the Government has to do is to ensure the conditions in which collective bargaining can operate effectively. Under the present system, as soon as the economy reaches a stage of full employment, the demand for additional labour creates a climate in which pay awards in excess of average productivity increases are inevitable.

The Government's solution to this situation has been to try and keep the economy 'off the boil' so that demand for labour is just enough to keep unemployment from rising over 2 per cent. The justification of a somewhat similar policy is cogently argued by Professor FRANK PAISH in one of the essays in a collection of his writings during the past decade recently published under the title, *Studies in an Inflationary Economy*.[1]

Professor PAISH's antidote to the wage inflation is to ensure that the resources of the economy are never exploited 100 per cent. An examination of rather limited statistical evidence relating to the post-war United Kingdom economy leads him to the conclusion that if the economy were to run at about 95 per cent of its capacity, representing about 2 to 2½ per cent unemployment, the inflationary pressure generated via excessive increases in incomes would be avoided. This margin of unused capacity would also eliminate the danger of bottlenecks which lead to delays in export deliveries, skimped work and all the other shortcomings of overfull employment.

Professor PAISH bases his proposal on the assumption that the Government is able to regulate the economy so that it would not fluctuate wildly about the 95 per cent level, and that industry would be able to co-operate because it would be kept fully informed of official policy. Quite apart from the inadequacies of existing economic forecasting techniques, there is surely a very real danger that to operate the economy below capacity would mean that the highly productive capital-intensive industries would not fully utilize their equipment. As recent company reports have revealed, the impact of a modest measure of deflation is much more severe on profit margins than it is on the level of wages or employment. Furthermore, such a policy of restraint runs counter to the human weakness of seeking to exploit a given situation. In boom periods those industrialists with unused capacity would resent the Government's restraining policy and it is doubtful if, even in a mild recession, any Government-sponsored stimulus would exert a corresponding effect in the opposite direction.

Unfortunately, any such policy does not meet the most serious defect of post-war incomes policy. Hitherto it has been widely assumed that a given award to a major section of labour was ample justification for a comparable increment for every other section, regardless of changes in productivity in the different sectors of the economy. The stumbling block to the emergence of a rational incomes policy has been the unwillingness of all sections of the community to recognize that the relative position of one group of employees will change *vis-à-vis* other groups with changes in the demand for their services. The reallocation of labour resources in response to changes in market conditions can only be achieved in a free economy by differential increases in incomes. It is the very fact of the Government's present insistence upon a flat-rate increase for all groups of workers that constitutes the most serious argument against its present policy. Unfortunately, the public is still unwilling to recognize this fact.

The one policy that no post-war administration has yet been able effectively to introduce is competition. Not even its most ardent admirer would assert that post-war legislation, aimed at curbing monopolistic practices, has achieved any signal success. The forthcoming test over resale price maintenance should provide an augury for the future. Once there is real competition between suppliers, then producers and distributors alike will not be able to shift on to the consumer the costs of hoarding redundant labour or unearned pay increments and excessive profit margins. The creation of a competitive home market would also enhance the attractions of the export markets. With these conditions achieved and the consumer restored to his rightful status in the economy, there would be no need for the Government's 'guiding light'. The question is, however, What is to be done for the time being?

Tax on Company Land Sales – II

WE saw last week how individuals may be 'connected with' one another within the meaning of clause 20 of the Finance Bill. Ultimately the clause is concerned with companies, or rather bodies corporate in general, who, like individuals, are also 'persons'. As in the case of an individual trustee, a company which is trustee of a 'settlement' is, in that capacity, connected with any individual 'settlor'. For this purpose 'settlement' and 'settlor' have the same meaning as in section 403 of the Income Tax Act, 1952, which deals with settlements on infants.

A company is 'connected with' another company if:

(*a*) (i) the same person has control of both; or

(ii) one person has control of one and persons connected with him have control of the other; or

(iii) one person has control of one and he together with persons connected with him have control of the other;

(*b*) (i) the same group of two or more persons has control of each company; or

(ii) two groups of persons control both companies and could be regarded as consisting of the same persons by treating (in one or more cases) a member of either group as replaced by a person with whom he is connected.

A company is connected with a person if that person controls it, or he and persons connected with him together control it. Any two or more persons acting together to secure or exercise control of a company are to be treated as connected with one another and with any person acting on the directions of any of them to secure or exercise control of the company. Where two companies are connected, they must be treated as also connected with any person whose control (alone or with others) of either company is relevant to establish the connection between the two companies.

Since clause 20 imposes Case VI tax without the necessity of any direction by the Inland Revenue, it follows that the person who undertakes the task of making an income tax return on behalf of a landowning company will be faced with the nightmare of understanding these provisions and of applying them. Even the definition of 'landowning company' is not straightforward. Clause 20 (14) (*c*) applies by reference the definition in clause 13 (6) of the Bill but excluding the application of the words 'being chargeable assets'. Thus, a landowning company for clause 20 purposes is a company not carrying on a trade of dealing in or developing land, but entitled to land to a value equal to or exceeding one-fifth of the net value of all its assets, i.e. their value less the 'value' of the debts and liabilities. The value of the land for this purpose is the value of the company's interest, free of any liability charged on it. It includes the value of interests which the company has unconditionally contracted to acquire, but not of interests which the company has unconditionally contracted to dispose of. There seems to be nothing to prevent the device of loading a company with assets to reduce the 'land' proportion to below one-fifth.

Clause 20 (3) brings some relief by excluding from the 'related activities' (which have to be taken into account to decide whether the activities (with respect to land) altogether amount to a trade) two categories of activities which would otherwise be taken into account, if 'related'. As long as a person is actually carrying on the trade of dealing in or developing land then none of his activities (whether part of that trade or not) fall to be taken into account as 'related activities'. On the face of it, this provision might appear to conflict to some extent with what THE CHANCELLOR OF THE EXCHEQUER said in his Budget speech:

> '*the dealer in property* [*sic*] who, alone or with associates, escapes tax liability in the following way. He forms a chain of companies with suitably framed articles [*sic*], through each of which he puts one transaction so as to avoid the implication that he is trading. If, regarding all the activities of these companies as though they were the activities of one person, they amounted to the carrying on of a trade, a gain on a particular sale by one of the companies would be taxable'.

As stated last week, clause 20 (2) (*a*) includes in 'related activities', the activities, with respect

to land, of any person with whom the company is connected at the time of the disposal. It does not, in terms, require that those activities of the person shall also have taken place at a time when the company is connected with him. However, clause 20 (3) (*b*) limits the scope of clause 20 (2) (*a*) in the following way. Activities (with respect to land) of the person which occur when he is connected neither with the company making the disposal in question, nor with a company with which that company is connected, nor with a company within clause 20 (2) (*b*), are not to be taken into account as related activities even though that person is connected at the time of disposal. A company within clause 20 (2) (*b*) is a company the activities of which (at a time when it was under such control) would have brought it within clause 20 (2) (*a*) if it had not ceased to be under control. However, clause 20 (3) goes on to provide that where there are two persons whose activities with respect to land are taken into account as related activities for the purpose of a particular disposal, then there must be also taken into account any transactions between those two persons. Presumably the object of this is to bring into account transactions which are not 'activities with respect to land', although nobody can be certain what such involved drafting really means.

Clause 20 (4) further cuts down the categories of transactions which may be taken into account as related activities under clause 20 (1) (*a*). It resembles the exemption from stamp duty on conveyances between two members of the same group. A disposal of land by one company to another is to be ignored if at the time of disposal:

(*a*) either company is a subsidiary of the other in the profits tax sense (75 per cent); or both are subsidiaries of a third company; or

(*b*) the members of both companies are the same and hold equivalent interests.

Clause 20 (4) apparently only cuts down related activities. A disposal of property which was within section 20 (4) would not apparently be excluded from liability under the clause merely on that account.

When a company goes into liquidation the authority of the directors as such comes to an end and the liquidator takes over the direction. His duty is to wind up the company's affairs and therefore prima facie he is not carrying on its business, although the presumption can be rebutted. For clause 20 purposes this uncertainty is to some extent swept aside: anything done with respect to the company's own land is to be treated as though it were not being wound up and as though it were still carrying on the business it carried on before the winding-up commenced (clause 20 (5)).

A company may transfer assets to its members or contributories otherwise than by way of sale or exchange. The transfer may be by way of dividend, reduction of capital, or as part of a distribution of surplus assets on a winding up. Clause 20 (5) provides that where a landowning company disposes of land in this way or in any way 'otherwise than by way of bargain at arm's length' the company is to be treated as disposing of the land for a consideration equal to the market value of the land. This provision is presumably limited to the purposes of clause 20, although sub-clause (5) is not entirely clear on this aspect. A company which acquired land before April 10th, 1962, is not to be taxed under clause 20 in respect of its subsequent disposal (clause 20 (7)). The letting of land for less than twenty-one years is not to be taken into account as a disposal unless that letting is accompanied by another letting, or an agreement for another letting, which brings the total term to twenty-one years or more; or the letting is accompanied by an agreement to dispose of the land otherwise than by letting. Where there is a subsequent disposal of the reversion, the consideration received for the exempted letting is to be taken into account (clause 20 (7)).

Profits chargeable under clause 20 are to be computed on the same lines as profits charged under the new Case VII, (clause 20 (6)). For surtax direction purposes such profit is to be treated as investment income, however (clause 20 (11)). The same sub-clause directs that clause 20 shall have effect for profits tax purposes in the same way as it has effect for income tax.

Income tax assessments are to be made by the Special Commissioners (clause 20 (8)). The obligation to secrecy of Inland Revenue officials is relaxed in relation to the affairs of connected persons. A novel feature is that a company may require the Inspector to give it information as to the affairs of other persons, relevant to the consideration of questions of related activities (clause 20 (9)). Finally, clause 20 (10) gives to the Revenue extended powers of inquisition.

(Concluded.)

Accountancy Practice in Europe

by KENNETH S. MOST, LL.B., F.C.A.

THE practice of accountancy differs greatly from one European country to another, and a study of these differences would be a major undertaking; all that will be attempted here, therefore, is a brief guide to the main characteristics of the profession in a number of Western European countries.

By 'the profession' is meant indigenous practising accountants. Many British and American firms of accountants have offices on the Continent, but their activities are often outside the main stream of accountancy in the countries where they practice. They audit and advise branches, subsidiaries and associates of British and U.S. companies and, in so far as these organizations are companies formed under the local laws, are additional to any local requirements, for example, concerning audit. Thus, the French subsidiary of a British holding company could be audited by the French office of a British accountancy firm, and at the same time, a French *commissaire aux comptes* would have to certify the subsidiary's accounts to conform with the French company laws. In some countries this duplication of functions is avoided by recognition of the foreign auditing firm as part of the auditing profession.

Functions of Accountants

As in Britain, the principal occupation of accountants in Europe is auditing the accounts of companies. It might therefore be assumed that professional rights and duties abroad resemble those in the United Kingdom. However, the company laws of the countries of Western Europe, which descend directly from Roman law concepts of incorporation, are in many respects totally different from the company laws of Britain and most states of the U.S.A., which have developed from the common law. In particular, those parts of the relevant Acts which deal with the appointment, rights and duties of auditors are in some cases not even comparable with the corresponding British legislation. This is an interesting subject for inquiry which will not, however, be pursued further in this article.

It should also be pointed out from the beginning, that where auditing is referred to as a function of the accountancy profession, it is the audit of public companies that is implied. By and large, private companies in Europe can choose their auditors where they will, as in Britain, and only where the investment of public funds or public subscription of capital are involved does the law lay down specifications.

In order to discuss the accountancy professions in the different countries it is first necessary to identify the areas of activity with which the accountant, as known in Britain, is concerned. These may be put under the following headings:

A Auditing accounts and reporting on them
B Certifying figures
C Advising on financial management
D Representing others in taxation matters
E Performing book-keeping and accounting functions for others; installing accounting systems
F Administering the estates of others, whether living or deceased. (In the case of companies, before and during liquidation)
G Ancillary activities in so far as they are compatible with the above, e.g. valuations on sale or purchase of a business, teaching and writing on finance and accounting

In nearly all the countries of Western Europe outside the United Kingdom, activities of a purely commercial nature such as those of insurance agent, agent for a financial institution, or director of a commercial company, are not regarded as compatible with the exercise of a liberal profession and therefore practising accountants are not permitted to engage in them. Switzerland is a notable exception to this rule. In Germany, the accountant who leaves the profession to take up an appointment in government or industry, although he may not practice as a public accountant (*Wirtschaftsprüfer*) may retain extraordinary membership of the professional body (*Wirtschaftsprüferkammer*).

Generally speaking, the aforementioned activities properly referable to accountants qualified to audit the accounts of public companies can be grouped by countries as follows:

Austria – A B C D E F G
Belgium – A B C D G
France – A B C D G
Germany – A B C D G
Holland – A B C D E F G
Luxembourg – A B C D G

Portugal – A B C D G
Sweden – A B C D E F G
Switzerland – A B C D E F G

Italy has not been included in the above grouping because accountancy practice comparable with the other countries cannot be said to exist there as a separate profession.

The range of activities of the British accountant is most nearly paralleled in Sweden and Switzerland. Nevertheless, it should be borne in mind that the allocation of matters requiring legal knowledge between the legal and accountancy professions varies considerably. Further, in spite of the apparently similar scope of accountants in France and Germany, the organization of the profession in France is widely divergent, as indicated by the fact that there are nine major professional associations in that country (see list at conclusion).

Status of Accountants

Again speaking very generally, the accountant is recognized in all countries as practising one of the liberal professions. However, legal recognition of this status differs considerably. The two principal features to be observed are regulation of the profession (as evidenced by a monopoly) and the association of practising and non-practising accountants in the same professional institution.

The most extreme case is that of the French accountant (*expert comptable*), a title which may only be used by independent practitioners although it is loosely applied to qualified accountants of different kinds. The French State has applied to the accountant the same rigorous standards which apply to doctors, chemists and lawyers, and has given members of the *Ordre des Experts Comptables et des Comptables Agréés* a monopoly both of name and function. The intention is that the auditor shall maintain complete independence, and to this end he is forbidden to accept any employment, even part-time, whether remunerated by fee or salary, if it involves submission to the orders of another. He is even forbidden from devoting the greater part of his time to the affairs of a single client. It is therefore not permissible for French accountants in industry to associate with their practising colleagues in one association.

The Austrian *Kammer der Wirtschaftstreuhänder* does not admit accountants in employment, but does not possess a monopoly status. In Germany, accountancy functions are performed by a variety of professionals, including *Wirtschaftsprüfer* and *Vereidigten Buchprüfer*, who are specially concerned with auditing, accounting and financial and economic advice and *Steuerberater* and *Helfer in Steuersachen*, who are mainly tax consultants. Recent legislation has taken a major step towards consolidating the status of the *Wirtschaftsprüfer*; no more *Vereidigten Buchprüfer* are to be appointed and this title will ultimately disappear.[1]

The *Collège National des Experts Comptables* in Belgium admits both practising accountants and those employed in industry, whereas the *Ordre des Experts Comptables* in Luxemburg includes only the former. Belgian accountants have been conducting an energetic campaign to regulate the profession for some years past. The Swiss, Dutch and Portuguese professional bodies do not distinguish between members according to their activities.

Protection by law is given to the designations *Wirtschaftsprüfer* in Germany; *expert comptable* in France; and *reviseur* in Belgium. No such protection exists for comparable designations in Austria, Holland, Luxemburg, Portugal or Switzerland.

Forms of Practice

In Germany, auditors may practise individually, in joint association or in companies. In the last case, all members of the board of directors and managers and their deputies, must be *Wirtschaftsprüfer*. If the company is limited (*G.m.b.H.*) it must have a minimum capital of DM. 50,000. There are about 200 such companies in Germany, and partnerships as they are known in Britain and the U.S.A. do not exist. There is no specialization in the profession.

In France the situation is similar, except that companies may be members of the *Ordre des Experts Comptables et Comptables Agréés*. Where the company is limited (S.a.r.L.) the capital must be at least N.F. 5,000, and the majority must be held by members of the *Ordre*. There are nearly one hundred such companies in France, and again specialization is not officially recognized.

Belgian accountants practise for the most part as individuals. There is a movement in Belgium in favour of some sort of association for accountants in practice, but it appears to be difficult of achievement. In Holland, accountants practise both individually and in association, whereas in Luxemburg, Portugal and Switzerland they may also practise as a company. In none of these countries is specialization either recognized or encouraged.

[1] See 'The Profession in West Germany', by W. Voors, *The Accountant*, January 6th, 1962.

Professional Standards and Enforcement

The standards of the profession in some countries are the subject of legal enactments, but in all cases the professional association is primarily responsible for their enforcement. In some countries again the accountant is required to take an oath of service and integrity. As previously mentioned, most professional bodies do not allow members to exercise any other occupation, and some do not even admit accountants who are employed, in order to ensure complete independence of judgment. Advertising is generally prohibited.

Certain aspects of these laws and professional rules are of especial interest. The German *Wirtschaftsprüfer* must insure against liability for professional negligence. In Austria, privilege extends to the refusal to surrender documents for examination by the Courts or taxation authorities, and accountants must be insured against professional negligence. French accountants take an oath, are bound by the law on professional secrets, and in spite of the prohibitions on other activities, may undertake 'artistic activities'. They are not allowed to calculate fees on the basis of the financial results of the client, nor relate them to the results of their interventions on his behalf.

Admission of Foreign Accountants

To take Germany as an example, although the accounts of public companies (*Aktiengesellschaften*) must be audited by *Wirtschaftsprüfer*, virtually all other accountancy functions can be exercised by foreign accountants. These may also obtain the *Wirtschaftsprüfer* designation in certain cases. Legal and taxation matters are restricted to certain professional bodies.

In Austria, admission to the various branches of the profession is so regulated that they can only be entered by Austrian nationals who must also prove that they reside in the country and exercise their profession there.

In Belgium, Holland and Switzerland, foreign accountants may practise freely, except that Switzerland does not allow foreigners to advise on reduction of capital, or to audit Swiss shipping companies, pension funds or banks. Approval of the Swiss Federal Government is required for this type of audit.

France bases the right to practise on acceptance of the foreign national's professional qualification and the existence of reciprocity formally embodied in an international agreement. It is for this reason that foreign accountants have difficulty in establishing new offices in France.

Annual Audit and Annual Reports

Sometimes, as in the case of Switzerland, laws relating to auditing are to be found in the civil code; sometimes, as in Germany, in the commercial code. In all cases, a large part of the body of rules applied is based upon custom rather than legislation.

These laws or rules can be regarded as requiring the auditor to answer certain questions which may be formulated as follows:

1. Do the annual accounts agree with the books of account?
2. Are the books of account kept in accordance with the legal requirements and customary practices?
3. Are the presentation and valuation of the items shown in the annual accounts in accordance with legal requirements and customary practices?
4. Has the profit shown in the accounts been dealt with in accordance with legal requirements (where such exist, for example, the obligation to transfer a specified percentage to a so-called 'legal reserve')?
5. Does the directors' report conform to legal requrements?
6. Has the auditor conformed to all legal requirements relating to his office?

The national differences may be presented by showing which of these questions the auditor is supposed to answer:

Austria – 1 2 3 4 5
France – 1 2 3 4 5
Germany – 1 2 3 4 5
Holland – 1 2 3 4 5
Portugal – 1 2 3
Switzerland – 1 2 3 4

It may be noted that question 6 is only required to be answered by the auditor in Italy, where he must state that he has conformed with the law relating to his office. This is because the law lays down in some detail both the timing of the audit and the procedure to be followed.

Audit reports vary enormously, from the simple statement 'verified and approved' of the Dutch auditor, to the lengthy analysis of the business organization and its results favoured by his German counterpart.

Conclusion

A summary account of the various aspects of the profession in Europe may be misleading, particularly if an attempt is made to compare them with corresponding features in Britain or the U.S.A. In judging the facts, the reader should

bear in mind that standards vary considerably within each country. Many accountants in the countries mentioned are to the highest degree worthy of their calling, and considerable effort is being devoted to establishing and maintaining a common standard for the profession throughout Europe. To this end, nine professional associations in as many countries of Europe banded together in 1951 to form the *Union Europeenne des Experts Comptables Economiques et Financiers* (U.E.C.). The U.E.C. through its specialist committees, has initiated studies of the differences between the countries concerned in respect of the practice of accountancy. It has also organized four European congresses, at Florence (1953), Brussels (1955), Nice (1958) and Zürich (1961). More than 1,000 members attended the Zürich congress last September; there were also present observers from the English and Scottish accountancy bodies, as well as from India, Japan and Venezuela. The Council of Europe, which gave the U.E.C. official recognition in 1958, and the E.E.C. were also represented.

The U.E.C. publishes studies of international accountancy problems as well as reports on the biennial congresses. A lexicon of accounting terms in five languages (French, German, American-English, Spanish and Dutch) which appeared recently was reviewed in *The Acccuntant* of March 3rd.

Decimalizing the Currency

Plea for Retaining the Two Unit Pauses

by T. H. HUSBAND, F.I.M.T.A., F.R.V.A.
Treasurer and Accountant, Caterham and Warlingham Urban District Council

IN considering how to decimalize the currency of the United Kingdom it is usually assumed that the traditional method of presenting financial information, viz. as £ *s d*, must go. Without adequate consideration it seems to be accepted as an axiom that henceforth there must be adopted a series of figures divided between the basic unit and its sub-divisions by a single decimal point. It is therefore refreshing to reconsider exactly what the decimal point is and what it does, not merely because decimalization will introduce *one* into our system but because (unwittingly it seems) for all practical purposes there are *two* already.

Time-honoured Method

The decimal point is merely a 'unit pause'; a mark of distinction between a basic unit on the one hand and its sub-divisions on the other. There is no need for the 'dot', a blank space serves just as well, 21 2 being essentially the same as 21·2. In daily use, I think the space has some practical advantages over the decimal point. Our method of writing currency demands two spaces, two 'unit pauses', e.g. £21 14 8. The drawback to the present system (if it really be a problem) is not the equivalent of two 'dots' but that different rules apply to the pounds (progressing in tens), the shillings (progressing in twenties) and the pence (progressing in twelfths). There is no reason why, having converted the shillings and pence to a tens or hundreds progression, we should not retain the time-honoured two-space method, not through loyalty to tradition but because of its practicality.

The great advantage of the £ *s d* system is that in reality there are *two* basic units, the £ and the shilling. This is very desirable as currency has more than one function to perform. Its major task is to be satisfactory not only for large-scale recording (e.g. national finance, the capital of joint-stock companies, etc.) but also to meet the needs of endless small day-to-day retail transactions. In the South African experiment the choice of 10*s* as the basic unit meets one need adequately but, in my view, is not as satisfactory a solution as can be obtained by retaining more of the existing British structure. The 10*s* basic unit facilitates small transactions but in an age of inflation expresses the large transaction in far too many figures. Any new system of recording should move against the historic trend of money to depreciate in value.

Assuming for the sake of this article that the penny is made one-tenth of a shilling, it is a comparatively simple matter to convert the two basic unit system into a decimal system and yet retain many of its advantages. This is done by making the £5 note one basic unit and the shilling the other, according to the following table.

10 pence = one shilling
100 shillings = one pound royal (colloquially the 'fiver')

Familiar Pattern

Except for aesthetic reasons there is no reason why the new pound should not be called a 'fiver'. In a very little time no one will associate the term with its origin of 'five pounds'.

A column of the new money would then retain its familiar pattern, though the figures would for a while appear a little strange:

£	*s*	*d*	
21	04	8	(21 fivers 4 shillings and 8 pence)
10	34	6	(10 fivers 34 shillings and 6 pence)
10	32	9	(10 fivers 32 shillings and 9 pence)
£41	72	3	(41 fivers 72 shillings and 6 pence)

Even the ½*d* could be retained, either as a fraction or a decimal, thus:

£	*s*	*d*		£	*s*	*d*
10	14	6½	or	10	14	6·5
21	92	5½		21	92	5·5
£32	07	2		£32	07	2

Multiplication and division present no added difficulties if there are two or three decimal points. You merely work to one (e.g. the 'fiver') and the others fall into place.

The great advantage of such a system is that it retains so much of existing colloquialisms and fits with such ease into our present reasoning in terms of money. A minimum of re-learning is necessary and all existing currency can continue

to be used; the £5 note being over-printed 'ONE POUND ROYAL' or 'FIVER' and the £1 note 'TWENTY SHILLINGS'.

The extent to which the British currency system, with these slight modifications, meets the essential requirements of recording large transactions with ease and facilitating small transactions can be seen in the capitals of joint-stock companies on the one hand and small retail transactions on the other:

Capital of joint-stock companies (a pound royal or 'fiver' basis)

Present values	10s *basic unit*	£5 *basic unit*
£	£	£
100	200	20
500	1,000	100
1,000	2,000	200
10,000	20,000	2,000
50,000	100,000	10,000
500,000	1,000,000	100,000

Retail transactions (a shilling basis)

£ s d	£	£ s d
1 6	0·16	01 6
7 6	0·76	07 6
15 0	1·5	15 0
1 1 0	2·1	21 0
2 2 0	4·2	42 0
3 3 0	6·3	63 0
4 4 0	8·4	84 0
5 5 0	10·5	1 05 0

From these tables I think it can be claimed that the 10s basis is too small for the first type of transactions and introduces an unnecessary complication in the second. For retail transactions, the retention of the existing pattern of shillings and pence up to £5 (and it can be used beyond) means one complication only – the problem of the pence. The 10s basis introduces a further complication for everything over 10s. Take a few small purchases – the type of transaction repeated a countless number of times each day – and the saving becomes apparent:

£	s d
0·12	01 2
1·39	13 9
0·84	08 4
1·32	13 2
0·02	2
3·69	36 9

The first column will need writing down or recording on the continental desk adder while the latter will continue to be mental arithmetic to the majority.

Decimalize Britain's currency by all means but do not let us introduce the 'one-unit pause' method. It is neither necessary nor wise that the practical benefits of the existing 'two unit pauses' should be lost.

Weekly Notes

NO BACK-DATING FOR PENSION SCHEMES

THE National Insurance Act, 1959, provides by section 7 (2) that an employed contributor's employment shall be a non-participating employment for any period during which there is in force a certificate issued to the employer to that effect. By section 7 (7) no such certificate is to have effect from a date earlier than the beginning of the contribution week following that in which it is issued. That these words mean what they say, and that accordingly a certificate cannot be antedated, has been emphasized by a decision last month of Mr Henry Salt, Q.C., the National Insurance Adjudicator (Ref. No. ADJ/APP/5).

Each of a group of three companies had entered into trust deeds on February 24th, 1961, witnessing that the company had established a trust to be administered in accordance with a definitive trust deed which the company undertook to execute within twelve months. This was in pursuance of the object of contracting out of the statutory graduated pension scheme which was to begin in June 1961, and the trust deeds contemplated that the pension schemes would commence on the first of that month. Each company completed a form of election on May 20th, 1961, and asked for the necessary certificate to operate from June 1st, 1961. The Scottish Widows' Fund and Life Assurance Society, with whom the schemes were to be insured, forwarded the forms to the Registrar on May 31st, 1961, with a covering letter saying:

> 'As one of the trustees is at present abroad we have not yet received the completed proposal form, but a copy of it, together with a certificate of insurance will follow as soon as possible.'

It was essential, before the Registrar could issue his certificate that the schemes be insured to his satisfaction. He reminded the Scottish Widows Society on June 23rd, 1961, that he was still waiting for the insurance certificate. On July 10th, 1961, the Registrar received the insurance certificate, which was dated July 10th, 1961. He then wrote to the three companies, enclosing his own certificates, dated July 13th, 1961, and saying that they were effective from July 17th, 1961. It

followed that double contributions had to be paid for the period from June 5th, 1961, to July 17th, 1961.

The companies asked the Registrar to antedate his certificates but this he declined to do, saying that he had no power. The National Insurance Adjudicator has now affirmed that decision.

FINANCIAL STATISTICS

ONE of the recommendations of the Radcliffe Committee on the Working of the Monetary System which the Government accepted, was the need to bring together in a single publication all the statistics relating to different aspects of the monetary system. The issue of a new publication entitled *Financial Statistics*,[1] which is to appear monthly, constitutes the first fruits of the Government's efforts to meet this need. Nearly sixty tables, with comparative information back to the mid-1950s, contain data relating to Exchequer financing, tax revenues, the operations of the Bank of England as well as the clearing banks and Scottish banks, and the asset structure of financial institutions such as the building societies and investment trusts. Other series give the yields on various types of Government loans and other borrowing, such as local authority and public corporations. In most cases the data are given on a quarterly or monthly basis.

In forthcoming issues of the new publication, which is prepared by the Central Statistical Office, new series and supplementary information about the various series which are described and defined in an appendix to the first issue, will be given. With the present flood of statistical information contained in the *Monthly Digest of Statistics*, *Economic Trends*, the *Bank of England Quarterly Bulletin*, to mention only the main official sources, the student of financial affairs can now enjoy an *embarras de richesse*. However, with rising printing costs some of these publications are becoming expensive. Both money and labour could be saved if the C.S.O. were to undertake a little pruning and rationalization of the official statistics. To produce new statistics is one thing; to duplicate *in extenso* in several publications a host of other information seems rather wasteful.

PLANNING FOR CONSTRUCTION INDUSTRIES

A NEW organization connected with the building industry is to be formed to be called The Economic Advisory Council for the Construction Industries. Its chairman will be Sir Harry Pilkington. The committee will help organizations within the industry to consult on general economic development, national planning and productivity. In fact, the Council will act as an official spokesman for a large section of the building and construction industries to the National Economic Development Council. It will not discuss wage rates or working conditions.

[1] No. 1. May 1962. H.M.S.O. 7s 6d net.

The construction industries – along with consumer durable industries dependent upon hire-purchase facilities to sell a significant proportion of their goods – have suffered since the war from swings of activity generated by the State to control the rate of economic expansion. Both the construction industries and suppliers of building materials have found it difficult to plan for a steady and remunerative level of investment when the Government will quite arbitrarily modify the building programme, or encourage those putting up new buildings to slow down the rate of erection.

If the building and construction industries are to avoid these wide swings in activity in the era of fashionable planning which probably lies ahead, the planning techniques employed will have to be a good deal more subtle and sophisticated than they have been in the past.

SWITCH DOLLAR MODIFICATIONS

THE Chancellor of the Exchequer announced in the House of Commons last week a relaxation in direct investment through the switch dollar market. Since last July it has been possible to invest direct only where a clear and commensurate benefit was apparent in the short period to the balance of payments position. The Chancellor said that he was now prepared to permit investment to take place through the switch dollar market or to be financed by suitable borrowing abroad. The two existing switch dollar markets are being amalgamated.

Up to the present, the switch dollar market has been used only for the purchase of securities by residents in Britain from other residents in the United Kingdom who wished to sell their existing foreign securities. Approved direct investment will now have access to this market and, in effect, a little of the existing investment in securities will be displaced in favour of direct investment. The position will thus be substantially the same as before July 1961.

MULTILATERAL INVESTMENT INSURANCE

A PRELIMINARY statement has been put out by the International Chamber of Commerce to the effect that the I.C.C. has submitted to the Development Assistance Committee of the Organization for Economic Co-operation and Development a preliminary report on the desirability of setting up a world-wide government multilateral system of insurance. This would insure against risks, mainly political ones, which are not normally insurable on a commercial basis for private overseas investment. Political risks are seen by the I.C.C. as a major deterrent to investment in developing countries.

The scheme, however, goes beyond guaranteeing private investment abroad by governments of capital-exporting countries. It would be an element in a wider system of co-operation to improve the climate

of confidence between industrial and developing countries. The main conclusion of the I.C.C. is, therefore, that such a system should be multilateral and that developing countries should be full partners with responsibilities as well as privileges.

To make such a system effective the I.C.C. thinks that it would have to have certain features. First, membership of the insurance or guaranteeing fund should be drawn as widely as possible from capital-exporting and capital-importing countries. Secondly, all members should take part in the liabilities as well as in the privileges, and all members should undertake formally to observe certain rules of conduct. The scheme would cover only new long-term investments or extensions of old investments. The system should cover political risks (including that of creeping expropriation), the transfer risk (excluding the devaluation and exchange risks) and the calamity risk (excluding natural calamities) as defined in a recent report by the World Bank. This last included the results of a joint inquiry with the I.C.C. Finally, premium rates should be reasonable and the procedure should be such as to permit prompt payment of claims.

MACHINE TOOLS IN THE COMMON MARKET

THE development of the Common Market means that European manufacturers will have to extend their knowledge of competitors, potential customers and suppliers throughout all the Common Market countries. If Britain and other European Free Trade Association countries eventually join the Common Market their interest will extend to substantially all the important industrialized countries of Europe. Yet most existing industrial directories cover only one country and if, say, a British manufacturer of machinery wishes to list potential customers or suppliers of components he will be faced with a substantial task.

For this reason a new directory of the European machine tool industry[1] may well fulfil a growing need. The publishers state that it is intended for machine tool manufacturers with an eye on markets; for manufacturers of the numerous components sold to the machine tool industry with an eye on their customers; and for large users of machine tools who may find it a handy reference book listing specialist suppliers in all the countries concerned.

In addition to listing over 1,400 manufacturers in Western Europe, the directory includes a statistical review of production and trade in machine tools, in which the figures are presented as far as possible in standard form.

The recent census of machine tools in use in the United Kingdom, which revealed that 21 per cent were over twenty years old, coupled with the growing use of hire-purchase to acquire machinery incorporating the latest modern developments, may well result in a tendency to buy more machine tools more frequently. It will be interesting to follow these developments in future editions of this directory, which the publishers hope to make available possibly at intervals of two or three years.

BANKRUPTCIES IN 1961

THE annual general report of the Board of Trade for 1961 on matters within the Bankruptcy and Deeds of Arrangement Acts was issued last Monday.[2] It shows that in 1961 the number of receiving orders and administration orders in England and Wales was 3,521 – an increase of 720 over 1960.

The principal groups of trades and occupations affected were builders, retailers of hardware and electrical goods, road haulage contractors, retail grocers, farmers, retailers of motor vehicles and cycles, and directors and promoters of companies; these seven groups accounted for 1,457 failures.

The report also contains details of the results of 522 debtors' applications for discharge dealt with during the year and of the 163 prosecutions concluded in respect of bankruptcy and other offences reported by the Official Receivers (134 in 1960); of the 289 deeds of arrangement registered in 1961 and of the 272 deeds of arrangement in respect of which final accounts were rendered (233 in 1960).

OLD £1 NOTES

THE old type of £1 Bank of England notes, those not bearing a portrait of the Queen, will no longer be legal tender after Monday next. Though more than 160 million of these notes have been exchanged at the Bank of England since the forthcoming withdrawal was announced in February, some 90 million are still in the hands of the public.

The Bank of England are advising holders of these notes to present them at the Bank, pay them into banking accounts, or arrange for their exchange for notes of current issue, without further delay.

After May 28th, notes still outstanding can be exchanged on personal presentation at the Head Office of the Bank but holders are reminded that the Bank does not undertake to exchange notes through the post.

UNDER-EMPLOYMENT IN COTTON

SOME blunt words on the future of the cotton textile industry have been made in a report from the Select Committee on Estimates recently. It says that unless there is a quick and satisfactory solution to the related problems of imports of cotton piece goods and the utilization of capacity of the Lancashire cotton textile industry the £23 million paid out to assist the modernization of the industry will have been

[2] H.M.S.O. 2*s* net (by post 2*s* 4*d*).

to no purpose. There have been a number of gloomy statements from Lancashire in the last few months about the prospects for the cotton industry. The latest of these comes from the president of the British Spinners and Doublers' Association who has said that he agrees with the findings of the Committee. He said that since the reorganization scheme came into operation more than one company which has received a grant for re-equipment has had to close down.

The Committee's report discusses the Cotton Industry Act, 1959 and points out that large sums of money were voted by Parliament to modernize the industry. They say that although it is not part of their duty to comment upon Government policy which underlies an Act of Parliament they, nevertheless, feel bound to say that unless there is a solution to the industry's problems the money will have been wasted. When the legislation was introduced it was estimated that the likely cost of re-equipment to the Exchequer would be £30 million over five years, if there was a favourable response from the industry. In the event, about £12 million will have been spent on scrapping and the maximum Government outlay for re-equipment is currently running at about £11 million.

The issue which underlies this problem is whether colonial goods should be rationed in the United Kingdom market in the interests of a domestic industry. So far the Government has preserved the principle that there can be no complete stoppage of exports from the colonies to the mother country. The colonies have to be allowed to trade as well as receive aid.

This is My Life . . .

by An Industrious Accountant

CHAPTER 125

RECENT meetings with some of my old colleagues bring back to mind the urgent problems of those most valued members of the profession, the articled clerks. On their quality depends our future; but it is generally recognized today that inadequate attention has been devoted to furthering their interests. Who, for example, advises them on that most vital step, their ultimate entry into partnership on a permanent basis, in other words, marriage? Who counsels them how to pick the future managing directors of their private lives? Where, in the plethora of platitudes about their training, is there a paragraph about the guidance of their domestic capabilities or the furtherance of their nuptial proclivities?

Research has established firmly, on the basis of numerous actual case studies over years, that the average articled clerk is extremely interested in this ultimate achievement. He devotes much of his principal's time, ranging from perhaps 5 per cent in his first year to 20 per cent in his final year (with admittedly wide deviations from the norm in individual cases), to preliminary study of the subject-matter. This includes correspondence, telephoning, and debate during office hours, as well as extra-mural evening sessions of varied duration. Authoritative data are, however, limited, due to the neglect in the past of statistical analysis. Space restriction at this stage prohibits more than the chronicling of one actual past episode.

It was in our big common-room that Ned, an articled clerk of sophisticated outlook in his own estimation, was laying down his own guiding principles on wedlock for our edification. Immediate financial advantages, he explained, though undoubtedly of vital significance, must defer to predictable long-range benefits. Here the status of the progenitors of the chosen fortunates was the key factor. Of sound old British stock, naturally no alien blood could be considered; of county family or City of London connection, failing a scion of the Establishment class; possibly of the aristocracy, since association with an earldom, even with a minor baronetcy, might be beneficial to an ambitious accountant. Perhaps a Texan oil baron, or an Argentinian ranchero, might qualify by concession in special cases.

The essence of the choice lay in the contacts available; all the foregoing prerequisites envisaged membership of numerous directorates on the part of the lucky father-in-law to be. When one of his interests needed a chief accountant, even a financial director, why then, there was the pay-off. Wealth, prestige, honours, all waiting to reward the skilful strategist. In fact, he had listed in a little black notebook sundry names gleaned from his audits over the years, of suitable executives with nubile daughters. These statistics would be no less vital than the ones vulgarly so described.

Here Peter, a dignified colleague already engaged to the daughter of a bishop, interrupted indignantly, protesting against such mercenary opportunism. There was more to marriage than money, he explained.

Ned tolerantly accepted the minority opinion. True, true, he agreed, she must also have the positive virtues: sobriety, thrift, domesticity; be a brilliant hostess and suitably deferential to the chairman's wife, for a start. Peter retired, purple with outrage, and Ned mused happily over the prospects ahead.

Of course, there are exceptions to even the soundest rules. I met Ned again recently, after many years, and he introduced me to his wife . . . she was pretty and shy, with a soft Irish brogue. Their car was old and shabby; their address far from affluent . . . he's not a director of anything yet. They both looked perfectly happy and contented. So perhaps he's revised his principles since those early days; perhaps rules aren't a good idea, after all?

Finance and Commerce

From Lombard Street

THIS week's reprint comes from Lombard Street, the street in the City of London so intimately concerned in its name and in fact with banking and finance. Lombard preserves the memory of the banking merchants from Lombardy who settled there. At number 36 is the registered office of Gerrard & Reid Ltd, bankers and discount agents, who are now in the process of obtaining a Stock Exchange quotation for their Second Preference and Ordinary capital. The company is, or probably by the time these lines are in print, was, the only private concern in the Association of London Discount Houses, an integral part of the London money market. Conversion from private to public company is, of course, essential to the application for quotation and introduction of the shares.

The business was established in 1870 as a firm of running brokers with the style of Gerrard & Middleton and changed to its present title in 1892. The development which has given it its present status, however, has occurred since the Second World War. It was turned into a private company in January 1948, and in 1960 it was granted borrowing and rediscounting facilities at the Bank of England and elected to membership of the London Discount Market Association. Mr Kenneth Henry Whitaker, F.C.A., is now its chairman.

The Market

Fundamentally, discount market business consists in carrying 'paper' – bills and bonds – with money borrowed in the short loan market, usually very short. It should be part of an accountant's training to study the operation of the London money market, although some never quite seem to get the hang of it. Maybe it is that there is something quite outside ordinary experience in borrowing just for one day and going the daily round of lenders to see whether yesterday's money is good for another day.

The process, of course, begins with the lenders having money to lend and the particular sort of money that the discount market wants can be seen in the bank balance sheet item: 'Money at call and short notice'. There is only one banking asset which is more liquid and that is the 'Cash in hand and at the Bank of England'. Call money is always there in greater or less degree according to whether conditions are easy or tight; in other words, on the degree to which a particular bank needs to allocate its funds within its banking structure. And the discount market representatives go their rounds of the City each day, to the head offices of the home banks and

REPORT OF THE AUDITORS TO THE MEMBERS

The accounts set out on [pages 682 and 683] are in agreement with the books which, in our opinion, have been properly kept. We obtained the information and explanations we required. In our opinion the accounts, amplified by the information given in Paragraph 3 of the Director's Report, comply with the Companies Act, 1948, in the manner authorised for discount companies, and on such basis give a true and fair view of the state of affairs and the profit which has been ascertained in the manner therein indicated.

the London offices of the Commonwealth and foreign banks, to renew their loans in hundreds of thousands and millions, or, if a bank is 'calling in', to balance the 'book' otherwise.

Interest Rates

The vital safety valve is the granting of borrowing and rediscounting facilities at the Bank of England, the 'lender of last recourse'. But there, of course, one deals on Bank rate, not market basis. In these days, the Bank of England terms have come to be called 'penal'. Another way is to lighten the holding of Government securities, the short bonds with no more than a few years to run, or less.

Simple though it may sound when summed up, it is really a highly specialized business in which personality and an instinct for market conditions can be valuable assets. The profit and loss account in the reprint shows what the running of a portfolio of over £50 million means for holders of £¾ million of equity capital.

Mr Whitaker, with these accounts, notes that the fortunes of the discount market fluctuated widely in the past financial year. There was the July crisis when Bank rate was raised from 5 per cent to 7 per cent which inevitably involved the market in losses. The cost of money goes up but there is no corresponding increase to be obtained at once from the assets on the other side. But the gradual reduction in Bank rate to 5 per cent, says Mr Whitaker, has restored profitably.

The dividend would have been raised from 10 per cent to 12½ per cent but for the Chancellor's request for restraint, but it is the intention to recommend 12½ per cent for the current year.

Statistics

HAVING already issued calendar year figures on interest and dividends, the London Stock Exchange now gives (in its recently published *Statistics relating to securities quoted on the London Stock Exchange*) the financial year view of market values and business. The total nominal value of all quoted securities by the financial year end on March 30th, had risen to a new record figure of £33,620 million. The total market value at £50,223 million, however, fell by £700 million on the 1961 total. Both the nominal and market value of Government securities – £21,819 million and £15,864 million respectively – fell on last year's totals.

The marks received – representing bargains recorded for *Official List* purposes – were 3,493,908 – the highest ever recorded with the exception of the 1959–60 figure of 4,396,175 which covered the 1959 election boom period. A total of 1,606 applications for quotation were granted during the year representing a nominal amount of £2,273 million, of which new cash subscribed accounted for £711 million.

GERRARD & REID LIMITED

PROFIT AND LOSS ACCOUNT FOR THE YEAR ENDED 5th APRIL, 1962

The notes [opposite] are to be read as part of this account

	£	£	£	1961 £
Profit for the year after providing for taxation and transfer to reserve for contingencies			171,799	143,421
Profit brought forward from 1961			83,268	47,498
			255,067	190,919
Less:				
Dividends, less income tax				
On 4½% redeemable cumulative preference shares for the year ended 14th March, 1962	4,364			4,364
On 6% redeemable cumulative second preference shares for the year ended 14th March, 1962	7,350	11,714		7,350
On ordinary shares				
Interim dividend of 2½% (Paid 2nd December, 1961)	11,484			11,484

GERRARD & REID LIMITED

NOTES ON THE ACCOUNTS

1. There is a contingent liability on bills re-discounted, excluding Treasury bills, of £5,018,630 (*1961 £3,565,803*).

2. (a) 50,000 of the 4½% redeemable cumulative preference shares shall be redeemed at par on 14th March, 1966, a further 50,000 shall be redeemed on 14th March, 1969, and the remaining 50,000 shares shall be redeemed on 14th March, 1972.

   (b) The 6% redeemable cumulative second preference shares are redeemable at the option of the company at 21s. per share on or after 14th March, 1977, but not later than 14th March 1980.

3. The amount recoverable in respect of income tax suffered in excess of taxation upon current profits has been included in "Loans (secured) and amounts receivable".

4. The following items have been charged in the accounts:—

	£	1961 £
(a) Emoluments of directors:		
For management (including £2,655 Pension Fund contributions)	29,405	29,066

CITY NOTES

FOR all the periods of future boom, challenge and opportunity which are presumed to lie ahead, the stock-market, reflecting public investment opinion, seems particularly unimpressed. Generally, the equity markets have fallen back to their mid-March levels, which means that the rise which preceded and immediately followed the Budget has been lost.

Within that movement, however, there has been strength in individual sections – insurance, property and entertainment, to mention three. In the shares of manufacturing companies, however, the tone has been mainly easier.

That reflects largely the flow of adverse company profit and dividend statements during the peak period of company news covering financial years ending in December and March. Even the optimists among company chairmen have been able to do little more than suggest a feeling that things might improve.

Meanwhile, the City waits for signs of Treasury advice to the Chancellor to ease credit pressure. A small chink in the Treasury credit-control armour has come in the shape of a minor climb-down on overseas investment by industry, but something more potent is needed, in the City's view, to push the economy ahead.

The Government, however, seems more concerned with nailing the tattered shreds of its pay pause policy to the economic masthead. The crew would be better employed manning the pumps.

Current Law

Contributory's Winding-up Petition Dismissed

THE petitioner in *Re Davis Investments (East Ham) Ltd* ([1961] 3 All E.R. 926) sought the winding-up of the company under section 222 (*f*) of the Companies Act, 1948, on the ground that it was just and equitable to wind it up, as he had lost confidence in the respondent, who was the only other shareholder – each of them held fifty shares – and was unable to continue to associate with him in the efficient conduct of the company's business. He claimed that the position was similar to that of partners who cannot agree, in which case the partnership may be dissolved, but he supported his petition with nothing but the statutory affidavit (see Form 9 in the Appendix to the Companies (Winding-up) Rules, 1949). No evidence was put in on behalf of the respondent, the defence being merely that the petition did not show any sufficient case for an order.

The Court of Appeal dismissed the petitioner's appeal from the decision of Plowman, J., who had dismissed the petition, pointing out that he had not the company's articles of association before him and so could not understand the legal rights of the parties. As Danckwerts, L.J., said in the Court of Appeal, it might be that the position of the contending parties might be decided by the terms of the articles, but the Court had been given no guidance as to whether or not it was.

Undue Influence by Intended Husband

S., who was about to marry Z., executed a deed whereby she relinquished all rights against his estate which she might have 'whether by virtue of the Inheritance (Family Provision) Act, 1938, of the Intestates' Estates Act, 1952, or by virtue of any statutory enactment or modification thereof'. The consideration for her so doing was the payment to her of £600 on Z.'s death in the event of the marriage being solemnized. The marriage took place and had the effect of revoking a will which Z. had made in favour of his children by a former marriage; he then

died intestate. His sons sought a declaration that S. was entitled to £600 only, and S. counterclaimed that the deed was not binding on her. One of the grounds of her counterclaim, and the one on which the case turned, was that she was at the time when she executed the deed engaged to Z. and had complete confidence in him in regard to financial matters, so that he stood in a confidential relationship to her and the agreement was procured by his undue influence.

In *Zamet and Others v. Hyman and Another* ([1961] 3 All E.R. 933) the Court of Appeal dismissed an appeal from Pennycuick, J., who had dismissed the plaintiff's claim and granted S.'s counterclaim. Lord Evershed, M.R., found that the relationship subsisting between a man and a woman engaged to be married was one which gave rise to an obligation of candour and protection and, furthermore, that the presumption of undue influence might arise although the parties were not young. (At the time of the engagement Z. was 79 and S. 71.) His lordship held that where a deed of arrangement or settlement between an engaged couple appeared on its face much more favourable to one party than to the other the Court might find a fiduciary relationship so as to cast on the party benefited the onus of proving that the transaction was completed by the other party only after full free and informed thought about it.

On the facts, their lordships found that strict proof was required that when S. executed the deed she fully understood its significance, after full, free and informed thought about it, and that the appellants had failed to discharge the onus upon them and to prove that S. really did understand and was fully informed about the transaction.

Date when Residue 'Realized'

IN *Re Petrie, Lloyds Bank Ltd v. Royal National Institute for the Blind and Others* ([1961] 3 All E.R. 1067) a share of the testatrix's residuary estate was (in the events which happened) held upon trust for 'any national appeal to the public which may exist in the United Kingdom at the time when the residue of my estate is realized' for contributions for certain research purposes. The question arose whether this gift was void for remoteness on the ground that the beneficiary might not fall to be ascertained until more than twenty-one years after the death of the testatrix.

The Court of Appeal (allowing an appeal from Pennycuick, J., who had taken the date of realization to be the point in time when the last of the estate was converted under the trust for conversion contained in the will) held that the words 'when the residue of my estate is realized' referred to the date when the shares of residue should be 'receivable or *de jure* receivable', viz. on the completion of the administration of the estate in the ordinary course or the expiration of the executor's year, whichever should first happen. As the administration of the estate had not in fact been completed within one year of the testatrix's death, the relevant date was in fact the expiration of that year. It followed that the gift was not too remote.

The Court left open the question whether, even if the words 'when the residue of my estate is realized' should be construed as referring to the date of the last sale, or the last statutory application, of assets, the Court ought to hold, having regard to the known facts about the estate, that the date intimated was one possibly as remote as, or more remote than, twenty-one years from the testatrix's death.

When a Beneficiary is 'Born'

TRUSTEES exercising their power of appointment over a trust fund set up by the will of S. appointed a part of the fund to W. for his life and after his death to any widow born in the lifetime of S. whom W. might leave him surviving during her widowhood. W. died leaving surviving him his widow, who was born six months and eighteen days after the death of S. and was accepted as having been *en ventre sa mère* at his death. In *Re Stern's Will Trusts, Bartlett and Another v. Stern and Others* ([1961] 3 All E.R. 1129) Russell, J. (as he then was), held that the fictional construction that a person *en ventre sa mère* at a particular date was born at that date, if subsequently born alive, should be applied. It appears that hitherto the rule of construction in question had only been applied in the case of class gifts, but Russell, J., said that he found it very difficult to see in reason or in logic why the rule should be so limited.

His lordship referred to *Elliot v. Joicey* ([1935] A.C. 209) where Lord Russell of Killowen said that the fictional construction might be applied only if its application would secure to a child a benefit to which it would have been entitled if it had been actually born at the relevant date, and that the only reason and the only justification for applying such a construction was that where a person made a gift to a class of children or issue described as 'born' before or 'living' at or 'surviving' a particular point of time or event, a child *en ventre sa mère* must necessarily be within the reason and motive of the gift.

Russell, J., said that it seemed to him that the reason and motive of the gift contained in the appointment was plainly to confer a benefit on W.'s widow; his lordship found nothing in Lord Russell of Killowen's statement of the principle which limited the application of the fictional construction to class gifts, and he accordingly declared that W.'s widow was entitled during her widowhood to the income of the appointed part of the trust fund.

Variation of Investment Clause

IN *Re Clarke's Will Trusts* ([1961] 3 All E.R. 1133) will trustees sought the Court's approval of an arrangement for enlarging their investment powers by deleting from the relevant clause of the will certain requirements as to dividend history and certain restrictions on the size of holdings in individual companies.

Since the Trustee Investments Act, 1961, came into force the judges have shown themselves disinclined to vary investment provisions so as to give

trustees wider powers than those which the Legislature has thought desirable.

Russell, J. (as he then was), expressed himself to be in agreement with the views which his brother judges had taken, but felt that in the instant case the trusts could be varied without conflicting with those views. The terms of the will permitted the whole fund to be invested in ordinary shares, though subject to the restrictions which have been referred to above. The Act of 1961, in so far as it permits investment in ordinary shares, places no fixed limit on the size of investment in any one company. Furthermore, in requiring a respectable dividend history, it provides (Schedule 1, Part 4, paragraph 3) that a company formed to take over the business of another company or other companies should have notionally attributed to it the dividend history of the company or companies taken over, whereas the testator's requirements as to dividend history made it impossible to accept shares in a new company.

Russell, J., decided that a variation of the investment provisions which brought the safeguards imposed by the testator more into line with those imposed by the Act could be made consistently with the Act and the decisions on variation reached after it came into force. His lordship accordingly made an order whereby the quantitative limitation on investments was removed and the statutory restrictions on investing in 'wider range' investments were substituted for the testator's requirements as to dividend history.

Notice of Meeting not Given

IN error, nine shareholders holding between them 101 out of 692,718 issued shares were not sent notices of an annual general meeting of a company at which a special resolution for the reduction of the capital of the company was to be proposed. Article 75 of the company's articles of association was in terms identical with those of article 51 of Table A to the Companies Act, 1948, which provides:

> 'The accidental omission to give notice of a meeting to, or the non-receipt of notice of a meeting by, any person entitled to receive notice shall not invalidate the proceedings at that meeting.'

The question arose whether notice had been duly given for the purposes of section 141 (2) of the Act within the terms of section 141 (5). The relevant provisions of section 141 are as follows:

> '(2) A resolution shall be a special resolution when it has been passed by such a majority as is required for the passing of an extraordinary resolution [as provided in subsection (1)] and at a general meeting of which not less than twenty-one days' notice, specifying the intention to propose the resolution as a special resolution, has been duly given. . . .
>
> '(5) For the purposes of this section, notice of a meeting shall be deemed to be duly given and the meeting to be duly held when the notice is given and the meeting held in manner provided by this Act or the articles.'

In *Re West Canadian Collieries Ltd* ([1962] 1 All E.R. 26), Plowman, J., having observed that there appeared to be no authority as to the effect of such an article as article 75, held, on the facts, that the omission to give notice to the nine members was 'accidental' within the meaning of that article. This meant that the proceedings at the meeting were saved from invalidation. By implication article 75 also validated the manner of convening the meeting, since in the absence of such an implication there could be no meeting the proceedings of which could be validated by the articles, as it is well settled as regards a general meeting that failure to give notice to a single person entitled to receive notice renders the meeting a nullity. It followed that the special resolution (having been passed by the requisite majority) was duly passed.

Contract Made by Agent

THE plaintiff in *Davies v. Sweet* ([1962] 1 All E.R. 92) offered P., a partner in a firm of estate agents, £75 for certain land. The plaintiff paid P. £5 by way of deposit and received a receipt, written on paper belonging to the firm and headed 'Chartered auctioneer and estate agent'. So far as is material the receipt read 'Received' from the plaintiff 'a deposit of £5 for land on which Evans Row houses previously stood . . . sold at £75 . . . F. A. Phillips & Son [the name of the estate agents]'. The plaintiff sued for specific performance of the contract and the judge of the Merthyr Tydfil County Court made the order sought. The Court of Appeal dismissed the defendant's appeal.

The principal issue was the sufficiency, for the purpose of section 40 (1) of the Law of Property Act, 1925, of the receipt as a memorandum of the contract of sale. Ordinarily an estate agent has no authority to enter into or sign a contract on behalf of a vendor, but the Court of Appeal held that in the present case authority to enter into such a contract should be inferred from the circumstances. The Court of Appeal was satisfied that the land was adequately described in the receipt: the real question was whether the vendor was sufficiently described. The receipt contained no words to show that the estate agents were signing merely as agents for some principal in such a way as to show that they were not intended to be bound. If the purchaser had been ignorant of the identity of the principal, there was no doubt that the memorandum would be sufficient, but, in fact, the purchaser knew who the principal was.

In *Abdul Karim Basma v. Weekes* ([1950] 2 All E.R. 146), however, Lord Reid, delivering the advice of the Judicial Committee of the Privy Council, had said *obiter* that an agent who contracts in his own name does not cease to be contractually bound because it is proved that the other party knew, when the contract was made, that he was acting as agent. It followed that the agreement made in his name did not in that event cease to contain the names of the contracting parties and, therefore, did not cease to satisfy the statute. Applying that dictum, the Court of Appeal held that the memorandum in the instant case sufficiently contained the names of the contracting parties.

TWELFTH NATIONAL TAXATION CONFERENCE

SCARBOROUGH, OCTOBER 19th to 22nd, 1962

The twelfth National Taxation Conference to be organized by our contemporary *Taxation* is to be held in Scarborough from October 19th to 22nd.

The conference which will be under the chairmanship of Mr Percy F. Hughes, Editor of *Taxation*, is open to members of the accountancy and legal professions in practice, and to those in industry and commerce.

The provisional programme outlined below gives details of the business sessions and varied social events arranged; there will also be an attractive programme for the lady visitors.

PROVISIONAL PROGRAMME

All business sessions will be held in the Olympia Ballroom, Scarborough.

Friday afternoon, October 19th.

Short inaugural address by the Conference Chairman, Mr Percy F. Hughes, followed by a civic welcome by the Mayor of Scarborough, Councillor W. H. Smith. It is hoped that lady visitors will attend these events.

Address by Mr E. H. Gordon, B.A., taxation consultant with Slaughter & May, formerly a Principal Inspector of Taxes, Board of Inland Revenue, on 'Taxation problems of family companies seeking public finance'.

Chairman: Mr G. L. Barker, F.A.C.C.A., Immediate Past-President, The Association of Certified and Corporate Accountants.

Friday evening:

A reception and cocktail party will be given by the Editor of *Taxation* in the Ballroom of the Grand Hotel, to which all members and their ladies will be invited.

Saturday morning, October 20th.

Brains Trust: Questions on quotations from the Income Tax Acts and decided cases in the Courts.

Chairman: Mr James S. Heaton, F.C.A.

Panel: Mr J. Christie, A.C.A., Mr Maurice F. Coop, B.A., Mr J. M. Cooper, A.A.C.C.A., A.C.I.S., Mr L. Varty, H.M. Inspector of Taxes.

For the ladies: By special arrangement with Marshall & Snelgrove – A demonstration of care of the hair etc. will be held in the Ballroom of the Grand Hotel, to which all lady guests will be invited.

Saturday afternoon:

Address by Mr P. H. Sée, C.B., Parliamentary Counsel, on 'Drafting the Finance Bill'.

Chairman: Mr G. A. Usher, M.B.E., T.D., C.A., Immediate Past President, The Institute of Chartered Accountants of Scotland.

Address by Mr A. Dale, F.A.C.C.A., on 'Taxation and industry – with particular reference to tax problems concerned with United Kingdom entry into the European Common Market'.

Chairman: Mr A. E. Dawson, F.C.A., Immediate Past President, The Institute of Chartered Accountants in Ireland.

Saturday evening:

Civic reception and dance to be given by the Mayor of Scarborough in The Spa Ballroom. Evening dress or dinner jacket. Invitations will be extended to all those attending the conference.

Sunday morning, October 21st.

Morning Service for conference members and their ladies at St Mary's Parish Church, conducted by the Rural Dean of Scarborough, The Rev. Canon D. Oxby Parker, M.A.

Golf competition: An eighteen-hole Stableford Golf Competition for the *Taxation* Challenge Cup will be held on the course of the South Cliff Golf Club, Scarborough.

Monday morning, October 22nd.

Address by Mr Geoffrey Stevens, M.P., F.C.A., on 'History and work of the Ways and Means Committee of the House of Commons – with particular reference to the Finance Act, 1962'.

Chairman: Mr Ernest Long, F.C.I.S., member for finance and administration, Central Electricity Generating Board.

Address by Dr A. S. Silke, M.COM., PH.D.(CAPE TOWN), C.A.(S.A.), on 'How fair is the United Kingdom tax system?'

Chairman: Mr F. M. W. Hird, F.C.A., F.C.W.A., Immediate Past President, The Institute of Cost and Works Accountants.

For the ladies: An interesting event is being arranged for the lady guests to the conference, details of which will be announced later.

In General

Special facilities will be granted to all members of the conference by the Corporation of Scarborough.

Readers wishing to attend the conference are asked to make a nominal contribution of two guineas per person towards the conference expenses. No further charge whatsoever will be made, all social functions being free. Those who attend will, of course, be responsible for their hotel accommodation and travel.

Early Application Desirable

Early application for registration for the conference is important as numbers have to be restricted. Special travel arrangements are being undertaken and detailed particulars of rail services are available upon application.

A registration form and list of hotels will be forwarded upon request to: The Conference Secretary, 98 Park Street, London W1. The choice of hotels is restricted and immediate application is advised.

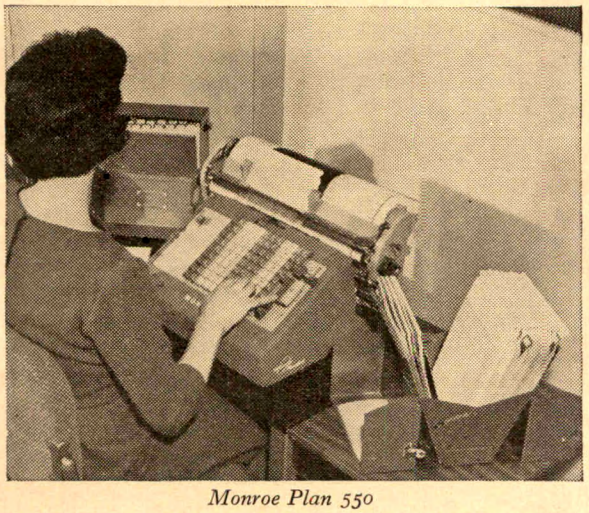
A monthly feature designed to keep readers – whether in practice or in commerce – abreast of the latest developments in the field of office equipment.

New Office

'Package' Accounting System

TO businesses operating on a limited budget it is particularly important to know exactly what expenditure will be involved when contemplating installation of a new office system. A recently announced scheme by Monroe known as *Plan 550* (because the total cost is £550) provides, as a package deal, all the ingredients for a small machine accounting system.

The machine in question is the maker's *166B200* with full figure keyboard, which comes equipped with standard mechanical programme for sales ledger, purchase ledger and payroll. Other items are a machine stand with two side extensions, a posture chair, sufficient stationery to last several months, one or two ledger trays and a set of guide index cards. Installation time has been minimized and operator training procedure streamlined Should the machine ever break down, another, similarly programmed, will be supplied in as short a time as possible.



Monroe Plan 550

This new scheme supplements, but does not supersede, existing arrangements which provide programme variations and additional programmes where needed, contract hire, or rental before purchase.

Monroe Calculating Machine Co Ltd, Bush House, Aldwych, London WC2.

Decimals No Obstacle

PEOPLE who hesitate to put in a new accounting system owing to the uncertainty about adoption of the decimal system can go ahead with confidence if they use autographic registers. The makers of *Paragon* equipment point out that the only change needed in their systems, should decimalization be used, is the redesign of cash columns of customers' forms.

Autographic registers provide a compact and easy way of filling multiple copies of handwritten forms. These forms, designed to individual requirements, are automatically interleaved with carbon as they pass through the register. A single movement of a lever ejects all the completed copies but one, this being retained in a locked security compartment.

Typical applications for autographic registers, which can be supplied in portable form and with or without a cash drawer, are recording of retail sales, order-taking, stock issuing and invoicing.

Lamson Paragon Ltd, Paragon Works, London E16.

Medium-size Typewriter

THE increasing number of semi-portable typewriters now available shows that their usefulness is being appreciated. This is not surprising, as these machines are almost as sturdy as the standard kind, have many of their features, cost much less and can be moved from place to place without difficulty.

Olivetti, whose *Studio 44* (described by them as a 'desk model') falls into this category, have recently produced an improved version of this machine. New features include transparent paper holders to maintain a firm grip even at the extreme top and bottom margins of the paper and a paper table which provides a flat surface for making erasures and prevents paper from curling round the platen. These points, which may seem trivial to the non-typist, are worth-while advantages to the busy user.

The design of the carriage return lever and platen knobs has been improved, the makers say. Features retained from the earlier model include key-set tabulator, horizontal and vertical half-spacing, a four-positional line-space selector with an extra position for inter-line spacing and a carrying case. Typefaces are elite, pica and Bodoni.

Price £36 including carrying case.

British Olivetti Ltd, 30 Berkeley Square, London W1.

Unit Furniture

A REMARKABLE improvement in appearance usually results from the installation of modular furniture in an office. In a small room, its ability to economize in floor space makes a cramped area seem more spacious, and in a large office its clean-cut regular lines give a pleasing impression of order and purpose.

A new reasonably priced series of this type, *Unit Line*, is finished in light, medium or dark oak veneer with black plinths and satinized brass handles. A typical two-person work station comprises two single-pedestal four-drawer desks linked by a shared two-way bookcase with adjustable shelves. This assembly costs £56.

Other components are an extension two-drawer table unit, a free standing single-pedestal four-drawer desk with a top measuring 4 ft by 2 ft 3 in. and a similarly sized two-drawer table.

Delivery is normally made from stock, the makers say.

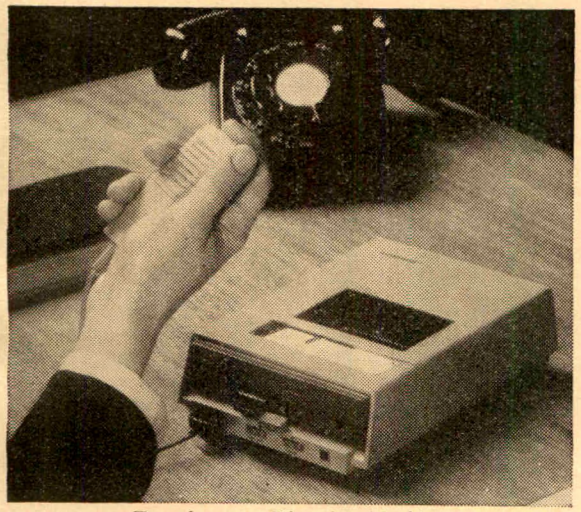
Free-standing desks and tables are priced at £21 and £17 15*s* respectively, extension desk units and table units are £17 15*s* and £15 12*s* 6*d*.

Glenhill Office & Industrial Furniture Ltd.

Equipment

Portable Recorder

A SMALL, lightweight dictating machine usually leads a busy life since, being relatively expensive, it is often shared by several people. Dictaphone's newest model, *Travel-master*, has therefore sensibly been designed to use a medium which may be transcribed on a full-size office machine, thus leaving the portable free for recording.



Travel-master Dictating Machine

Travel-master weighs less than 5 lb., measures 8 by 6 by 2½ in. and runs from re-chargeable nickel-cadmium batteries whose life is said to be as long as that of the machine itself. Up to four hours' recording may be done before recharging is necessary and dictation can continue while the machine is plugged into the main for battery recharging.

Like others in this maker's range, the portable model makes a permanent, non-erasable record on a light-weight flexible plastic sleeve which is discarded or filed after transcription. Cased in cast magnesium, it incorporates printed circuits and a three-stage amplifier with ten transistors.

Price of £105 includes a carrying case which also holds the 2 in. diameter charging unit.

Dictaphone Co Ltd, 17–19 Stratford Place, London W1.

For Mailroom Economy

ANY organization which frequently exchanges correspondence with, for example, branch offices or regular customers, could profit by studying a new catalogue issued by Envopak Ltd. Well produced and illustrated, this provides details and prices of a wide variety of plastic containers which form an economical and labour-saving alternative to envelopes, paper and string.

Envopaks, which are accepted by the G.P.O. even for registered mail, are made in flat, envelope shapes or with gussets for bulky contents. All have metal zips to which a metal seal is affixed. Pockets, covered with transparent plastic, carry address cards.

A typical set of supplies – four foolscap plastic envelopes, printed address cards, seals, stamp insert slips and two openers is priced at £6 6*s* 2*d*. Conservatively based on a two-year working life (three to four years is more probable) and five transmissions per week, this works out at 1·45*d* per time – a very favourable comparison with the price of stationery of suitable size and strength.

Envopak Ltd, Envopak Works, Powerscroft Road, Sidcup, Kent.

Line-selecting Duplicator

A REASONABLE price and some interesting design features will recommend the *Spacemaster* line-selecting spirit duplicator to firms who have not previously used this economical method for the filling of office and factory forms. The machine, which can, of course, also be used for ordinary spirit duplicating, is designed specifically for use in production, material and purchase order control, order dispatch and invoicing procedures and in any other systems where a number of documents of varying content must be reproduced from permutations of the same basic information.

The line-selection mechanism centres round an endless belt of new design. The master document, which can be inserted immediately at any time without 'zeroing' the machine, is wrapped round the drum with its length across the drum width. Lines are selected by a tabulator, controlled by a pedal, and supplemented by hand levers which allow a changeover from forward to backward movement or vice versa. Tabulator spacings, which correspond with line spacings on the duplicated forms, can be widely varied by a single control – a valuable feature which allows the use of systems employing forms with different spacing. Price: £385.

Office Mechanization Ltd, Ofrex House, Stephen Street, London W1.

Spacemaster Spirit Duplicator

Taxation Cases

Full reports of the cases summarized in this column will be published, with Notes on the Judgments, in the 'Annotated Tax Cases'.

Brooke Bond & Co Ltd *v.* C.I.R.
Brooke Bond & Co Ltd *v.* Butter

In the High Court of Justice (Chancery Division)
April 6th, 1962
(before Mr Justice WILBERFORCE)

Income tax – Double taxation relief – Dividend from overseas company – Grossing-up of dividend for overseas tax – Deduction of sum equal to overseas tax – Loss by overseas company – Tax deducted repaid – Whether sum repaid is part of appellant's overseas income – Foreign possession – Whether amount repaid is income therefrom – Income Tax Act, 1952, Schedule D, Case V (section 123), section 248, Schedule 16, paragraphs 8, 9 – Schedule 17, paragraphs 1, 3.

The appellant held all the shares in an Indian company which in October 1954 declared a dividend of £18,000 on its preference shares, and also a dividend of £239,063 on its ordinary shares, for the period ended June 30th, 1954, and deducted from the latter £67,479 in respect of Indian income tax and £52,216 in respect of supertax. The Indian company paid to the Indian Revenue the sum of £135,417 in respect of income tax and supertax applicable to the dividend. The £67,479 was in Indian law a part of the dividend, representing an amount of tax deemed to have been paid by the Indian company in respect of the dividend, and was treated as a part of the appellant company's income for Indian tax purposes, and as having been paid on its behalf by the Indian company.

In a later year loss relief became available to the Indian company, and the amount of supertax, £52,216, and the amount of income tax, £67,479, making a total of £119,695, were repaid.

The appellant claimed unilateral relief, under section 348 of the Income Tax Act, 1952, in respect of the dividend, and contended that the amount of Indian tax, with which it should be credited for double tax relief, was the £135,417. The second respondents contended that only £67,938 should be credited, i.e. £135,417 less the £67,479. The Special Commissioners accepted the latter view.

An assessment in the sum of £325,001 under Case V of Schedule D was made upon the appellant in respect of its income from the Indian company. This amount was arrived at by (i) deducting the £119,695 from the £239,063, (ii) adding the preference dividend, £18,000, (iii) adding the £135,417. The appellant contended that the £67,479 included in the calculation of the £135,417 was not its income includible in the Case V assessment. The Special Commissioners decided that the £67,479 was so includible.

Held: (1) the £67,479, which had been refunded by the Indian Revenue was not a part of the appellant's credit for Indian tax for the purposes of unilateral relief; (2) the £67,479 was an item of the appellant's Case V assessment.

Fitch Lovell Ltd *v.* C.I.R.

In the High Court of Justice (Chancery Division)
April 6th, 1962
(Before Mr Justice WILBERFORCE)

Stamp duty – Purchase of shares – Agreement for sale of shares – Reduction of value of shares – Incomplete transfer deeds to sub-purchaser – Covering letter stating sub-purchaser as transferee – Sub-purchaser registered as shareholder – Whether transferred deeds stampable by reference to sale (not sub-sale) consideration – Stamp Act, 1891, sections 54, 58, 59.

The appellant acquired all the shares in a company (I.B.S.) in exchange for shares in itself valued at 30*s* 4*d* a share, and this sale took place on November 29th, 1958. On December 22nd, 1958, the appellant agreed to sell the shares to its subsidiary (Lovell & Christmas); and the agreement rested when steps were to be taken to reduce the value of the I.B.S. shares to 1*d*. On the following day a general meeting of I.B.S. created a new class of 400 preferred ordinary shares of 5*s* each, which conferred the right to a fixed preferential dividend at the rate of £2 million a year and to a payment of £3 million out of the assets on a winding-up. The auditors of I.B.S. then certified that the ordinary shares in I.B.S. were worth 1*d* each.

Completion of the sub-sale took place on December 24th, 1958, when Lovell & Christmas paid the price for the shares, 1*d* each, and the appellant handed over the transfer deeds signed by the original vendors but not completed as to the transferee. Lovell & Christmas submitted these deeds, as they were, to I.B.S. for registration, but accompanied by a covering letter stating that Lovell & Christmas was the transferee, and that company was registered as the holder of the shares in I.B.S.

The Inland Revenue assessed stamp duty of £36 on the covering letter, and they also assessed the stamp duty on the transfer deeds at £13,238 6*s* based on the original price of 30*s* 4*d*. The appellant appealed against the latter assessment contending that there had been a transfer of the I.B.S. shares direct from the original shareholders to Lovell & Christmas. The respondents contended that there had been two sales; and that the transfer deeds were stampable in respect of the first sale on the footing that the consideration was 30*s* 4*d* a share.

Held: whether the transfer deeds were conveyances on sale to the appellant or were conveyances on sale to Lovell & Christmas they were in either event stampable on the basis that the consideration was 30*s* 4*d* a share.

New Legislation

All new Acts will be noted in this column, together with those Statutory Instruments which are of interest to the profession. The date given indicates when an Act received the Royal Assent or when a Statutory Instrument becomes effective. Copies of either may be obtained through Gee & Co (Publishers) Limited, 151 Strand, London WC2

STATUTES

(10 & 11 Eliz. 2)

Chapter 8: Civil Aviation (Eurocontrol) Act, 1962

An Act to make provision in connection with the international convention relating to co-operation for the safety of air navigation, known as the Eurocontrol Convention; to provide for the recovery of charges for services provided for aircraft; to authorize the use of certain records as evidence in proceedings for the recovery of such charges or proceedings under the Air Navigation Order; and for purposes connected with the matters aforesaid.

STATUTORY INSTRUMENTS

The Charities (Registration) (Commencement No. 3) Order, 1962 (S.I. 1962, No. 698)

The registration of charities provided for by section 4 of the Charities Act, 1960, does not apply to charities founded before 1961 until dates to be appointed. This Order appoints September 22nd, 1962, as that date in relation to charities for the benefit wholly or mainly of any part of any of the administrative counties and county boroughs specified in the schedule and also in relation to 'general' charities, that is to say, charities not for the benefit wholly or mainly of particular areas within England and Wales.

LONDON AND DISTRICT SOCIETY OF CHARTERED ACCOUNTANTS

TWENTIETH ANNUAL GENERAL MEETING

The twentieth annual general meeting of the London and District Society of Chartered Accountants was held in the Oak Hall of the Institute, Moorgate Place, London, on Tuesday of last week, Mr G. F. Ansell, F.C.A., Chairman of the Society, presided.

The annual report of the Committee was reproduced in *The Accountant* of April 28th.

CHAIRMAN'S ADDRESS

Proposing the adoption of the report and accounts, the Chairman said:

The notice of this meeting, the annual report for the year ended March 31st, 1962, and the accounts for the year ended December 31st, 1961, have all been in your hands for the requisite period. May I take it that you would wish to take these three documents, as well as the auditors' report, as read? (*Agreed*).

Mr G. F. Ansell

Accounts

The accounts do not show such a large surplus income as those of the previous year. This is largely due to the fact that it is neither necessary nor desirable for the District Society to build up large funds since all our essential expenditure is covered by grants from Institute funds. The main factor affecting our annual surplus is the degree of accuracy with which we are able to budget for self-balancing functions such as luncheons, dinners, conferences and the like. The deficit of £163 on these items in 1961 was somewhat more than the surplus of £125 in the previous year. This is, I think, how it should be – taking one year with another, we should hope to come out all square.

Two other factors affect the accounts. As explained in the annual report, owing to a change in timing, the District Society entertained two Presidents during 1961. Also, as I think is perfectly proper, the District Society took over from the Students' Society the pleasant duty of entertaining successful London candidates after the May and November examinations and introducing them to the facilities available to them through the district societies of the Institute.

Before leaving the accounts, I feel sure you would wish me on your behalf to say 'thank you' to the partners of Messrs Sydenham, Snowden, Nicholson & Co for their generous services as honorary auditors.

Membership

The membership of the Society has again grown but only by a meagre net forty members to 6,614. This may be an impressive total but when related to a potential membership of about 12,500 in the London area I am inclined to be distressed by what I consider to be an alarming degree of apathy. It distresses me to think that one in every two London chartered accountants has so little interest in his Institute as not even to ask to receive notice of functions arranged for his benefit and this notwithstanding that membership of the London and District Society is free for the asking.

This may sound like preaching to the converted, but I believe membership of a district society is important and is going to get more important. So much so that I would ask that any of you who have friends, colleagues or acquaintances who are not members will encourage them to apply for membership. I say this for two reasons: Firstly, district societies are already an established channel of communication between the ordinary member and the Council and vice versa. That this machinery is working satisfactorily up and down the country is evidenced by the lack of support given to the few members who challenged it at the annual meeting of the Institute a fortnight ago. Secondly, I have gained the impression during my year of chairmanship that the increasing size and status of our profession is placing on the fifty-five entirely voluntary members of the Council a growing burden which prudence may dictate should be relieved. I have been astonished at the number of hours a week, days

a month which our Council representatives cheerfully and voluntarily devote to our collective interests. This year the Institute has had a provincial president and, if I may say so, a very excellent president who must have done much to maintain and enhance the status of the profession. Many times during the year I have heard him make such remarks as 'I saw my office for an hour or two last Monday week' or 'essential work has to be done at week-ends'.

There is a limit to what we should expect of our national representatives and if pressure on their time is to be relieved it seems logical to me that some matters may have to be delegated to district societies which will inevitably enhance their importance. Should changes on these lines become necessary, I have no doubt whatever that the Committee of the London and District Society would willingly help in any way it could; the Committee in its turn would, I am sure, be much encouraged if more than the existing 50 per cent of London members demonstrated more tangibly their support by joining their district society.

Activities

I am not going to itemize all the activities of the past year – they are fully referred to in the annual report – but I would just say publicly a grateful thank you to all those eminent persons who have so kindly given of their time and spoken at our functions.

Small Practitioner Meetings

One happening during the past year stands out and that is the 'Small Practitioner' inquiry. This was initiated during the year and I think I can assure you and my successors in office that it will be with us for a long time to come. There was a most gratifying response both to the questionnaire and to the invitation to attend meetings, as a result of which a voluminous report has been submitted to the President. The President has told me that the response to his inquiry has been equally enthusiastic in other districts. There was an enormous amount of meat in the reports we and other districts have put in and none of us should be too impatient for tangible results. There must of necessity be some delay before all our comments can be assimilated and any necessary or desirable action taken. Particularly must this be so in the light of existing pressure of work on Council members.

In the meantime, I can say without fear of contradiction, that some of the criticisms made in the course of the inquiry are unfounded and arise from a lack of appreciation by members of facilities already available particularly through their district societies. For example, at one meeting a sole practitioner complained bitterly that when he had recently been seriously ill, his wife after much searching could only find an unqualified practitioner to assist in keeping the practice going. At almost the same time our Advice to Members Subcommittee was actively helping a small practitioner in exactly the same predicament.

I feel I cannot too strongly emphasize that all of us, and perhaps most of all the smaller practitioner, would gain an immense benefit from a closer association with his professional colleagues through his district society. On this point, may I quote from a paper read at the 1956 Summer Course by Mr Past-President Donald House:

> 'A very high proportion of the (disciplinary) cases relate to members practising alone. It is in my view very dangerous, both to himself and his clients for a member to take on more responsibilities than he can properly and diligently discharge. With no partners to consult or to rely upon in an emergency, a sole practitioner is in a very vulnerable position, especially in these days when all the work we do tends to become more and more complex. In case of illness or special difficulty a sole practitioner ought not to hesitate to seek the aid of a fellow practitioner.'

The District Society offers this facility to all members who wish to take advantage of it. Informal meetings are one of the best ways of achieving a comforting association between fellow professionals. Discussion groups, of which we have only seven to cover our enormous area and membership, are doing good work and there is scope for more. There is ample opportunity existing here for any energetic member to collect a few friends and start a discussion group, particularly in the outlying parts of our area. I am sure the London Committee would welcome and encourage the formation of new groups.

Benevolent Association

Reference to fellow members who fall on difficult times, particularly through illness, leads me to mention the Chartered Accountant's Benevolent Association. As you know the President of the Benevolent Association, Sir William Carrington, has recently asked for greater support. There is, of course, much truth in the statement that 'half a loaf is better than no bread at all' but on the other hand, niggardly charity can be a most unkindly act.

May I underline Sir William's appeal by putting it to you that benevolence within the profession is important even for the lowest possible reason of maintaining the good name of our profession. So I would ask you to assist the Benevolent Association Committee – to use Sir William's words – to:

> '. . . endeavour to give help commensurate with the current cost of living and provide our beneficiaries with a reasonable standard of life rather than a mere subsistence level – particularly where children are concerned'.

Conclusion

Finally, I wish on your behalf, to say a sincere thank you to all members of that happy team of fellow workers comprising the District Society Committee. I have enjoyed the privilege of being their chairman for a year. It has been a happy year because I think we have all been busy in the common cause of trying to maintain and if it is possible to enhance the status of our profession in the London area. Whether we come from large firms or small ones, whether we are employed within the profession or in industry and commerce we on the Committee have found that in common service there are more things which unite us than divide us. I trust that what little we have been able to achieve will commend itself to you and justify your confidence for the future.

ELECTION OF COMMITTEE MEMBERS

The report and accounts having been adopted, the result of the poll for membership of the Committee was announced as follows:

Members in Practice

Messrs G. B. Judd, B.A., F.C.A.; B. E. Basden, M.A., F.C.A.; B. A. Maynard, M.A., F.C.A.; J. A. Allen, F.C.A.

Notes and Notices

PROFESSIONAL NOTICES

MESSRS HARMOOD BANNER, CASH, STONE & MOUNSEY, Chartered Accountants, announce that, as from May 1st, 1962, they have admitted to partnership at their Liverpool office, Mr GEORGE FURNESS APPLETON, A.C.A., MR PETER JOYCE RUSH, A.C.A., and Mr HOWARD WILLIAM FRANKLIN, A.C.A., all of whom have been members of their staff for some years. Mr D. V. HOUSE, F.C.A., who was to have been the senior partner resident in London, has been appointed a lay member of the Restrictive Practices Court. This appointment necessitates his withdrawal from professional practice, and it must be announced with the greatest regret therefore that Mr HOUSE will not now be a partner in the present firm.

MESSRS HOWARD SMITH THOMPSON & Co, Chartered Accountants, announce that as from May 14th, their London address is 17 Devonshire Square, London EC2.

MESSRS MOSS & WILLIAMSON, Chartered Accountants, of Booth Street Chambers, Ashton-under-Lyne, Lancashire, announce that Mr EDWARD RAINES, F.C.A., who has had a long and active association with the firm, has retired from practice as from March 31st, last, and the partnership hitherto existing between Mr RAINES, Mr WILLIAM MOSS, F.C.A., and Mr JOHN P. STANSFIELD, A.C.A., is being continued under the same style and name, by Mr Moss and Mr STANSFIELD.

MESSRS W. ROWLAND WALLER & Co, Chartered Accountants, of 148 Temple Chambers, London EC4, announce that they have taken into partnership Mr LAURENCE EDWARD TAYLOR, A.C.A., and Mr PETER CHARLES YATES, A.C.A., as from April 1st, 1962.

MESSRS SHEEN, STICKLAND & Co, of Alton, Hants, and Farnham, Surrey, announce that they have been joined in partnership by Mr PATRICK RENSHAW GOULDER, A.C.A.

Appointments

Mr Robert Beldam, M.A., F.C.A., M.I.MAR.E., has been appointed a governor of the Brunel College of Advanced Technology at Acton.

Mr Duncan I. Cameron, C.A., has been elected President of the Edinburgh Junior Chamber of Commerce for the year 1962–63.

Mr S. K. Hardy, F.C.W.A., previously chief accountant of the Osram Lamp Division has been appointed financial director of Osram (G.E.C.) Ltd.

Mr N. F. Hibbert, A.C.A., accountancy manager of Laporte Titanium Ltd, has been appointed a director of G. D. Holmes Ltd and Goole Docks Fresh Water Boat Co Ltd, subsidiaries of Laporte Industries Ltd.

Mr L. G. T. Farmer, F.C.A., executive vice-chairman of the Rover Company, has been elected president of the Society of Motor Manufacturers and Traders for 1962–63.

Mr A. E. Smith, F.C.A., chief accountant and assistant secretary of Morris Motors, has been appointed secretary of the company.

Mr J. R. Vernède, F.C.A., has joined the board of National & Grindlays Bank Ltd.

COMPANIES REGISTRATION

Change of Address

The Board of Trade have announced that, in order to bring under one roof again the Companies Registration Office and the Registry of Business Names, together with the 750,000 files relating to existing companies and recently dissolved companies now stored in three separate buildings, the Companies Registration Office and the Registry of Business Names are to be transferred to new premises at Companies House, 55–71 City Road, London EC1. (Telephone: Clerkenwell 9393).

Under a six-weeks' timetable they are to be moved from their existing premises at Bush House and Lacon House between June 1st and July 8th.

Stamping of Documents

The companies Registration Office are making arrangements to collect their fees in money instead of by means of impressed or adhesive fee stamps. There will therefore be no Inland Revenue stamp office at Companies House, City Road; and on a date to be announced, Inland Revenue offices will cease to stamp documents or supply adhesive stamps in respect of Companies Registration Office fees. Until that time the Registrar will accept fees either in money or in the form of fee stamps.

Remittances in payment of Inland Revenue stamp duties in connection with new company registrations or increases in nominal capital (10*s* each on the memorandum and articles, and an *ad valorem* duty on share capital) may be sent as hitherto to the Registrar of Companies, who will arrange for the documents to be stamped by the Inland Revenue. Registrants may, however, find that they can save time if they themselves get the documents stamped by the Inland Revenue before submitting them for registration. The methods of paying fees to the Registry of Business Names will not be affected by these arrangements.

REVALUATION OF ASSETS
WORKS, FACTORIES, PLANT & MACHINERY, Etc.

AGRICULTURAL MACHINERY TRADE

National Survey of Operating Costs

The third annual survey of operating costs in the retail agricultural machinery trade has recently been organized by the Agricultural Machinery and Tractor Dealers Association. In these surveys, conducted on a nation-wide basis, information on sales, expenses and certain balance sheet items is obtained from as many members as possible and the resulting averages, after collation by the Association's accountants, are made available and are of considerable assistance to dealers in operating their businesses at optimum efficiency.

The Association is anxious to enlist the support of accountants who are concerned with dealers' accounts in encouraging its members to participate in the surveys and to keep their accounts in a form which will enable them to derive full advantage from them.

CENSUS OF DISTRIBUTION

While, thanks to the excellent co-operation of traders, most of the returns in this year's Census of Distribution have now been made, the Board of Trade appeal to the minority of traders who have not yet dealt with their census forms to do so at once. They are reminded that the completion of these forms is obligatory under the provisions of the Statistics of Trade Act, 1947.

If further copies of the census forms are required they may be obtained from the Board of Trade, Census Office, Eastcote, Ruislip, Middlesex. (Telephone: Pinner 8771, Ext. 227).

INSTITUTE LIBRARY

The Librarian reports that among the books and papers acquired by The Institute of Chartered Accountants in England and Wales in recent weeks by purchase and gifts are the following:

The American Invasion; by F. Williams. 1962. (Anthony Blond, 18*s*.)

Basis for Marketing Decision through controlled motivation research; by L. Cheskin. 1962. (Business Publications, 35*s*.)

Comprehensive Bond Values Tables showing net returns on . . . securities paying interest semi-annually: fourth edition. (Financial Publishing Co.) Boston. 1958. (F. P. Co, 120*s*.)

The Duty of a steward to his lord . . . to which is added . . . (a plain and easy method to be practised . . . in keeping his accompts . . .); by E. Laurence. 1727. (David Low, 77*s* 6*d*.)

General Ledger Code. (Geo. E. Shnier & Co.) Montreal. 1962. (Presented by B. Lonsdale, A.C.A.)

*Lindley on the Law of Partnership; by Lord Lindley: twelfth edition by E. H. Scamell. 1962. (Sweet & Maxwell, 200*s*.)

* This book has been presented to all District Society Libraries under the grant of books scheme.

THE NOTTINGHAM SOCIETY OF CHARTERED ACCOUNTANTS

New President

Mr K. A. Buxton, F.C.A., a partner in the firm of Mellors, Basden & Mellors, Chartered Accountants, has been elected President of The Nottingham Society of Chartered Accountants for 1962–63. For the past year he has served as Vice-President.

Mr K. A. Buxton

Educated at Rydal School, North Wales, Mr Buxton was articled to Mr C. E. Lavender, of Mellors, Basden & Mellors, and was admitted an Associate of The Institute of Chartered Accountants in England and Wales in 1938. He was appointed Near East representative of Mellors, Basden & Mellors at the beginning of 1939 and has been a partner in the firm since 1949.

During the Second World War he joined the Royal Army Ordnance Corps in Egypt and was later seconded to the United Kingdom Commercial Corporation, becoming chief accountant to the Egypt Branch. He was subsequently appointed chief accountant of the British Ministry of Food (Middle East).

Mr Buxton has served on the Committee of the Nottingham Society since 1953, and has represented

MOTOR — FIRE — CONSEQUENTIAL LOSS
MOTOR UNION INSURANCE COMPANY LTD
10 ST JAMES'S STREET, LONDON, SW1

the Society on the Taxation and Research Committee of the Institute since 1957.

Other new officers of the Society for the ensuing year are as follows:

Vice-President: Mr T. Ashton, F.C.A.

Hon. Secretary and Treasurer: Mr R. F. Holloway, F.C.A., Messrs Derbyshire & Co, Bentinck Buildings, Wheeler Gate, Nottingham.

Annual Report

The annual report of the Society states that the total membership at December 31st, 1961, numbered 460, a slight decrease over the year.

Congratulations are extended to Mr P. F. Granger on his election in June last year as President of the Institute, the first time a member of the Nottingham Society has held that office since 1924–25.

Several luncheon meetings were held during the year and the Society continued to hold lecture meetings for students on Saturday mornings, in conjunction with the Nottingham and District Technical College. For the session which commenced in February 1961, 185 students enrolled, a slight decrease on the number for the two previous sessions but a better average overall attendance was attained – 66 per cent of possible attendances against 62 per cent. It is stated, however, that the attendances of Final examination students continued to fall far short of the numbers expected. In view of the declining support given to the classes by students, discussions between the Tuition Scheme Committee and the Technical College were held with a view to effecting economies without impairing the standard and value of the lectures to the relatively small number of students taking advantage of the facilities and this, it is stated, has been achieved.

The Derby Branch of the Society held two lecture meetings and a luncheon meeting, and social events which were well supported included a dinner dance and the annual dinner.

The Committee records its appreciation of the services of Mr T. Ashton, F.C.A., honorary secretary of the Society from 1956 until his recent retirement from office. A presentation was made to Mr Ashton at the annual dinner held on March 7th.

THE MANCHESTER CHARTERED ACCOUNTANTS STUDENTS' SOCIETY

Annual Report for 1961

The annual report of The Manchester Chartered Accountants Students' Society for 1961, to be presented at the seventy-ninth annual meeting on Monday next, records that membership at the year-end numbered 1,440, an increase of ten. In his review of the year, the Chairman, Mr R. Hayton, A.C.A., refers to considerable development and progress in the Society in 1961. All the normal and well-established activities were continued – a comprehensive programme of lectures and visits was arranged – and a new development has been the introduction of discussion groups at which students were able to discuss between themselves and with a qualified leader the problems confronting them during the course of their studies. The groups have been meeting monthly, but it is hoped that if demand is sufficient it may be possible to run them on a regional basis throughout the area covered by the Society.

The Chairman states that for many years, successive social subcommittees have striven hard to infuse some social life into the Society, but have failed to win the support of the membership for the functions they have arranged. In the past twelve months, however, an extremely successful 'Tickers Ball', attended by over 700, was held; several less ambitious social events were also arranged and all were successful.

During the last twelve months or so, more students have been willing to join the Committee and take their part in the running of the Society and made it possible to introduce new rules increasing the number of student members, as opposed to qualified members, from a minimum of six to a minimum of ten. In addition, with a view to encouraging newly-articled clerks to take an early interest in the Society's affairs, one of the Committee vacancies at each annual general meeting is to be reserved for a student in the first year of his articles.

The sporting section of the Society was again active in 1961, over a hundred students having taken part in association and rugby football, golf, hockey, squash and tennis, and also chess. In all, thirteen matches were played.

The Bolton Branch of the Society arranged a number of lectures during the year; there was also a visit to a mobile exhibition of punched-card equipment given by International Computers & Tabulators Ltd.

PROFESSIONAL TRUSTEES' REMUNERATION

In the Weekly Note under the above heading in our last issue, we stated that an accountant and a solicitor, who were trustees under a will, had paid themselves remuneration of £1,983 17*s* 3*d* respectively, under the trustee charging clause. This should have read '. . . paid themselves remuneration of £1,983 17*s* 3*d* and £3,072, respectively'.

Improving the Short-term Gains Tax

THE provisions in the Finance Bill imposing tax on short-term gains took up some nineteen hours of House of Commons' time to pass through the committee stage. Nearly two hours of this was devoted to sub-clause (5) of clause 15 which gives wide inquisitorial powers to the Inland Revenue. Several members on both sides of the House expressed misgivings about this sub-clause. Mr JOHN HOWARD quoted at length from the observations which we made three weeks ago. We said then that if the object was merely to enable the Inland Revenue to ask for 'simple factual information, that is to say particulars of purchases or sales in which the agent concerned has acted on behalf of a named client', and not to inquire about advice given, then it was strange that the sub-clause expressly empowered the Inland Revenue to require any person to state whether he has acted for the taxpayer 'in connection with any acquisition or disposal of assets' by the taxpayer. Sir KENNETH PICKTHORN said:

> 'Ministerial assurances about legislation are always deceptive and often really insulting. The business of the Treasury Bench in passing this kind of legislation is to assure us, as honestly as it is capable, that words we are being asked to put in the Statute will have such and such effect and no further.'

It fell to THE ATTORNEY-GENERAL to defend clause 15 (5) and he began by roundly asserting that it was necessary and did not go beyond what was necessary. He denied something which we have not claimed, namely, that paragraph (*a*) of the sub-clause gave power to the Inland Revenue to ask a tax adviser what advice he had given. Paragraph (*a*) does give power to ask whether or not the adviser has acted on behalf of the taxpayer in connection with an acquisition or disposal. Ministerial assurances apart, would it be safe, in view of the penalties, for a tax adviser to decide that in examining the details of the transaction and looking up the law on the point, he was not 'acting on behalf of' the taxpayer? Moreover, it could well do more harm to a taxpayer to say baldly that he has sought and been given advice on a transaction, than to say what the advice was.

Paragraph (*b*) of the sub-clause sets out what can be demanded. It is information in the possession of the agent or adviser

> 'with respect to the acqusition or disposal being information as to matters specified in the notice which are relevant to the question whether the (taxpayer) is chargeable as aforesaid by reference to the acquisition or disposal, or are relevant to the computation of the gain or loss. . . .'

THE ATTORNEY-GENERAL said that the Inland Revenue would not want to know what the advice was; the obvious retort to that is to ask why then the Inland Revenue should be given the power. Pressed as to whether the sub-clause did not go farther than was necessary, THE ATTORNEY-GENERAL undertook to reconsider, before the report stage, whether paragraph (*b*) could be more precisely defined to accord with what he said it was meant to mean. When he is doing this, it is to be hoped he will look at clause 10 (3) (4) (6) where the question of motive arises. Sub-clauses (3) and (4) exempt transactions with a principal residence and with business assets, but sub-clause (6) denies the exemption where the acquisition was also made wholly or partly for the purpose of realizing a gain from the disposal. The Inland Revenue tend to take a somewhat cynical view of motives and they might well be concerned to make fishing inquiries as to whether the taxpayer took advice from tax experts before making the acquisition. It should be perfectly clear from the legislation whether they can or cannot make such inquiries.

The Government gratefully accepted the assistance of Mr GEOFFREY STEVENS in correcting the faulty drafting of clause 9 (7) which deals with profits tax on income falling within the new Case VII. The draftsman had overlooked the fact that a chargeable accounting period is not necessarily coextensive with an accounting period. The new paragraph (*b*) proposed by Mr STEVENS was accepted by the Government as putting the matter right. Under it, regard will be had to transactions within the chargeable accounting period, not in a particular period for which accounts have actually been made up. They also accepted an amendment, proposed by Mr STEVENS, to the original paragraph (*b*) of clause 9 (7). The draftsman had provided for set-off of losses and profits inside a profits tax group but only as between principal and subsidiary, having overlooked the possible existence of fellow subsidiaries in the same group.

The Government announced that the criticisms concerning the impact of the tax on mutual life assurance companies, to which we have already referred, were valid. An amendment will be introduced at the report stage to exempt mutual life companies. Other mutual insurance companies will not be exempt. They resisted a suggested proviso to exclude from the definitions of 'disposal of an asset'

> 'its disposition or destruction through act of God, *force majeure*, compulsory purchase and other causes outside the control of the taxpayer'.

The ECONOMIC SECRETARY said the destruction of an asset did not involve its disposal. The compulsory disposal of shares under section 209 of the Companies Act, 1948, did not seem to be a matter calling for exemption. One might add that such a disposal is not entirely out of the control of the taxpayer. Moreover it would be absurd if those shareholders who acquiesced had to pay tax, while those who did not escaped tax. As to compulsory purchase of land under statutory powers, many sellers who really wanted to sell might go the length of compulsory purchase in order to avoid tax. The ECONOMIC SECRETARY said he would examine the position of a bona fide reluctant seller. He would also look at the case of options on shares, given to employees.

THE ATTORNEY-GENERAL promised that where land was disposed of by lease, tax would not be charged on the capitalized value of the rent.

Clause 13 (8) defines 'share', in relation to a company not limited by shares, to include the interest of a member. But clause 13 (7) originally referred to 'share capital', which the Government has since been advised is not apt to cover a share in the extended sense given by clause 13 (8). Accordingly, 'share capital of' in clause 13 (7) was altered to 'shares in'.

Not surprisingly, the Ninth Schedule came in for some amendment, although of a minor character. Paragraph 2 (5) (*b*) was amended to:

> '(*b*) in the case of a contract to dispose of the asset, nothing in this *or the last foregoing* paragraph shall apply so as to treat him as disposing of the asset under the contract on the condition being satisfied'.

The Government introduced an extensive amendment to paragraph 10 (6), dealing with reorganizations of share capital. The amendment was to correct two anomalies. One object is to extend the application of the paragraph to a case where the allottee of bonus or 'rights' shares sells his old shares before taking up the allotment of the new. The other amendment ensures that where a person buys rights and then exercises those rights, the six months will run from the date of purchase of the rights, not from their subsequent exercise.

Practising a Profession

CONTRIBUTED

It is something of an event when a profession calls for an investigation of its own organization and activities. This has, however, been done by the Royal Institute of British Architects, whose recently published report, *The Architect and his Office*, constitutes a valuable survey of professional practice administration, service and productivity.

THERE are at least two reasons why the report should be of interest to accountants. The first is that although the two professions are far apart in some things they share the common problems of all professions in today's conditions. The second is that the report calls for closer collaboration between architects and accountants in improving the former's own standards of accounting.

Common Problems

All professions face common problems today. These include recruitment and training; shortage of suitable ancillary staff; costs which are much less confined than fees by traditional attitudes and usage. All face the competition of commerce and industry for staff and qualified personnel. All are affected in not dissimilar ways by the monolithic power of the State and the jobs it can offer at local or central level. Finally, all are faced with the fact that in this age the basic idea of professional work, that is of providing a confidential service to a client, is often less financially rewarding and even less socially gratifying in relation to other types of work than was once the case.

It is therefore reasonable to suppose that when a particular profession takes a dispassionate look at itself, it will have things to say which are of general interest to the other professions. The architects have taken such a look, assisted by management consultants, the investigation having been largely financed by a grant from the Leverhulme Trust.

There are two groups of subjects in the report which are not dealt with here. The first, obviously enough, are those subjects which are technical to the architect; the second is fees. There is no immediate common ground between designing a head office for a large public company and auditing the accounts of the concern which will occupy it, nor between the fees and bases for computing them for these services.

There remains, however, a wide field of common types of problem, notably on training and management. In what follows, these problems have been identified, though no attempt has been made to say that such-and-such is a problem for both architects and accountants and here is how the architects are being advised to solve it. The problems, and their solution or suggestions for improvement, are as seen in the R.I.B.A. report; the accountant must therefore run and read and decide for himself what is important and what may be interesting.

Difficulties of Structure and Growth

The report makes much of the difficulties arising from the structure of the profession. There are small practices, medium-sized ones and large ones. There are architects working for industry and those working for the Government and local authorities. Not all small practices deal exclusively with small jobs; not all large ones take on only big assignments. The idea of the typical professional office is thus largely a fiction. Many of the profession's problems of poor quality work and low productivity (a refreshing professional admission that such difficulties exist without detracting from the profession's overall standing among clients) arise from questions of growth in recent years throughout this patchwork professional structure.

Throughout the profession there is apparent a sense of isolation – a desire to see how other offices organize certain kinds of work – but it seems that this has yet to be articulate enough to impel the R.I.B.A. to take action to achieve greater co-operation. It may here be observed that the survey itself may be seen as a move in that direction.

Rapid growth has led to greater use of unqualified staff and a tendency for unqualified men to do jobs better left to their principals. There has, in fact, been a good deal of dilution of the profession and not surprisingly principals have expressed concern about the standard of training of non-qualified personnel. Growth has also put principals in a cleft stick on the issue of specialization *versus* diversification. They have found bigger turnover in specialization but greater personal satisfaction in diversification.

Disillusionment among trainees has arisen not only because in many cases they have dreamed of building palaces and see little in prospect beyond, say, a minor extension to the municipal *abattoir*,

but also because growth and staff shortage have made it difficult to offer good supervision and training in offices. Trained, qualified men have to be put full time on to fee-earning work rather than on to training their juniors. Day release and evening class tuition is less popular than sandwich courses among trainees. The former articled training system has already succumbed to economic pressure and is largely a thing of the past.

Chronic Problem

Staff turnover is a chronic problem. Those with a below-average rate of turnover seem to be those which delegate responsibility to assistants and which have a lively working atmosphere.

The Board of Architectural Education is aware of the training problem and is introducing a more formalized system of training involving an integrated seven-year period of instruction. It would seem that the architects are moving broadly in the same direction as industry in replanning trainee courses as the traditional type of apprenticeship becomes less common.

Growth has obliged many principals to spend an increasing amount of their time at meetings, in memorandum, report and letter writing and in decision-making, which has resulted in their forgetting some of their professional techniques. This, of course, fits in with greater delegation to non-qualified staff and leads on to the suggestion that a new type of technician should be developed. It is emphasized, however, that any move in this direction must take place only when youngsters attracted to such work are made quite clear about the limitations it will have on their careers. This would seem to be highly controversial ground unless the introduction of a new grade to serve the profession were to help the architect to practice more continuously his design skills. Nevertheless, the report sees higher productivity in the office as coming partly from the introduction of such a grade.

The report also notes that there has been a tendency as the profession has grown for specialists of various kinds to proliferate – on the whole with good results. Specialists, in this sense, range from consultants of professional status in various fields, to office managers supervising greatly expanded staffs.

Some of the sternest comments in the report are reserved for office organization. The investigation showed that offices as a whole achieved their best performance in technical efficiency. Quality of design came a not very good second; with management a very poor third. It is considered that there is urgent need to improve this last. Management theory and practice is regarded as a prerequisite of architecture, and the profession is called upon to improve its management aids, assisted by the R.I.B.A., which is called upon to produce a *Management Handbook* as soon as possible. Systematic management education for trainees is recommended, and the Institute should advise other professional bodies (including those in accountancy) that they are setting up standard bases in accounting, cost control, work measurement and management control. The profession generally is advised to improve the working environment of its office staffs. Overcrowding and poor amenities are common.

Management Research

As might be expected, when they come to management research the authors of the report are off into controversial waters. They are clearly impressed with the possibility of evolving readily available standards of work in actual professional and technical matters. For example, they suggest an examination of group practices and consortia to strengthen the technical resources of individual offices, and they also suggest that the function of drawings should be re-thought. They are thus much concerned with efficient short-cuts in professional work and the use of standard practices wherever these are available. They are unfavourably impressed by the fact that so much professional work is done (often of an elementary or routine nature) over and over again. In effect they say, if there can be progress in standardized components in the erection of buildings, why should there not also be progress towards standardized drawings and standardized design techniques. This is the direction in which they would look for some relief of the pressure on highly qualified and experienced professional men who are in danger of losing their basic expertise prematurely for lack of time and opportunity to practise it.

In an effort to make constructive recommendations about spreading the work load – the bane of all professional work – the investigators suggest an objective study of job allocation and a review of the professional attitude on advertising. This last probably goes too far for the R.I.B.A. – as for other professions – but it shows the importance which is attached to the question of getting a satisfactory even flow of work through the office.

Throughout the report there runs, if in modest form, the theme that the professions in general are moving together and have something of value to exchange with each other.

THE ACCOUNTING WORLD

Belgian Income Tax Reform

A CENTURY and a half ago Addington introduced the British system of income tax which provides for the schedular classification of income by reference to its nature, regardless of the status or identity of the recipient. He also introduced the principle of taxing income at source wherever practicable. These principles allowed for painless collection, combined with a pandering to the reluctance of taxpayers to reveal their total incomes. When surtax was introduced some hundred years later, the British tax system entered into a new phase, where emphasis was placed more and more on total income, i.e. on the unitary system.

The same or a similar process can be observed in other countries. The European Economic Community Treaty, which has among its objects the harmonization of tax systems, will no doubt give a fillip to this movement. Earlier this year the Belgian Government introduced a Bill, entitled *Projet de loi portant réforme des impôts sur les revenus*, which is designed to reform the Belgian direct tax structure and is an illustration of the movement towards the unitary system. The declared purposes of the Bill are:

- to divide the tax burden among Belgian taxpayers more equitably;
- to produce higher revenues, especially through measures to prevent tax evasion;
- to simplify the system;
- to stimulate the economy.

So important is this new Bill that *European Taxation*, the fortnightly review published by the International Bureau of Fiscal Documentation (to which we are indebted for our information), devoted practically the whole of its issue of April 16th to a detailed analysis of the provisions of the Bill.

Although, as we have said, the move is towards a unitary system of taxation, under which the taxpayer, particularly if he is an individual, ultimately pays a total tax which has reference to his own total income, the Bill not surprisingly provides for retention of the system of taxation at source by direct assessment on income as such, or by deduction of tax. Needless to say, tax suffered by deduction is largely brought into account in the final computation. To emphasize this, the provisions for deducted taxes refer to them as 'prepayments' (*précomptes*). Thus, as in the United Kingdom, the Belgian tax administrators seek to obtain the best of both worlds, but certainly at the cost of considerable complication.

Under the proposals, there will still in fact be more than one direct tax properly so-called. There will be four taxes, as follows:

- *Impôt sur les personnes physiques*, levied on the world-wide income of resident individuals at progressive rates ranging up to 55 per cent.
- *Impôt des sociétiés*, levied on world-wide income of resident bodies corporate which carry on business or have other income-producing activities. The rate is fixed at 30 per cent. Branches of non-resident bodies corporate will not be liable.
- *Impôt des personnes morales*, levied on public bodies (such as the State, provinces and municipalities) and other bodies corporate which do not carry on business or have other profit-making activities.
- *Impôt des non-résidents*, levied on income from Belgian sources derived by non-resident individuals and legal entities (including the branches of non-resident bodies corporate), at a rate of 35 per cent for legal entities and progressive rates up to 55 per cent for individuals.

Since the rates of tax on individuals are progressive up to 55 per cent, it is clear that the final liability of an individual cannot be determined until his total income is known. In Britain during the war, tax was deducted at source at a rate of no less than 50 per cent, because that was the standard rate, although it involved the repayment of tax in a large number of cases. To deduct tax (or collect it provisionally) at 55 per cent in Belgium would produce repayment claims in a very high proportion of cases. The proposals for what the Bill calls *précomptes* (perhaps 'payment on account' expresses the idea) are more modest, and in effect they incorporate much of the existing Belgian system.

There are to be three categories of *précomptes*, as follows:

- *Précompte immobilier*, levied by assessment on the estimated ('cadastral') income from Belgian immovable property. Non-residents using such property for business purposes may in some circumstances pay on actual income.
- *Précompte mobilier*, levied as a withholding tax on income from personal property. In some circumstances income from abroad may be subjected to a *précompte* by way of assessment.
- *Précompte professionel*, levied as a withholding tax on wages, salaries and pensions, and by way of self-assessment on the earnings of certain self-employed individuals.

These three proposed *précomptes* correspond respectively to the existing *Contribution foncière*, *Taxe mobilière* and *Taxe professionnelle*.

The *précompte mobilier* is perhaps the most complicated. The standard rate of deduction is 15 per cent, but where the payee declines to allow the payer to report his name and address (with the amount of the payment) to the tax authorities, then the payer must deduct a supplemental 15 per cent, making 30 per cent in all. The Bill has not yet revealed to what extent, if at all, this supplemental payment will be allowed as a credit in computing the taxpayer's ultimate liability. Where the payment is a dividend on shares, or otherwise represents a share of profit,

the effective rate of deduction is 18·2 per cent because the payment is grossed up on the basis of 121·4 per cent. There is also provision for a 'special credit' to individual shareholders (or sleeping partners) to reflect the fact that the company or partnership has already borne tax on the profits as such. *European Taxation* sets out detailed examples of the working of this system, which is on the lines of the British double tax relief and can, of course, produce some difficult arithmetical complications.

SOUTH AFRICA

New Legislation on Auditing

THE Public Accountants' and Auditors' Amendment Act, 1962, is designed mainly to clarify the provisions of section 26 of the original Act dealing with the powers and duties of auditors. Under the 1951 Act, an auditor who finds a 'material irregularity' of which he has cause to complain is required to report the matter in writing to the undertaking concerned. If he does not receive a satisfactory reply within thirty days, the auditor must immediately furnish the Public Accountants' and Auditors' Board with a copy of his report and of any replies thereto.

The amending Act defines a 'material irregularity' as one 'which has caused or is likely to cause financial loss to the undertaking or to any of its members or creditors'. In such a case, the Board is entitled to disclose the relevant information to an Attorney-General, an officer in the public service, or to any member or creditor of the undertaking.

Another important phrase to be expanded is the provision requiring an auditor to satisfy himself of the existence of the assets and liabilities shown in the balance sheet by 'the ordinarily accepted methods'. The amendment replaces this rather vague wording with an instruction that he must apply 'such methods as are reasonably appropriate having regard to the nature of the undertaking in question'.

This last provision demands no higher standard of auditing than has already been observed by responsible practitioners, but the new definition of 'a material irregularity' seems to extend the responsibilities of the auditor. He can hardly be held responsible for the policy pursued by the undertaking; his duties in this connection are still limited to *irregularities*. But to decide whether an irregularity is *likely* to cause loss to members or creditors could present the auditor with a type of problem he has not previously been called upon to solve.

CANADA

Federal-Provincial Income Tax Collection

THE agreements under which provincial Governments in Canada rented to the Federal Government their rights to collect individual and corporation income taxes are not to be renewed. From January 1st, 1962, all provinces will levy individual and corporation income taxes, as Quebec has being doing for years and as Ontario has done in the corporate tax field.

The provinces which have been renting their rights have arranged for the Federal Government to collect the taxes imposed by them. But Quebec will collect its own as before, and Ontario will continue to collect its own corporation tax. A provision of the collection agreements is that the provincial tax legislation shall be uniform (except as to tax rates) and in conformity with the relevant provisions of the Federal Income Tax Act and regulations.

OVERSEAS TAX DEVELOPMENTS

THE following notes have been made available by the Inland Revenue Library (Foreign Section).

Federation of Rhodesia and Nyasaland

The Income Tax Amendment Act, 1962, of almost fifty pages is mainly devoted to redrafting and to transferring certain provisions from the body of the Act to schedules at the end. Changes include:

Modification of the provisions relating to pension funds whose rules are changed after July 1st, 1960, so that, if more favourable, the amount of any lump-sum payment to be included in gross income and the deduction to be allowed in respect of contributions to the fund, may be replaced by the amount or deduction that would have applied had the rules not been changed.

Inclusion of provisions for the taking into account of the value of trading stock and for the treatment of hire-purchase agreements relating to machinery, etc.; both give statutory effect to existing practice.

The new Southern Rhodesian personal tax is not an admissible deduction.

The present provisions relating to co-operative agricultural companies are extended to similar co-operative societies.

The initial and annual allowances on certain farm dwellings are limited to the allowance appropriate to an original cost of £3,000; allowances given for past years are not amended.

Spain

The following changes are effective as from January 1st, 1962:

Individuals. The basic exemption under *impuesto sobre el trabajo* (earned income) is raised from 18,000 to 25,000 pesetas.

Companies. Spanish companies receiving dividends from overseas subsidiaries are allowed an 80 per cent exemption, i.e. only 20 per cent of the amount received need be included for *impuesto sobre sociedades* (corporation tax). A subsidiary is one in which the parent company has a 25 per cent interest or when apart from this, it exercises effective control of the subsidiary.

A Revaluation of Assets Law has been introduced, its application being optional. It covers the assets in Spain of Spanish and foreign companies. Companies may either (1) revalue and pay a 1·5 per cent tax on the increased value, or (2) set up a revaluation reserve, contributions to which will be an allowable expense against corporation tax.

Credit Control

by G. H. DAY
Internal Auditor to the Heal Organization

THE granting of credit involves a loss of liquidity with no financial return. On the contrary, net margins diminish because of the increased administrative burden. Nothing could be easier or cheaper than to sell one's wares or services on a cash basis. Tally rolls (or the like) show sufficient details for immediate reconciliation, and thereafter one is interested only in daily, weekly or even monthly totals of takings. Once credit is extended, extra paper flows and clerical staff must record comprehensive details, either in ledger accounts or by a voucher system. These are the firm costs; additionally, stationery and postage will probably be expended in rendering statements, some debts will need to be followed up, perhaps pursued to the Courts, and specialists may be employed to sanction future credit. The total expenditure coupled with the stagnation of capital may very easily lead the creditor to bankruptcy.

At the same time it must be remembered that money is a scarce commodity. In a relative way, this statement remains factual regardless of accumulated riches. Some years ago, I suppose that all of us started work on a Monday and gave our services on credit until the following Friday. Ever since, I suggest that there has been a tendency to pay when we are paid. Many potential buyers are literally unable to raise the purchase price on the nail. To others, a charge account is a symbol of prestige. If facilities are denied, it is likely that they will be granted by a competitor.

Here, then, is a problem for management. There must be a clear, positive policy but, within its bounds, free flexibility is essential. The line credit controller needs considerable discretionary powers and, in order to give his juniors vital experience, he should be permitted to delegate a part of his sanction authority. Of all accounting functions, this is perhaps the most hazardous, and a really useful executive in this field would be quite exceptional if he did not have behind him several staggering blunders.

Experience

As my observations throughout this paper will be limited by my own experience, it may be as well for me to mention briefly what this has been. The danger of allowing extended credit was brought home to me in my very first job. This was with an engineering firm, 50 per cent of whose output was for a single customer. The product was a patent cinematograph projector for which the market contracted drastically when nearly all cinemas were absorbed by three groups, all of which were interested in other projectors. When our customer was wound up, his debt to us represented nearly a year's turnover, and his only sizeable asset was a large stock of our own unsaleable instruments.

In time I took an interest in retail administration. Three houses have been good enough to employ me: a departmental store, a multiple fashion shop and a furniture business. My present employer firm was founded 150 years ago by an expert feather dresser who demonstrated his craft by stuffing pillows in an open shop window. His descendants added furniture to their interests, the pace being set by a great designer in this field. Keeping his standards in view, his sons have expanded the idea towards its logical conclusion within the wider scope of furnishing. As the business grew, it was found convenient to form or absorb subsidiary companies for the control of certain activities not directly concerned with the shop. The family group now includes companies dealing with building and decorating, architectural joinery and cabinet making, wholesaling and contracts (by which we mean orders to equip, for example, an office suite, a hotel or a ship). It is thus seen to be a classical vertical combination which can undertake every facet of furnishing, starting, if need be, with a plot of land, and finishing by hanging pictures on the wall.

I propose broadly to use this group structure – contracts, retail, wholesale – as a scheme for classifying several kinds of credit problems, though I may in passing draw elsewhere for some quoted examples.

Contract Work

The credit risks involved in contract work are not usually great. Most business comes from customers of the highest integrity – architects, Government departments or large organizations of national repute. There is no reasonable doubt about settlement. The difficulty is that the jobs take a long time to complete. Meanwhile, the costs of material and supplies, wages and other expenses, have to be carried by the contractor. It is customary in these cases for interim payments to be made against architects' certificates, but even when the work is complete it is not unusual for there to be a 'retention' of 10 per cent for a period of six to twelve months. The accountant should be fully briefed on such arrangements so that he knows what he may expect at given stages. Moreover, he can make claims as a matter of routine. One understands that the customer would be pleased to keep the cash in his pocket as long as possible, but, oddly enough, sales-

Address given to the London Chapter of the Institute of Internal Auditors.

men are often quite reluctant to ask for money. The accountant is considered somewhat naïve for wanting to bother such a customer for 'odd bits and pieces'. Once, when the customer was a trade union, it was seriously thought that we ought not to let 'them' think we were short of money! Obviously these examples are exceptional; normally, transactions in this group are of a very happy order.

More doubtful may be some companies which specialize in exhibitions, stage and television studio work. The prospect of attendant publicity is sufficiently tempting to blunt caution but, while no generalization is intended, there are many mushroom organizations in this category. From time to time, new orders are received from companies about which nothing is known, and perhaps the greatest nuisance value comes from officials of customer companies who want personal purchases at contract rates.

Retail Shop

In assessing the credit-worthiness of all comers to a shop, one must be prepared for many headaches. The well-groomed emerge as rogues and the shabbily dressed as shareholders; there are those in funds who are bad payers. The cynics quickly develop a 'looking-glass' mentality, never accepting people as they seem.

Also encountered are those who invent their own terms – without, of course, advising the creditor! When I reminded a dilatory Chelsea artist that she would have to pay monthly, she replied that her sole object in opening the account was to delay settlement until she sold some pictures. The proprietress of a Bournemouth hotel was furiously indignant when her account was closed, although a ten-month-old debt was settled only after we had threatened Court action. She claimed not to have read the letter or its predecessors. Certainly she had noticed our follow-up letters but she ignored them because, she said, if we had used any intelligence, we should have realized that she would pay at the end of the season.

Sometimes difficulties are aggravated by poor salesman-technique. Having already tilted once at my colleagues, I will not make much of this, but the credit controller can be greatly embarrassed if a salesman has been over-optimistic of facilities that will be granted. On other occasions the accounts section is represented as an ogre-like 'they', which does not help in subsequent negotiations with the customer.

In its simplest form, credit is technically granted in the acceptance of a cheque for goods to be taken, a risk which is normally accepted by most large shops. Sometimes customers are asked to support their identity – say, with a driving licence – and it is usual for the name and address to be noted on the cheque. This illusory protection does not fool us, but the ritual impresses alike junior staff and lay customers. We would not normally cash a cheque for someone unknown to us.

If a credit account is opened, it is on the understanding that it will be paid net monthly on presentation of a statement. This is of special convenience to customers who make several purchases during the month, and it tides them over to the next salary remittance.

It is in the realm of extended payments that one meets that section of the community which has been described as the financially illiterate. Gullible folk can be persuaded to increase their total debt when they think only about the small weekly increment to instalments. The worst examples of high-pressure salesmanship are experienced at the hands of door-to-door tally men and second-hand car vendors. Practices have been disreputable enough to evoke special legislation, and there are modifications even now in the offing. The situation becomes more complex because the control of hire-purchase is one of the tools of fiscal manipulation. The proportion of the deposit and the period of repayment are regulated, and the hirer must be spoon-fed with information about the cash price, his rights and his obligations. The law seeks to protect both parties, and in certain circumstances the creditor can recover his goods. Unfortunately, the realization value is often negligible. One way or another, the retailer becomes involved with additional burdens which are not covered by his nominal service charge; the notion that this represents interest earned is quite ludicrous.

However, the demand for extended payments is met, either in this form or by variations on the theme which are not so rigorously controlled. These include credit-sale agreements which require no deposit, the whole debt being settled by regular equal instalments; and subscription accounts for which a regular sum is paid and credit is allowed up to x times the amount of the subscription.

By contrast, there is the lesser problem of credit to staff. Within limits cheques are cashed and advances on salaries are allowed. Properly authorized cash floats are available to those travelling on business. Discount is allowed on purchases for cash; credit accounts may be opened, but usually with a restricted privilege of discount.

Wholesaling

My experience of wholesaling is confined to furnishing items all of which are exclusive to the wholesaler. This is a true expansion of a market already known to exist through trading in the shop. Most of the customers are other retailers, whose problems we know only too well. Otherwise the goods are ordered by Government departments, local authorities, stage fitters and officials of customer companies requiring personal purchases at wholesale rates; in other words of the same ilk as the contract customers.

Code of practice provides that the wholesaler's trading is confined within these bounds. Though not legally enforceable, this effectively discourages direct sales to the public. It is usual in the trade to offer discount for prompt payments, which has the desired effect in most cases, but some customers prefer to pay net regularly two to four months in arrear.

Sanction

Let us now consider just what kind of safeguards are practicable to assist management in this rather complex problem. When asked to charge purchases, the salesman will inquire whether an account has been opened. If the answer is negative, the customer will be asked to complete a form nominating two trade referees and a banker. The banker does not in fact tell us much, but it is comforting to be told that he knows the customer. The other referees are normally asked how long they have known the applicant; to what extent they have allowed credit, and whether payment has been made promptly. Personal testimonials are of only marginal value. Inevitably there is the person seeking credit for the first time who offers as a referee his vicar. Although I am a churchman, in this context I would rather have a guarantor.

But if the customer avows he has an account, there is a dilemma: the statement may be true or false; and, if it is true, the account may be bad. It is impracticable in a large shop for every charge to be referred to the ledgers while the customer waits, so some discretion should be given to sales staff, but the amount must be strictly limited. According to the seniority of the individual, this might range between £2 and £50.

Many retail organizations have adopted the use of personal account cards. If the customer presents one of these and can reproduce the signature it bears, he is allowed to take goods almost without question. But two dangers are obvious: the account may be in arrear, and the shopper may not be the true owner of the card. Consequently there must still be limits to the value of goods taken. Beyond this stage the matter should be referred to the counting house. (This, incidentally, is our rather quaint way of describing the sales ledger section.)

The worry is, of course, primarily about 'take' goods. When purchases are to be sent, the paperwork initiating the delivery automatically passes through the counting house. If sanction is withheld, the customer will receive a letter, probably accompanied by a *pro forma* invoice.

In cases of contract and wholesale business, where the question of taking goods rarely arises, probably all orders can be sanctioned by the accounts department.

Trade Organizations

Both retailers and wholesalers have their trade protection associations. On inquiry they will assess a credit rating and produce the names of all members who have previously sought information about the customer. Those whom he did not quote, incidentally, will be noted with interest, because it is not unknown for people to nurse a couple of accounts specially to quote them for references.

Extension of this idea into a wider field leads us to the Export Credits Guarantee Department. This is an insurance scheme by which the Government, recognizing the greater difficulty of credit rating and debt collection in overseas markets, seeks to relieve the exporter of this burden. In response to inquiry, the Department will specify a credit limit and a premium will be charged in ratio to the value of exports, the rate varying for different countries. If accounts fall into arrear, the Department takes over the collection, and in the event of default the exporter stands indemnified for the greater part of his debt.

Collection

Collection procedure is fairly standard in most organizations. One starts with a detailed statement; next month is sent the account rendered, with or without 'stickers' (according to taste). Two or three graded stereotyped letters may follow before the matter receives more personal attention. This leads to the threat of legal proceedings, which is about as far as the normal administration can go.

The papers are passed to solicitors or other agents, who will make further application for settlement. If this is unsuccessful, the matter may be pursued with Court action, but consideration is given to the size of the debt and the likelihood of its recovery before one becomes too deeply committed in legal proceedings. It is not only a matter of costs. Careful study of the law of contract, sale of goods and so on, may be of only academic interest. Very often the defence pleaded is alleged inefficiency by the supplier. Even if this is proved false, the company will have suffered adverse publicity, and this factor must be weighed against the actual recovery anticipated.

Internal Audit

The internal auditor's function here – as always – is to safeguard the company's interests by seeing that its policy is properly carried out. As I hope has been suggested already, he will not be looking for adherence to hard-and-fast rules. He must remember that credit is a personal matter and it may need tailoring to personalities. This is not to contradict my earlier remarks. The auditor must satisfy himself that deviations from the standard were authorized by a responsible official and that his decision was not made lightly. Moreover, the decision must not become a precedent: all exceptions must be treated on their merits.

The question of sanctions can best be dealt with by sampling. A random selection of live accounts can be subjected to a simple questionnaire:

(*a*) By whom was it sanctioned?
(*b*) Was it within his discretion?
(*c*) Were the references adequate?
(*d*) Were they satisfactory?
(*e*) What is the payment record?
(*f*) Have legitimate complaints justified late settlement?

On the collection procedure, the auditor should see that statements are sent off directly after the month-end close-down or at the appropriate times if cycle billing is operative. The follow-up letters mentioned should be watched in the case of 'regulars'. If the routine always follows the same pattern, your debtor

knows he can safely wait for the final demand notice. It is most important to see that threats are actually carried out. I mentioned earlier that the company may exercise a waiver at the point of litigation. Where this has happened, the circumstances must be thoroughly scrutinized.

As to staff accounts, my own policy since the introduction of a clearance certificate for those leaving the employ is to make a complete review twice a year for overdue accounts, and I include examination of all cash floats. From time to time a sample of staff accounts is checked for discount validity.

Discounts allowed to the wholesale customers are also subjected to scrutiny. Clearly discount deducted from payments received late should be forfeited, yet every month many debtors draw their cheques on the due date, and a week may elapse before the recipient's bank account is credited. Having managed a bought ledger section for some years, I am not schizophrenic enough to be too harsh in these cases. Nevertheless, it is important to ensure that discounts claimed are not automatically allowed; and when disallowed the matter must be brought home to a responsible official of the customer company. Otherwise the clerks at each end may play ducks and drakes with each other until they build up a hopeless discrepancy between them.

Evaluation

In summing up, one could observe that if the period of credit is reduced, a contraction of financial costs will follow; that if arrears are promptly followed up, bad debts may be avoided. But in terms of money it is quite difficult to show positive savings resulting from an audit in this sphere. The real importance of credit control in a company's organization lies in its direct relationship with the customers on matters about which most folk are extremely sensitive. You will normally hear little of it until something goes wrong, and when that happens your company's goodwill is in jeopardy. For this reason, I commend such an audit to you as well worthy of your attention.

Weekly Notes

ANOTHER VIEW ON DECIMAL CURRENCY

IN this issue, we reproduce the memorandum of the Council of The Association of Certified and Corporate Accountants on the decimalization of the currency recently submitted to the Halsbury Committee. The reasons for supporting 'a major unit of 100*d*' are set forth simply and clearly and the way in which the Council marshals its arguments will command respect even from those who do not agree with the conclusions reached.

As noted in these columns two weeks ago, the Association is not the only professional body first to have favoured retaining the pound as the principal unit and then to have changed its views. The Council of The Institute of Chartered Accountants in England and Wales has already circulated its reasons for advancing the claims of the 10*s* unit, after further consideration of the problem, and the Council of The Institute of Cost and Works Accountants has come round to the same opinion in its memorandum of evidence to the Committee which we hope to reproduce next week. In this document, the pound is dismissed as too large a unit by international standards and one which cannot easily be decimalized. It seems evident that the Council hesitated between the 10*s* system and the 8*s* 4*d* system but, while appreciating that the adoption of the latter would serve to maintain existing values in small transactions, easier comparison of major units ('a factor of 2 is more readily understood than a factor of 2·4') is among the advantages which have now made it opt for the 10*s* system.

STOCK EXCHANGE ANNUAL MEETING

THE annual meeting of the Stock Exchange on May 24th was of more than usual interest this year to outsiders. The chairman said in his speech that the negotiations are proceeding satisfactorily with the Post Office to incorporate in their existing site the plan to rebuild the Stock Exchange. Design plans of the new Stock Exchange are expected to be ready in the next few months and if these are considered suitable they will be submitted to the planning authorities for approval in the autumn.

The year just ended has seen the introduction of new rules of membership, also rules for the creation and dissolution of firms and concerning firms' accounts. A committee has started work promoting the co-ordination and possible unification of the activities of stock exchanges throughout the United Kingdom. On this committee there are representatives of the Council of Associated Stock Exchanges and the Provincial Brokers' Stock Exchange. The possibility of allowing broker firms to establish branch offices overseas is still under consideration by the Council.

The chairman also referred to the advertising campaign which started on April 9th. This did not come within the financial year under consideration which ended on March 24th, 1962. The purpose of the campaign is to explain the function of the Stock Exchange but not, at this stage, to invite business. There has, however, been a significant increase in the number of applications for the short list of

brokers since the campaign began. The annual average number of applications for the list over the last three years was 3,466. Since April 9th, 3,645 applications have been received.

P11D AND PUBLIC AUTHORITY EMPLOYEES

IN the House of Commons on May 24th, the Economic Secretary to the Treasury confirmed that the new forms P11D for expenses and benefits of employees applied to employees in the nationalized industries, since they carried on trade. They did not apply to ordinary civil servants, nor to employees of local authories except where they were employed in some trade. Mr Barber said that 'their expenses payments are more strictly regulated than is generally the case in industry and commerce. Therefore, the ordinary pay-as-you-earn machinery is normally sufficient'.

This is not a complete answer because the legislation applying to industry and commerce does not merely provide for a strict regulation of expense payments. It imposes tax on payments which are not taxable in the hands of civil servants or employees of local authorities.

PAYMENT UNDER GUARANTEE DEDUCTIBLE

SOLICITORS who have lent money to clients and lost it have tried in vain in the past to claim the loss as a deductible expense for income tax. The existing authorities could not be said to be in a very satisfactory state. It seems now that Mr Justice Pennycuick has reversed the trend. He held that a firm of solicitors could deduct a payment of £412 made in consequence of their having guaranteed the overdraft of a client of theirs. According to *The Financial Times* of May 24th the Appeal Commissioners had found as a fact that the solicitors had been guaranteeing their clients' overdrafts for the last thirty years and this was the first time that they had had to pay. The Commissioners were also satisfied that other solicitor firms were accustomed to giving such guarantees, usually for temporary purposes, and that the £412 in the present case was expended wholly and exclusively for the purposes of the profession.

The Crown having appealed, his lordship said that the firm's practice was a sensible and proper activity – particularly since in the present case the guarantee was given in a transaction involving a purchase of property on the client's behalf. The expense was properly allowed.

FINANCIAL INFORMATION

ONE of the major obstacles in the way of forward economic planning in peace time is lack of full knowledge of current economic trends, such as would enable corrective measures to be adopted in good time. The problem is often one of balancing the value of a particular item of information against the difficulty and cost of obtaining it.

Reference to this problem was made at the recent annual general meeting of the Industrial Bankers' Association. The Radcliffe Committee on the Working of the Monetary System recommended that statistics should be collected at regular intervals from financial institutions covering the main financial assets and liabilities. It was suggested that this information together with figures from other institutions should be used to draw up a single account for financial institutions as a group with a view to showing the change taking place in the structure of their assets and the current flow of funds from the financial sector as a whole to other major sectors of the economy. After discussions between the Statistics Division of the Board of Trade, the Finance Houses Association, the Hire-purchase Traders' Association and the Industrial Bankers' Association, a suitable form was drawn up and agreement was reached that its completion should not throw an unreasonable burden on members.

BACKGROUND TO THE E.C.M.

A BOOKLET has been issued called *Britain and the European Communities*[1], which gives a summary of the present working of the European Economic Community with the statistical data which is necessary for appraising the advantages and disadvantages for Britain in joining the European Common Market. There has been a series of booklets of this kind put out under various auspices. The case for another lies mainly in the fact that the situation is continuously changing and the statistical data has to be brought up to date.

The booklet gives a brief account of the establishment of the European Coal and Steel Community and such organizations as Euratom. It then goes on to show how the E.E.C. established under the Treaty of Rome operates. There are then sections on the European economy as a whole showing the trend of United Kingdom output compared with the member countries of the European Common Market, the trend of employment, wages and costs. The pamphlet points out that although labour costs in Britain are somewhat higher than those in some European countries, it does not follow that costs per unit of output are out of line. If average hourly labour costs in the manufacturing industry are compared for April 1959, approximate social costs being included in the calculations, the United Kingdom has a better record than any of the members of the Common Market except Western Germany. At 66*d* per hour costs in this country compare with 67*d* per hour in Western Germany and 92*d* per hour in Sweden. Switzerland has the same figure as Britain.

There are sections dealing with the trade of Commonwealth countries with Europe and also closing sections on what will happen if Britain joins the Common Market and on Western Europe's prospects of prosperity in the world as a whole.

INCOME FROM PROFITS

THE trend of profits is discussed in the latest (May) issue of the *Bulletin for Industry*. It points out that profits have borne most of the effects of short-term fluctuations in demand and output. In consequence, over the years 1953 to 1960, they rose as much as wages and salaries on a percentage basis, but their progress was much more uneven. This would be expected since profits are by their nature a residual item.

There has been a tendency of recent years for the proportion of company income distributed as interest and dividends to rise and the proportion taken in taxation to fall, but with the fall in company profits in 1961 the rise in dividend distribution has slowed down.

There are two sources of data on profit trends. The first of these is the series put out by *The Financial Times* and similar series. The Central Statistical Office provides another series. The two series show different degrees of fluctuation in profits but they reveal a broadly similar trend. A feature of both is that they do not give very up-to-date information. The Central Statistical Office series now gives figures for the fourth quarter of 1961 and the series based on companies reporting in *The Financial Times* is available up to the third quarter of 1961. In order to put both series on a comparable basis the Bulletin shows each quarter as a percentage change on the same quarter a year before and includes a six-months' timing adjustment to allow for the time-lag in company reports. Both sets of figures show a drop in profits since the first quarter of 1961, which accords with general experience since the end of the last boom.

This is My Life . . .

by An Industrious Accountant

CHAPTER 126

THERE'S a book of humour called *1066 and All That* which has among its many gems a knack of describing historical personages succinctly as Good Things or Bad Things. This type of libellous appellation is capable of extended use. Take chairs, for example, just ordinary office chairs. Surprisingly enough, they can be Bad Things.

The basic point about a chair is not so much its size or its shape or its softness; it's the ease with which one sits in it. When it becomes a sort of status symbol, then this basic point looms large in business importance. I noticed this suddenly when I had a session with our personnel director recently.

Prinny is a character who looms large in our organization, and not merely because of his rotund bulk. His naval service stands him in good stead, also. Behind his natural geniality and his professionally-posed phlegmatic impassivity, lies hidden a readiness to blow his top. He can bawl out a defaulter like Captain Bligh at his worst; it's always a case of 'Breakers ahead'.

However, he greeted me cordially with a 'Pull up a chair, old man': we settled down to discuss the possibility of pruning the accounts staff, as there's a fierce economy drive under way. Before long, he needed some statistics, so he summoned his assistant, a rather weedy type with a nervous eye, and questioned him briskly. Weedy wasn't asked to sit down, though the questioning dragged on somewhat. It was only then that I noticed that all the chairs in the room were placed well back against the panelled walls, and it was a big room. Twice Weedy cast a furtive glance at them, but Prinny didn't take the hint. He chatted on in his bluff quarterdeck style. Weedy wasn't the man to break off the conversation, turn away to the wall, pull forward a chair to the director's desk and sit down calmly. His status was tacitly fixed and understood; it was just one of those things. Not that Prinny wasn't more than courteous to him, of course, but Weedy simply hadn't graduated to the appropriate level yet.

After Weedy had departed, we decided there could possibly be scope for improvement in the punched-card section, and in a revised layout for the cashiers. So we summoned the internal auditor – a dedicated young man with an intense approach to problems – to discuss the matter. He stood there for a few moments, legs wide apart, hands clasped behind him, brooding deeply, while we outlined our ideas. Then his eyes blazed with inspiration behind his thick black-rimmed spectacles.

'You know, you've got something there, sir,' he said 'Look, by re-routing the duplicate receipts . . . let's draft a new work-flow chart.' He put a foolscap pad on Prinny's desk, and pushing aside with brisk efficiency an ashtray and an ornamental brass gadget, he sketched rapidly some lines and symbols. Still talking, he crossed the room with long strides, and hauled back a chair one-handed, perching determinedly on its edge. All his attention was bent on his hardworking pencil . . . 'this triangular box', he went on, 'indicates comptometers.'

While we studied the plan he sat back thoughtfully, lit a cigarette, and exhaled a long grey cloudy column; clearly he was a man who had never heard of status symbols. Prinny measured him for a moment with a glowering glance, but his innocence was obvious. We asked him to check the details and prepare a report.

'That young man will go far,' said Prinny cryptically as he put the two chairs firmly back against the wall later. I didn't ask him what he meant; I just mentally registered chairs as Bad Things.

Decimal Currency

The Association Favours 100-penny System

A Memorandum submitted on behalf of the Council of The Association of Certified and Corporate Accountants to the Committee set up by the Chancellor of the Exchequer under the chairmanship of the Earl of Halsbury to inquire into the method and cost of decimalizing the currency.

Introductory

FOLLOWING the invitation extended to this Association by the Halsbury Committee, the Council of the Association (hereinafter referred to as 'the Council') has considered the matters covered by the Committee's terms of reference and desires to submit the observations which are set out hereunder.

2. The Council has been advised that the terms of reference of the Committee are as follows:

(*a*) To advise on the most convenient and practical form which a decimal currency might take, including the major and minor units to be adopted.

(*b*) To advise on the timing and phasing of the change-over best calculated to minimize the cost.

(*c*) To estimate the probable amount and incidence of the cost to the economy of proposals based on (*a*) and (*b*).

Accordingly its consideration of the problem has been confined to those terms.

Convenient and Practical Form of Decimal Currency

3. In considering the most convenient and practical form of decimal currency, the Council took into account the following points:

(*a*) The major unit selected should be capable of decimal sub-division, which would produce a lowest minor unit suitable for practical day-to-day purposes, e.g. newspapers, bus fares and housewives' shopping.

(*b*) An endeavour should be made, if possible, to avoid the inflationary tendency which might arise if minor units of a slightly greater value than the present ones were selected.

(*c*) It would be desirable to restrict the number of decimal places and at the same time to endeavour to keep the number of digits of an amount expressed in the new currency somewhat the same as an amount expressed in the existing currency.

(*d*) In considering the advantages of any one system over another, it is desirable that a long-term view should be taken and, while some link between the old and the new may be desirable, the new system should not be merely a compromise to avoid temporary transitional problems.

4. The Council considered that the selection of appropriate units of currency involved a choice between the following:

(*a*) (i) Selecting the present £ and subdividing it into one thousand parts.

(ii) Selecting the present £ and subdividing it into one hundred parts.

(*b*) (i) Selecting a major unit related to the present £, but less than £1, e.g. 10*s*.

(ii) Selecting a major unit related to the present £, but greater than £1, e.g. £5.

(*c*) Selecting first the minor unit and building it up to a major unit, e.g. a minor unit of 1*d* and a major unit of 100*d*.

(*d*) Selecting an entirely different unit of currency not related in any way to the present system.

5. The Council could see no advantages in selecting an entirely different unit of currency not related in any way to the present system, and it therefore gave its attention to the five possible methods set out in paragraph 4 (*a*), (*b*) and (*c*) above. The various aspects of these proposals have been compared and the results tabulated in the Appendix to this memorandum.

6. Before arriving at a conclusion, the Council examined the major points which arose from making the comparisons referred to in the preceding paragraph.

(*a*) The selection of the present £ and subdividing it would result in the following advantages:

(i) The prices of articles and services over £1 would retain a substantial identity with their present prices.

(ii) There would be no alteration in the Foreign Exchange value of the £.

(iii) The present coinage of 6*d* and upwards is capable of being expressed as a precisely equal value to a specified number of thousandths of £.

The following disadvantages would, however, arise:

(i) Prices under £1 would lose their identity.

(ii) While the present £ is divisible by 10 without departing from the present coinage, further sub-division by 10 involves the introduction of coinage not related to the present coinage.

(iii) Division by 100 to the second decimal place gives a minor unit equal to 2·4*d* which is too large for many purposes today, and therefore division by 1,000 to the third decimal place is necessary to arrive at a suitably small unit.

(iv) Coinage of 3*d* and lower would not equate exactly in value with a thousandth part of £.

(v) It would be inflationary at lower prices.

(vi) Lengthy notice of the change would be necessary for both usage and change-over of machines.

(*b*) The most favoured major unit other than the £ is the 10*s* major unit. The advantages of this method of decimalization are:

(i) A division by 100, as in the case of South Africa, might be sufficient. This would lead to a lower unit equivalent to 1·2*d* which might be small enough for most normal

purposes. While this would avoid the disadvantages of the third decimal place referred to in the first method, there would be the inflationary tendencies referred to above.

(ii) The selection of a small major unit would make its international value more in keeping with some of the other important international currencies than the present £.

The disadvantages are:

(i) Values expressed in the new denomination would have no common identity, either in large or in small sums, with the present system, and it might take people longer to familiarize themselves with the currency.

(ii) It may be argued that there would be a loss of international prestige.

(*c*) The selection of the £5 major unit has the main advantages and disadvantages set out above, but the following additional disadvantages appear to arise:

(i) It is too large a unit.

(ii) It requires at least four places of decimals to work satisfactorily.

In any case, it only differs from the 10*s* system inasmuch as the decimal place is in a different position.

(*d*) The final proposal is to select the first minor unit and build it up, i.e. taking 1*d* as the minor unit and 100*d* as the major unit. The advantages of this particular system are:

(i) The old system can be translated precisely into the new system without any shift in relative values whatever as the halfpenny would continue in use as at present. Inflationary tendencies are therefore avoided.

(ii) The prices of articles and services under 8*s* 4*d* would be easily identified with present prices.

(iii) The present currency could still circulate for the time being concurrently with any new coinage, without difficulty.

(iv) The selection of a smaller major unit would make its international value more in keeping with some of the other important international currencies than the present £.

(v) Short notice would be required of a change-over to this system.

The disadvantages are as follows:

(i) Although values are exactly convertible from the present system to the proposed new one, larger values would not be so easily identified.

(ii) It may be argued that there would be a loss of international prestige.

7. After careful consideration, the Council felt that of the five methods mentioned, three warranted serious consideration:

(*a*) The sub-division of the present £ into a thousandth part, with a designation of, say, a mil. The £1 and 10*s* notes, the 2*s* and 1*s* coins could be retained (although the last three would have to be redesignated). New lower denominations of coins would be necessary. The 6*d* and 3*d* could continue to circulate, but would need to be replaced in due course.

(*b*) The use of the 10*s* unit with one hundred sub-units of only 1·2*d*. Apart from the size of the sub-units, it had no real advantages over the division of the £ into 1,000 parts.

(*c*) The use of the major unit of 100*d*, which would involve the gradual replacement of the present coinage by 5*d*, 10*d*, 20*d* and possibly 50*d* coins.

8. In considering the merits and demerits of the three selected methods, the Council was initially in favour of adopting the £, because of the desirability of retaining the present basic unit and the possible effect abroad of the abandonment of the unit of currency which had been in use for generations. However, the disadvantages of the proposal compared unfavourably with the advantages of the 100*d* unit, and the Council therefore came to the conclusion that the 8*s* 4*d* unit possessed the least number of disadvantages.

9. The Council therefore submits that, while there are advantages and disadvantages in all the various possible methods, it considers that the 100*d* unit possesses the greatest advantages with the least disadvantages.

Timing and Phasing of the Change-over

10. The Council feels that as the adoption of the 100*d* unit would mean an exact convertibility at all levels from the old currency to the new, a limited amount of notice is all that would be necessary, but, having regard to the fundamental nature of the change to decimal currency, a notice of one year would be reasonable and adequate.

11. The Council has also given consideration to the question of the phasing of the change-over, and feels that if the existing currency could circulate concurrently with the new currency, the change-over could be effected in one operation. The new currency could be introduced gradually, but cashiers handling money in bulk would be faced with some transitional difficulties in handling and making up the two different types of currency. A period would therefore need to be set during which both types of currency would circulate. To some extent this period would have to depend upon the cost of replacing the coinage, and also the period within which coin-operated machines and meters could be altered. The Council is of the opinion that a time-limit should be set, and that a period of five years for the complete elimination of the old currency would not be unreasonable.

Probable Amount and Incidence of the Cost to the Economy

12. The Council does not possess sufficient information for the purpose of advising the Committee on the probable amount and incidence of cost to the economy of the various proposals for decimalization. It has, however, recommended the selection of the 100*d* unit since that system would not only cause the minimum of inconvenience, but would also appear to be the least costly of the methods because of the exact translation of values from one system to the other. It appears to the Council that costs would fall under the following headings:

(*a*) To the community as a whole:

(i) Printing of new notes. As, however, the life of notes in any case is comparatively limited,

the additional cost under this head need not be substantial.

(ii) The eventual minting of a complete set of new coins other than the penny would be more expensive but should be carried out over a period of years.

(*b*) To individuals and businesses:

(i) The main costs would arise in the conversion of accounting machinery, including cash registers. No doubt to some extent keyboard type machines could continue to be used where the whole number of digits were sufficiently large. In many cases, however, they would need to be replaced or adjusted.

(ii) Coin-operated machines would need to be altered to take the new coins, except machines operated by pennies.

(iii) Catalogues, price tickets, etc., would need to be amended, although in the case of the 100*d* unit and the exact translation of the price, there could be no confusion in the values expressed in the old and the new currency.

13. The Council feels that a subsidy should be given to companies and organizations having to convert equipment by virtue of decimalization. It has been suggested in some quarters that this could be achieved by special taxation relief. The Council considers that this would not be an appropriate way of dealing with the matter (e.g. local authorities and charities could not obtain such relief), and this subsidy should be directly related to the cost of the change and the age and outstanding life of the equipment concerned.

SUMMARY OF RECOMMENDATIONS

14. The following is a summary of the recommendations which the Council submits:

(*a*) That the most advantageous form which a decimal currency should take is a major unit of 100*d*, with a minor unit of 1*d*, and coinage of 5*d*, 10*d*, 20*d* and 50*d* with the continued use of the halfpenny.

(*b*) That it would be reasonable to give a notice of one year of the change, and that the existing currency should be withdrawn over a period of five years.

(*c*) That while it is not in a position to estimate the amount and incidence of the cost, the proposals detailed under (*a*) above are considered to be the least costly of various possible methods of decimalization.

(*d*) That a direct subsidy should be given to businesses and organizations towards the cost of conversion of equipment as a result of decimalization.

Appendix

15. A table of comparisons between the various units of currency is detailed in an appendix [to] this memorandum.

APPENDIX

	£1 (i)	£1 (ii)	10*s*	£5	8*s* 4*d*
(*a*) Lowest coin equivalent to ..	$\frac{96}{100}$ of $\frac{1}{4}d$	0·6*d*	0·6*d*	$1\frac{1}{2}d$	$\frac{1}{2}d$
(*b*) Decimal places to record (*a*) ..	3	4	3	3	3
(*c*) Lowest coin to account for (except shops etc.)	$\frac{96}{100}$ of $\frac{1}{4}d$	2·4*d*	1·2*d*	3*d*	1*d*
(*d*) Decimal places required for (*c*)	3	2	2	4	2
(*e*) Inflationary in lower prices? ..	Yes	Yes	Yes	Yes	No
(*f*) Relative value of coins	Change	Change	Change	No change	No change
(*g*) Can existing coins be used? ..	Some	Some	Some	Yes (except 1*d* and $\frac{1}{2}d$)	Yes
(*h*) Can existing notes be used? ..	Yes	Yes	Yes	Yes	Yes
(*i*) Present prices in catalogues, books, etc.	Change	Change	Change	Change	Change only by calculation
(*j*) New price of:					
(i) Low price – 5*s* 9*d* ..	*0·287	*0·29	*0·575	·0575	69*d*
(ii) Higher price – £8 17*s* 9*d*..	*8·887	*8·89	*17·775	1·7775	21·33
(*k*) Foreign exchange value ..	Same	Same	Less	Greater	Less
(*l*) Number of units in published accounts	Same	Same	Possibly more	Possibly less	Possibly more
(*m*) Adding machines:					
(i) Transitional	Can use only whole numbers on machines			Can be used with mental conversion	Can be used with mental conversion
(ii) Future eight keys ..	Present £ equivalent approximately				
	£100,000	£1,000,000	£500,000	£50,000	£420,000
(*n*) Timing for introduction ..	Lengthy notice	Lengthy notice	Lengthy notice	Any time	Any time
(*o*) Psychology of change – use of old terms?	No	No	No	Yes (except 1*d* and $\frac{1}{2}d$)	Yes

* Approximate.

Electronics in the Office

Investment Portfolio Valuation by Computer

ONE of the time-consuming routines common to every stockbroker's office has recently been engaging the attention of IBM United Kingdom Ltd and has been successfully programmed for processing by computer in the company's London Service Bureau.

The task is the periodical valuation of clients' portfolios which has normally been calculated laboriously by hand by the broker's clerical staff at a heavy cost in man hours and overheads. The computer, which will now be able to process a valuation at a speed of 300 to 400 lines a minute, is the IBM 1401, one of which is installed in the IBM Data Centre in Newman Street, W1, and a second in the company's Service Bureau at 101 Wigmore Street, W1.

Both the Data Centre and the Service Bureau exist to process work for outside customers who have no data-processing installation of their own, or only an installation which is inadequate for a periodical overload of work, and charges are based on machine time used and any cost of writing programmes.

In the case of the portfolio valuation, the programme is ready written in such a way as to be applicable to every stockbroker who wishes to use it so that programming charges are reduced to a minimum. The overall cost of a valuation by this method, at 7*d* per line, is considerably less than the cost of manual preparation.

Input to the system consists of a file of punched cards held by IBM and recording the investment holdings of clients. These cards contain a code number for each broker and each client, and a single card records the amount of one holding and the title of the security. The cards are filed in the sequence of each client within each broker and are amended from change slips which the broker sends in, recording changes in holdings, new holdings or discontinued holdings. The file is thus constantly up-dated, so that when valuations are called for, Service Bureau staff will select the cards for the appropriate clients and put them through a 1,000 card per minute sorter to arrange them in the required sequence. This is in a predetermined classification, under fifty headings of different types of stock, i.e. British Government, industries, oils, foreign bonds, etc.

For each group of cards recording one particular stock, a new card is inserted on which is recorded the price and the dividend from the *Stock Exchange Daily Official List* and this information is then punched automatically on a run through the machine into every following card recording a holding of that stock. At the same time a new pack of identical cards, without the price and dividend rate, is reproduced automatically to go back to the master file as a starting-point for the next valuation.

The cards are then sorted back to the original order of client within broker and go through the computer which calculates the value from the holding and the middle price, and the estimated income and percentage yield from the holding and the dividend rate.

The machine prints out this information at approximately 400 lines per minute on prepared stationery, to include a code number for the broker and for each client and the date of the valuation.

Holdings are listed by type of stock according to the fifty headings mentioned above and each type of stock is separately sub-totalled by value and estimated income. At the end of the run each sub-total is summarized on a separate sheet for each client and a grand total is produced, together with a schedule of the percentage which the holdings of each type of stock bears to the grand total.

The new system of stock valuation and investment analysis is available on request for the use of stockbrokers and has created considerable interest among City firms since it was announced.

New Data Centre

THE official opening last April of the Commercial Union Group of Companies' data centre at Concord House, Exeter, marks one of the most ambitious electronic data processing projects yet attempted in the United Kingdom.

The new centre, previously referred to in *The Accountant* of May 28th, 1960, houses an English Electric KDP.10 data processing system, coupled with a country-wide network of data transmission links with each of the Commercial Union branch offices. The daily transactions at each branch office are encoded on punched-paper tape and transmitted by G.P.O. lines to the data centre where the information is assembled into the correct processing order.

The main task of the system is the daily maintenance of a main file containing the records of some five million policy-holders. All five million policies pass through the system in four days, the daily operations including computing and recording 40,000 cash transactions, materially amending 5,000 policies, and printing and issuing 2,000 new contracts. The system also produces weekly renewals, lists, and account statements for agents, together with branch office copies. Management control information including branch and agents' performance figures, claims analysis and trends, revenue analysis and trends, and details of outstanding claims are produced as required.

To deal with the wide variety of forms necessary in insurance work, Rank Xeronic high speed printing equipment capable of printing 4,700 alphabetical or numerical characters per second is included in the system. The provision of pre-printed stationery is unnecessary, as the printer selects and prints the required format simultaneously with the details of the policy-holder concerned. The Commercial Union installation it is claimed is the first to use this type of equipment for insurance work.

New Branch Office for Leo Computers

LEO Computers Ltd opened a branch office in Birmingham, on June 1st. The new office will act as Midland headquarters, providing consultancy and programming facilities for the company's computer users in the region. These include Dunlops, Standard-Triumph, Stewarts and Lloyds and I.C.I. Metals. Staff training and maintenance facilities will also be available.

Finance and Commerce

Operating Buses

THE accounts of Lancashire United Transport Ltd, the bus company well known to readers in that area, are the subject of this week's reprint. Sir Robert Cary, M.P., its chairman, summing up, says the fleet now consists of 297 double-deck buses, 67 single-deck and 56 coaches, a total of 420 passenger vehicles. The company gives employment to 1,643 persons of whom 1,380 are men and 263 women. It has other interests: a subsidiary, Waterloo Motors (Bolton) Ltd, with workshops, showrooms, spare-part stores, etc., runs a motor agency business.

But, as Sir Robert points out, L.U.T. remains 'a single independent operating bus company owned wholly by its stockholders'. He uses these words in the context of a view of public transport, the whole field of which, he believes, is likely to come under some sort of general review during the next few years.

A tactical beginning, he says, was made when the Transport Bill was presented last November. By this measure, a large number of bus-operating companies will be directly affected by a compulsory transfer of their shares held by the British Transport Commission to a new holding company, a company subject to the direction of the Minister of Transport.

Passengers

L.U.T. itself dropped 1,735,000 passengers in 1961, the number carried falling from 81,520,000 to 79,785,000. Fluctuations such as this, Sir Robert states, can be explained by general social changes brought about by short hours of work; to changes in the distribution of population and industry; and to the extension of private motoring. But while in the transitional social conditions of today it is easy to detect the effects, it is hard to analyse the exact causes of some of the reasons for passenger fluctuation.

One very interesting section of his statement deals with fuel taxation. The bus industry is paying £28 million a year in fuel tax, now 2*s* 9*d* a gallon. This in turn is translated into an inflated level of fares and progressive reductions in unremunerative services. He gives a table of figures to show the weight of this taxation on the company and its passengers, and the table, which gets behind the main credit entry in the profit and loss account, is included in the reprint.

This question of the fuel tax is a matter on which the bus industry is constantly making representations to the Chancellor of the Exchequer. Linked to the campaign for tax remission is the Jack Report on Rural Transport with its majority recommendation

of aid for unremunerative rural services by way of subsidy through county councils. But it is a highly contentious matter for which the Government has not yet been persuaded to give Parliamentary debating time.

All Tax

This high-lighting of the fuel tax might be an occasion for a consideration of taxation, in general, in accounts. In these particular accounts, income and profits taxes account for £76,694 in the consolidated profit and loss account. But as Sir Robert shows, practically twice this amount falls to be met in a fuel tax, the weight of which is not evident apart from the table in his statement given in the reprint. Yet, as between one tax and another, there is, apart from method of computation, no really vital difference. It is all tax, and a meditation on the subject might well start from that fact.

To suggest for consideration that accounts might give a wider view of the burden of taxation is not as startling as it may seem. Joshua Tetley & Sons, the

NOTES ON THE ACCOUNTS

(1) VEHICLE REPLACEMENT RESERVE:—

	£
As at 31st December 1960	89,000
Transfer from Profit and Loss Account	32,105
	121,105
Proceeds of sale—obsolete vehicles	1,895
	£123,000

(2) INCOME TAX:—
The amount charged in the Accounts includes Reserve for future liability of £46,500 based upon profits for the year.

(3) CAPITAL COMMITMENTS:—
Contracts for Capital Expenditure so far as not provided for in these Accounts amount to approximately £183,000 (1960 £143,000).

(4) COMPARATIVE FIGURES:—
The comparative figures for 1960 include the initial four months trading of the Subsidiary Company.

EXTRACT FROM CHAIRMAN'S STATEMENT

The following details indicate over the last three years the amount of fuel used by the Company's fleet and the amount of tax paid:—

Period	*No. of gallons used*	*Tax per gallon* s. d.	*Total tax* £	£
1.1.59—31.12.59	1,168,156	2 6		146,019
1.1.60—31.12.60	1,162,778	2 6		145,347
1.1.61—25. 7.61	648,581	2 6	81,073	
26.7.61—31.12.61	502,461	2 9	69,089	
				150,162
		Total for 3 years		£441,528

It is anticipated that approximately 1,165,000 gallons will be used in 1962 and the tax, if it remains at 2s. 9d., will cost us £160,187

Yorkshire brewers, before its integration with the Ind Coope group, used to give 'Sales of cask and bottled ale' (1959 – £8,767,515) reduced to 'Net sales' by deduction of 'Beer duty on ale produced by the group' (1959 – £4,726,844). The Royal Dutch-Shell group shows the same kind of thing – Sales, less duties.

One sometimes sees a company chairman in his annual statement adding up the weight of taxation under the various forms in which it is imposed. One becomes so used to 'profit before' and 'profit after' tax in accounts that 'weight of taxation' is lost sight of until someone makes a special point of it.

Tax on Biscuits

ONE can understand the feelings of Mr P. G. Macdonald, the chairman of United Biscuits Ltd, a name that covers well-known biscuit-makers like McVitie & Price and Macfarlane Lang & Co.

There was a 6 per cent interim dividend on the then issued ordinary capital of £4½ million and a 10 per cent final on a capital of £6 million following a two-shares-for-three capitalization issue. The year's total dividend is equivalent to 14½ per cent on the £6 million capital compared with an equivalent effective rate of 13½ per cent for 1960 on the increased capital. There has been a tremendous mechanization and automation in the business since the war and the 1961 capital expenditure was over a million.

Export trade has been moving up. The largest export market, Canada, showed a 6·8 per cent gain. And, for the first quarter of the current year, group sales show an increase. 'The Chancellor', says Mr Macdonald, 'asks us to produce and export more. We have done both'. What the Chancellor has done is to include chocolate biscuits in the 15 per cent tax on sweets. Mr Macdonald thinks the Chancellor and his advisers would be better employed looking for ways to cut Government expenditure and waste in the nationalized industries. They would not have far to look, he says.

CITY NOTES

THE accumulation of poor industrial profit and dividend news coupled with heavy calls from the new issue market and continued weakness on Wall Street has turned the London equity market decidedly easier. The Ford Motor Co's statement on earnings to the trade unions pressing for higher wages has brought home the profits versus costs position in no uncertain manner.

The Ford Co's position is not entirely typical of industry as a whole. Production has been dislocated by a series of nagging strikes but there is in industry generally a basic condition of extreme pressure on earnings which has its roots in higher wage and other costs which cannot be passed on in prices under circumstances of acute competition in overseas markets and of flagging demand at home.

So far as earnings are concerned, it is not enough, under present cost conditions, merely to maintain turnover; and yet, with credit restrictions still adversely affecting home demand, there is little prospect of increased turnover for many sections of industry – more particularly at the consumer end.

For some time this position has been covered in the stock market by hopes of an easing of the credit restrictions imposed last July. Recent statements by the Chancellor would seem to point to an increase, rather than a decrease, in the credit pressure.

THE ACCOUNTANT ANNUAL AWARDS FOR 1962

Presentations by The Lord Mayor of London

The Accountant Annual Awards for 1962 for company reports and accounts were presented by the Rt Hon. The Lord Mayor of London, Alderman Sir Frederick Hoare, at the Mansion House last Tuesday, in the presence of a large and distinguished company representing the City, the professions, commerce and industry. The Lord Mayor was accompanied by Mr Alderman and Sheriff Lionel Denny, M.C., and Mrs Denny, and Mr Sheriff C. S. P. Rawson and Mrs Rawson.

Mr Percy F. Hughes, Editor-in-Chief of *The Accountant*, presided, and also on the platform were the representatives of the winning companies, The Rt. Hon. Lord Kindersley, C.B.E., M.C., Chairman of Rolls-Royce Ltd, and Mr W. G. Allen, F.C.A., Chairman of Atkinson Lorries (Holdings) Ltd, together with Mr P. F. Granger, F.C.A., President, The Institute of Chartered Accountants in England and Wales; Mr Edgar Spencer, F.A.C.C.A., President, The Association of Certified and Corporate Accountants; Mr William Bishop, C.A., F.C.W.A., President, The Institute of Cost and Works Accountants; Mr K. W. Mackinnon, M.B.E., T.D., Q.C., Chairman of the Panel of Judges of *The Accountant* Annual Awards, and the following members of the Panel: Mr A. S. H. Dicker, M.B.E., F.C.A.; Mr C. D. Gairdner, C.A.; Mr J. E. Harris, B.COM., F.A.C.C.A.; Mr Donald V. House, F.C.A.; Mr J. A. Hunter, M.B.E., T.D.; Mr Ian T. Morrow, C.A., F.C.W.A.; Sir Richard Yeabsley, C.B.E., F.C.A.; Mr Arthur E. Webb, Editor of *The Accountant*; and Mr Peter Chapman, Secretary of *The Accountant* Annual Awards.

The names of those who accepted invitations appear on other pages.

The Chairman's Address

Opening the proceedings, Mr Percy F. Hughes said:

'This is the occasion on which *The Accountant* Annual Awards are to be presented for the ninth successive year. My Lord Mayor, we all appreciate the great honour you do us in making these presentations on our behalf and in making available to us the Mansion House for this purpose, for which I express our sincere and grateful thanks. As a banker, you are well aware of the importance of having accounts which are informative and I have no doubt that this is also true when you look at accounts as a shareholder.

'It is good to be able to report that an even keener interest has been shown in *The Accountant* Annual Awards this year than in any earlier year, and I hope that companies that have not so far submitted their accounts for the consideration of our Panel will do so, as I feel that they will then make a special effort to ensure that their accounts conform to the best possible standards, and we will thus continue to achieve our purpose on an even wider scale than in the past.

'The support that we have always enjoyed from the various professional bodies is evidenced by the presence on this occasion of Mr P. F. Granger, President of The Institute of Chartered Accountants in England and Wales; Mr Edgar Spencer, President of The Association of Certified and Corporate Accountants; and Mr William Bishop, President of The Institute of Cost and Works Accountants. Owing to other commitments in connection with The Institute of Municipal Treasurers and Accountants, the President of that body cannot be with us today.

'This year the Panel has again worked under the most able chairmanship of Mr Kenneth Mackinnon, Q.C., and Mr Donald V. House, Mr A. S. H. Dicker, Mr C. D. Gairdner, Mr A. W. Giles, Sir Richard Yeabsley, Mr Ian T. Morrow and Mr J. A. Hunter have, with Mr Arthur Webb, assisted us once again. I would like them to know how much we of *The Accountant* appreciate their services and I assure them of the sincerity of my thanks.

'This year they have been joined by Mr J. E. Harris, a Past President of The Association of Certified and Corporate Accountants, and now that he has come through his first ordeal in this connection, I hope that he will continue to enjoy his work on the Panel.

'My thanks are also due in no small measure to Mr Peter Chapman who has carried out the onerous duties of secretary to the Panel so ably from the first.

'I would like to pay a special tribute to the work of two members of the Panel. Lord Latham retired before this year's work began after serving from the very beginning, and I will always be grateful, as I know Ronald Staples was before me, for the exceedingly lively interest, keenness and continuous effort which he put into this work. Mr Donald V. House, a Past President of The Institute of Chartered Accountants in England and Wales, has recently been appointed a member of the Restrictive Practices Court and has, therefore, told me that he will not be available next

The Rt Hon. Lord Kindersley, C.B.E., M.C., Chairman of Rolls-Royce Ltd, receives his company's Award from the Lord Mayor.

year. To him also I would express first my congratulations on his appointment and then my very sincere appreciation of all that he has done to ensure the success of the work of the Panel. They are both able to take a good deal of credit for the great improvement that we have seen over the last few years in the general standard which has been reached in the form and content of the accounts of public companies in this country.

'It does, however, go even wider than this because our efforts are being watched closely by other countries and some have established award schemes with the same aim as our own. When I was in India recently, I was invited to open a refresher course for accountants, at which I was asked to give a talk on *The Accountant* Annual Awards. Not being a member of the Panel, I was able to do this without having to give away any secrets and this may well have prevented embarrassment to me when answering a number of questions, but these indicated how interested are accountants in India about our efforts in this connection.

'The accountancy bodies in this country are always watching the changing conditions affecting the presentation of accounts, and The Institute of Chartered Accountants in England and Wales has recently published some notes containing suggestions on the form of narrative that may be used in accounts dealing with particular items, both in the profit and loss account and balance sheet. I congratulate them on their efforts in this way, which should assist both practising accountants and those in industry, who are concerned with the preparation of accounts to ensure that the results of their efforts conform to the best possible practice.

'You will see from your programmes that the Panel has been pleased this year with the efforts of the motor industry. I am able to assure you that it is a pure coincidence that both companies receiving the Awards today have some connection with it. I think that it is fitting that Rolls-Royce Ltd, the mere mention of the name of which brings to mind engineering products of beauty and first-class quality, should receive our Award for the excellence of their accounts, and I congratulate Lord Kindersley, and all those who have been responsible for the production of the accounts, on their success.

'Similarly, I pay tribute to the excellence of the accounts of Atkinsons Lorries (Holdings) Ltd, and I am delighted that Mr W. G. Allen, Chairman of the company, who is a chartered accountant, is able to be with us today to receive the Award. As many of you will know, there is no distinction between the two Awards, but one is for large companies and the other for smaller companies.' (*Applause.*)

The Lord Mayor of London

Presenting the Awards, the Lord Mayor said:

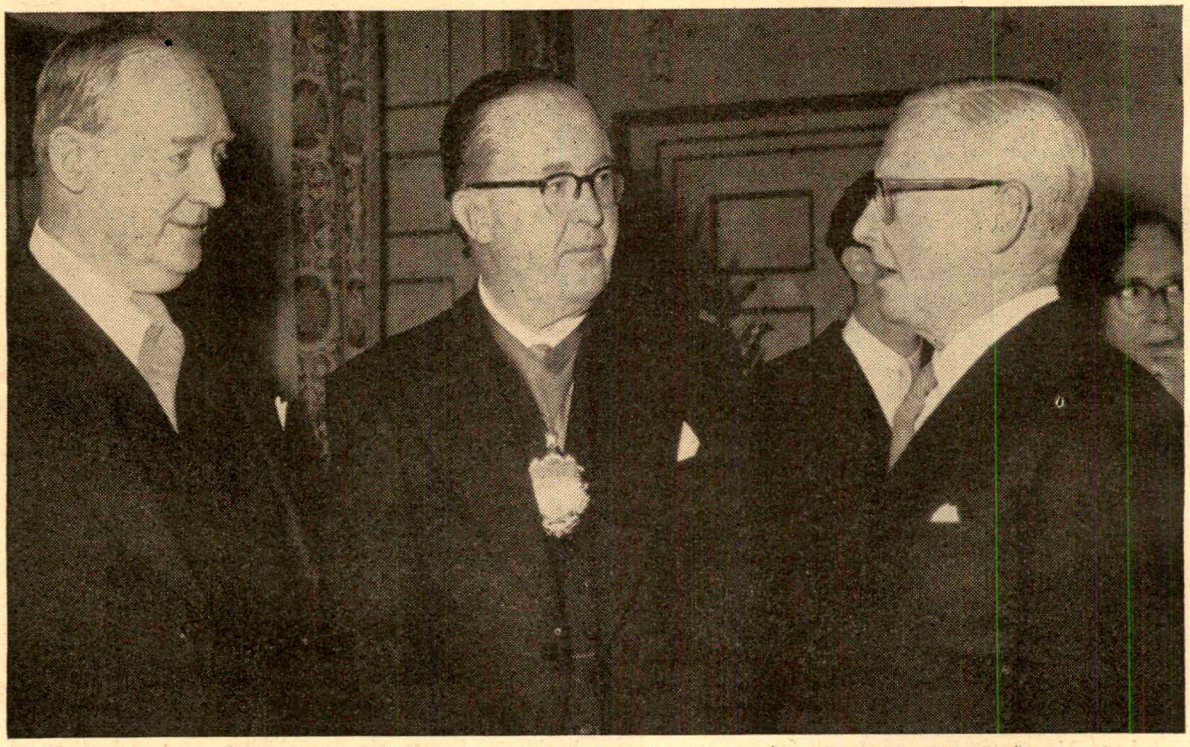
'One of the most surprising features about the annual general meeting of a highly successful company is how few shareholders turn up to it, but if the day should come when that same company has halved its dividend, then the meeting becomes a most lively affair with such a fuss as would rival any hornets' nest. This aspect of human nature is the reason that *The Accountant* Awards have been of such immense benefit to the whole business community. Company reports should be as informative as the answer I once received from a bank in America about their own customer. The bank wrote as follows: "The subject of your inquiry is reputed to be a millionaire, but our advice would be, if out, stay out." (*Laughter.*)

'The kind of company report I like tells one early on in the proceedings whether you have taken on that particular company for better or for worse. Most people can assimilate information in a visual form far more easily than through a mass of very technical information and statistics. Like most people in my profession I have never advanced much further than long addition and long multiplication, so we like to see a good old-fashioned cake somewhere, subdivided to show who gets what.

'The total number of entries for this competition has shown a remarkable increase over the last eight years until it has now reached 1,250. This strong support from so many companies for readily understandable accounts gives me very great pleasure, especially because any lending to a company is about as dependent upon the accounts as a miner is dependent on his lamp. I therefore most warmly congratulate *The Accountant* on establishing so firmly such a very worth-while scheme, and also I congratulate the two winning companies on their success against very strong competition, and I would like to assure you all that it is purely coincidental that the panel, with no pressure from me whatsoever, should have chosen two companies both of whose chairmen I already know well. In the case of Lord Kindersley, we are not only fellow bankers, but he is chairman of an insurance company and I myself play chess in the insurance league. With regard to Mr Allen, when he was a Sheriff in 1956 and the time came for him to give up his office, he and Sir Bernard Waley-Cohen had their chains taken off them by their successors, one of whom was Sir James Miller, and the other was myself. So you may be quite sure that Mr Allen and myself are very old friends and I am delighted to see him as the chairman of one of the two companies which won these Awards today.' (*Applause.*)

The Lord Mayor presents the Award for Atkinson Lorries (Holdings) Ltd to Mr W. G. Allen, F.C.A., Chairman of the company.

The Chairmen of the winning companies after receiving their Awards, with the Lord Mayor and (*left*) Mr Percy F. Hughes, Editor-in-Chief of *The Accountant*.



Mr P. F. Granger, F.C.A., President of The Institute of Chartered Accountants in England and Wales (*centre*), with two members of the Panel of Judges, Sir Richard Yeabsley, C.B.E., F.C.A. (*left*), and Mr A. S. H. Dicker, M.B.E., F.C.A.

Acknowledgements of the Presentations

Acknowledging the presentation made to his company, The Rt Hon. Lord Kindersley, C.B.E., M.C., Chairman of Rolls-Royce Ltd, said:

'It was with considerable pride and pleasure that my colleagues and I learned that Rolls-Royce has been chosen to be a recipient of one of *The Accountant* Awards for this year.

'This is an honour, ladies and gentlemen, which was unexpected and for that very reason is all the more appreciated throughout our organization, especially I think by those who spend a great deal of time and trouble in preparing the presentation of these accounts. Sometimes I feel that there are people who forget that shareholders are the owners of the business and as such are fully entitled to the clearest possible explanation of the annual accounts.

'Mr Chairman, we owe *The Accountant* a real debt of gratitude for their initiative in instituting this competition with these annual Awards. I am only sorry that this movement – may I call it – has not spread to the Continent where I think the systems of producing and preparing balance sheets and accounts leave a great deal to be desired, and if we are to enter the Common Market – and I for one sincerely hope we do – I cannot think of anything which would be more valuable to create understanding and consequently friendship between the business men each side of the Channel than some system which were unified for the balance sheets and end of year accounts.

'Not all the work and trouble in the preparing and presentation of accounts is confined to our financial and accountancy staffs. Far from it. We owe a great deal to our auditors who have given us guidance and encouragement and help over the years, and I am delighted to see sitting over there two of their representatives, Mr George Touche and Mr William Ritchie, and I would like to take this opportunity publicly to thank them and express the debt which we owe to them.

'Now, finally, Mr Chairman, may I thank *The Accountant* for this delightful Award. Had I not read the note about it before I came in I would have been suspicious that it was a symbol of bringing light to those who sit in darkness. (*Laughter.*) Thank you, and thank you, also, Lord Mayor, for the very gracious way in which you have made this presentation.' (*Applause.*)

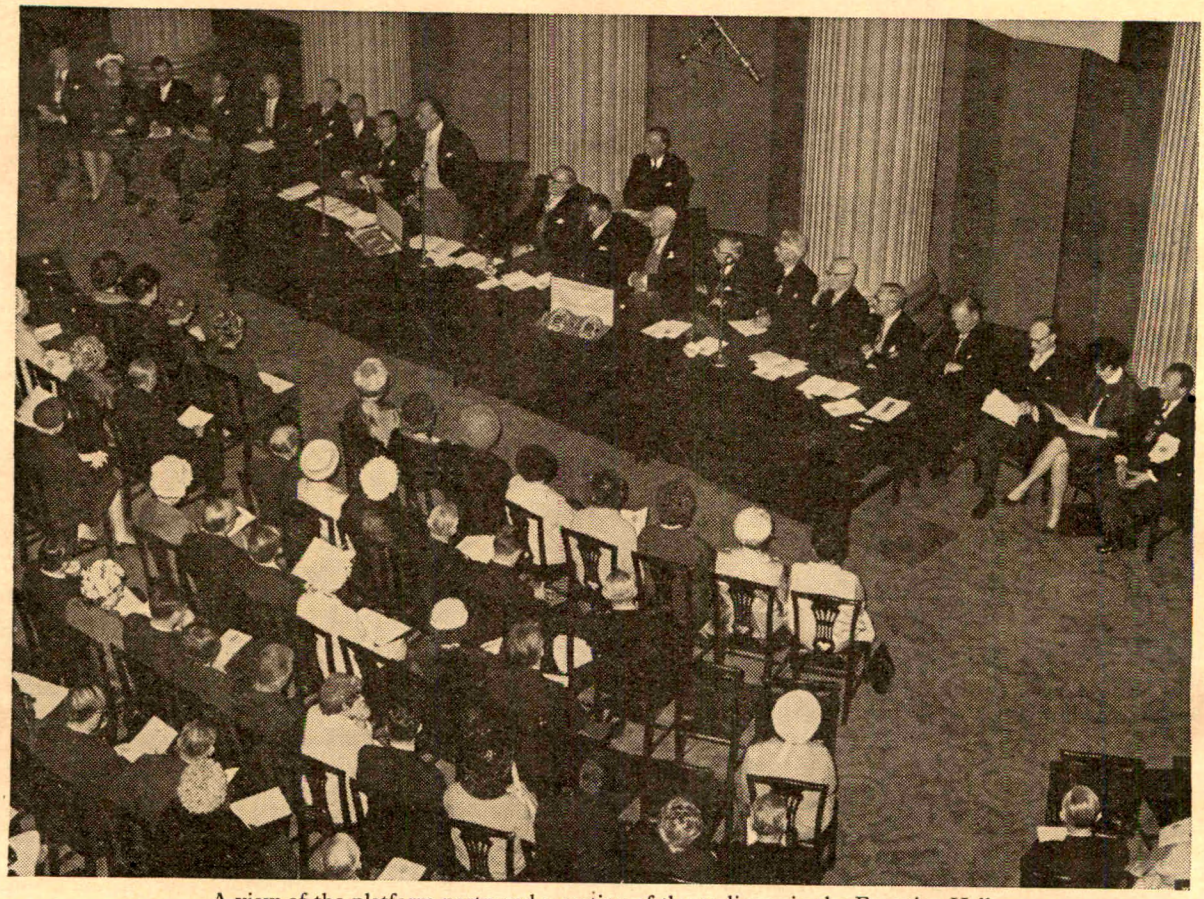
Mr W. G. Allen, F.C.A., Chairman of Atkinson Lorries (Holdings) Ltd, said:

'Just six years ago, when I sat on this platform as a Queen's Sheriff, occupying the outside-left position, I never visualized that I should, after such a short time, be promoted to the seat of honour at inside-left and privileged to receive from the present Lord Mayor, by reason of being chairman of my company, one of these handsome Awards.

'However, in spite of having been team manager as well as father and mother and everything else for the last thirty years, the chief credit for this Award must go to my son, Antony William, who has put into these accounts his knowledge and enthusiasm of accountancy and a very great deal of time. I am, therefore, more particularly proud today that such a distinguished panel should have made this Award to my company.

'I must also take the opportunity of thanking our

Mr Edgar Spencer, F.A.C.C.A., President of The Association of Certified and Corporate Accountants (*left*), with Mrs Spencer, Mrs Gairdner, Mr C. D. Gairdner, C.A., a member of the Panel of Judges, Mrs House and Mr D. V. House, F.C.A., also a member of the Panel.



A view of the platform party and a section of the audience in the Egyptian Hall.

auditors, Mr Peter Nield and Mr Derby, and my managing director, Mr Caunt, for their great help towards this success and I am glad to say that they are all present here today.

'When I heard that the Rolls-Royce company were to receive a similar Award it seemed to be a very happy coincidence as our commercial relations have been of the very best for several years past, and there are many Atkinsons being propelled by Rolls-Royce engines today, running all over the world. In fact, Lord Kindersley will be interested to hear that we received yesterday morning from Australia two newspapers giving illustrations of our vehicles engined by 335 h.p. Rolls-Royce engines pulling over 125 tons.

'To conclude, my Lord Mayor, may I thank you for honouring us by making this presentation – and to you, Mr Hughes, for continuing to make these Awards and encouraging, each year, clearer and more informative reports and accounts.' (*Applause.*)

The Chairman of the Panel of Judges

In his address, Mr K. W. Mackinnon, M.B.E., T.D., Q.C., Chairman of the Panel of Judges, said:

'It is again a great pleasure on behalf of the Panel to congratulate this year's winners. And this is more particularly the case because not only have the entries this year again increased in numbers but also in our unanimous opinion they have reached the highest standard since the Award was instituted. My own personal thanks are due to my colleagues for the care and consideration which in these circumstances they have given to the difficult task of selection.

'Last year I referred to one aspect of company reporting – the provision of adequate information. I gave some examples of the matters which we on the Panel had particularly in mind. It is an interesting reflection that a great number of the entrants have taken these matters into consideration when preparing their accounts. We on the Panel would like to believe that this was no coincidence and that last year's reference provided some stimulus.

'In this belief – perhaps optimistic – we think it appropriate this year to make a further point, namely, to emphasize the necessity for clear presentation. We realize, of course, that annual reports must comply with the statutory requirements and that these requirements shape to some extent the framework of presentation. In consequence, annual reports tend for the ordinary shareholder – using that phrase in its most ordinary sense – to be technical and somewhat formidable to understand. In our view much can and should be done in the way of simplifying matters for share-

holders. And this can, we think, be done while at the same time complying with the statutory requirements and providing statistical information for experts to examine in order that they make available their conclusions through the Press and other media to shareholders and investing public alike.

'With the possibility that this country may enter the Common Market, this point needs special emphasis. Let me finish by saying this: we on the Panel expect – and it is much in the national interests – that the annual reports of British companies should lead the Common Market companies in the field of company reporting.' (*Applause.*)

Welcome to the Guests

Mr Arthur E. Webb, Editor of *The Accountant*, extended a welcome to the many guests who were present.

Guests at the Presentation Ceremony

Mr Wilfred G. Adams, F.C.A., and Mrs Adams

Mr A. W. Allen, F.C.A., *Director and Secretary, Atkinson Lorries (Holdings) Limited*, and Mrs Allen

Miss E. B. Allen, *Director, Taxation Publishing Co Limited*

How to Decimalize the Currency

SIR, – I have recently spent nearly two months in France and on board French liners and I have seen no evidence of the confusion into which, according to your contributor, Mr William Phillips, in your issue of April 14th, all France has been plunged as a result of the introduction of 'new francs'. I now find that a train ticket which used to cost 6,400 francs now costs 64 francs and a bottle of wine which used to cost 675 francs now costs 6 francs 75 centimes, and I can pay in either new or old currency or with any combination of both. Frankly, I cannot see how any monetary change could possibly be more simple and I imagine that the alleged confusion exists mainly in the minds of British tourists.

The practice of pricing articles in shop windows in both old and new francs is dying rapidly, if it is not already dead, and I have seen articles in London shops priced in both sterling and dollars. If Mr Phillips were a Frenchman he would no doubt assume that this is done because the English cannot understand their own complicated monetary system. Were he to purchase an article priced at, say 33½ guineas, he would have reasonable grounds for such an assumption!

Yours faithfully,
R. VINCENT BENNETT.

Rio de Janeiro, Brazil.

SIR, – Referring to Mr Arnold Lever's letter in your issue of May 12th relating to decimal currency, I should like to add one or two points to my earlier letter (April 28th issue).

I suggested re-naming our existing Crown as this, divided into 100 cents, would probably create confusion as the basic unit and the sub-unit would both be represented by the letter 'C'.

I cannot agree with Mr Lever's suggestion that we should keep the penny under the five shilling-cent system as during the conversion period we would have two coins of different values, both with the same name. I think it would be difficult to call in the existing pennies quickly enough to avoid confusion.

I have discussed the five shilling-cent system with a large number of people of varying interests and I have yet to find anyone who can discover any serious flaws in it. I believe that this system, if properly publicized, will meet with overwhelming support in most quarters and certainly amongst those of us who handle coinage on a large scale.

Yours faithfully,
J. R. SPEED,
Managing Director,
JOHN SPEED & CO LTD.

Rotherham.

SIR, – My attention has just been drawn to your Weekly Note on our Chairman's statement, contained in your issue of April 28th. I would like you to be aware of the problems associated with what you assume to be an easy way out for industrial assurance offices if the penny were to disappear.

The main difficulty with your suggestion of modifying the frequency of call in order to secure an equivalence of premiums paid is that the new frequency would vary according to the size of the premium. For premiums of 1*d* to 5*d* a week your illustration holds: 6*d* a week presents no problem; 7*d* a week would become 6 cents, or the equivalent of 7·2*d*, and on your plan the agent would collect 6 cents for thirty-five weeks and then give the policy-holder a 'free' week. To take just one more example, for 3*s* 2*d* the 'free' week would be every ninety-five weeks. When it is realized that many agents are collecting on as many as 2,000 policies and that some households may have six or more policies for differing premiums, you will appreciate the confusion that would arise and how complicated the system of checking would become. Further, the problem is not a short-term one; some

of today's policies will still be with us in fifty years' time, so that we should be handing the problem on to future generations of agents.

Yours faithfully,

F. M. REDINGTON,
Chief Actuary,
THE PRUDENTIAL ASSURANCE CO LTD.

London EC1.

Appointments to the Council

SIR, – At the Institute's annual meeting, Mr G .R. Appleyard is reported as having said:

> '. . . anybody can join a district society, and if they are really interested in Institute affairs, they can get themselves elected to the committee of the district society.'

Recently the district society of which Mr Appleyard is a member held an election to fill certain vacancies on its committee, and four of the candidates were required to be nominated by the prescribed number of members of the society.

The nominators of one of these four included one baronet, four knights, and two Council members who have not yet received the accolade.

Another candidate was sponsored by one baronet, one knight, the Vice-President of the Institute, and two other members of the Council.

A third candidate was supported by only two Council members, and the sponsors of the fourth, unless I do them an injustice, were all persons of lesser eminence.

I understand that the result of the ballot placed these four candidates (disregarding others) in the order in which I have mentioned them. The last two were not elected.

Nothing in this letter should be taken as implying any disparagement of any of the candidates concerned. Nevertheless, it is possible to draw certain inferences from these proceedings. One is that Mr Appleyard's assertion calls for qualification, in that interest in Institute affairs seems not to be the only requisite necessary to secure election to a district society committee. Another is that the recipe for attaining Council membership spelt out at the Institute's annual meeting lacked one seemingly essential ingredient – acceptability to the Establishment.

Yours faithfully,

London EC2. L. H. CLARK, F.C.A.

Taxation Cases

Full reports of the cases summarized in this column will be published, with Notes on the Judgments, in the 'Annotated Tax Cases'.

C.I.R. *v.* John M. Whiteford & Son

In the Court of Session - May 2nd, 1962
(Before THE LORD PRESIDENT (Lord CLYDE), Lord CARMONT and Lord GUTHRIE)

Income tax - Farming - House on farm occupied by partner - Capital allowances – Whether agricultural cottage or farm-house – Income Tax Act, 1945, section 314.

The respondents, a father and son, owned and operated a farm, and the father occupied the farm-house. The son lived with his father until he married, when the partnership erected a house on the farm for him, and he and his family occupied the house.

The respondents were charged to income tax on the footing that the house was a farm-house, but they contended that it was an agricultural cottage. The General Commissioners agreed with this contention.

Held: the General Commissioners' decision was correct.

Gordon & Blair Ltd *v.* C.I.R.

In the Court of Session – May 3rd, 1962
(Before THE LORD PRESIDENT (Lord CLYDE), Lord CARMONT and Lord GUTHRIE)

Income tax – Loss claim – Brewing company – Cessation of brewing – Sales of beer brewed by another company – Whether same trade carried on – Income Tax Act, 1952, section 342.

The appellant company, prior to October 1st, 1953, brewed beer at its own brewery, and sold the beer in the open market and to its managed houses and its tied houses. As the appellant was making losses, it decided to cease brewing, and it made an arrangement with another brewing company under which from October 1st, 1953, the other company brewed and supplied beer to the appellant at the latter's specification. The beer was delivered in casks provided by the appellant and marked with its name and labels. The appellant did its own bottling. The distribution of beer to customers was carried out by the appellant, and to the same type of customer, and in substantially the same manner, as before that date.

The appellant claimed to be entitled to deduct against profits arising from October 1st, 1953, onwards, the losses it had made before that date. The respondents contended that the losses could not be carried forward, as the trade after that date was not the same trade as that which existed previously. The Special Commissioners decided in favour of the respondents.

Held: the Special Commissioners' decision was correct.

Frasers (Glasgow) Bank Ltd *v.* C.I.R.

In the Court of Session – May 16th, 1962
(Before THE LORD PRESIDENT (Lord CLYDE), Lord CARMONT and Lord GUTHRIE)

Income tax – Banking business – Purchase of stock to support price thereof – Stock subsequently sold at a surplus – Whether surplus a trade receipt – Income Tax Act, 1918, Schedule D, Case I.

In 1947 the stock of House of Fraser Ltd on the stock exchange was falling in price, and at the instance of Sir Hugh Fraser the appellant purchased £800 of stock in 1948. It purchased another £187 10*s* of stock in 1952. The appellant had purchased stocks and shares only twice previously.

In 1958 the £987 10*s* of stock had been converted into £4,314 5*s* non-voting stock and £4,314 5*s* voting stock. The appellant's overdraft with the National Commercial Bank of Scotland Ltd was at that time about £50,000, and the latter was pressing for its reduction, and accordingly the non-voting stock was sold and fetched £23,199. The surplus accruing to the appellant on this sale was £18,300.

It was contended for the appellant that the £18,300 was not realized in the course of carrying on its business, and was a surplus on capital account. It was contended on behalf of the respondents that the £18,300 was a taxable receipt. The Special Commissioners decided in favour of the respondents.

Held (Lord Guthrie dissenting): the Special Commissioners' decision was correct.

Doyle *v.* Davison

In the High Court of Justice in Northern Ireland (Queen's Bench Division) – November 20th, 1961
(Before Mr Justice McVEIGH)

Income tax – Schedule E – Director occupying house owned by company – Rent same as net Schedule A assessment – Sums spent by company on repairs – Whether benefits in kind – Income Tax Act, 1952, sections 160, 161, 162.

A company, of which the respondent was managing director, purchased a dwelling-house on January 21st, 1957. The house was let to the respondent in April 1957, at a rent equal to the net annual value; and prior to the letting the company spent £775 8*s* 10*d* in repairing, altering and adding to the house, which was old and in a bad state of repair. Shortly after the respondent went into occupation the company spent a further £412 1*s* 4*d* on repairs to the house, and this sum was allowed as a deduction in computing the company's Case I assessment. In the company's next accounting period the company spent on the house £343 4*s* 11*d*, which was treated as capital expenditure, and £142 5*s* 8*d* which was allowed as a deduction in the Case I computation.

The Schedule A assessment was made on the company pursuant to paragraph 1 (1) of Part II of Schedule 23 to the Income Tax Act, 1952.

An additional Schedule E assessment made on the respondent for 1957–58 for the £412 1*s* 4*d*, and his Schedule E assessment for 1958–59 included the £142 5*s* 8*d*. It was contended on behalf of the appellant that these two sums were benefits within section 161 of the Income Tax Act, 1952, and that the respondent was assessable under Schedule E in respect thereof. It was contended on behalf of the respondent that sums spent by the company on repairs to the house were not benefits within section 161, in that the benefit year by year was limited, by section 162 (3), to the amount of the net Schedule A assessment. The Special Commissioners decided in favour of the respondent.

Held: the two sums in question were assessable on the respondent.

C.I.R. *v.* Luke

In the Court of Session – May 2nd, 1962
(Before THE LORD PRESIDENT (Lord CLYDE), Lord CARMONT and Lord GUTHRIE)

Income tax – House let by company to director – Rent fixed at arm's length – Repairs done by company – Whether a benefit in kind – Income Tax Act, 1952, sections 161, 162.

The respondent was at the material time the managing director of a company which desired that he should live in Ayrshire and had suggested that a certain house in Troon would be suitable. The respondent bought the house and lived there for a time, and entertained foreign customers of the company. In 1954, as the house was larger than he wished, the respondent sold the house to the company, and the company let it to him. The purchase price and the rent were fixed at arm's length. The respondent occupied the house for about two and a half years till he left to live in England. During his occupancy the company expended considerable sums on repairs and also paid the owner's rates and the insurance. The repairs included the providing of a new hot-house boiler, the supply of a fire-place, the laying of a new water main, and the renewing of the plumbing in the house and the chauffeur's cottage.

The respondent was assessed to Schedule E tax on the sums spent by the company and it was contended for the appellant that the assessments were valid. It was contended on behalf of the respondent that the company's expenditure was not in or in connection with the provision of living or other accommodation, nor the provision of other benefits or facilities, within section 161 (1) of the Income Tax Act, 1952; that the company's expenditure had been made good to the company when the respondent agreed to pay the rent; and that the expenditure had been incurred by the company in the acquisition of an asset, and that therefore, the expenditure was, by section 162 (1), not assessable on the respondent. The General Commissioners decided in favour of the respondent.

Held: the expenditure by the company was in or in connection with the provision of a benefit for the respondent, and was therefore assessable on him.

THE INSTITUTE OF MUNICIPAL TREASURERS AND ACCOUNTANTS

SEVENTY-SEVENTH ANNUAL CONFERENCE

About 1,500 members and delegates from local and public authorities attended the seventy-seventh annual conference of The Institute of Municipal Treasurers and Accountants held in Edinburgh on Wednesday, Thursday and Friday of this week.

At the opening session on Wednesday morning, the conference was officially welcomed by the Rt Hon. the Lord Provost of Edinburgh. The official welcome was followed by an address by the Minister of State for Scotland, the Rt Hon. Lord Craigton, C.B.E. In the same session, the conference considered Part A of the Council's annual report and the presentation of prizes in respect of the 1961 examinations took place.

On Wednesday afternoon, the President of the Institute, Mr A. L. Imrie, C.B.E., C.A., F.I.M.T.A., delivered his Presidential Address and afterwards the Institute's annual general meeting was held.

On Thursday, the conference was addressed by the Rt Hon. Lord James of Rusholme on 'Education and national prosperity'. In the afternoon a paper entitled 'Local government units – financial and other considerations' was given by Mr Kenneth Hyde, F.S.A.A., F.I.M.T.A., County Treasurer, Cornwall.

The Rt Hon. Henry Brooke, M.P., Chief Secretary to the Treasury and Paymaster-General, addressed the conference on Friday morning and the conference concluded with the investiture of the new President Mr Norman Doodson, F.S.A.A., F.M.I.T.A., County Treasurer of Lanarkshire.

Extracts from Report of the Council

Rating and Valuation

The Rating and Valuation Act, 1961, received the Royal Assent during the year. The main effect of the Act, read with previous legislation, is that in 1963 derating of industrial and commercial properties will be abolished, and, for the first time since before the war, domestic properties will be valued on a current rental basis, although the Act gives the Minister of Housing and Local Government wide powers to introduce derating for dwelling-houses, if he considers that the impact of the revaluation on domestic ratepayers should be reduced.

The Government have announced in a White Paper on 'Revaluation for rates in 1963 – the rate liability of the householder' (Cmnd. 1663) that these derating powers will not be used. Although details of aggregate values of the main classes of properties have not been published, the White Paper shows that domestic ratepayers will on average bear rather less than their present share of the total burden, in spite of increases in average gross values of houses to some four times their values in the lists current in 1939 (which related to the valuation lists prepared in 1934).[1] The overall reduction for domestic ratepayers of 1·6 per cent covers variations ranging from an increase of 27 per cent in one county borough to a reduction of 21 per cent in two counties. These variations are within the limit of one-third increase contemplated as reasonable by the Government, but the shift of incidence to domestic ratepayers in particular rating areas within administrative counties may well exceed that limit, as, of course, may the increases of individual domestic properties in any part of the country.

The Minister's figures take account of increased rate deficiency grant due to increased disparity in rating resources resulting from revaluation. Local authorities will be strongly of the opinion that the general grant should not be reduced on account of increased rateable resources, as was done on partial rerating of industry in 1959. The effect of the revaluation is to redistribute the rate burden between classes of ratepayer; it will not alter the amount required to be raised from them. . . .

[1] The increase on the values in the current lists (prepared in 1956 and bringing up house values from 1934 to 1939) is about three times on average.

Local authority treasurers are always anxious to secure to their authorities the advantage that can be derived from mechanical accounting. Section 14 of the Act, permitting the discontinuance of the use of traditional rate books without the need for the Minister's dispensation will therefore be welcomed. As a consequence of this provision the Ministry has made new Rate-accounts Regulations to replace the restrictive provisions of the previous regulations.

The Act makes a number of other changes in the law of rating and valuation, including provision for a formula method for the assessment of statutory water undertakings, and gives the Minister power to introduce formula valuations, by agreement with interested parties, for properties now valued by reference to accounts. There is grave disquiet among rating authorities about recent decisions applying the profits basis to hereditaments of statutory undertakers who are precluded from making commercial profits, resulting in nil valuations for extensive dock installations; unless the new formula basis gives more equitable results, some amendment of the law would appear desirable.

Housing

The Housing Act, 1961, received the Royal Assent during the year under review, providing for a new system of housing grants under which the amount of grant paid to an authority will be determined by an assessment of the adequacy of the resources of the authority. The two basic rates of subsidy are £24 and £8 a dwelling for sixty years. Which of these rates will be received for particular houses will depend on the authority's actual expenditure on housing in the previous year compared with an assumed income made up of the actual subsidies and miscellaneous income received together with twice the gross value of their house property (that is, an assumed rent). If the expenditure is greater than the 'income', the higher rate of subsidy will be payable; if smaller, then the subsidy will be £8. This test will be applied each year to take account of changing circumstances.

Another new feature of the subsidy arrangements is the power given to the Minister to reduce or abolish subsidies payable under the Act. This does not apply to previous commitments and will not be exercised within the next ten years. . . .

The growing emphasis on the need for urban redevelopment will also add to the difficulties of many local authorities in carrying out their housing functions under the new subsidy arrangements unless realistic rent policies are adopted. . . .

Local Government Areas

The Council has had under continuous examination the proposals for the reviews of local government reorganization by the Local Government Commissions. The orders which will be made by the Minister of Housing and Local Government will give rise to a number of financial problems, including such matters as financial adjustments, superannuation funds and compensation to officers. . . .

The financial problems affecting superannuation funds will be complex. They will be affected by the extent to which local authorities are wholly or partly absorbed into other units of local government, whether those authorities administer superannuation funds themselves or participate in funds of other authorities or of joint committees.

Some precedents have been established in the transfers between local authorities and the various public boards and in the regrouping of water undertakings which has been taking place in recent years. However, the problems likely to be posed by the reorganization of local government particularly in London and the conurbations may be unique.

Proposals for the reorganization of local government into a smaller number of larger units will have a substantial effect upon the salary, status and prospects, of a considerable number of officers. This Institute can only be concerned in these developments in so far as local government finance is concerned.

The code of compensation established by the Local Government Act, 1933, was superseded and the present code established in 1948 consequent upon the social legislation which was enacted in the years immediately following the Second World War.

The Minister of Housing and Local Government has informed local authorities and staff associations of his intention to make some improvements in the compensation settled for similar purposes in the immediate post-war period.

Reorganization on the scale contemplated will inevitably create additional burdens for finance departments whilst the new authorities are being constituted and services are being transferred. Many chief and senior officers in the areas affected are nearing retiring age and there is already an acute shortage of professional officers in these areas. The Council considers that this aspect of the main problem is one which will merit serious consideration by the Ministry and by the local authorities affected and will keep the matter under review.

Trustee Investments Act, 1961

The Trustee Investments Act, 1961, which came into operation in August 1961, gave 'trustee status', subject to certain conditions, to loans made to local authorities on the security of deposit receipts.

A few authorities before the passing of this Act had local Act powers enabling investments to be made in 'equities'. The main effect of the Trustee Investments Act, 1961, was to extend this power to all authorities by permitting the investment of up to half of all funds investable in securities open to trustees (other than those funds applicable to the redemption of debt) in 'wider range securities'.

The practical effect of this extensive change in the investment powers of local authorities had been anticipated by a proposal that an investment trust available only to local authorities be set up. This suggestion enabled the Local Authorities Mutual Investment Trust – commonly known as LAMIT – to be available by the time that this new Act came into operation. Some members of the Institute are giving a great deal of time to this new venture which, it is understood, has already justified its inauguration . . .

PRESIDENTIAL ADDRESS

In his presidential address Mr A. L. Imrie, C.B.E., F.I.M.T.A., C.A., City Chamberlain, Edinburgh, surveyed a wide range of topics of general interest to those occupied in public finance. He discussed first some general problems of local government today, and then turned to examine in detail the financial problems which are the special concern of Institute members.

Mr A. L. Imrie

Mr Imrie reviewed the nationalization of some local authority services after the Second World War and the greater use of fiscal measures by the central Government as instruments of economic policy. He pointed out the danger that local government might be replaced, to a greater or lesser extent, by Government departments or regional boards. He did not agree that the efficiency of large local government units was such as to outweigh all other considerations. There was much to be said for the close identification of local councils with the local inhabitants: there was a good deal of speculation about the need for an Ombudsman, but most councillors were already doing that job.

Role of Finance

The need for local authorities to adapt themselves to changing conditions extended to their servants; the chartered municipal treasurer was not only a bookkeeper and paymaster, but also an adviser with a vision going far beyond his particular responsibility. The role of finance was 'no longer beneficially obstructionist, as some used to say, but . . . wisely regulatory'. Mr Imrie did not believe that local government had been left in decaying circumstances by the loss of some of its functions, nor that local authorities had become little more than obedient instruments of the central Government.

Mr Imrie then turned to specifically financial problems. He discussed at some length the growing outlay of public authorities, an outlay to which local government was a notable contributor. He posed the question of what proportion of the national income could be taken in taxation without injury to the economy. The answer was a rise in productivity which would bring about a relative diminution – if not a withering – of expenditure on the welfare state.

The proportion of local government expenditure defrayed, through the grant system, from national taxation had risen steadily, and local government had become 'an unwilling applicant for national assistance'. It was right for the Exchequer to contribute to the major national services: unfortunately some Government aid beyond this was required, in order to bolster the weakness of the rating system. Mr Imrie examined the ratepayer's ability to pay – the ratio of rates to income. The 'regressiveness' of rates had probably been lessened by the rising living standards of working people, and by the introduction of equalization grant.

Alternative Sources of Revenue

Despite the disadvantages of the rating system, the Government had decided against introducing a new source of local revenue. Mr Imrie reviewed the possibilities – the transfer to local authorities of certain national taxes (for example, entertainment tax or vehicle excise duty), a poll tax, the rating of site values and a local income tax. He considered the last two at some length, and referred to an investigation he had made, at the invitation of the Royal Institute of Public Administration, of the Swedish local income tax system.

In his concluding remarks, he said:

'Some may ask what is the difference between the proposition for treating local rates as a payment on account of income tax and the more simple method of increasing the rates of income tax and handing the additional yield to local authorities. The additional aid would require to be substantial. Apart from the fact that the Government has declared and demonstrated its unwillingness to do so, it is my view that such a proposal would shackle local authorities more firmly in servitude to central department control and would do nothing to deliver them from their villeinage. If local rating was abolished, local authorities would be strictly confined within the financial resources made over to them by the Government and local government would fade away. If Exchequer grants were not sufficient to meet local outlay, local rates in some shape or form would require to be continued to cover the balance – it is merely the existing system with a change in emphasis between Exchequer aid and rates. Certainly the simplest way to reduce the burden of rates is to expand the aid from national taxation, but local authorities would be better served by a system which puts a boot on one of their feet at least – although the last is shaped to the resources reasonably available – thereby ensuring [illegible] less independence than they have at the present time. If either course were adopted the taxpayers would have to pay more and there is the possibility of a revision of the tax structure. There is the thought that taxes can reach a point when so much is abstracted from the pockets of the people that enterprise is discouraged and currency inflation is encouraged. The nation's livelihood must not be endangered, no matter what the economy in which the nation lives and works.

'There can be other propositions for local taxes – payroll tax and sales tax – but none is likely to win or merit widespread support. One remembers the outcry against the Chancellor's suggested regulatory payroll tax last year. There are already plenty of taxes and surely some means can be devised for mitigating the rating burden and the financial difficulties of local authorities within the existing national taxation system. All taxes are unpopular, few, if any, more so than local rates, but they are necessary to finance the public services. The trouble is the overall load of taxation; indirect taxes enter into the prices of commodities, many of which are no longer regarded as luxuries but as necessities, and exert pressure on the cost of living; the more obvious direct taxes are seen as a clear deduction, substantially diminishing free income, and at higher levels are charged with stifling initiative and enterprise. On the other hand social responsibility and thinking demand the national and local provision of welfare and other services and the more these expand, the greater the sum to be abstracted from the people in taxes and rates. There is thus the conflict of disinclination to pay taxes and the intent to improve and extend the public services; there is the conflict between the taxing and rating authorities, each of which invades the pockets of the people; there is the conflict between those who have and those who have not; there are many conflicts in the field of human institutions and relationships. Local authorities are in the midst of these things, but they are not alone in contending against difficulties. In seeking to solve the problem of public finance the text to remember is that what the Government gives, it first must take away. There is the thought also that there is so much still to be done that local outlay during the next decade or two may rise more rapidly than the national income, in which event the rigidity and inadequacy of the rating system may endanger local government. It is time now to think of how better to endow local government with more productive financial resources.'

LOCAL GOVERNMENT UNITS
Financial and Other Considerations

In his paper to the conference on Thursday afternoon, Mr Kenneth Hyde, F.I.M.T.A., F.S.A.A., County Treasurer of Cornwall, surveyed the considerations involved in determining local government units. He briefly outlined the history of boundary reviews up to 1958, and discussed in detail the Local Government Commission Regulations, 1958, which lay down the principles to be adopted by the Commissions for England and Wales in their reviews of status and boundaries. Among the important factors considered were 'financial resources measured in relation to financial need'. To be effective, a local authority must be able to provide for itself comprehensive services over the whole range of its functions.

Mr Hyde then considered the present English and Welsh counties in the light of these principles, and examined Rutland as an example of a county held by the Local Government Commission to be too small for the effective discharge of its functions. He went on to review some of the smaller county boroughs, and then dealt with the special problems of the conurbations. The Commission have dealt with the West Midlands differently from London and Tyneside, and Mr Hyde examined the two patterns of local government recommended for these areas.

No special guidance had been given to the county councils about how to approach the reviews of the county districts, and Mr Hyde analysed the existing county districts according to population. He considered that a county district needs a penny rate product of about £1,000–£1,250, at present valuations, to operate as a fully effective unit. As a general rule, such a county district would have a population of not less than 15,000. As many as 673 county districts have populations under 15,000.

In the determination of local government units, the financial factors show that there is a minimum size for each unit, below which it will not be fully effective because of lack of resources. Mr Hyde's paper dealt primarily with these financial factors, but he also referred to the other considerations to be taken into account – community of interest, development (and expected development), economic and industrial characteristics, suitable boundaries, means of communication, the distribution of the population, the size and shape of areas, and the wishes of the inhabitants.

The next section of Mr Hyde's paper was entitled 'Spreading the burden', and in it he dealt with the principle that wealthy areas (in terms of rateable value) should bear a higher proportion of expenditure than the poorer. He cited in detail the London Equalization Scheme, which the Royal Commission on the Government of Greater London thought should be retained in a modified form.

Mr Hyde concluded that the local government structure urgently needed bringing up to date. Experience showed that many existing local authorities were too small, and many small authorities must disappear.

Notes and Notices

PROFESSIONAL NOTICES

MESSRS CLARK, BATTAMS & Co, Chartered Accountants, announce that from June 15th their address will be Rowland House, 6 Eldon Street, London EC2. Telephone: Bishopsgate 5791. Their registration department will remain at 32 Victoria Street, London SW1, until June 29th, when it will be removed to the new address.

MISS C. M. COLLINGS, F.C.A., of 122 Hadham Road, Bishop's Stortford, announces that as from May 1st, 1962, she has entered into a partnership arrangement with the firm of SLATER, DOMINY & SWANN, Chartered Accountants, of Cambridge, and that her practice will continue at its present address under the name of COLLINGS, SLATER & Co.

MESSRS A. F. FERGUSON & Co, of Karachi and branches, announce that with effect from June 1st, 1962, they are opening an office in Chittagong. The address will be Spencer's Building, Quaid-e-Azam Road, Chittagong, East Pakistan.

MESSRS GULLY, STEPHENS, ROSS & GREGORY, Chartered Accountants, announce that they have now moved their offices to 17 Devonshire Square, London EC2.

MESSRS EDWARD MYERS, CLARK & Co and CLARKE, ECKERSLEY, PRENTICE & Co (incorporating GEORGE PEDLEY & Co), of London, Manchester, Watford and Burnley, who have been associated for many years, announce that they will in future carry on the practice under the name of EDWARD MYERS, CLARK, ECKERSLEY & Co. They also announce that they have amalgamated their practice, as from May 1st, 1962, with that of the old-established Manchester firm of PILLING & Co, and have been joined in partnership by the partners of that firm, Mr F. W. BUCK, F.C.A., and Mr N. PILLING, F.C.A. The joint practice will be carried on under the name of EDWARD MYERS, CLARK, ECKERSLEY & Co. They further announce that as from April 1st, 1962, they have become associated with J. G. BIRKETT & Co, of Watford (formerly GRAY, STAINFORTH, BIRKETT & Co), and Mr P. J. L. CASE, F.C.A., and Mr B. ARNOLD, F.C.A., have joined Mr BIRKETT in partnership. The practice will be carried on under the name of J. G. BIRKETT & Co.

Appointments

Mr J. Garton Ash, M.C., M.A., F.C.A., has been appointed chairman of Kamna Ltd, to fill the vacancy caused by the death of the late Mr H. Garton Ash, O.B.E., M.C., F.C.A.

Mr Derick Bolton, F.C.A., has been appointed to the board of Greengate & Irwell Rubber Co Ltd.

Mr M. S. Cohen, B.COM., A.C.A., has been taken into partnership with Messrs Phillips & Drew, stockbrokers.

Mr A. Dent, F.S.A.A., A.I.M.T.A., D.P.A., has been appointed chief accountant of the South Eastern Electricity Board. He is to succeed Mr Ernest Sinnott, F.I.M.T.A., F.S.A.A., who was recently appointed deputy chairman of the Board.

Mr J. Logan, F.C.A., has been appointed an additional director of Sir George Godfrey & Partners (Holdings) Ltd.

Mr Richard Otley, F.C.A., has been appointed a director of Stewarts and Lloyds and will continue as secretary of the company.

OBITUARY

Jack Ashworth Smith, F.C.A.

We have learned with regret of the death on May 17th, at the age of 62, of Mr Jack Ashworth Smith, F.C.A., financial director of Turner & Newall Ltd.

After serving in the First World War in the Royal Navy, Mr Smith entered the service of the Lancashire & Yorkshire Railway Co, Manchester. In 1925 he entered the employment of Messrs Parkinson, Mather & Co, Chartered Accountants, of Manchester, and in the Final examination of the former Society of Incorporated Accountants in 1931 he gained first place and was awarded the Society's gold medal. Following integration, he became an associate of The Institute of Chartered Accountants in England and Wales in 1958 and a fellow in 1960. Mr Smith joined the staff of Turner & Newall Ltd, head office, in 1934, to form the internal audit department of which, for a time, he served as head. He later became the company's accountant, and in January 1949 he was elected to the board.

At the time of his death Mr Smith was also a director of several subsidiary companies of Turner & Newall Ltd, both in the United Kingdom and overseas.

DOUBLE TAXATION CONVENTION

United Kingdom and South Africa

A double taxation convention between the United Kingdom and South Africa was signed in Cape Town on Monday.

The convention, which is subject to [redacted], replaces the agreement signed in 1946. It [redacted] the avoidance of double taxation of income and profits and is expressed to take effect in the United Kingdom for income tax from April 6th, 1962, and for profits tax from January 1st, 1962. The full text will be published shortly by H.M. Stationery Office.

COMPANY INVESTIGATION

Mr W. H. Lawson, C.B.E., B.A., F.C.A., a partner in the firm of Binder, Hamlyn & Co, Chartered Accountants, and a Past President of The Institute of Chartered Accountants in England and Wales, and Mr N. J. Skelhorn, Q.C., have been appointed by the Board of Trade under section 165 (*b*) of the Companies Act, 1948, as inspectors to investigate the affairs of Livestock Marketing Co Ltd, Northern Livestock Producers Ltd, Southern Livestock Producers Ltd, Western Livestock Producers Ltd, Highland Livestock Producers Ltd and Agribusiness Ltd.

IN PARLIAMENT

Income Tax Act, 1952: section 159

Mr GOODHEW asked the Chancellor of the Exchequer if he will now implement the recommendation of the Royal Commission on Taxation regarding the repeal of section 159 of the Income Tax Act, 1952.

Mr BARBER: I recognize that this section gives rise to some anomalies, and I will keep the question of its repeal under review.

Mr GOODHEW: How long does my hon. friend intend to continue keeping this matter under review? Is he not

aware that, however much he may be under fire at the Treasury, the war referred to in this section ended long ago? Is it reasonable that tax relief for expenses for travelling to and from work should be given to one part of the community because of changes in wartime, while the rest of the community is denied that relief?

Mr BARBER: I see the force of my hon. friend's point with regard to this section considered in isolation, but the object of the section is quite different from the object of some of my right hon. friends with regard to a general tax allowance for travelling. That raises much wider questions and, indeed, I think I am right in saying that there are new clauses about it on the Notice Paper for the Finance Bill.

Hansard, May 24th, 1962. Oral Answers. Col. 654.

Taxation and Gross National Product

Mr WARBEY asked the Chancellor of the Exchequer what was the percentage increase in direct and indirect taxes, respectively, between 1950 and 1961, including in indirect taxes the amount paid in National Health and Insurance contributions; and what, during this period, was the percentage increase in the gross national product.

Mr BARBER: In money terms, the increase in indirect taxes levied by the central Government, together with National Insurance and Health contributions, was 79 per cent between 1950 and 1961. The increase in direct taxes on income and capital was 67 per cent and in gross national product 102 per cent.

Hansard, May 24th, 1962. Oral Answers. Col. 659.

SCOTTISH INSTITUTE'S COMPUTER COURSE

Seventy-three members of The Institute of Chartered Accountants of Scotland attended the fourth of the [redacted] computer courses held at the Turnberry [redacted]rry, Ayrshire, from May 23rd to 26th. [redacted]he Pr[redacted]t of the Institute, Mr James C. Stewart, C.A., welcomed members, and the course was opened by the convener of the computer course committee, Professor Robert Browning, M.A., LL.B., C.A., Professor of Accountancy at the University of Glasgow. Among the subjects dealt with were: 'Introduction to electronic data processing', by Mr T. B. Simpson, C.A., of John Brown & Co (Clydebank) Ltd; 'Input, output and storage', by Mr Graham Morris, B.SC., A.R.I.C.; 'A typical business application', by Mr H. W. Matthews, of Urwick Diebold Ltd; 'Problems to solve before and after installation of a computer', by Messrs D. G. E. Benzie, D.F.C., C.A., J. T. H. Macnair, M.C., B.A., C.A., both of London, and practising accountants; J. W. Randall, A.C.W.A., Rolls-Royce Ltd; and Ronald Peddie, B.A., C.A., The United Steel Companies Ltd.

Other features of the course included two question time sessions, a visit to the I.B.M. factory at Greenock, and a talk on computer terminology by Mr Graham Morris, B.SC., A.R.I.C., of International Computers & Tabulators Ltd, followed by two films on computers.

SOUTH EASTERN SOCIETY OF CHARTERED ACCOUNTANTS

New President

Mr A. D. Langridge, F.C.A., has been elected President of the South Eastern Society of Chartered Accountants for 1962–63. Mr Langridge was admitted to membership of the Institute in 1933 and, since 1934, has been a partner in the firm of Langridge & Langridge, Chartered Accountants, of East Grinstead, Haywards Heath and Lewes.

Mr A. D. Langridge

He has served on the Committee of the South Eastern Society since 1946 and has been a member of the Society's Regional Taxation and Research Committee since 1942, being secretary from 1947–50 and chairman from 1953–55.

In 1960 Mr Langridge became a vice-president of the South Eastern Society and chairman of the Kent and Sussex Branch.

Annual Report

The Committee's twenty-ninth annual report records that membership at January 1st, 1962, totalled 598. There were 374 members in the Society's Kent and Sussex Branch and 224 in the Hants and Dorset Branch.

Local members' groups were active during the year, the Bournemouth group met on eight occasions; the Isle of Wight group held five meetings during the year, and four meetings were held by the Portsmouth and District group. The main event in the winter session of the Southampton and District group was an address by Mr David Price, M.P., on 'The Common Market'.

In the Kent and Sussex Branch, the groups at Brighton, Canterbury, Hastings and Maidstone all held a number of meetings during the year, with improved support by members.

The report states that in connection with the Institute's small practitioner inquiry, thirteen meetings were held during the year throughout the Society's area; 554 invitations were sent out and 192 practising members attended. The Committee expresses its gratification at the enthusiastic response from members and firms willing to give information anonymously on overall results and partners' income, staff and articled clerks' remuneration, hourly charging rates and the manner in which fees were calculated.

Members, it is stated, were generally of the opinion that the remuneration of practising members was inadequate and compared unfavourably with that of other professions. It was recommended that a minimum scale of charges for the guidance of practitioners should

JOHN FOORD & COMPANY
56 VICTORIA STREET, LONDON, SW1 Telephone: Victoria 2002 (3 lines)
REVALUATION OF ASSETS
WORKS, FACTORIES, PLANT & MACHINERY, Etc.

be published by the Institute. Members were also strongly in favour of the Institute undertaking greater publicity in order to make the public more aware of the services offered by chartered accountants.

BEDS, BUCKS AND HERTS CHARTERED ACCOUNTANTS

The annual meeting of the Beds, Bucks and Herts Branch of The London and District Society of Chartered Accountants was held at Dunstable on May 7th under the chairmanship of Mr J. L. Dickinson, F.C.A. Nearly sixty members were present.

The report of the Committee for 1961–62, which was presented, shows that membership at March 31st, 1962, totalled 237, compared with 230 the previous year. The Committee expresses the hope that present members will assist to increase the growth and influence of the Branch by encouraging others in their locality to join.

Branch activities included a stimulating and informal meeting with H.M. Inspectors of Taxes of Bedford, Dunstable, Luton, Watford and City 11 District, and regular meetings were held in Luton and Watford on a variety of accounting subjects. The first dinner of the Branch took place in Aylesbury on November 14th and was well attended by members and guests; an address of welcome was given by the Mayor of Aylesbury. In March this year a successful dinner-dance took place in Luton.

Completed questionnaires in respect of the Institute's small practitioner inquiry were returned to the London and District Society and a meeting of practitioners from all parts of the Branch area was held in Luton to discuss a summary of the answers to the questionnaire.

Following the annual meeting there was an interesting discussion with the following industrialists on 'Top management's views on chartered accountants': Mr W. A. Hartop (George Kent Ltd), Mr G. Hickson (Laporte Chemicals Ltd), Sir Reginald Pearson, O.B.E. (Vauxhall Motors Ltd), Mr R. Watson Lee (Commer Cars Ltd), Mr W. A. Summers, O.B.E. (Hunting Aircraft Ltd).

The following officers have been elected for 1962–63:

Chairman: Mr P. J. L. Case, F.C.A.
Deputy Chairman: Mr J. L. Dickinson, F.C.A.
Vice-Chairman: Mr R. F. Waterfall, F.S.A.A.
Hon. Secretary: Mr E. J. Frary, F.C.A., Messrs Hillier, Hills, Frary & Co, 26 Victoria Street, Luton, Beds.
Treasurer and Assistant Secretary: Mr A. J. Philpott, B.A., A.C.A.
Auditor: Mr E. G. Squires, F.C.A.

SOUTH WALES AND MONMOUTHSHIRE CHARTERED ACCOUNTANT STUDENTS

The thirty-eighth annual report of the South Wales and Monmouthshire Chartered Accountant Students' Society, presented at the annual meeting on June 1st, shows that membership at the end of 1961 numbered 279.

Regular Saturday morning lectures were held during the year and were most successful, though the Committee states that it would be encouraging to see more Final students present. A series of lecture meetings was also held on Fridays.

The eleventh annual dinner-dance was again held at the Park Hotel, Cardiff, while at sport the Society had another very successful year during which there were no defeats at rugby, soccer or cricket; at rugby the Society excelled itself by scoring over ninety points with only nine against. The golf and tennis teams were also successful in matches played at Bristol and Swansea.

THE ACCOUNTANTS' CHRISTIAN FELLOWSHIP

The monthly meeting for Bible reading and prayer will be held at 1 p.m. on Monday, June 4th, in the vestry at St Mary Woolnoth Church, King William Street, EC3. The scripture for reading and thought will be John, Chapter 16, verses 7 to 11 (The convincing of the Spirit).

CHARTERED ACCOUNTANTS' LODGE NO. 3162

At the installation meeting held at the Piccadilly Hotel, London W1, on May 9th, W.Bro. William Henry Parton was installed in the chair by W.Bro. K. S. Carmichael. The officers appointed were:

W.Bro. K. S. Carmichael, *I.P.M.*; Bro. J. [illegible] Hodgson, *S.W.*; Bro. S. R. Curtis, *J.W.*; W.Bro. H. M. [illegible]thorne, L.G.R., P.M., *Treasurer;* V.W.Bro. H. A. R[illegible]Wilson, P.G.TREAS., P.M., *Secretary;* W.Bro. D. [illegible]cy Jones, L.G.R., P.M., *D.C.;* W.Bro. G. S. H. Di[illegible]t.D., *S.D.*; W. Bro. G. J. Hakim, P.P.G.TREAS. (Middlesex), *J.D.*; W.Bro. A. A. B. Yeatman, P.G.STD., P.M., *Organist;* Bro. D. A. Redston, *I.G.*; Bro. J. B. Lewis, W.Bro. R. H. Jenkins, *Stewards;* W.Bro. W. T. Lovell, *Tyler.*

Among those present were: V.W.Bro. A. W. White, G.TREAS.; W.Bro. C. Simmon, A.G. *Registrar.*

THE INSTITUTE OF BANKERS

At the eighty-fourth annual general meeting of The Institute of Bankers held on May 16th, Sir Edward J. Reid, Bt, O.B.E., a director of Baring Brothers & Co Ltd, was elected President of the Institute for the ensuing year, in succession to Sir Eric A. Carpenter, O.B.E., chairman of Williams Deacon's Bank Ltd, who has been President since May 1960.

The Council's report for 1961–62, which was presented at the meeting, records that membership at December 31st, 1961, reached the record level of 52,008. This was an increase of 3,393 over the previous year: in the past three years membership has grown by

MOTOR — FIRE — CONSEQUENTIAL LOSS
CAR & GENERAL INSURANCE CORPORATION LTD
83 PALL MALL, LONDON, SW1

8,568 – almost as many as the increase (9,404) in the quarter of a century before that.

The report states that the eighty-one local centres of the Institute arranged over 500 well-attended meetings during the year which included lectures, discussions, study groups, debates, industrial visits, public dinners and other social events.

SEMINAR ON UNIFORM ACCOUNTING

A seminar on uniform accounting is to be held during the week commencing July 2nd by The Polytechnic, Department of Management Studies. The object of the seminar is to bring together accountants in practice, industry, local and other public authorities, and consultants to study the form and content of accounting statements. Participants will be asked to bring examples of accounts they prepare for management (if necessary disguising the figures). The legal and other constraints which are responsible for the form and content of the statements will be discussed and suggestions offered for their improvement.

The fee for the seminar is five guineas. Further details from The Polytechnic, Department of Management Studies, 204 Albany Street, London NW1.

CHARTERED ACCOUNTANTS' GOLFING SOCIETY

The Chartered Accountants' Golfing Society played its annual match against The Bar at Woking golf course recently.

The course, which is the home of The Bar, is one of the most enjoyable, and the match is always a very popular one. At the conclusion of the morning round the Accountants were leading by one match but in the afternoon they lost three out of the five matches and the day finished with a win for the Bar of 5½ to 4½.

The team consisted of five pairs, and ten foursome matches were played. The results (Chartered Accountants' names first) were as follows:

MORNING

J. M. Kaye and S. G. Sillem beat D. Tudor Price and R. Borneman, Q.C., 2 up.
H. C. Staines and D. W. Gibson beat I. Davidson and R. Ward, 1 up.
D. G. Richards and E. Head lost to D. Henry and A. Hollis, 3 and 1.
M. A. P. Gay and N. W. Collett lost to Judge P. I. Bell, Q.C., and J. McDonald, 1 down.
A. Coleman and J. D. Green beat G. Willett and W. Glover, 2 and 1.

AFTERNOON

Kaye and Staines lost to L. Paddy and Davidson, 2 and 1.
Sillem and Gibson lost to Tudor Price and McDonald, 3 and 1.
Richards and Collett halved with Henry and Glover.
Gay and Coleman beat Ward and Borneman, 3 and 2.
Head and C. I. Steen lost to Bell and Willett, 1 down.

Annual General Meeting

The sixty-third annual general meeting of the Chartered Accountants' Golfing Society was held at the Sea Bank Hotel, Porthcawl, on May 12th, during the week-end meeting at the Royal Porthcawl Golf Club, South Wales, under the chairmanship of Mr J. B. Pittman, who was again elected President. Mr D. W. Gibson was elected Captain and the retiring Vice-Presidents, Messrs L. R. Elcombe, D. V. House and L. E. Parsons were re-elected. Mr C. G. Midgley was also elected a Vice-President of the Society.

The following were also elected:

Vice-Captain: Mr H. C. Staines.
Hon. Secretary and Treasurer: Mr E. H. Head.
Hon. Match Secretary: Mr C. I. Steen.
Asst. Hon. Match Secretary: Mr D. W. Gibson.

Messrs E. H. Wingfield, S. G. Sillem and L. V. Mills were re-elected to the Committee. Mr W. B. Henderson was also elected to the Committee.

Mr J. S. Hyland was reappointed hon. auditor.

The leading results of the competitions were as follows:

CAPTAIN'S PRIZE

(presented by the retiring Captain, Mr A. W. Coleman)

1.	A. W. Coleman (12) ... ... Wins Ernest Cooper Cup.	35	points
2.	H. W. Pitt (9) ... ... Wins Captain's Prize on last nine holes and Mystery Prize.	34	,,
3.	H. C. Staines (6) ... ... Wins Second Prize and Scratch Prize.	34	,,

Taxing Masked Building Profits

TWO weeks ago we discussed clause 20 of the Finance Bill, which imposes tax on the proceeds of sales of land by a company associated with a dealer in land. This week we examine the sister clause, clause 19, which had a remarkably smooth passage through the committee stage. Some notoriously large fortunes have been made in recent years in the sphere of land development in this country. Bearing in mind that the top rate of income tax and surtax is still very high, 17*s* 9*d* in the £, it is a fair inference that a good part of these fortunes represent untaxed profits. In view of the readiness of the Inland Revenue to allege trading whenever anyone sells land at a profit, the immunity from tax of those profits is no accident; it must have been achieved in many cases by astute avoidance devices. Clause 19 is directed against a particular kind of device in connection with the development of land by building on it.

A builder (whom we will call X.) who acquires land, builds on it, and then sells or leases the built-on land, is obviously carrying on a trade and must pay tax on the profit. To avoid the tax he may sell his building business to a company controlled by him. A purchaser is found for the eventual building. This purchaser enters into a contract with the building company to erect the desired building. At the same time he negotiates for a building lease of the land, from X. its owner. The price paid to the building company for erecting the building is such as barely to cover the building company's costs, so that its building business produces no taxable profit. Bearing in mind the bargain he has had from the building company, the ultimate purchaser will be inclined to be generous when paying a premium to X. for the building lease. X., having sold his building business, is no longer a trader. Accordingly the Revenue find it very difficult to charge him to tax in respect of the profit on the grant of the lease.

Into this lacuna steps clause 19 with the very laudable object of taxing X. on his gains. One could only wish that the drafting of the clause was a little more precise. Its smooth passage through the House was attributable not so much to its clarity as to its obscurity. With one honourable exception, no member had the temerity or the fortitude even to discuss it. Nevertheless, it ought to have been probed because it may well strike the innocent far more than the guilty. The guilty are always one ahead of the legislator. They have the resources and the astuteness to take legal advice before embarking on a transaction, dubious or otherwise.

The innocent ones go rashly ahead, only to find too late that they have incurred heavy tax liability under some obscure section they had never heard of.

Clause 19 (1) postulates a triumvirate consisting of the ultimate purchaser (whom we call P.), the actual builder (whom we call B.) and the person who is sought to be taxed, X. 'Builder' here is defined to mean a person carrying on a trade which consists of or includes the erection, or securing the erection, of a building (clause 19 (4)). Some or all of these persons will probably be companies. The sub-clause imposes Case VI liability on X. in the following circumstances:

(*a*) P. contracts with B. for the erection of a building.

(*b*) The building is to be on land acquired (or to be acquired) in connection with that building contract.

(*c*) The land is acquired from a person 'associated with' B. This associated person is of course X.

(*d*) X. is not disposing of the land in the course of carrying on a trade of dealing in or developing land.

If all these conditions are satisfied, a computation has to be made. One adds to the consideration received by X. from P, the market value of any interest which X. retains in the land. From this total is deducted the cost to X. of the land. The balance is the measure of deemed income assessable on X. under Case VI. To prevent X. from minimizing the chargeable profit by disposing of the reversion at the same time that he grants the lease, clause 19 (3) provides that all his interest in the land which he does not dispose of to P. is to be treated as retained by him.

There is a proviso to clause 19 (1). If X. acquired the land at a time when he was neither a builder nor associated with one, then the computation of profit is modified. Instead of taking the actual cost of the land, one takes its market value as at the time when, after having acquired the land, X. becomes a builder or becomes associated with a builder. This proviso is, no doubt, intended to reduce the Case VI liability, but it could have the opposite effect. Why not, then, say 'cost or market value, whichever is the higher?'

Item (*a*) above is reasonably straightforward. Item (*b*) is less so. No definition is given of 'in connection with', but clause 19 (2) contains a deeming provision. Land is to be deemed to be acquired 'in connection with a contract for the erection of a building' if:

(i) the building contract is entered into 'before or on the same day as the contract for the acquisition of the land'; or

(ii) the land acquisition contract is either:

(*a*) subject to any condition or stipulation for the building to be erected on terms provided for in the condition or stipulation; or

(*b*) made in pursuance of any arrangement for the building to be erected on terms provided for by the arrangement.

If the land is acquired with a view to, or in connection with, the erection of a building (not with a *contract* for the erection), then clause 19 (2) is to apply notwithstanding that the person contracting with B. is different from the person acquiring the land. In other words, the fact that P.'s role is performed by two different persons (one acquiring the land and the other causing the building to be erected) does not prevent the acquisition of the land from being 'in connection with' the building contract. The clause gives no definition of the phrase 'acquired with a view to or in connection with the erection of the building'.

Thus, a prerequisite of X.'s liability under the clause is that he be 'associated with' B. Clause 19 (4) sets out the somewhat bewildering tests which have to be applied to establish this. As these bear a close resemblance to the ones which apply to the definition of the same phrase in clause 19 and which are contained in paragraph 18 of the Ninth Schedule to the Bill, the tests are not examined in detail here. Clause 19 (5) throws in a further test. X. is to be deemed to be associated with B. in relation to a building contract (connected with which P. acquires the land from X.) if B. enters into the contract 'in pursuance of any reciprocal arrangement between' either:

(i) X. on the one hand and a person (whom we call A.) on the other hand with whom B. is associated; or

(ii) X. and A. on the one hand and other persons on the other hand.

Clause 19 is excluded if either (*a*) the building contract or (*b*) the land acquisition contract was entered into before April 10th, 1962. If X. is carrying on a trade or business chargeable to profits tax, the clause 19 income will be added to the chargeable profit.

Companies Report

THE outstanding fact in the *Companies General Annual Report by the Board of Trade for 1961*,[1] published on Monday, is that for the first time since the recession year of 1952 there was actually a decline in the number of new companies registered. The drop was not great, from 34,312 in 1960 to 33,645. Moreover, although there was an increase in the number of companies dissolved or struck off the register, the figure was only 10,255, so that the net increase in the number of companies on the register was over 20,000, bringing the total number to over 416,000. Although some 400,000 of these are private companies, they have a much smaller aggregate paid-up share capital than the public companies; the total is £7,612 million, of which the private companies account for £2,733 million. Although the number of public companies with a share capital at the end of 1961 had declined further by 124 to 10,682, their total paid up capital had increased by £153 million.

How are names found for all these companies? The indications are that the trend towards fantastic or fanciful names must inevitably be accelerated. The Board of Trade refused to sanction 21,359 names during the year; 91 per cent of the refusals being on the ground of similarity with names already on the registers.

Some 80 per cent of private companies have filed the certificates required of exempt private companies. The report points out that the number of companies actually qualifying as exempt is greater, since there is, of course, a time lag between the formation of a company and the time for rendering its annual return. The report draws attention to the two reported cases where claim for exemption status was rejected by the High Court and the Court of Appeal.

During 1961, the Board of Trade gave authority to ninety-eight persons to be appointed as auditors of non-exempt companies notwithstanding that these persons were not members of any of the accountancy bodies recognized by the Board. Sixty-three of these persons had similar qualifications obtained outside the United Kingdom; nineteen were regarded as having obtained adequate knowledge and experience in the course of employment by a member of a recognized body; and the remaining sixteen were authorized on the ground that they were in practice as accountants in Great Britain before August 6th, 1947. The total number of authorized auditors, not being members of any of the recognized bodies, is now 1,045; the three categories number 567, 112 and 366, respectively.

Section 159 (3) of the Companies Act, 1948, provides that where at an annual general meeting no auditors are appointed or reappointed, the Board of Trade may appoint a person to fill the vacancy. In 1961 the Board received five applications to appoint auditors under the subsection, which were added to the two applications outstanding at the beginning of the year. One was outstanding at the end of the year, one was not proceeded with, and in the remaining five cases the Board appointed auditors.

The number of creditors' petitions for compulsory winding-up increased in 1961 from 757 to 876. These two years have both been record years for a long time; even in 1952 there were only 634 creditors' petitions. During 1961 the Courts made 612 winding-up orders. Not since 1955 has has any order been made for winding-up subject to the supervision of the Court. In the last ten years there have been only five such orders. Liquidations begun in 1961 totalled 4,689. Of the 4,077 voluntary liquidations, 2,843 were members' voluntary liquidations. These are the figures for England and Wales. In Scotland the liquidations begun in 1961 were 275 in number; 19 being compulsory.

Bearing in mind the manner in which the Companies Act, 1948, bristles with penalty sections and the total number of companies which are subject to those penalties, the number of prosecutions under the Act continues to be remarkably small. The total was only 690; 652 being for failure to render annual returns. Next in number were prosecutions for failure to keep proper books of account prior to winding-up. Ten undischarged bankrupts were prosecuted for being concerned in the management of companies. A remarkably large number of prosecutions were dismissed, although in many cases this was because the summons was withdrawn.

Double Tax Relief Claims Without Tears

by FÉLICE V. SLADE, A.C.A.

A 'TOOL KIT' that will greatly facilitate the computation of double tax relief on overseas dividends can be built up from the following publications:

	Price
Forms No. 86c (obtainable from H.M. Inspectors of Taxes) ..	Free
Tables of Effective Rates of Income Tax (published by H.M. Stationery Office)	1*s* 3*d*
Supplement to the Stock Exchange Weekly Official Intelligence – Relief from United Kingdom Income Tax on Dividends of Overseas Companies (published in January and July by the Share and Loan Department of the Stock Exchange)	1*s* postage 6*d*
Tables of Tax on Net Income (published by H.M. Stationery Office)	£1

Forms No. 86c are printed in duplicate so that copies may be taken and they are designed for much of the calculation to be done in totals. This results in a considerable saving in the amount of time spent on the claim by the tax clerk and by the typist. The layout is equally suitable for double tax and unilateral relief claims and for, say, Canadian and South African dividends, from which the tax deducted at source is calculated differently.

The *Tables of Effective Rates of Income Tax* minimize the time taken to calculate an individual's income tax rate, but the effective rate of surtax must still be calculated separately. The tables for 1959–60 remain applicable for 1961–62.

The *Supplement to the Stock Exchange Weekly Official Intelligence* is indispensable for ascertaining the companies' rates of overseas tax. If a particular company is not included in the supplement, application for details should be made to H.M. Inspector of Foreign Dividends, Lynwood Road, Thames Ditton (Telephone: Emberbrook 4141, extension 89).

The most valuable item in the 'tool kit', in more senses than one, is the book of tables for grossing at various rates from 1*d* to 12*s* 6*d* (in 1*d* stages). These tables show the tax which must be added to any net amount to arrive at the gross equivalent at the selected rate – the net income is shown as fractions of £1, in £1 steps from £1 to £200 and in stages thereafter up to £10,000.

For illustration let us take two dividends from, say, a Canadian and a South African company and compute, step by step, the double tax and unilateral relief, respectively. The dividend vouchers are assumed to show the following details:

CANADA LTD
600 Common Shares

	£ *s* *d*
Dividend declared	76 6 8
Less 15 per cent withholding tax ..	11 9 2
	64 17 6
Less United Kingdom income tax at 4*s* 9*d* on £76 6*s* 8*d*	18 1 4
Amount credited	£46 16 2

SOUTH AFRICA LTD

	s *d*		£ *s* *d*
400 Shares – Amount of warrant			£38 13 0
Amount of dividend in British currency ..	2 9	per share	55 0 0
Less South African non-resident shareholders' tax at 1*s* 6*d* in the £ ..	2·475	,,	4 2 6
	2 6·525	,,	50 17 6
Less United Kingdom income tax at 3*s* 10·5*d* in the £ on the gross amount of the dividend of 3*s* 1·8605*d* per share (£63 2*s*) ..	7·3355	,,	12 4 6
	1 11·1895	,,	£38 13 0

The figures shown in the block and in brackets for the South African dividend are obtainable from the back of the voucher.

Let it be assumed that the client's surtax computation for 1960–61 reads as follows:

	£	£
Director – as assessed to income tax, 1960–61		3,681
Untaxed interest – as assessed to income tax, 1960–61		264
Property (net annual value £144 less maintenance relief £104)		40
Taxed dividends:		
Self – as returned		3,781
Wife – as returned		2,019
		9,785
Charges and deductions:		
Farm loss – section 341 ..	£985	
Personal allowance (less £140)	100	
		1,085
Income chargeable to surtax		£8,700
Surtax payable		£1,700

Turning next to Form No. 86c, Part I, 'Calculation of Effective Rate' (Figure 1) is designed so that a detailed calculation may be made, but if the *Tables of Effective Rates* are to be used it is unnecessary to calculate the total income tax liability and to divide it by the net income. Furthermore, in surtax cases one really need insert only the total of the gross income, charges and personal allowances (including earned income relief but excluding life assurance relief). From the resultant 'taxable income' the income tax effective rate can be ascertained from the *Tables*.

The gross income and charges may be taken direct from the surtax computation but in that event one should be careful to bring the total income for surtax into line with the total income for income tax purposes, i.e. to exclude any building society interest or exempt Post Office interest received, to add back any personal allowances deducted for surtax and to deduct any covenanted payments that may have been disallowed for surtax.

To ascertain the effective rate of income tax from the tables it is necessary first to find the column appropriate to the amount of the taxpayer's personal allowances (including earned income relief but excluding life assurance relief) – in the illustration £839, i.e. personal allowance £240 plus earned income relief £599. In that column one must find the figure of taxable income which is equal to or next *above* the amount of the taxable income shown in Part 1 and the line on which this figure appears indicates the required effective rate.

A part of page 11 of the *Tables* is illustrated at Figure 2 showing how the effective rate of 6*s* 11*d* in the example was arrived at, £8,055 taxable income being nearest to the actual taxable income of £7,961.

The surtax effective rate, calculated simply by dividing the surtax liability by the amount of the assessment, is then added to give the total effective rate.

Parts II to IV of Form 86c together are illustrated at Figure 3 and the following com-

Figure 1

I. CALCULATION OF EFFECTIVE RATE

(1) **Income Tax**	£	Tax on taxable income—	£	s	d
Overseas Income (including Direct Tax) ..		£..... at s d ..

II. SUMMARY OF OVERSEAS DIVIDENDS

Source and Overseas Country	Overseas Rate inclusive of Direct Tax (K)			Dividend declared less Overseas Direct Tax (L)			Tax credit, i.e. tax addition when (L) grossed at the smaller of (i) Effective Rate, or (ii) Rate in (K) (M)			Gross United Kingdom income ((L)+(M)) (N)			United Kingdom Tax deducted from Dividend (O)			Paying Agent's gross (*To be completed in Surtax cases only*) (P)		
	s	d	£	s	d	£	s	d	£	s	d	£	s	d	£	s	d
Canada Ltd	10	11	64	17	6	76	13	6	141	11	0	18	1	4	76	6	8
South Africa Ltd	7	1	50	17	6	27	18	0	78	15	6	12	4	6	63	2	0
Note. If there is insufficient space above, continue overleaf and bring back the totals into the summary above.				TOTALS		104	11	6	220	6	6	30	5	10	139	8	8

III. CALCULATION OF RELIEF

	£	s	d
(Q) U.K.I.T. on (N) at taxpayer's highest personal rate(s)– £220 at 7s 9d .. .. .. £ at s d	85	5	0
(R) Less tax credit (amount at (M)) ..	104	11	6
(S) Net U.K.I.T. ((Q)–(R))	– 19	6	6
(T) U.K.I.T. deducted (amount at (O)) ..	30	5	10
(U) Relief due ((T)–(S))	49	12	4
or (W) Relief overallowed ((S)–(T)) ..			

IV. CALCULATION OF ADDITIONAL SURTAX

Gross U.K. income (amount at (N)) ..	£220	
Amount on which Surtax charged (amount at (P))	£139	
Additional Surtax on	£ 81	
at 7s 6d	£ 30	7s 6d

ments may be added to the explanatory column headings in Part II, the 'Summary of Overseas Dividends':

(1) The rate at (K) is taken from the *Stock Exchange Supplement* where, except in the case of Australian dividends, it is quoted inclusive of any direct tax deducted at source.

(2) The figure at (L) is the amount of the dividend after deduction of any withholding or non-resident shareholders' tax etc.

(3) The addition at (M) is obtained from the grossing tables and in the illustration the Canada Ltd dividend has been regrossed at the effective rate (10*s* 10*d*), this being lower than the company's rate (10*s* 11*d*).

(4) In practice the amount to be included at (P) is that which has already been returned (and assessed to surtax).

Any number of dividends can be tabulated in this way – if there is insufficient space the back of the form may be used – and columns (M) to (P) are then totalled.

Turning next to Part III it will be seen that income tax at the taxpayer's highest personal rate on the true gross total (N) is calculated first, the total tax credits (M) are then compared with this amount, leaving an excess due to or by the Inland Revenue and the subtraction (or addition) of the United Kingdom income tax deducted per column (O) gives the income tax relief due (or over-allowed).

In the case of an individual who is not also a surtax payer this ends the calculation but otherwise it remains for Part IV to be completed. This section consists simply of a comparison of the true gross amount (N) with that already returned (P), and the computation of the additional surtax that will arise when the amount of the difference is added to the taxpayer's total income. In practice Inspectors are always willing to deduct any additional surtax from the income tax repayable. In the illustration a net repayment of £19 4*s* 10*d* would be issued in settlement of the claim.

It should be mentioned that where section 201 relief is also due – the appropriate fraction will be found in the *Stock Exchange Supplement* – this relief must be calculated separately to ensure that it does not exceed the tax remaining in charge after credit has been given.

Form No. 86C is not appropriate where age relief or small income relief is due or where relief in respect of losses is set against doubly taxed income, neither is it suitable for dividends in respect of which no relief is due for indirect overseas tax (e.g. non-participating preference dividends).

In cases where a refund of overseas tax is due from the overseas country and/or the overseas rate quoted excludes direct tax, for example in cases of Australian dividends from which withholding tax has been deducted, Form 86D should be used instead, but space does not permit of its illustration here.

Sickness and Accident Policies

Insuring for Income during Incapacity

CONTRIBUTED

MAKING financial provision for the future of one's family in the event of the unexpected happening often takes the form of a fairly substantial endowment or whole-life assurance policy, to which may be added income benefits while the children are at school. What should be faced, however, is that one may not die, but because of accident or sickness, may either be away from work for a long stretch or be compelled to retire at an early age. The professional practice may not be able to support one in such circumstances; nor would there be any joy from the life policy, for the annual premiums will still have to be paid.

Supplementary to Life Policy

On this basis, therefore, it is sensible to have a sickness and accident policy which will be supplementary to a life policy, and which will provide a reasonable income whilst the incapacity lasts – even though it could be for the rest of one's expected working life.

The normal accident and sickness policy on the market does not cater for the long-term or permanent disability. Usually the weekly benefits payable are limited to about two years (though there may be a lump sum for total disablement). Of equal importance is the fact that the policy is an annual contract. Dependent on experience

throughout the policy period insurers may either refuse to renew, or impose conditions – either in the form of a higher premium or (more likely) the exclusion of claims arising from certain causes. Good as this form of policy may be for the short-term view (especially for a man whose income may cease immediately he is off work), it has its disadvantages so far as long-term planning is concerned.

This is where permanent sickness and accident insurance comes into its own. Once the insurance is in force, only the person insured has the option to let it lapse. One can hold the insurance company to continuing the cover irrespective of claims experience. If a serious illness or accident keeps one away from work, the insurance company will pay the agreed weekly compensation until the age of 65, or earlier planned retirement date.

Benefit and Premiums

Since this is long-term insurance, it is not the intention to cover every comparatively minor accident or illness. For that reason it is not usual for claims to be paid until after four weeks of incapacity, and this is reasonable enough. The premium will be even cheaper if the period of deferment before payment begins can be raised to thirteen or twenty-six weeks. Where a sick pay scheme exists, the actual period should, however, tie in with the period adopted by the firm for continuing payment during prolonged illness.

The other point which will have to be determined is for how much the benefit should be. Generally speaking, insurers are reluctant to issue policies which will give a benefit (together with that provided by any existing insurances) in excess of three-quarters of one's normal earnings. And the maximum amount of benefit may be limited to £50 a week.

In the case of a thirteen-week deferment, the premium for benefit of £20 a week for a man aged 35 is likely to be less than £25 per annum.

Clearly, however, the insured amount should be raised to keep in step with increases in income. In this case, however, the additional insured sums will not be accepted automatically – for in practice they constitute a fresh contract. Provided, however, that there are no medical complications, no difficulties should arise.

Tax Aspect

Since there is no insurance against death, the premiums do not qualify for any income tax relief. In the present circumstances, however, it is the practice of the Inland Revenue not to assess any benefit under this form of insurance for income tax purposes until it has been received continuously for a full fiscal year. Depending, therefore, on the time of year when the incapacity started and the deferment period, an illness or accident may have to continue for considerably more than a year before the benefits become taxable.

Besides the obvious advantages to principals – especially in small practices – in many cases a firm may wish to take out this form of insurance for the benefit of employees, feeling not only that there is, to some extent, a moral obligation to provide some compensation for an employee, but also because this will be a really useful 'fringe benefit' to retain the services of valuable members of the staff.

Here again, the benefits (plus National Insurance payments) should not exceed three-quarters of the person's earnings. It is common for a firm to run the risk itself for the first six months. Often, therefore, in an office where the *average* age is 35, the total cost may be no more than 1 per cent of the salary roll. The premiums can be treated as a normal business expense for tax purposes.

Some insurers will extend all their policies so that, on payment of a small additional premium, the full premium is waived whilst benefit is being paid. Others waive the premium automatically as a matter of course.

Advice to Clients

Although charity begins at home, and the rates and conditions mentioned apply specifically to certain professions including accountants, if and when clients ask for advice on making provision for the future there is no doubt that thought should be given to this form of insurance. If the rates seem on the high side, it should be remembered that it is a permanent contract which can continue until the age of 65, or earlier death, in the event of a long illness or incapacity following an accident.

As a grim reminder of what does happen, statistics show that, in any year, one out of every fifty men (whose ages range from the late 20s to 65) will be forced to stop work for three months or more. This form of insurance does, therefore, offer any professional person one way of maintaining a family, irrespective of how long he may be off work on doctor's orders.

Weekly Notes

THE INSTITUTE'S NEW PRESIDENT

MR PERCY FREDERICK CARPENTER, F.C.A., Vice-President of The Institute of Chartered Accountants in England and Wales in 1961–62 was elected President of the Institute for the ensuing year at last Wednesday's meeting of the Council.

Mr Carpenter, who was educated at St Marylebone Grammar School, is senior partner in the firm of W. B. Keen & Co, of London, where he was articled to the late J. B. Reeves. He took First Place in the Intermediate Examination in 1920, qualified in 1923, and became a partner in the firm in 1929. Aged 60, he is the second son of the late F. J. Carpenter who was also a partner in the firm until his death in 1930. Mr Carpenter was elected a Fellow of the Institute in March 1934.

Since his election to the Council of the Institute in February 1947, Mr Carpenter has served on most of its committees and has been Chairman of the Examination Committee (1957–61), Library Committee (1954–57), and the Summer Course Committee (1957–61). He received special commendation for his work as a member of the Planning Committee in 1951. Articled clerks and their training are of particular interest to Mr Carpenter; he served on the Articled Clerks Committee from February 1954 to June 1961, and was a member of the Education and Training Committee, and the Committee on Relations with the Universities (as P. D. Leake Committee representative).

He was a member of the Taxation and Research Committee from 1951 to 1956, and gave evidence before the Mocatta Committee on the Endorsement of Cheques. He was the first Chairman of the London and District Society of Chartered Accountants in 1943–44.

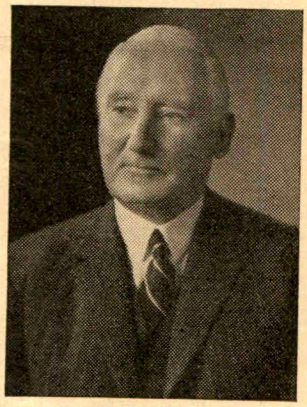
Mr Carpenter's public service includes that as an advisory accountant to the Railway Assessment Authority; as a member of the Palmer Committee on Prices of Building Materials in 1947; and as a member of the Joint Committee for the Award of National Certificates in Business Studies. He is a Fellow of the Institute of Arbitrators and of the Royal Statistical Society, and an Honorary Fellow of the Zoological Society of London.

A member of the City of London Special Constabulary from March 1939 to 1949, Mr Carpenter is a freeman of the City and Under-Warden of the Guild of Freemen. He is also a member of the Court of Assistants of the Worshipful Company of Loriners, a liveryman of the Worshipful Company of the Makers of Playing Cards and a Governor of the City of London College.

A reproduction of a recent portrait of the new President in included as a supplement with this issue.

THE NEW VICE-PRESIDENT

THE new Vice-President of the Institute is Mr Robert Pearson Winter, C.B.E., M.C., T.D., D.L., F.C.A., a partner in the firm of Winter, Robinson, Sisson & Benson, Chartered Accountants, of Newcastle upon Tyne. Born at Tynemouth in 1897, he was educated at Mill Hill School and was articled to his father the late R. P. Winter in 1914. He was admitted to membership of the Institute in 1921, becoming a partner in his firm the same year; he was elected to fellowship in 1928.



Mr R. P. Winter

Mr Winter was elected to the Council of the Institute in April 1952 and has served on the Applications Committee (chairman July 1959 to date), District Societies, Library, Disciplinary and General Purposes Committees. He was President of the Northern Society of Chartered Accountants in 1940–42 and again in 1951.

Mr Winter has had distinguished service with the Territorial Army. He was commissioned in the Royal Engineers (T.A.) in 1915, serving throughout the First World War and was awarded the Military Cross in 1918. Since 1934 he has been a member of the Territorial and Auxiliary Forces Association of Northumberland and holds the Territorial Decoration. From 1934 to 1938 he commanded a regiment of Royal Engineers (T.A.), and served on the staff from 1939–42. He was Honorary Colonel of the Tyne Electrical Engineers (T.A.) from 1952–60 and was appointed a Deputy Lieutenant for Northumberland in October 1953.

Appointed a C.B.E. in the Birthday Honours in 1958 for services with the Northumberland Territorial and Auxiliary Forces Association and other work in the county, Mr Winter is also connected with a number of charities in the City and County of Newcastle upon Tyne, being chairman of the Finance Committee of the North of England Council of the British Empire Cancer Campaign, and until 1961, vice-chairman of the Northumberland County Association of Boys' Clubs.

BIRTHDAY HONOURS

WE have pleasure in tendering our congratulations to members of the profession whose names appear in the Birthday Honours List.

The profession is well represented in the list. Among the Knights Bachelor are two chartered accountants: Mr W. H. Lawson, C.B.E., B.A., F.C.A., senior partner in the firm of Binder, Hamlyn & Co, Chartered Accountants, who is a member of the Council and a Past President of The Institute of Chartered Accountants in England and Wales; and Mr William Watson, C.A., Treasurer, The Bank of Scotland.

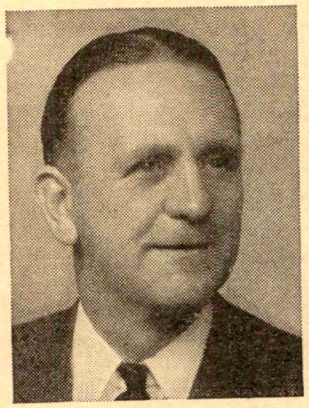
Four members of the profession receive the C.B.E.: they are Mr W. Hayhurst, F.S.A.A., F.I.M.T.A., City Treasurer of Westminster; Alderman O. S. Holmes, F.C.A., senior partner in the firm of Holmes & Bailey, Chartered Accountants, of Sheffield, for public services in Sheffield; Mr Ernest Long, F.S.A.A., F.I.M.T.A., F.C.I.S., Member of the Central Electricity Generating Board, a former Secretary of The Institute of Municipal Treasurers and Accountants, and a Past President and a member of the Council of The Chartered Institute of Secretaries; and Mr A. Stewart, C.A., F.C.W.A., F.C.I.S., director and general manager, Huddersfield Building Society.

The O.B.E. is awarded to Mr G. L. Bellhouse, F.C.A., senior partner, Barber, Bellhouse & Co, Chartered Accountants, of Nakuru, Kenya, for public services in Kenya; Mr H. G. Pinner, J.P., F.C.A., senior partner in the firm of Pinner, Darlington & Co, Chartered Accountants, of Birmingham, for political and public services in Smethwick; and to Mr L. F. Smale, F.I.M.T.A., City Treasurer, Lusaka, Northern Rhodesia.

The M.B.E. is awarded to three members of the profession for their work for the National Savings Movement. They are: Mr P. Fleming, F.S.A.A., F.I.M.T.A., Treasurer, Long Eaton Urban District Council; Mr W. A. C. Roope, F.I.M.T.A., Borough Treasurer, Port Talbot; and Mr T. Shaw, F.C.A., F.I.M.T.A., Borough Treasurer, Southall Borough Council.

MUNICIPAL TREASURERS' NEW PRESIDENT

MR NORMAN DOODSON, F.S.A.A., F.I.M.T.A., County Treasurer of Lancashire, last week was installed as President of The Institute of Municipal Treasurers and Accountants at the annual conference of the Institute held in Edinburgh.



Mr Norman Doodson

Mr Doodson, who was born in 1909, was admitted to membership of The Institute of Municipal Treasurers and Accountants in 1933 and became a member of the former Society of Incorporated Accountants in 1936. He started his career in local government at Farnworth, Lancashire, and later served with local authorities in Glamorgan, Kent, and Surrey. He was appointed Deputy County Treasurer of Lancashire in 1947 and became County Treasurer in 1951.

Mr Doodson was elected to the Council of The Institute of Municipal Treasurers and Accountants in 1955 and was chairman of the research group set up by the Institute on local authority borrowing; the findings of the group were later published in book form. Mr Doodson is a Past President of the Society of County Treasurers.

The new Vice-President of the Institute is Mr G. C. Jones, F.I.M.T.A., Borough Treasurer of Reading.

Mr W. H. Lawson
Knight Bachelor

Mr William Watson
Knight Bachelor

Mr Ernest Long
C.B.E.

JENKINS REPORT LOOMS NEARER

THE Jenkins Report on Company Law has been finished and is now in the hands of Mr Erroll, President of the Board of Trade. It is doubtless a lengthy document and is expected to be published later in the summer, probably next month. There is a feeling that the report will not be favourable to non-voting ordinary shares although presumably existing shares of that category will be given a modified blessing. It is evident that the provisions as to the qualification for exempt private company status, and possibly even the status itself, are in the melting pot. The present rules have been found to work harshly in some cases. On the other hand, opinion is growing that anyone who seeks the great boon of limited liability ought to be happy to file annual accounts as some return. Take-over bids were very much in the news when the Committee was taking evidence and it will be surprising if the report does not contain recommendations for a change in the relevant law. We can perhaps look also to some change in the law concerning unit trusts.

EASIER DEPOSITS FOR BANKS AND PUBLIC

IN little over a week there has been a relaxation in the special bank deposits required by the Bank of England and a cut in hire-purchase deposits. Special deposits have been required since July 1961. In the case of the London clearing banks the special deposit ratio was 3 per cent of gross deposits; it was reduced on June 1st to 2 per cent. The ratio for Scottish banks was 1½ per cent of gross deposits; now it is 1 per cent.

The total of special deposits so released will be about £77 million, half to be returned on June 12th and the remainder on June 18th. The effect of this increase in the banks' liquidity is likely to be significant on their lending policy. In theory about three times as much credit could be created as the total of special deposits released, but the Bank of England has indicated that it will permit only a slight relaxation in lending policy.

At the same time it was announced that a further repayment of £25 million was to be made to the International Monetary Fund in a mixed selection of foreign currency including United States dollars. This is the fifth repayment since the loan was negotiated in August 1961 and brings the total outstanding down to £229 million, just under half the original loan.

The stimulus which the return of the special deposits was calculated to give, assisted by the further repayment to the I.M.F., was reinforced on Monday when minimum hire-purchase deposits on all goods except cars was reduced from 20 to 10 per cent. It is apparent that the trend in the fall of hire-purchase debt and the comparative sluggishness of consumer spending (doubtless assisted by a long winter and a non-existent spring) has decided the Government that the rate of expansion in the economy since the Budget is turning out to be more sluggish than was expected. The announcement of the fall in deposits on a wide range of consumer durable goods coincided, however, with a further slide in prices on Wall Street. The relaxations are therefore taking place at a time of acute unsettled economic weather and by no means assure the economy of a sudden upsurge of activity.

CLEARING UP THE BACK DUTY MUDDLE

LAST week, the Attorney-General introduced a new clause in the House of Commons for insertion in the Finance Bill. It is intended to cure the drafting deficiencies of Part III of the Finance Act, 1960, which introduced a new back duty code. He referred to the case of *ex parte Fysh* which established that interest could not be claimed on tax in assessments made before the 1960 Finance Act was made law. He also went on to admit that it was arguable whether that Act was effective to impose penalties for acts committed before 1960. He said that the Revenue might win if they appealed against their defeat in the *Fysh* case but it was preferable to alter the law.

The Minister revealed a remarkable state of affairs. He said that since the 1960 Act was passed, many thousands of back duty settlements had been agreed, involving over £30 million. Presumably none of these taxpayers, or their advisers, took the point that the drafting of the 1960 Act was ineffective. All too often the Revenue's *ex cathedra* statements as to the meaning of the Income Tax Acts, are accepted with a docility which can sometimes involve a taxpayer in payments which he need never have made.

ACCOUNTANTS IN DEMAND

THE quarterly review of the M.S.L. Index indicates an increased demand for executive staff in the first quarter of 1962. After a period of comparative stability for nine months the Index moved significantly forward, and the improvement is reflected in each of the six individual categories recorded. It will be recalled that the Index is a record of the demand for executives in Great Britain measured by the advertisements published in certain newspapers and journals.

Comparing the first quarter of this year with the last quarter of 1961, the biggest increases in demand were for general management at 48 per cent, production 43 per cent and accounting 40 per cent. If a comparison is made with the first quarter of 1961, accounting shows the biggest rate of increase.

It is perhaps a comment on the natural but somewhat illogical reaction of companies to harder times, that the smallest increase in advertisement was in sales. They were up only 13 per cent on the quarter and not at all on the year. Logically, one would expect the demand for top-level sales executives to increase when times are difficult and profits are falling but it is more likely that the typical concern makes substantial investments in sales management when times are getting better.

CONFIDENCE IN ATLANTIC SHIPPING

SIR JOHN BROCKLEBANK, chairman of the Cunard Steam-ship Co Ltd, has told shareholders with his company's latest accounts that tenders have gone out to build four new cargo ships for the North Atlantic route at a cost of £4 million. In addition there is to be much more flexible handling of the passenger fleet. The three medium-sized North Atlantic ships are to be refitted to make them suitable for service in warmer climates and the *Queen Elizabeth* is to do some cruising early in 1963. These changes, and there are one or two others contemplated for the fleet, are the company's reaction to the intense and increasingly seasonal competition on the North Atlantic sea route.

A major internal management change is for the board to divest itself of day-to-day operations of the fleet and to hand these over to a management company. There is also to be a further reduction in the size of the board which will now number thirteen directors compared with twenty-two a few years ago.

Cunard is thus determined to stay firmly entrenched in the North Atlantic shipping trade. It is of interest, however, that the impact of technical change, taking the form particularly of competition from jet aircraft, is recommending a streamlining of the organization and the reorientation of senior management to conform more to textbook ideas on the functions of a board and top management rather than certain traditions of the shipping industry.

This is My Life . . .

by An Industrious Accountant

CHAPTER 127

IT'S remarkable how one's chickens come home to roost. Nearly a year ago a lady consulted me about a career for her shy seventeen-year-old son and needless to say I sold accountancy in a big way. Accountants, I explained with due modesty, were the *élite* of the industrial world. They were the brains behind the balance sheets, the spirit behind the sales drive, the enterprise that sparked off the expansion. They were also the ensurers of industrial ethics; they guarded jealously the honesty and integrity of their clients and insisted on scrupulous observance of the highest moral principles.

It was rather an impressive effort, I felt: the ablest public relations officer need not have blushed for it. Shy son gazed with wondering eyes, a new hero mounting the pedestal formerly occupied by Coeur-de-Lion, Wyatt Earp, Bradman or Hillary. His future destiny was chosen there and then.

Mother was converted also. She, too, relegated the Civil Service, the law and journalism to immediate obscurity. She has an old-fashioned puritanism amounting almost to intolerance about low standards of conduct; she saw her shy son as a Crusader of the modern world. He was articled to one of the partners in our auditor's firm by the month's end.

So I was somewhat shaken last week when she arrived unheralded in my office, blazing with wrath. Her tight-lipped, hard-eyed glare was disconcerting. Her son, she explained hotly, had just been sent on his first 'away' audit to a little village too remote for him to return home at week-ends, where the amenities were scarcely even primitive. His senior deserted him basely in the evenings, staying with relations nearby. Her sheltered boy was not only lonely and miserable, but also exposed to temptations hitherto unknown . . . the public-house, if not worse. For a moment the Demon Rum and the Scarlet Woman hovered behind her shoulders.

My first defences were breached early. Neither TV nor the local cinema, she retorted, could adequately entertain her intellectual son, nor was he the frivolous type to patronize the jazz-ridden barbarism of a strident rural dance hall. True, he could study for his coming exams, and doubtless the poor dear boy was exhausting himself in this strenuous pursuit, but surely not every night. He needed some suitable social outlet.

Remembering my own early efforts to read mercantile law while away, in dim-lit bedrooms or noisy lounges, I could agree with this viewpoint. However, I rallied to remind her that shy son was now nearly eighteen; he was mature enough to extend his experience; this audit would widen his horizon. It all went to make up life; he must see more of the world than the city or the domestic suburb. To these unctuous platitudes I added a jovial reference to apron-strings and the birds leaving the nest, and to limits of a principal's responsibility.

It was a blunder. She drew herself up stiffly and reminded me that the principal should stand in *loco parentis* to the unsophisticated youngsters articled to him. It was his moral duty to protect their welfare. Thrusting them unfledged into the midst of drunken tavern brawls was scarcely a loving father's part. A tear glistened in her eye; I felt abashed. I thought of days when I, too, wandered dispiritedly the damp and dismal streets of strange towns ignored by our clients, disregarded by my principal. Maybe something more is owed to our young auditors far from home; maybe insidious vice lurks in wait all unsuspected; maybe decades of thoughtless senior partners have failed in their bounden duty. Perhaps the drift from the profession to industry is due to the lonely years and lost illusions of apprenticeship. Perhaps the green audit pencil rests above an aching heart.

It seemed hardly fair to tell her that not-so-shy son had just phoned me to say he was having a smashing time and please could he borrow a fiver.

Finance and Commerce

Changed Basis

THE accounts of The Limmer & Trinidad Lake Asphalt Co Ltd which are the subject of this week's reprint are marked by a change in the basis for computing the provision for maintenance of work. The group is best known for road and airfield surfacing and civil engineering work, and the change in the computation for maintenance has had the effect of increasing the trading surplus by £122,378.

The total amount provided is carried in the balance sheet under current liabilities (£610,066) and Sir John Hathorn Hall, the chairman, expresses the board's satisfaction that the amount is adequate to meet the liabilities for maintenance. Negotiations are in progress with the Inland Revenue regarding taxation consequences arising from the changed basis. Sir John draws attention to the fact that after discounting in full the increased profit resulting from the change in accounting procedure, 1961 profits improved on the group's 1960 record by 6 per cent.

Sir John refers to 'highly competitive conditions' in which there is no place for facile success. He provides a chart showing that profits have not kept in step with increasing turnover; in effect, it has been necessary to take on an increased amount of work at a 'significantly lower level of profitability'. 'Indeed,' he says, 'it might almost be said that our record results for 1961 were achieved despite, and not because of, our participation in the construction of Britain's much-needed new motorways.'

Cover against Default

With these accounts, Sir John continues a subject he raised last year in connection with the financial failure of a main contractor. In road construction work, Limmer & Trinidad, more likely than not, is likely to find itself in the position of subcontractor to a main contractor instead of directly for the employing authorities. In the 1960 experience, Sir John then said, 'the group has almost certainly incurred a bad debt in excess of £50,000 which it has been necessary to write off in the accounts under review'. This, despite the fact that the main contractor had already been paid by the employing authorities.

This year Sir John says: 'The obvious safeguard, which we had assumed would be open to us, of securing from the customary credit insurance sources cover against default on the part of main contractors has, on investigation, proved to be ineffectual. In the case of a number of contracting firms, accepted by ministries and public departments as suitable to undertake large public contracts, full insurance cover against default cannot, we find, be secured at any cost. Such cover is in practice only available in respect of firms of obviously unassailable financial strength.'

It is indeed a frustrating position for those who, as subcontractors on road construction, have carried out their part of the work satisfactorily and there would seem to be good reason for an overhaul of the whole contracting system.

Completion Bond

Employing authorities, says Sir John, no doubt do their best to ensure that only firms with the necessary resources are awarded large contracts, but they are naturally reluctant to expose themselves to criticism by excluding reputable firms from their tender list, or by rejecting the lowest tender, because of doubts of financial capacity which often cannot readily be substantiated.

But there is, he continues, a less distasteful and more effective alternative course open to them and one that would involve them in no invidious choice. In the U.S.A. and Canada, to take only two examples, a main contractor tendering for any important work is frequently required to put up a completion bond of up to 100 per cent.

Under this procedure, the financial capacity of a contractor is, in effect, professionally appraised by the insurance company invited to underwrite the bond, and by this means, the financially sound are separated from the unsound.

Sir John adds that a further measure of protection to subcontractors, by safeguarding them against unconscionable delay in payment for work completed, could be afforded by extending to all approved subcontractors safeguards similar to those which are at present provided in the standard Institution of Civil Engineers' conditions of contract for 'nominated' subcontractors. Proposals to that end have already been submitted to the appropriate authorities.

Aftermath

THE aftermath of the 'Jasper affair' is long drawn out and the impatience of shareholders in what are now known as the 'Jasper' companies can be appreciated. At recent meetings of three of them, Sir Dingwall Bateson, the chairman, was able to say that negotiations with the State Building Society were nearly complete. Once the position of the companies with the Building Society is established, the way is then open for the directors to get down to work on an inter-company agreement.

Meanwhile, as an instance, there is The Victory Real Estate Co with its suspense account for £444,764 in a September 1960 balance sheet totalling £1,153,985. And this includes £198,900 for 130,000 5s shares in Capital & Provincial News Theatres 'purchased through Harewood & Co where evidence of ownership is not available'. While Capital & Provincial, on the other hand, has £12,011 included

6 **Foreign Currencies**

The values of Fixed Assets have been converted into sterling at the rates of exchange ruling at the dates of acquisition, and of Current Assets and Liabilities at the rate ruling on 31st December 1961

in its suspense account for a holding in Victory. But that only touches the fringe of the problem to be unravelled.

Capital & Provincial has £159,445 in suspense for 'moneys applied for the purchase of shares in seventeen companies where evidence of ownership is not available subject to deduction of £94,850 for amounts owing to those companies'.

It is indeed a fantastic story of the results of financial manipulation in which, however, the 'fruit machines' of Temperance Billiard Halls (another Jasper company) provide a touch of humour. The machines have provided an operational surplus which has been retained in the balance sheet. Owing to ambiguities in the 1960 Betting and Gaming Act, the board does not yet know how the surplus can be applied.

Stock Valuation

THE question of overheads on work in progress from the Inland Revenue stock valuation angle is obviously a very important matter to Radiation Ltd, the group that produces heating and cooking appliances. The chairman, Mr F. P. S. Stammers, in his statement with the 1961 accounts, notes, in relation to the reserves, that no use has been made of the stocks obsolescence reserve which was created and has since been maintained at a figure sufficient to eliminate the overhead loading on stocks and work in progress of goods manufactured by the group. He recalls the mention in earlier statements that the loading of overheads on work in progress was brought about by the Inland Revenue's attitude in the matter.

'We wish', says Mr Stammers, 'to revert to the basis of valuing stock and work in progress which has been consistently adopted over thirty-four years. As this problem is not yet resolved with the Inland Revenue, the reserve to which I have referred is being maintained for the time being, and I confirm that it is more than adequate to cover overheads in stock and work in progress at the end of December 1961.' The stocks obsolescence reserve amounts to £400,000.

CITY NOTES

SINCE the Chancellor of the Exchequer stated a month or so ago that the economy would be allowed to take its course for the rest of this year there have been two major economic pump priming moves. Some £78 million of special deposits have been released to the banks and hire-purchase restrictions have been eased.

The first of those moves is probably a more realistic measure than the second – at least, so it is considered in the City. There has been plenty of time for the buying public to get acclimatized to hire-purchase restrictions and the fact that there has been no real spring buying movement this year would seem to result more from the aftermath of a year of two of out-and-out spending than from any considerations of restricted hire-purchase.

But whatever the background to the easier credit moves, they have had singularly little effect on a stock-market – still being regarded with suspicion by big and small investors alike. Thought is clearly being given to the background of last week's sharp changes, rather than to the changes themselves.

The pressure on industrial profit margins is as keen as it ever was, and it will take more than special deposit releases and lower down-payments to ease that position before the end of this year.

Decimal Currency

Evidence submitted by The Institute of Cost and Works Accountants to the Committee of Inquiry on Decimal Currency

THIS Institute welcomes the establishment of the Committee of Inquiry on Decimal Currency as a sign of further progress towards the eventual introduction of such a currency. In submitting this memorandum on the problems which may arise in the process, it considers that, despite the cost, inconveniences and initial difficulties which will inevitably have to be faced in the short term, the changeover will be to the long-term advantage of industry and the nation, as a result of its effect upon administrative costs and the improvement in industrial efficiency.

On the basis of the wide experience of its members in industrial and commercial undertakings and public services, the Institute has prepared the following summary of evidence in favour of a speedy changeover to a decimal currency.

1. Its introduction, by rationalizing the design of accounting machinery and the attendant mental and machine calculations, would in our opinion lead to benefits which will constantly accrue in the future. The costs of changeover will occur once and for all at the time of change and should not therefore be considered a deterrent. It is even more necessary to take advantage of these constantly accruing cost advantages at this time of increased international competition and the probable entry of this country into the European Common Market. No opportunity for cost reduction must be neglected, especially one such as this, the benefits of which will, in our opinion, percolate to every level of our national life.

2. Despite the obvious sentimental attraction of retaining the pound as the major unit of account, we do not feel it to be suitable. It is too large a unit by international standards and cannot easily be decimalized. For these practical reasons we feel a choice should be made between the ten shilling/cent system and the eight shilling and fourpence/penny system.

3. In order to minimize the cost and inconvenience of the changeover it is desirable that the new system should be easy to understand and that the public should be able readily to associate the values of the old and new currencies. The fewer new coins issued the less the minting cost and the cost of modifying vending machines.

4. Against this background the ten shilling/cent system and the eight shilling and fourpence/penny system are reviewed (hereafter referred to for convenience as the 10*s* system and the 8*s* 4*d* system). The initial changeover from the £ sterling to the new major unit would seem to be easier under a 10*s* system; a factor of 2 is more readily understood than a factor of 2·4.

5. Although under the 8*s* 4*d* system the penny would be identical in value to the present penny (and therefore prices would be readily comparable), it is considered that the 10*s* system would result in almost as readily comparable values, and the equivalence of amounts greater than the major unit would be more easily understood.

6. An advantage claimed for the 8*s* 4*d* system is that a price structure based on units of one penny would need no adjustment. Such adjustments as would be necessary under the 10*s* system could have an inflationary effect on the millions of daily transactions which individually involve the exchange of a few pence, e.g. newspapers, bread, milk, telephone calls, postal charges, bus and rail fares. It is suggested that although this possible inflationary effect is a factor which the Committee should carefully consider, undue emphasis should not be placed upon it. In some circumstances a price rise might conceivably be of a smaller amount than under the present 'penny' price structure (e.g. a contemplated price rise of 4*d* to 4½*d* might now be from 4*d* to the new 3½ cents, equivalent to 4·2*d*).

7. The minting problems involved have been clearly commented on in the annual report of the Royal Mint for 1958:

> 'Systems of the halfpenny cent type, for example, the 8*s* 4*d* : 1*d* system, would involve no immediately urgent demand for new coin, since all sums in the new notation could be made up exactly with existing coins, but coins of 5, 10, 20 (or 25) and 50 cents would eventually replace the 6, 12, 24 and 30*d* coins. The task before the mint, therefore, would be the gradual replacement, probably denomination by denomination, of the entire cupro-nickel coinage, comprising some 3,000 million pieces. Existing pennies and halfpennies could remain in circulation as 1 and ½ cents at least until all the higher denominations had been replaced and reasonably until they were withdrawn as worn coin.
>
> 'On the other hand, it is characteristic of all systems based on the £ sterling that pennies and halfpennies do not represent simple decimal fractions of £1, the penny being £0·00416 and the halfpenny £0·002083. It would therefore be necessary either to revalue these coins by appreciating them by 20 per cent (1*d*=£0·005) or to replace them. The first course would place no undue burden on the mint, but prior knowledge of appreciation might lead to hoarding and there would be other tire-

some initial consequences. The second course would involve the replacement of some 2,400 million coins.'[1]

(A ten shilling/cent system would have similar characteristics to that of a £ sterling system.)

8. Although initially the 8*s* 4*d* system obviates the necessity of new coinage, other than for the major unit, ultimately all coins would need to be replaced. The 10*s* system would only necessitate the replacement of the penny and halfpenny, and this could be avoided by appreciating the value of these coins by 20 per cent. It might be advisable to minimize the minting of new coins at this stage of the negotiations for the entry of this country into the European Common Market, since this may well eventually lead to the adoption of an European decimal currency.

9. If under the 10*s* system the penny were revalued and the other larger coins (3*d*, 6*d*, 1*s* and 2*s* 6*d* – equivalent to 2½, 5, 10 and 25 cents) were retained, the cost of adjusting vending machines would be minimized. Under the 8*s* 4*d* system adjustment would be necessary only when old coins were replaced by new coins.

10. Adjustments to accounting and computing machines would be necessary if either of the systems were introduced, and this factor is considered in a later section of this submission.

11. A detailed comparison of the two systems of decimal currency provides evidence both of advantages and disadvantages in the use of either system, and different authorities will give varying importance to each of these aspects. However, on balance this Institute is of the opinion that the advantage lies with the 10*s* system.

12. The two natural dates for the introduction of decimal currency would seem to be the end of the financial year (April 5th) or the end of the calendar year. As the latter is too near Christmas (a period of high note circulation) to be convenient, the financial year end would seem to be the best time. The summer months are inconvenient as note circulation tends to rise during the holiday season and most employees take their annual holiday during this period, which in itself often creates considerable problems in maintaining the volume of clerical work.

13. More important than the actual date of introduction is the early publicizing of the date on which the new system would come into force. It is the experience of our members that costs are usually lowest when plans are prepared well in advance. In this way peak loads, which disproportionately increase costs, can often be reduced; re-equipment programmes can be undertaken; and new type stationery ordered in phase with the changeover. Immediately after the announcement of the changeover date most organizations would be able to commence the conversion of some of their records, thus reducing the peak load otherwise arising at the changeover date.

14. Many accounting and statistical records are already kept in decimal form so that the benefits of easier calculation will not accrue in these cases. These records, together with all other information of an historical nature, will need to be converted to the new unit. There may be some saving in cost if the necessity for retaining this data can be considered at the time of conversion and future records rationalized. Certain information in daily or weekly use would need immediate conversion at the time of changeover, or a temporary duplication of records, either of which would involve an undertaking in additional short-term cost.

15. An official conversion table should be issued immediately the announcement is made. It appears that a certain amount of confusion was caused in South Africa by the issue of several different official tables; we therefore submit that only one official table should be issued.

16. At first the new system might slow the tempo of work, but familiarity should soon lead to a resumption of normal tempo. In addition, mental calculations would be simplified and the possibility of error reduced. In a large undertaking it might be possible eventually to reduce clerical staff. The majority of accounting machines would need conversion, but temporarily the shillings and pence columns could be blanked off. As the major unit is smaller than the pound, and two columns would be needed for the cents, the value capacity of machinery would be considerably lower, even after total conversion. Machine conversion could be phased so that it took place first on those machines with the lowest relative capacity. It is probable that a proportion of machines could be converted in advance.

17. The joint report of The British Association for the Advancement of Science and The Association of British Chambers of Commerce notes [at page 16] that over two-thirds of its estimate of £128 million for machine conversion and replacement costs represents replacement of machines too old to convert and that many machine-users would subsequently be better equipped than at present. It is our opinion that most of this replacement expenditure is not a fair charge to the cost of changing to a decimal currency.

18. Machine manufacturers may find the rationalization of machine design reduces their costs and thereby enhances their competitive position in world markets, although they will find that their domestic markets are more vulnerable to competition from overseas. The research and production effort devoted to the perfection of sterling multiplication systems would no longer be necessary.

19. It has always been the firm belief of this Institute that no opportunity for cost reduction should be missed. The once and for all changeover costs are small when compared with the continuing savings in operating costs.

20. In the opinion of this Institute a well-planned and efficient introduction of a decimal currency would further enhance the international prestige of this country, and by reducing costs and simplifying transactions improve our trading position in overseas markets, thereby enabling the United Kingdom to maintain a predominant position in world trade.

From the Earl of Crawford and Balcarres

The Leonardo Appeal

SIR, – I would be grateful if you would allow me to appeal through your journal to members of the accountancy profession of this country to help us secure the Leonardo cartoon for the nation.

I wish it were as easy to raise money as it is to think of reasons why Leonardo, as a man, is of interest to almost every branch of the community. His link with your readers is, of course, his passion for mathematics. And, indeed, one of his contemporaries wrote of him that 'his mathematical experiments have so far distracted him from painting that the sight of a brush puts him out of temper'. Perhaps, if he had stuck to mathematics, he might have been one of the pioneers of the profession of accountancy. For, as you know, he was a pioneer in almost everything and even designed flying machines.

The Leonardo cartoon, now on view at the National Gallery, is one of the world's masterpieces by one of the greatest artists that have ever lived. We have got to raise the remaining £500,000 by the end of July if we are to keep this incomparable treasure at home for ourselves and posterity. I am confident that we shall succeed if everyone will rally to our support and if your readers will send us a donation to the Leonardo Appeal Fund, the National Gallery, London WC2.

Yours faithfully,
CRAWFORD AND BALCARRES.

London WC2.

Deposit Account Interest

SIR, – Belatedly perusing your issue of April 28th I was very interested to read the letter from Messrs Sanders, Millichamp & Co under the above heading. I have had several 'brushes' with various branches of Lloyds Bank over this same point. The most recent case concerned the crediting of four years' deposit interest in one year and as the total amounted to £16 odd it was 'returned' to the Revenue by the bank and this started an investigation which eventually cost my client about £250 in fees.

I took the matter up with the bank and was informed that the interest was held in suspense until the customer gave instructions as to the account to be credited. My client stated quite definitely that no request for instructions, either written or verbal, had ever been made and the bank could produce no evidence that instructions had ever been sought. I argued with the bank and the Revenue that as the interest was calculated half-yearly it became a credit to the client at the same time as it was debited in the accounts of the bank and that it was quite immaterial whether or not it was actually entered in a pass-book at the same time. The Revenue accepted the argument without demur but the bank manager did not feel that any apology was necessary.

I will offer no opinion on the ethics of the procedure but certain it is that interest on interest is lost as your correspondent points out and Mr Booley's reply on behalf of Lloyds Bank in your issue of May 19th offers nothing logical by way of justification.

Yours faithfully,
TORA DATA.

SIR, – Mr F. C. Booley, Public Relations Officer of Lloyds Bank Ltd, in his letter published in your issue of May 19th, omits information on two vital points:

(1) How does his bank deal with interest in the absence of any instructions from the depositor.
(2) If the interest is allowed to accrue, is interest given each half-year on the accumulated amount of accrued interest.

Can Mr Booley please give this information?

Yours faithfully,
Cambridge. L. V. SLATER.

[Mr F. C. Booley writes:

(1) In those cases where the bank has not received instructions for the disposal of interest it is calculated upon the day-to-day balance of the deposit account and accrues until instructions are received.
(2) Simple interest is allowed on the deposit account balance and accrues until it is credited to an account.

Having explained the general policy of the Bank in dealing with deposit account interest, may I suggest that if any of your readers wish to make further inquiries and will address them to me, at Lloyds Bank Head Office, 71 Lombard Street, London EC3, I shall be very happy to deal with them.]

B.U.P.A. Accountants' Group

SIR, – Your readers may be interested to note that the British United Provident Association Accountants' Group has now been operating for seven years and has over 1,000 contributors, together with members of their families.

B.U.P.A. is a nation-wide non-profit association, under the presidency of the Rt Hon. Viscount Nuffield, G.B.E., F.R.S., and was formed in 1947 by the amalgamation of a number of provident associations, some of which had already been in existence for many years. The object of the Association is to shield its subscribers and their families against heavy expenses arising from surgical operations and other specialist treatment as a result of either illness or accident. There is also an optional extension for private treatment by general practitioners.

The Association has no shareholders, and the governors give their services without fee or remuneration of any kind.

The Accountants' Group enables subscribers to obtain the benefits of membership on terms well below those available to individual subscribers to the Association. Membership of the Group is open to most accountants in the United Kingdom whether they are in public practice or in employment, as well as to all grades of staff employed by practising qualified accountants. In the case of chartered accountants, however, their address must be within the area covered by the London and District Society of Chartered Accountants (i.e. London and part of the Home Counties).

Further details of the Association and of the Group will gladly be sent to anyone who may care to write to us.

Yours faithfully,

ROSE, GLUCK & CO,
Chartered Accountants,

HON. GROUP ORGANIZERS,
B.U.P.A. ACCOUNTANTS' GROUP.

14 Queen Victoria Street,
London EC4.

How to Decimalize the Currency

SIR, – In view of the recommendation by The Association of Certified and Corporate Accountants that the major currency unit for decimal currency in Britain should be one of one hundred pennies, your readers may be interested to know that this unit was used in this country for nearly three hundred years before the introduction of our present 240*d* pound. According to the *Encyclopaedia Britannica* the one hundred-penny unit under the name 'Mark' was the unit for money of account in Anglo-Saxon times, its replacement by the pound of 240*d*, with the penny unchanged in value, being a result of the Norman Conquest.

The penny was first struck in A.D. 775, 291 years before the Conquest. As it was the English penny by maintaining its standard of weight and fineness for getting on for five hundred years that earned for itself the name 'Sterling', or good money, on the Continent as against the continually debased local coinages, it would seem appropriate to call a revived one hundred-penny unit by the name of Mark Sterling (contracted to Mark for internal use) thus continuing the association of our currency with sterling.

Yours faithfully,

Ewell, Surrey. H. O. WORGER, V.D., F.I.A.

Taxation Case

A full report of the case summarized in this column will be published, with a Note on the Judgment, in the 'Annotated Tax Cases'.

In re Bird

In the Court of Appeal – March 16th, 1962
(Before Lord Justice HARMAN, Lord Justice UPJOHN and Lord Justice DIPLOCK)

Income tax – Trade – Debtor acquiring residence abroad – Tax still owing – Whether debtor carrying on business in England – Bankruptcy Act, 1914, sections 1 (2), 4 (1) (d) – Income Tax Act, 1952, Schedule D, Case 1.

As the result of a back duty inquiry the debtor became liable to pay tax under Case I of Schedule D, amounting to £3,622, in respect of his business as a street bookmaker, and the Inland Revenue obtained a default judgment against him for that amount in 1960. In the meanwhile, in February 1957, the debtor went to Jersey, and he and his wife had lived there ever since. The debtor also owed a sum to his accountants in respect of their work in the course of the back duty inquiry.

On September 1st, 1960, a bankruptcy notice was issued, and by leave was served on the debtor out of the jurisdiction; and he was adjudicated bankrupt on February 24th, 1961. Having been ordered to attend his public examination, and not having complied therewith, the debtor was, on April 21st, 1961, arrested in Jersey for contempt of court and was brought to this country. On May 4th, 1961, the debtor applied by motion to have the adjudication order annulled, and to have the bankruptcy notice set aside on the ground that he was not at any time during the material period either domiciled or ordinarily resident in England or in any other respect a debtor within section 1 (2) of the Bankruptcy Act, 1914, or a person against whom a petition in bankruptcy could be presented pursuant to section 4 (1) (*d*) of that Act, and that he was not otherwise subject to the bankruptcy jurisdiction of the English Courts. The registrar dismissed the motion.

Held: for bankruptcy purposes a person continues to to carry on business in England, as long as any debts of the business remain outstanding; that the same rule applied in relation to a debt for income tax under Case I of Schedule D; that, as the debt for income tax was still unpaid, the debtor had been carrying on business in England within section 4 (1) (*d*) within one year of the presentation of the petition; that the receiving order and the adjudication order were, therefore, valid; and that the debt owed to the accountants was in the same position as the debt for income tax.

Notes and Notices

THE INSTITUTE OF CHARTERED ACCOUNTANTS IN ENGLAND AND WALES

Members' Addresses Wanted

The Secretary of the Institute would be glad to know the present addresses of the following members of the Institute. The town at which the member was last known is shown after each name.

Alfred Charles Axon, F.C.A., Brighton.
Wouter Matthijs de Clercq, A.S.A.A., New York.
John Norman Edward Hart, F.C.A., Walsall.
Rio Tyrell Arthur Hohler, B.A., A.C.A., Ontario.
Frank Denis Leech, A.C.A., London.
Frank Netherwood, F.C.A., York.
Frank Norris Pinder, F.C.A., London.
Cyril Ward, F.C.A., Ontario.

PROFESSIONAL NOTICES

MESSRS BIRKETT, WESSON & CO, Chartered Accountants, of 6 Hanover Square, London W1, announce that they have taken into partnership Mr RAYMOND JOHN LYE, A.C.A., with effect from June 1st, 1962.

MESSRS DEARDEN, HARPER, MILLER & CO, Chartered Accountants, of 14 Lloyd Street, Manchester 2, and 17/18 St Dunstan's Hill, London EC3, announce with regret the death of their senior partner, Mr ROBERT BIBBY, F.C.A., on May 28th, 1962.

MESSRS DELOITTE, PLENDER, GRIFFITHS & CO announce that Mr LESTER G. TAYLOR, C.P.A., has been admitted into partnership in their associated firms in Lima, Peru, viz. DELOITTE, PLENDER, GRIFFITHS & CO and DELOITTE, PLENDER, HASKINS & SELLS.

MESSRS JONES, ROBATHAN, THOMPSON & CO, Chartered Accountants, announce that as from June 1st, 1962, Mr WILFRED ALAN CLUBB, F.C.A., has retired from the partnership. Mr RICHARD TURNER PARKINSON, A.C.A., will continue to be the resident partner at Cardiff.

MESSRS PARKER & GLENTWORTH announce that Mr NORMAN REX, A.C.A., has been taken into partnership. The style of the firm remains unchanged, but as from June 4th, 1962, the address is Cavendish House, Pasture Street, Grimsby.

MESSRS F. ARTHUR PITT & CO, WOMERSLEY & TWEEDALE and GREENHALGH, SON & DUTTON, Chartered Accountants, of 14 John Dalton Street, Manchester 2, and 20 Acresfield, Bolton, announce with regret the death of their senior partner, Mr P. NUTTALL, F.C.A., on May 27th, 1962, after a long illness. The practice will continue to be carried on under the same names by the remaining partners, Mr M. H. LEESE, F.C.A., Mr R. A. PITT, F.C.A., Mr P. CLARKE, F.C.A., and Mr V. DALLEY, F.C.A.

Appointments

Mr J. J. Beavis, A.C.A., has been appointed to the board of Laing Development Co Ltd.

Mr R. A. Dean, A.C.W.A., has been appointed revenue assistant (organization and mechanization) in the chief accountant's department of British Railways, Eastern Region.

Mr John Doorly, B.COM., A.C.A., has been appointed secretary of Irish & Intercontinental Hotels Ltd.

Mr George S. Essex, A.C.A., secretary of Grover, Bolton & Co Ltd, has been appointed to the board.

Mr Edwin P. Hubbard, F.A.I.A., F.C.C.S., of London, has been elected chairman of the Association of International Accountants for the third consecutive year.

Mr J. A. B. Keeling, D.F.C., M.A., A.C.A., has been elected to the board of C. F. Taylor & Co Ltd.

Mr John Mapley, A.C.A., secretary of Tickopres Ltd, a company in the Norcros group, has been appointed general manager of their Harwich establishment.

Mr W. G. A. Russell F.C.A., has been appointed a director of the Legal & General Assurance Society Ltd.

Mr R. A. Sutton, F.C.A., is to be appointed group chief accountant of Tootal Ltd with effect from June 30th, 1962.

NEW PROFESSOR OF ACCOUNTING

The title of 'Professor of Accounting in the University of London' has been conferred upon Mr H. C. Edey, B.COM., F.C.A., in respect of his post at the London School of Economics and Political Science.

Mr H. C. Edey

Mr Edey qualified and was admitted an Associate of The Institute of Chartered Accountants in England and Wales in 1935. He served throughout the war in the Royal Navy and shortly after demobilization joined the L.S.E., where he is now Reader in Accounting. He is a Governor of the City of London College and the Travers Lecture he gave there in April on 'Thinking in figures' was reproduced in *The Accountant* of April 21st. He is author of the book, *Business Budgets and Accounts*.

When Mr Edey takes up his new appointment on October 1st next, there will be two Professors of Accounting in London University; the other, of course, being Professor W. T. Baxter, B.COM., C.A.

PREMIUM SAVINGS BONDS

The Treasury has announced a variation in the conditions of eligibility of Premium Savings Bonds for the prize draw after the death of the holder.

At present, bonds are eligible for the monthly prize draw for one month after the death of the holder. Under the new terms, if the holder dies on or after July 1st, 1962, the bonds will be eligible for the prize draw for one year after his death. The first draw to be affected by the change will be that commencing on Monday, September 3rd, 1962. The change will apply to all bonds whenever they were bought. There will be no change in the existing conditions in cases where the holder dies before July 1st, 1962.

INCOME TAX PAYERS' SOCIETY WINDING-UP

The Income Tax Payers' Society, founded over forty years ago, is to be brought to an end. This unfortunate decision has been forced upon the Executive Committee of the Society by the ever increasing rise in expenditure notwithstanding a fairly substantial increase in membership in recent years. The resultant increased income, says the Society, has proved insufficient to balance costs, and the decision to wind-up the Society has been taken while it is still in a position to meet its liabilities in full. The winding-up should be effected by September 30th next.

LONDON AND DISTRICT SOCIETY OF CHARTERED ACCOUNTANTS

New Chairman Elected

Mr C. V. Best, F.C.A., senior partner in the firm of Allen, Baldry, Holman & Best, Chartered Accountants, of London and Guildford, has been elected chairman of the London and District Society of Chartered Accountants.

Mr C. V. Best

Admitted to membership of the former Society of Incorporated Accountants in 1924 and elected a fellow in 1930, Mr Best served as chairman of the Incorporated Accountants' London and District Society from 1946–48, and was a member of the Council of the Society from 1952 until integration in 1957. He served as chairman of the Parliamentary and Taxation, and Library Committees, and was a member of the Finance and General Purposes, Disciplinary, and District Societies Committees. Following integration, Mr Best served on the Taxation and Research Committee of the Institute from 1958–61.

He has been a member of the London and District Society of Chartered Accountants since 1958 and was the first honorary treasurer of the Society, holding the office from that year until his election as Vice-Chairman in 1961. He was also chairman of the London Taxation and Research Committee in 1961–62.

Mr Best is Treasurer and a Past Master of the Sir James Martin Lodge (formerly The Incorporated Accountants' Lodge) and chairman or director of a number of companies.

The new Vice-Chairman of the Society is Mr C. J. M. Bennett, B.A., F.C.A., of Barton, Mayhew & Co, Chartered Accountants.

LEICESTERSHIRE AND NORTHAMPTONSHIRE SOCIETY OF CHARTERED ACCOUNTANTS

New President

Mr H. M. Lepper, F.C.A., a partner in the firm of Clifford Towers, Woodroffe & Co, Chartered Accountants, of Northampton, was elected President of the Leicestershire and Northamptonshire Society of Chartered Accountants at the Society's annual meeting held on May 24th.

Mr H. M. Lepper

Mr Lepper was admitted to membership of the former Society of Incorporated Accountants in 1935, after serving articles with Clifford Towers, Woodroffe & Co. He was admitted to partnership in the firm in 1938.

He was elected to the Committee of the Leicestershire and Northamptonshire District Society of Incorporated Accountants in 1945 and served as assistant secretary until integration.

Mr Lepper is also a chartered secretary and served as President of the Northampton Centre of their Institute from 1958–61.

Other officers of the Society for 1962–63 are:

Vice-Presidents: Mr G. L. Aspell, T.D., D.L., F.C.A., Mr W. E. Willis, D.F.C., B.A., J.P., F.C.A.

Hon. Librarian: Mr W. E. Willis, D.F.C., B.A., J.P., F.C.A.

Hon. Secretary and Treasurer: Mr J. H. Golcher, F.C.A., 32 De Montfort Street, Leicester.

Hon. Assistant Secretary: Mr R. F. Watkins, F.C.A.

Annual Report

The Committee's annual report for the year 1961 shows that membership of the Society on December 31st totalled 497.

Four luncheon meetings were held in Leicester during the year, when addresses were given by guest speakers, and were all well attended. No evening meetings were held as, it is stated, 'judging by attendances in the past, these are not very popular'. The Leicester Discussion Group held a number of luncheon meetings and several meetings were held by the Kettering Discussion Group. In connection with the Institute's small practitioner inquiry, meetings were held in Leicester, Northampton and Peterborough. The principal social function of the year was the annual dinner held at the Grand Hotel, Leicester, and attended by 326 members and guests.

In response to the appeal of the Leicester City Council, the Committee decided to contribute towards the collection of civic plate and a silver sweet dish was presented to the Lord Mayor of Leicester on behalf of the Society by the President and the Secretary in March of this year.

BIRMINGHAM AND DISTRICT SOCIETY OF CHARTERED ACCOUNTANTS

Mr D. E. T. Tanfield, F.C.A., has been elected President of the Birmingham and District Society of Chartered Accountants for the year 1961–62.

Mr D. E. T. Tanfield

Educated at Bromsgrove School, Mr Tanfield was articled to his father, the late Mr Doylah Tanfield, subsequently joining him in the partnership of Wall & Tanfield, of Birmingham and Dudley. He left practice in 1953 to become joint managing director of J. Hickman & Son (Brierley Hill) Ltd, and is a director of a number of companies, including the principal members of the J. Hickman & Son group.

Mr Tanfield has served as auditor of the Birmingham and District Society, is a member of its Committee and is a past chairman of the District Society Regional Taxation and Research Committee. He is also a member of the Institute's Taxation and Research Committee. For a number of years Mr Tanfield was secretary of the old Bromsgrovian Club, of which he is now treasurer.

Other officers of the Society elected for the ensuing year are as follows:

Vice-President: Mr G. S. Major, T.D., B.COM., F.C.A.
Hon. Secretary: Mr W. R. Doherty, T.D., F.C.A., Cooper Brothers and Carter & Co, 75 Harborne Road, Birmingham 15.
Hon. Assistant Secretary: Mr P. T. Neal, F.C.A.
Hon. Treasurer: Mr C. Wheatley, F.C.A.
Hon. Librarian: Mr P. G. Craven, T.D., F.C.A.
Hon. Dinner Secretary: Mr A. S. Maddison, F.C.A.

Eightieth Annual Report

The Society's eightieth annual report records an increase of fifty-nine members during the year and total membership at April 30th, 1962, numbered 1,522. This figure includes 169 members of the Wolverhampton Branch, 139 members of the Coventry Area Branch and 128 members of the Stoke-on-Trent Area Branch.

Eleven meetings of the Committee were held during the year and the Regional Taxation and Research Committee met on a number of occasions to discuss matters referred to it by the main Institute Committee. As in past years, certain members of the Society, who were not on the committee, were invited to attend meetings when the topic under discussion was one on which it was felt that their special experience would be valuable.

Six lecture meetings were held during the winter 1961–62 session and all were well attended. In addition, the Society received an invitation from the Association of Her Majesty's Inspectors of Taxes for members to attend a meeting held in February last and about one hundred members of the Society were present. Successful conferences took place during the year at the North Staffordshire University College, Keele, at Welshpool – when some thirty practising members from Shropshire and Herefordshire attended – and at Birmingham University. Two discussion groups continue to meet – one group being for the exchange of ideas between accountants engaged in industry and commerce in the Midlands – and all their meetings were well attended. Meetings of small practitioners were held in connection with the Institute inquiry in November and December in Welshpool, Stoke-on-Trent, Dudley, Worcester, Coventry, Wolverhampton, Leamington Spa and Birmingham.

CHARTERED ACCOUNTANTS' GOLFING SOCIETY

The Chartered Accountants' Golfing Society played its annual match against the London Solicitors at Walton Heath on Sunday, May 27th.

The weather was very unkind at the start and it rained heavily throughout the morning. Nevertheless, the standard of golf was very good and the result at midday was level, each side having won two and a half matches.

The weather made amends in the afternoon and shortly after lunch the rain stopped and stayed away for the rest of the round.

The Solicitors lost three of the five matches in the afternoon so that the over-all result for the day was a win for the Accountants by $5\frac{1}{2}$ to $4\frac{1}{2}$ matches. The teams consisted of five pairs and ten foursome matches were played.

The results (chartered accountants' names first) were as follows:

Morning

Tudor Davies and J. M. Kaye beat G. D. Glenister and J. Parry-Jones, 4 and 3.
M. T. W. Easby and W. R. Tomkinson lost to N. W. Roberts and F. L. Perkins, 3 and 2.
R. G. B. Drummond and D. J. Hedges lost to F. R. Furber and J. D. Kerr, 1 down.
D. H. Brown and A. Coleman beat G. Vaughan and R. T. Boase, 5 and 3.
J. T. Isherwood and E. Head halved with D. Brooke-Hitching and L. Nathanson.

Afternoon

Davies and Easby beat Parry-Jones and Kerr, 7 and 5.
Kaye and Drummond beat Roberts and Vaughan, 2 and 1.
Hedges and Tomkinson lost to Perkins and Glenister, 6 and 4.
Isherwood and Coleman beat Brooke-Hitching and Boase, 2 and 1.
Brown and Head lost to Furber and Nathanson, 2 down.

CERTIFIED ACCOUNTANTS' JUBILEE GOLF TROPHY

The final round of the Certified Accountants' 1962 Jubilee Golf Trophy Competition was played at the North Cliff Golf Course last Saturday. The winner was Mr H. Pepper, F.A.C.C.A., of Leeds, the joint runners-up being Mr J. V. Banks, F.A.C.C.A., of Rhyl and Mr J. Wilkie, F.A.C.C.A., of London.

At a dinner held the same evening at the Grand Hotel, Scarborough, the President of the Association, Mr E. Spencer, F.A.C.C.A., presented the Jubilee Trophy and a miniature replica to Mr Pepper who was accompanied by his wife and son.

MANCHESTER CHARTERED ACCOUNTANTS STUDENTS' SOCIETY

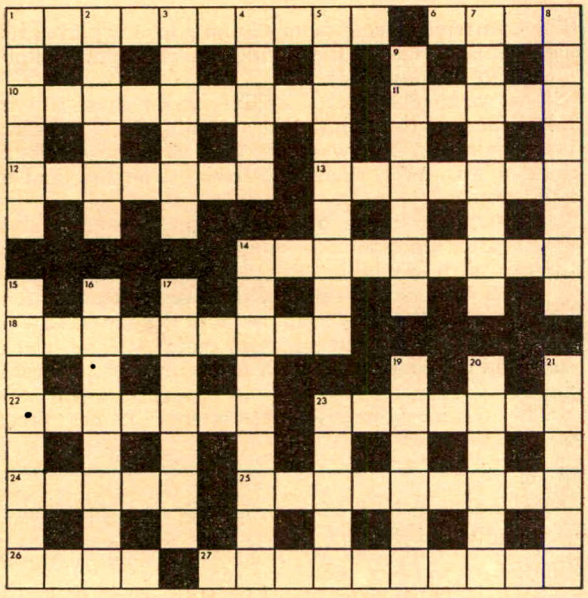
At a recent meeting of the Manchester Chartered Accountants Students' Society the following officers were elected for the ensuing year:

President: Mr D. N. Walton, F.C.A.
Vice-President: Mr R. Y. Taylor, B.A., F.C.A.
Joint Hon. Auditors: Mr A. T. Dowd, B.SC., A.C.A., and Mr W. A. Bolton, A.C.A.

The Hon. Secretary, Hon. Treasurer and Hon. Librarian will be elected at the next Committee meeting to be held on July 16th.

BANK HOLIDAY CROSSWORD

Compiled by Kenneth Trickett, F.C.A.



CLUES ACROSS

1. He displays a noble article in performance (10).
6. Local tax process with no argument in favour of it (4).
10. Money sent to issue a thousand in payment for use of property (9).
11. Of which the fifth is an important accounting date (5).
12. Form of Quota 51 such as will divide a number without 18 (7).
13. The writer is back on a retirement allowance (7).
14. Prerogative to reprint what the efficient typist will do (9).
18. A reminder of things to come? (9).
22. Do these deposits with the broker impair his spirits? (7).
23. Somehow musters forged cheques (7).
24. Double relationship of 10 to 1 with base 2 (5).
25. Devolving again, always returning fleece (9).
26. Used to be the subscription to a club (4).
27. Picture regulations in lieu of log-tables (5, 5).

CLUES DOWN

1. Payments in this are overdue (6).
2. Pledge it under two thousand with a company precedent (6).
3. A statement included in a prospectus shall be deemed to be ——— if it is misleading . . . (Section 46, Companies Act, 1948) (6).
4. Negotiate at the bar (5).
5. Record document for writing letters (9).
7. Confused reasoning loses nothing in wages (8).
8. It contains particulars of the vendor's transaction (4, 4).
9. Small change for leather manufacturers (7).
14. A low fellow of the stars referring to a register of lands for taxation purposes (9).
15. Advanced and set up a company (8).
16. A hole in the wood to pay off through a sinking fund (8).
17. Section 439, Companies Act, 1948, deals with the improper use of this word, with restrictions (7).
19. The treasurer holds a scholarship (6).
20. Mailed so as to provide about the average (6).
21. Customs that take us a long time (6).
23. Economized, except for a penny (5).

The solution will be published in next week's issue.

Estate Duty and Overseas Property

UNIVERSITY LIBRARY

CLAUSE 24 (originally Clause 23) of the current Finance Bill imposes duty on immovable property abroad and makes consequential amendments.

Ever since estate duty was imposed in 1894 the general rule has been that where the decedent was domiciled in Great Britain all the assets, wherever situate, passing on his death attracted estate duty. A single exception was made in favour of his property outside Great Britain which, by the local law, was 'immovable' property. The rules relating to overseas property were codified by section 28 (2) of the Finance Act, 1949.

The broad effect of section 28 (2) is, *inter alia*, to exempt from estate duty immovable property situated abroad. Except in the case of *inter vivos* gifts, it is necessary also to satisfy the Revenue that the proper law regulating the devolution of the property, or regulating the disposition under which it passes, is not the law of England or of Scotland. However, this additional requirement is practically nugatory, in view of the House of Lords' decision in *Philipson-Stow v. C.I.R.* (39 A.T.C. 394).

Clause 24 (1) of the Bill takes out of section 28 (2) the reference to immovable property, thus leaving the subsection to deal only with matters where the question of domicile is in issue. Clause 24 (2) enlarges the field of accountability to the Inland Revenue for estate duty which has become payable. It does this in two ways: by amending section 8 (3) of the Finance Act, 1894, and by amending section 8 (4) of that Act. In its present existing form, section 8 (3) makes the executor (which includes the administrator or any person intermeddling with the deceased's property) 'accountable' for the duty in respect of all *personal* property, whether inside or outside Great Britain, of which the deceased was competent to dispose. However, it limits the executor's liability for actual payment to the proceeds of such assets as he receives as executor, or might have received but for his own neglect or default. The first part of clause 24 (2) extends this accountability of the executor to include all property, personal or not, situate outside Great Britain, provided, of course, that the deceased died competent to dispose of it. It will be seen that the executor is still protected, as to liability to pay, by the restriction to the proceeds of assets actually received by him. As regards real property inside Great Britain, section 16 (1) of the Law of Property, 1925, makes the 'personal representative' accountable.

Section 8 (4) of the 1894 Act imposes accountability for estate

duty on 'every person to whom any property . . . passes (on the death) for any beneficial interest in possession, and also, to the extent of the property actually received or disposed of by him, every trustee, guardian, committee or other person in whom any interest in the property so passing or the management thereof is at any time vested, and every person in whom the same is vested in possession by alienation or other derivative title'. A mere bailiff or agent for management is excluded. Now this subsection is expressed to be confined to property in respect of which the executor is not accountable. We have seen that the range of the executor's accountability has been extended by the first part of clause 24 (2) to include immovable property overseas. The second part of the sub-clause extends section 8 (4) accountability to cover all property outside Great Britain, even though the executor *is* also accountable for it. This amendment is not solely consequential upon the termination of exemption of overseas immovable property; it strengthens the Revenue's powers in relation to all overseas property of which the deceased was competent to dispose. If they cannot get the duty from the executor, they can proceed against beneficiaries and donees in this country.

Their powers are further strengthened by clause 24 (3) which extends the scope of section 9 (1) of the Finance Act, 1894. This subsection, in its present wording, imposes a charge on property in respect of which estate duty is leviable. The charge is to secure a rateable part of the estate duty falling on the estate as a whole. The part is, of course, in proportion to the value of the property charged. Section 9 (1) is expressed to be confined to property which does not pass to the executor as such. There is a proviso exempting property which has passed to a bona fide purchaser for valuable consideration. In relation to property which is within section 9 (1) but is situate outside Great Britain, clause 24 (3) provides that the charge shall extend to assets which form the proceeds of any disposition of the property. The sub-clause goes on to direct that the proviso, and also any other enactment relating to the charge, is to have effect accordingly.

Clause 24 (4) makes some minor amendments, all of which are confined to property situate outside Great Britain. References in the estate duty Acts to 'personal property' are to be construed as references to property which, by the local law, is movable property or which consists of a mortgage or other security. Under the second limb of this provision, the famous Jersey mortgages will be personal property. References in the estate duty Acts to 'real property' are to be construed accordingly.

Section 60 (3) of the Finance (1909–10) Act, 1910, made special provisions for appeals on a question of valuation of real property, including leaseholds. These provisions were amended by the Lands Tribunal Act, 1949. Broadly speaking, disputes as to valuations of land for estate duty purposes are referred to the Lands Tribunal. Clearly this system is inappropriate to land overseas. Clause 24 (4) (*b*) directs that it is not to apply, so that the ordinary rules contained by section 10 of the Finance Act, 1894, apply. Paragraph (*c*) of clause 24 (4) contains a similar amendment. The provisions, in paragraph 1 of the Seventh Schedule to the Finance Act, 1940, deal with the valuation of the 'benefits' for the purpose of computing a company's liability to duty under section 46 of that Act. Where the deceased occupied land, paragraph 1 (7) directs that the value of the benefit be based on the Schedule A value. Clearly there will be no Schedule A value for foreign land. Accordingly paragraph (*c*) directs that this provision shall not apply in relation to property outside Great Britain. Paragraph (*c*) makes a like amendment in relation to section 7 (5) of the Finance Act, 1894, which imposes a limit on the valuation of agricultural property. Incidentally, where overseas land charged to duty is agricultural land, it seems that the 'agricultural relief' will apply.

Section 7 (2) of the Finance Act, 1894, restricts the deduction of debts owed to persons outside Great Britain. An allowance for debts owed to persons resident outside Great Britain is to be made in the first instance only out of the deceased's overseas *personal* property, unless the debt is payable in, or charged on property, in Great Britain. Moreover no estate duty paid is to be repaid in respect of such debts except to the extent to which the Revenue are satisfied that the *personal* property of the deceased in the territory where the creditor lives is insufficient for the payment of the debts. Clause 24 (5) directs that the word 'personal' is to be deleted from section 7 (2).

Contrariwise 'Know-how'

FOLLOWING on the decision in the House of Lords in *Rolls-Royce Ltd v. Jeffery* last March, this month has seen another blow struck at the taxpayer in the 'know-how' cases. On June 5th Mr Justice PENNYCUICK allowed two appeals by the Crown, as a result of which payments for 'know-how' aggregating over £800,000 became charged to tax. At the same time his lordship laid down rules as to the tax treatment of payments of this kind.

The taxpayer was the English Electric Co Ltd and the assessments were for the years 1951–52 and 1952–53 in the sums of £3,100,000 and £3,420,000, respectively. The company appealed against them on the grounds that they wrongly included certain lump sums for the sale of 'know-how'. The company was incorporated in 1918 and carried on a manufacturing business as general engineers. By 1950 its authorized capital was £8 million and its issued capital £7 million. It had accumulated special information and technique in engineering processes which it had always jealously guarded. Although the company had not been in the habit of imparting this knowledge to others for reward, under pressure it had occasionally granted licences to other manufacturers. Having had long experience in the manufacture of land turbines, it was approached by the Admiralty in 1949 with a request to manufacture a prototype sea turbine which other engineering firms could manufacture.

In that year the company agreed with the Admiralty to provide the prototype, and also the manufacturing technique, engineering information and all other data necessary to manufacture sea turbines to that design. The consideration was the following lump sums: £40,000 for the licence to six other United Kingdom manufacturers; £25,000 for manufacture in Canada, and £25,000 for manufacture in Australia. In 1950, at the request of the Ministry of Supply, the company agreed with the Australian Government to provide the necessary 'know-how' for the manufacture of the Canberra twin-engined bomber in Australia, for a lump sum of £200,000. The agreement also provided for annual sums for the use of the company's designs and for information as to improvements in design; liability on these annual sums was not disputed. Again at the request of the Ministry of Supply the company agreed in 1951 with an American military commission that the Glenn L. Martin Co, be given the necessary 'know-how' to manufacture the Canberra for $1½ million (£536,739).

The Special Commissioners accepted the company's contention that the lump sums were capital sums and did not fall to be included in the company's taxable profit. At that time the House of Lords had given judgment in *Moriarty v. Evans Medical Supplies Ltd* (36 A.T.C. 277) but not in *Rolls-Royce Ltd v. Jeffery*.

Mr Justice PENNYCUICK expressed the view (according to *The Guardian* of June 6th) that the *ratio decidendi* of the *Rolls-Royce* case was that the 'know-how' of manufacturing technique was an asset in the hands of the manufacturer. It was of such a nature that it could be transferred to another party for a consideration. If it were communicated in such a way that it would lose all value to its original owner the consideration for it would be a capital sum. But if its original owner could still make use of that knowledge, then the consideration for its transfer would be income.

It was possible, his lordship said, that some cases might take an intermediate position between the complete loss of value on the one hand and a retention of value on the other. Such a case would call for an apportionment; the fact that the parties had called a particular sum 'capital' would be irrelevant. Coming to the facts of the present case, his lordship said he had come to the conclusion that the so-called lump sums were income and not capital payments. Prior to the agreements with the Australian Government the company had never manufactured sea turbines. Its Canberra aircraft had always been sold to the Ministry of Supply. There was no evidence of the company's activities in Australia or the United States. The company had imposed restrictions on the use of the 'know-how'; it had retained the use of it for its own purposes; and it could still impart the knowledge to others for profit. In other words, the 'know-how' asset was still intact.

Section 209 Under Fire!

by A BARRISTER-AT-LAW

NO provision in the Companies Act, 1948, received so much criticism from those who gave evidence, or submitted memoranda to the Jenkins Committee on Company Law Reform, as section 209; not so much on account of the general principles involved, but because of ambiguities and inconsistencies in the text, the creation of some time limits which serve no purpose save to delay, and one or two wholly undesirable features.

The section provides, in effect, that where a company makes an offer for all the shares of another company or for the whole of any class of shares, and that offer is accepted by the holders of 90 per cent of the shares, the transferee company can, upon the same terms, acquire the shares of the members who have not accepted the offer unless such persons can persuade the Court not to permit the compulsory acquisition. Special provisions apply where the transferee company already holds more than 10 per cent in value of the shares concerned. Minority shareholders, too, in certain circumstances, may require the transferee company to purchase their shares, and the transferee company is bound to do so. Such acquisition is upon the same terms as in the offer, or upon terms agreed between the offeror company and the dissenting shareholder, or upon such terms as the Court may order.

Transfers of Shares

The Bar Council pointed out that the expression 'transfer of shares or any class of shares in a company' in subsection (1) may mean

(*a*) the execution of an instrument of transfer by the transferor in favour of the transferee company; or
(*b*) the completion of the instrument by its execution also by the transferee company; or
(*c*) the delivery of the completed instrument for registration; or
(*d*) the actual registration;

but that whichever of these meanings is correct, it is inconsistent with subsection (2) which contemplates that a transfer in pursuance of the 'scheme or contract' (referred to in subsection (1)) may be made not only to the transferee company but also to a nominee of the transferee company. It is therefore suggested that subsection (1) should refer to 'another company or its nominee', as in subsection (2), and since the transferee company may wish all or any of the shares to be acquired by one of its subsidiaries, that transfer to a subsidiary should be equated with transfer to the transferee company itself.

Again, it is said that the reference in the section to 'transfer of shares' etc. merely imports a transfer of legal ownership and does not necessarily import that the transferee company becomes beneficial owner. Accordingly, the transferee company may be acting purely as a nominee of an individual or group of individuals, or a syndicate of companies, which appears to be contrary to the intention of the section (see now, *Re Bugle Press Ltd* ([1960] 3 All E.R. 791)). The Bar Council suggested that for the reference to 'transfer of shares' there should be substituted a reference to the beneficial ownership of shares, and that the benefit of the section should be confined to the acquisition of the beneficial ownership of shares by a single company or its subsidiary. The Accepting Houses Committee and Issuing Houses Association, on the other hand, saw no logical reason why the transferee must be a company.

Making of the Offer

It is not always clear in practice what is the date of the 'making of the offer' for the purposes of subsection (1). There is sometimes a preliminary agreement with the directors of the transferor company under which they agree to sell their shares, and the general body of shareholders is then invited to sell on the same terms. In such circumstances, is the date of the making of the offer the date when the preliminary agreement was made or the date when the invitation is sent out to the general body of shareholders? It is suggested that the latter should be the relevant date; and that the relevant date for giving notice to dissentient shareholders under subsection (2) should be the date of acquisition of a 90 per cent beneficial interest in the transferor company by reason of acceptances of the offer and the fulfilment of all conditions to which the offer is subject. Otherwise, the transferee company can, by delaying the execution by it of instruments of transfer or the presentation of transfers for registration, postpone the date of giving notice beyond the six months' period ('two months after the expiration of the said four months') referred to in subsection (1).

Different Classes of Shares

It is not absolutely clear in cases where there are two or more classes of shares in the transferor company whether acceptance by holders of 90 per cent in the aggregate fulfils the conditions of the section. Among those who submitted recommendations to the Jenkins Committee there was a general feeling that it should be necessary for 90 per cent in value of each class of share to have been acquired in order to claim the benefit of the section. On the other hand, Guest, Keen & Nettlefolds consider the section should make it plain that where an offer is being made for the whole of the share capital of a company consisting of shares of different classes, it is sufficient to obtain acceptances from holders of 90 per cent in nominal value of the total paid-up capital.

Mixed Terms

Problems arise where there are alternative share and cash offers, for the terms on which compulsory acquisition follows are not clearly stated. Unless in such a case the offer is carefully framed, the transferee company may find itself unable to operate section 209 if dissenting shareholders refuse to express an election. A suggestion was made to the Jenkins Committee that the transferee company should be entitled to stipulate, in giving a subsection (1) notice, which of the alternative sets of terms is to apply in the absence of an election by the dissentient within a specified time.

Another difficulty may arise where the consideration consists partly of shares in the transferee company and partly of cash, the cash being not more than 10 per cent of the total consideration. Subsections (3) and (4) may cause the transferee company to lose stamp duty reliefs under section 55 of the Finance Act, 1927 (as amended), because the shares issued to the transferor company on trust for dissentients will not have been issued to shareholders of the transferor company, and this may reduce the proportion of shares issued to such shareholders below 90 per cent. It is therefore suggested that the issue of shares to the transferor company under subsection (3) shall be deemed, for the purposes of section 55 of the Act of 1927, to be issued to the holders of shares in the transferor company.

Time Limits

Subsection (1) provides that a transferee company whose offer has been accepted by the holders of not less than 90 per cent in value of the shares (or class of shares, as the case may be) of the transferor company may give notice of its desire to acquire the minority shareholdings within two months after the expiration of four months from the making of the offer. It is generally agreed that it is pointless to make the transferee company wait for the expiration of the four months' period before giving notice to dissentient shareholders, and that it should be allowed to do so within six months or less after the condition of 90 per cent acceptance has been fulfilled. And although there is a time limit within which notices may be sent to dissentient shareholders, no time limit is set for the acquisition of their shares!

Stamp Duty

At one time it seemed that no stamp duty might be payable in connection with the compulsory transfer of shares under section 209, and Buckley, J., had so held in the case of *Ridge Nominees Ltd v. C.I.R.* ([1961] 2 All E.R. 354), on the ground that a 'sale' involved a consensus between vendor and purchaser, and in the case of a transaction under section 209 that element was absent. But the Court of Appeal ([1961] 3 All E.R. 1108) thought otherwise. It held that the question was not whether it could properly be said that the dissenting shareholder 'sold' her shares within the common law meaning of that word, but whether the transfer was a 'transfer on sale' within the meaning of the Finance Act, 1891. It appeared to the Court that it was a transfer on sale notwithstanding that the shareholder was compelled to sell against her will, for section 209 brought about a transfer having on its face all the essential characteristics of a sale and conferred authority for its execution which the transferor could not revoke.

Transferor Company Trustee for Dissentients

Where, pursuant to subsection (4), shares in the transferee company have been issued to the transferor company to hold in trust for dissentients, there is nothing to preclude the transferor company from exercising the voting rights attached to such shares. The Bar Council suggested it should be provided that the transferor company shall not exercise such votes except on the instructions of the beneficial owner. Courtaulds, however, thought that some independent person, such as a bank or the public trustee, would be more appropriate as a trustee. They pointed out that the transferor company (now a subsidiary of the transferee company) which has to act as trustee has generally no experience of

doing so, so that a disproportionate amount of administrative time has to be spent upon the task. In addition, difficulties arise on the winding up or reconstruction of the transferor company, and it seems surprising that the dissentient shareholder should have to accept as trustee the wholly-owned subsidiary of a company with which he has declined to deal.

Bidder Already Holding Shares

The proviso to section 209 (1) states that where the transferee company already holds more than 10 per cent of the shares subject to the offer, the subsection shall not apply unless (*inter alia*) the assenting shareholders not only hold 90 per cent of the shares involved but are also not less than three-fourths in number of the holders of those shares. The Accepting Houses Committee and Issuing Houses Association pointed out that there is no similar requirement for acceptance by three-quarters in number of the holders where the bidder holds no shares or 10 per cent or less. They considered it difficult to justify this inconsistency and have recommended that assent by three-quarters in number of the holders should be required in all classes of bids before the provisions for compulsory acquisition can be enforced.

Mr Registrar Berkeley would go further. He thinks it unfair on the dissentient shareholder to place the onus of applying to the Court on him, for the reason that apart from the financial risk this involves he has seldom a sufficiently intimate knowledge of the company's affairs to make out his case. On these grounds it is said that there is a case for requiring the sanction of the Court for all compulsory acquisitions of shares or compulsory replacements of shares by shares of another company.

Certainly there is no dearth of ideas concerning the ways in which section 209 should be amended, and it will be interesting to see what the Jenkins Committee has to say about them in its report to be published next Thursday.

The Profession Abroad

I—INTERNATIONAL FREEDOM

by MARY E. MURPHY, Ph.D.(Lond.), C.P.A.

This series of articles in which Dr Murphy, of Los Angeles State College of Applied Art and Sciences, surveys the professional scene in various parts of the world is particularly appropriate at the present time when Britain is contemplating entry into the European Common Market, and the profession at large looks forward to the forthcoming International Congress in New York.

AFTER the International Congress on Accounting in Amsterdam in 1957, the writer undertook a survey of professional organization and practice in various parts of the Free World. Appreciation is expressed to those who offered material on their societies and information concerning national accounting standards.

International meetings in all professional fields have become part of the normal pattern since 1945; but there is something deeper, more significant, than social intercourse which draws accountants together. It is the desire to ensure the widest possible exchange of principles and procedures, and to work toward the achievement of international auditing and financial reporting standards which advance the finance and enterprise of both mature and underdeveloped countries. It is essential that there be greater freedom to practise accounting throughout the world. The removal of barriers to the free passage of, and practice by, accountants should be an aim of all professional accounting societies.

Professional Accountant's Vital Role

In spite of the fear of restrictive laws, exchange control and expropriation, the encouragement of venture capital is especially important at the present time. The professional accountant has a vital role in overseas finance and company management, but probably insufficient attention has been devoted to this role in current publications. Some time ago the President of the New York Stock Exchange and the editors of *The Economist* and *Fortune Magazine* singled out the diversity of accounting standards in the Free World as a serious obstacle to the international flow of private investment capital.

Commercial treaties negotiated in recent years by the United States Government with a number of countries include clauses providing for the free passage of accountants, auditors and other technicians into the territories of the signatories for the purpose of making examinations and investigations

on behalf of their own nationals. For example, treaties with Denmark, Greece, Israel and Japan, ratified by the United States Senate in 1953, contained provisions to guarantee the right of American business interests abroad to employ accountants and auditors of their own choice.

At the 1926 International Congress, Sir Albert W. Wyon declared: 'As trade is said to "follow the flag", so will accountancy inevitably follow the growth of international commerce and finance.' Yet Sir John Somerville, when President of The Institute of Chartered Accountants of Scotland, warned at that body's centenary celebration (1954): 'In many countries overseas the doors are shutting and the traditional outlets for Scottish chartered accountants are tending to become fewer.'

International Barriers

Serious impediments arise, however, where restrictions based on nationality or residence are imposed, and they are not in the best long-term interests of the country which imposes them. Experience in the United States, for instance, was for Americans to learn principles and procedures from British chartered accountants who crossed the Atlantic in the 1880s and the 1890s to audit the accounts of British-owned enterprises. In a short time thereafter, British partnerships were established in various cities of the United States. Later these partnerships were converted to American ownership and local firms of professional accountants were formed.

The important issue today is that practitioners in every part of the world should recognize the necessity of removing international barriers to practice, irrespective of whether these barriers are erected by dissimilarity of language, custom or code. Over the years, the international aspects of practice have been fostered by the staffs of the large accounting partnerships which have true colonizers in every corner of the globe, bringing their specialized talents and high ethical standards to the solution of local auditing and business questions. Far too little has been written about the pioneers of accountancy. Even today, almost nothing is available concerning the problems of establishing an overseas practice, such as those arising from the need to train nationals and integrate them with staff members recruited abroad to work in unsatisfactory or unfamiliar conditions, and to sustain the best traditions of the accounting profession. These experiences are buried in the files of international firms; especially the story of the development of uniformity of standards and policies by these firms over the last seventy-five years.

The American Institute of Certified Public Accountants maintains a Committee on Foreign Affairs 'to promote international goodwill and exchange among accountants throughout the world, and to encourage freedom of movement of accountants and auditors across national boundaries'. In a pamphlet entitled *Accounting for International Trade and Investment*, prepared by this committee, it is stated in unequivocal terms that accountants should be permitted to practise wherever their clients' businesses require them to do so, and that any curtailment of this freedom constitutes a hindrance to international trade and investment.

Disclosure in Accounts

The listing of foreign shares on American stock exchanges can make an important contribution to the movement of United States capital abroad. However, one impediment to listing is the necessity of enforcing full disclosure of company financial data.

In Italy, for instance, sound accountancy is frequently distorted today by the desire to avoid taxation; this attitude stems from the fact that Italian taxes are almost confiscatory. Costs are padded on the theory that, although not all of them will be allowed, prudence suggests that they be reported at as high a level as possible. Some Italian companies maintain three sets of books – one for the tax collector, one for public stockholders, and one for owners and inside managers.

There is a widespread practice of concealing assets in France from both the Government and the public by carrying properties on company books at only a fraction of their present values – a practice made easier by continuing inflation. In Germany, where the need for capital has risen since the war, in many cases profits were reported not just after normal depreciation but after investment in new plants with a resultant underestimation of earnings. Though it is to be hoped that the new German company legislation outlined by Wirtschaftsprüfer R. J. Niehus in *The Accountant* of April 28th, 1962, when enacted, will remedy this.

Many European companies do not provide consolidated data for the assets and profits of their subsidiaries. Dividends from subsidiaries are shown on the books, but these may or may not be based on earnings, and the amount paid into the parent company is discretionary. Another accounting problem which is relevant to listing of foreign shares on the New York Stock Exchange relates to statements of sales and earnings. In France, Germany, Italy and the United Kingdom the statement of sales and cost of sales is not obligatory. Much remains to be accomplished to achieve certain objectives in accounting and auditing, especially relative to companies with shares traded in on the large stock exchanges of the world. The flow of capital must be encouraged to all parts of the Free World.

Enlargement of the range of the professional accountant's and his client's viewpoint from the parochial to the international is increasingly important in rapidly shifting international trade. This topic is the motivating force behind a series of articles on comparative professional accountancy in some other countries which will appear in subsequent issues of *The Accountant*.

Weekly Notes

JENKINS COMMITTEE REPORT

LAST week we announced that the report of the Jenkins Committee on Company Law was in the hands of Mr Erroll, President of the Board of Trade, and that its publication was imminent. In a parliamentary reply on June 8th (reproduced on another page) Mr Erroll stated that the report will, in fact, be published on June 21st. The report and the Committee's recommendations will be reviewed in our issue of June 30th.

COST ACCOUNTANTS' NEW SYLLABUS

STARTING with the June 1964 examinations, The Institute of Cost and Works Accountants will inaugurate a new syllabus the main feature of which is that the present Intermediate, Final and Management Accountancy examinations will be replaced by a five-part examination. In the existing syllabus, an applicant for associate membership must have passed the Final examination and an applicant for fellow membership must have passed the examination in Management Accountancy. Under the new regulations, applicants for either associate or fellow membership must have passed all five parts of the syllabus.

As before, practical experience will continue to be an essential prerequisite of membership – three years practical acquaintance with cost accountancy for associates and five years in a responsible position in management accountancy for fellows. Finally, the Preliminary examination of the Institute will cease after June 1963, and thereafter applicants for registration as students must produce evidence that they have passed an examination equivalent to G.C.E. standards with passes at 'O' levels in five subjects including English and mathematics.

Full details of the changes are given in an informative booklet entitled *Syllabus and General Information*, available from the offices of the Institute at 63 Portland Place, W1. The principal effects of the reconstruction will be to widen the scope of the test in financial accounting and to bring management accountancy and taxation (as far as it applies to industrial undertakings) more prominently into the curriculum.

TASKS FOR 'NEDDY'

IF the mere statement of problems contributes in any degree to their solution, then the National Economic Development Council is already making progress. At its second main business session last week the Council formulated nine main topics for examination, more especially with the object of ascertaining the conditions favourable to economic growth. The nine subjects upon which material is to be prepared by Government departments, universities and the National Institute of Economic and Social Research are as follows: balance of payments; saving and investment; technological change; demand; regional problems; manpower and management; taxation, and public expenditure. Private individuals will also be invited to give their views on these matters.

Nobody expects quick results from 'Neddy', but a consideration of the above subject headings suggests that if the Council is really going to devote itself to examining all these issues, it is going to work for a long time with little result. Of course, there are still gaps in our knowledge of these issues, but the main problems of the United Kingdom economy are sufficiently evident to enable 'Neddy' to begin considering policy. As a start there are the problems of restrictive practices and incomes, to mention only two. There seems to be a real danger that 'Neddy' may be diverted from its professed function of breaking the log-jam of our economic difficulties and develop into just another economic information bureau. Any council with its membership representing diverse and conflicting interests, as is the case with the N.E.C.D., can nearly always agree on study topics. The test will come when some policy has to be formulated on the basis of those studies. In the meantime we can but wait and hope.

THE ACCOUNTANT'S IMAGE

OUR amiable contemporary *Punch*, in the course of some light-hearted thoughts last week on *The Accountant* Annual Awards, directed a dart at the accountancy profession in general for 'having kept its public image so private'. Accountants, it asserts, simply don't exist except as dim Dickensian shades on high stools. Now this observation is about as untrue and unfair as would be the counter-assertion that *Punch* has not changed at all since the days of Dicky Doyle and George Du Maurier and these comparisons need not be carried further.

What should be noted, however, is that although accountants are habitually reticent about their activities, both public and private, as befits professional men, the good deeds they do in this naughty commercial world often project if not a glare at least a glow, and it is surprising that so percipient an observer of current affairs as Mr J. B. Boothroyd, the writer of the article, should not have long since recognized the modern version of the species even by this modest light. Any obscuration of the image must in this case then clearly (or rather darkly) lie in the eye of the beholder; but we cannot help thinking that his air of wondering innocence – characteristic of regular *Punch* writers in their subjective weekly musings – is wholly assumed. If it is not, then it is just as well that Mr Boothroyd is not intended to be taken seriously.

COMMON MARKET DEBATE

'THERE has been more public discussion of this issue in the Press, on the radio, on television and by every other means than there has been about any other single issue in British politics since the war.' Thus commented Mr Heath on the issues of Britain's application to join the Common Market, and in view of the continued uncertainty and even ignorance on the basic issues, last week's debate in the House of Commons was both interesting and informative. Whether it deserved the flattering remarks on its quality made by Mr Silverman and Mr Brown is another matter. The one vital point to emerge is that as yet the country is as far from being in a position to decide its policy, on what is probably the most important issue of the century, as it was two years ago.

Mr Heath was at pains to stress the care with which each separate controversial point was being discussed between himself and the E.E.C.; Commonwealth interests were being urged, as were those of British agriculture, while textiles and fishing would not be forgotten. The Commons debate was agreeable in tone, for the simple reason that there was nothing contentious to debate. Each member could state his own views subject to qualifications of his own making. Whether, when later this year the Government lays before the House the terms upon which the United Kingdom is offered admission to the club, the debate will be so quiet is another matter. For the time being the majority of voters must, in the broadest sense of the term, be 'fence-sitters'. In the meantime the Conservative Party is doing its best to inform the electorate of what is at stake. A new booklet[1] contains approved answers to some sixty-five questions on the Common Market, and possibly reflecting the mood of the electorate, most of the questions are critical and even hostile. However, this is the way to stimulate public debate and on this score the booklet is to be welcomed.

HIGHER PORT CHARGES

LAST week's announcement by the Port of London Authority of big rises in London port charges draws attention to a field in which British industry may be at a serious disadvantage if the United Kingdom joins the European Common Market, namely the high cost of loading and unloading ships at many British ports. Dutch manufacturers, for example, believe that bulk cargoes can be loaded and unloaded at Rotterdam very much more quickly and cheaply than at British ports and this was true before the recently announced increases.

The main reason for the increases in P.L.A. charges, which come into force early in July, is, of course, to meet the cost of the recent pay award to dock workers, but the proposed increases appear to be higher than was generally expected ranging, from 7 per cent on rates for discharging vessels to 19·3 per cent for hire and use of plant. There will be a rise of 17·5 per cent in the charges for vessels using P.L.A. docks and in river navigation dues. Total rates and charges on goods for shipment are expected to rise by about 15 per cent.

[1] *Common Market: Questions Answered.* Conservative Research Dept, 24 Old Queen St, London SW1. 9*d*.

GROWTHMANSHIP

THE target of 4 per cent growth per annum announced by the National Economic Development Council 'can be described in no other terms than as a most irresponsible piece of growthmanship on the part of the Government and official thinkers'. Such is the opinion of Mr Colin Clark, whose paper *Growthmanship*, published last March in the 'Hobart' series of the Institute of Economic Affairs (*The Accountant*, March 25th, 1961), has just been reprinted and expanded.[2] The main thesis of the paper was that much of our investment was ill-directed and, far from conducing economic growth, by straining our limited resources to the point of inflation actually retarded expansion.

In a postscript Mr Clark reiterates this view and stresses that in so far as much of our current investment is not labour-saving, while that which is may not be allowed to operate effectively because of restrictive practices, the best solution to Britain's difficulties is to import labour. For this reason he criticises the Immigration Bill and hopes that entry into the European Economic Community will induce labour to come to Britain, just as the increased competitive conditions within the Common Market will reallocate the labour supply in favour of the most efficient industries.

Mr Clark rejects the view that the apparent success of recent French and Japanese economic policy is the direct result of planning as such. In any case, France has continued to experience rising prices and devalued the franc in 1958. For these reasons, Mr Clark is sceptical of the likely benefits to be derived from 'Neddy' unless, as has been so often argued in this journal, competitive forces are allowed to provide the sorely needed stimulus to efficiency.

BUILDING SOCIETIES REPORT

PART 5 of the report for 1961 of the Chief Registrar of Friendly Societies dealing with Building Societies published last week (H.M.S.O., price 4*s* 6*d*) records that during the year the total assets of all societies increased by £270 million to £3,436 million. The corresponding increase in the previous year was £259 million. The amount of £620 million received by way of subscriptions to share and deposit capital and loans (excluding bank loans and advances from H.M. Government) was £36 million more than in 1960; withdrawals at £522

[2] *Growthmanship* (Second edition). Hobart Paper No. 10. Institute of Economic Affairs, 66A Eaton Square, London SW1. 6*s* net.

million, however, rose by £50 million. With the addition of interest, share, deposit and loan capital increased by £203 million compared with an increase of £206 million in 1960. The average rate of interest on shares was 3·54 per cent and 6·28 per cent on mortgages as against 3·37 per cent and 5·89 per cent respectively than in the preceding year.

The amount of £546 million advanced on mortgages was £14 million less than in 1960 (the record year to date) the average amount advanced being £1,500. The year ended with 2,425,000 borrowers holding 2,455,000 mortgages, the average mortgage debt standing at £1,170.

The report refers to additions to and removals from the list of societies designated for the purposes of section 1 of the House Purchase and Housing Act, 1959, and to the extension of the powers of trustees to place trust funds in such societies. Two orders were made during the year under section 6 of the Building Societies Act, 1960, prohibiting the societies concerned from accepting further investments. Directions were made under section 7 of the same Act in respect of three societies, prohibiting the issue of advertisements by those societies. An account of these proceedings is included in the report.

A list of the banks designated as ones in which building societies are authorized to place their funds forms Appendix I to the report and the notes issued for guidance in completing the form of annual return are reproduced as Appendix II.

This is My Life . . .

by An Industrious Accountant

CHAPTER 128

OFFICE managers, being characters who normally work in close harmony with the accountants, are accordingly worthy of close and sympathetic study. Our own O.M. is a case in point. For years an austerely-minded bachelor, happy in his snug little flat with his library and his TV, he has found himself almost swamped by the tidal wave of his approaching nuptials. There were the mornings when he arrived at the office with his fingers swathed in plaster ('put up a shelf in the kitchen last night'), or limping painfully ('there's more to fixing pelmets than you'd think'). Finally, I told him to borrow a couple of our carpenters on the Q.T.

He had an obvious short struggle with his conscience, but yielded when he had to get his forehead stitched ('never realized there could be so many pipes in a bathroom'). There's nothing like marriage for teaching humility to these autocrats; the most expert manager must defer to the handyman in technical matters.

We gave him a great send-off finally. The directors presented him with a silver coffee-service; the staff with a refrigerator. We have a ceiling fixed for individual subscriptions in such cases, very properly, but it was pleasant to see how many of the outside employees volunteered to chip in also. The O.M. was really touched and could hardly speak in response.

His particular friends gave him a stag dinner at a remote hotel before seeing him off on the night train to the south, to his intended's home town. It was quite a session: Scotty, the sales manager, the engineer, a few accountants, departmental managers, myself . . . old feuds forgotten, best wishes and toasts to the future and lusty speeches . . . and a final souvenir.

With the fruit salad came a parcel bigger than a hat box, to be presented by Scotty who was in great form; all evening he had been vainly pressing the O.M. to sample Gaelic coffee, a lethal concoction like a tasty time-bomb, and drinking the rejects himself. The O.M. cut the string and rose to reply. He tore off the paper to reveal a similar parcel the size of a hat box; another attack disclosed another parcel slightly smaller. The party became hilarious.

By the time the parcel was down to cigar box size, the room was in turmoil. Paper and string littered the table and floor, the fat head waiter was nearly having hysterics, other noisy diners were flocking around us. The O.M. was crimson with embarrassment: he finally worked down to a slim cylinder which disgorged a beautifully chased gold pencil inscribed with his initials. He became so touched at this stage that he nearly took his first-ever drink of alcohol. Fortunately for him, Scotty had just finished both glasses.

The strains of 'Jolly good fellow' were raising the rafters when we noticed how the time was going and had to rush for the cars. Four of us piled into Scotty's. The O.M. drove, having seized the key on the plea that it was hardly fair to widow his bride before the wedding; the engineer sang a Welsh lament of piercing poignancy as we sped towards the little local station. It was dark and damp; the last train was already in sight; we all seized the O.M.'s assorted luggage and raced for the platform. We only just made it with a scramble. The O.M. leaned out through the window and waved and shouted incoherently as he was borne into the night; we roared appropriate messages after him.

The porter locked up and cycled off through the heavy downpour; we sat back comfortably in the car and waited for Scotty, now strangely silent and staring, to drive us home. It was quite a shock to realize that the excited O.M. had gone with the only key. That station was nearly a mile from the nearest town. I was wetter out than in before we got home.

Reviews

An Executor's Accounts and the Law Relating Thereto

Thirteenth edition by E. MILES TAYLOR, F.C.A., S. C. HOUGH, A.I.B., and O. GRIFFITHS, M.A., LL.B., Barrister-at-law. (Textbooks Ltd, Harpenden. 30*s* net.)

The fact that this familiar students' textbook has reached its thirteenth edition, is itself a very fair indication of its enduring value. The new edition is as useful as the earlier ones and the plentiful examples and reliable legal commentary are of obvious help to the student.

It deals with the changes introduced into estate duty since the last edition. In particular the Finance Act, 1959, changed the basis of the imposition of liability on life policy moneys and the new edition deals with the new rules, and gives practical examples. At the same time, treatment of the old rules has now been dropped. The new rules for rapid succession relief, introduced in 1958, are also dealt with.

The printing and binding are of excellent and serviceable quality and there is also that very essential aid to students, a good index. This also enables the book to be used as a quick-reference guide by practitioners, though obviously there is a limit to the depth reached by a work designed primarily to meet the needs of examinees.

A point which has escaped notice is that use of the designations 'F.C.A' and 'F.S.A.A.' together, following integration of the Society of Incorporated Accountants with the Chartered Institutes, is now out dated.

Book-keeping and Accountancy for Solicitors

Second edition, by P. HARRISON and A. G. HILLMAN, F.A.C.C.A. (Butterworth & Co (Publishers) Ltd, London, 50*s* net.)

The result of collaboration between a solicitor and an accountant should be excellent advice for the reader. As any business man knows, especially those who have had experience of the problems of setting up trusts and the like, the best results are only to be obtained by full consultation with and between both types of adviser. In spite of this, one occasionally comes across a sort of mutual suspicion between members of the two professions, and one greets with pleasure, therefore, the fruits of a collaboration that is obviously genuine and happy.

The arrangement of this book, intended for law students, is both novel and helpful. It consists in fact of two books, or rather volumes, joined together by a strip of cloth which, when both books are closed, becomes the back binding. Thus, both volumes – one with the text and the other with the accounts examples and index – may be opened at the same time, side by side. It is a convenient arrangement which could with advantage be used more often.

The book takes its reader through the rudiments of book-keeping for sole traders and partnerships, and the basic methods of interpreting final accounts to meet the needs of the proprietors and creditors or prospective purchasers; then deals rapidly (in seven pages) with companies, and proceeds to comment on balance sheets and to explain 'yields' and 'earnings' in evaluating company shares. All this, of course, is elementary to the accountant – some of it even naive – as for example the comment that if an increase in fixed assets values (on a company's balance sheet) included replacements, the 'reserve towards increased cost of replacements of fixed assets' should have been reduced. If, indeed, the purpose of that reserve was the conservation of funds for replacement costs over and above normal depreciation or amortization, surely one would be surprised if it *were* reduced (unless it was decided to capitalize some of the reserves as bonus shares).

For accountants, therefore, the 'meat' of the book will lie in chapters 13 to 17 (forty-two pages) and the examples (eighty pages) in the second volume, where the book really gets into its stride. It is well printed and the examples are detailed and clear.

Amerikanische Standardkostenrechnung

by Dr KARL WEBER. (Verlag P. G. Keller, Winterthur) (German text).

This scholarly book is quite unlike any other work on the subject of standard costing, although Professor David Solomons may be said to have anticipated it in *The Historical Development of Costing* (*Studies in Costing*, 1952). Dr Weber has endeavoured to trace the growth of the techniques used over the last forty years, and the twenty-three pages of bibliographical references give some indication of the thoroughness with which he has executed this task.

He is careful to point out the early work of Garcke and Fells in *Factory Accounts – Their Principles and Practice* (1887) and to cite the writings of H. Stanley Garry (in *The Accountant* of 1903) and Thomas Downie, jun., as evidence of the birth of the idea in Britain. Nevertheless, the major source used is the body of work published by the American National Association of Accountants (formerly the National Association of Cost Accountants) in their bulletins, articles and annual congress reports; hence the title of his book. The availability of this material draws renewed attention to the importance of accounting research, not as the publication of compromise opinions culled from practitioners, as is so often the case in Britain, but as objective fact-finding in the area of business management.

If any criticism of this book is warranted, it is that it shares – in common with most publications in its field – the weakness of a historical survey, and pointers for the future are not to be found. Thus,

no mention is to be found of the concept of direct standard costing (such as is expounded in Mr K. S. Most's recent book), which promises to relieve cost accountants of the complex and usually futile drudgery of overhead variance analysis.

A Textbook of Economics

Third Edition by J. L. HANSON. (Macdonald & Evans Ltd, London. 20*s* net.)

The appearance of a new edition of Dr Hanson's textbook underlines the popularity with many students of a textbook which within its covers compresses a mass of information covering the entire examination syllabus. The author gives the historical background where it is relevant, e.g. population and banking, and up-to-date statistics. Each chapter is rounded off by a selection of examination questions culled from a wide range of examining bodies.

Opinions among teachers of economics vary widely as to the desirability of this type of comprehensive text but the examination requirements of most professional bodies are so wide that such a book undoubtedly serves a great need. There will no doubt be future editions of this competent work.

The 1961 Income Tax Legislation in the Federation of Rhodesia and Nyasaland

by A. S. SILKE, M.COM., PH.D.(CAPE TOWN), C.A.(S.A.). (Juta & Co Ltd, Cape Town. £1 6*s* 6*d* net.)

This is a sixty-six-page booklet between semi-stiff covers which is divided into four parts. Part I sets out the rates of income tax and rebates for the year of assessment ended March 31st, 1961, with arithmetical illustrations. Part II expounds the changes made by the 1961 amendments to the Income Tax Act. Part III is devoted to taxation tables showing the precise tax bill for married and unmarried persons at selected income levels, for the year ended 31st March 1961. Part IV reproduces verbatim the text of the 1961 Taxation Legislation.

Schimmelpfeng European Register of Industry and Commerce

(Publishing & Distributing Co Ltd, 177 Regent Street, London, W1.)

This credit rating and market guide covers some 50,000 companies and individuals in western Europe. Such registers are a competitive field in the U.K., there already being several well-established registers of the kind. Like others, the new register is offered for a loan fee, remaining the property of the publishers. This again is common practice in cases where credit ratings are made available.

With 50,000 entries spread over sixteen countries (excluding the United Kingdom) the average number of entries per country is only just over 3,000, though there are, of course, likely to be considerably more for the larger countries. The register's appeal is to those requiring a credit rating on companies abroad.

This review is based on a sample volume which covers Austria, Denmark, Finland and France. Though the compilation is in English, and countries are arranged alphabetically, entries are listed by towns spelt in the local language: Copenhagen, for instance, appears under 'K'. We would have thought that in an English edition, there is a good deal to be said for keeping to English place spelling. Presumably arrangement by towns has been proved preferable for some reason, but this can be awkward for speed of reference if one does not know where a company's head office is situated. In a comparable United Kingdom compilation, how many would look immediately for Stewarts and Lloyds under Glasgow?

French alphabetical order, moreover, is a problem of its own and an introductory paragraph to the French section (and perhaps for some others) explaining the principles of arrangement adopted would have been helpful. The French have scant respect for correct company names, even their own at times.

The United Kingdom price of fifty-five guineas includes twenty-four credit reports free of charge for countries in the register and also twelve ratings free of charge for concerns not included, provided the company is in the publishers' international archives.

Finance and Commerce

Complications

A FURTHER glimpse of the complications that have followed from the Jasper affair is seen in the reprint this week of the accounts of Reliable Properties Ltd, which is now under a board of six with Sir Dingwall Bateson, a Past President of The Law Society, as chairman, and with three chartered accountant members. The auditors' report points out that 'no provision has been made in these accounts for possible liability for the bank loan of £500,000 referred to in Note 1 (*b*), nor for any resulting loss which may be irrecoverable'.

Note 1 (*b*) explains that on August 24th, 1959, a cheque for £500,000 was drawn on the company's bank account in favour of Harewood & Co. The bank debited this cheque to the company and took as security, deeds and documents relating to leasehold properties of the company's subsidiary.

The company contends that the drawing of this cheque and the application of the proceeds were unauthorized and that the security given to the bank was invalid. Proceedings to establish the rights and claims of the company and its subsidiary arising out of these transactions were commenced by a writ issued in the Queen's Bench Division of the High Court, on May 16th, 1961.

Accordingly, the accounts exclude the transactions which are the subject of the writ, and the whole of which, the note affirms, are repudiated by the company and its subsidiary.

Premium

The premium paid on the acquisition of shares in a subsidiary represents the excess of the cost to the company (viz. £667,370 paid in cash *plus* costs) of the subsidiary's capital over its net assets taken at book value at acquisition date. The cost of the shares was equal to the total of the professional valuation of the subsidiary's leasehold properties and furniture and fittings at the time of the acquisition in June 1959, *plus* the stamp duty on the share transfers. The subsidiary, it is stated, is a property-dealing company and its net profits on realizations will be liable to tax. For this reason, the directors are unable to express an opinion as to the value of the premium.

No provision has been made for taxation in respect of any property transactions as the partial realizations to date are regarded as being reduction of the original

£94,684			£66,862

cost. The group's taxation position is under discussion with the Inland Revenue and has not been agreed since the subsidiary started trading in 1959.

The parent balance sheet, it will be noted, carries a bank balance of £111,677 – but the amount is held by the bank as collateral security which is challenged.

Suspense

The suspense account of £63,190 represents two cheques for £8,750 and £4,000 paid to Harewood & Co in 1959, and £50,440 bank interest and charges paid in connection with the £500,000 bank loan. A further £1,653 of Harewood & Co indebtedness in respect of property transactions produces the £64,843 in suspense in the consolidation. The directors are not able to express an opinion as to the value of this account and all the transactions are still under inquiry.

At the meeting, Sir Dingwall said the proceedings in connection with the £500,000 were still *sub judice* and the action had not yet reached the Courts. The board, he said, was unable to pursue a policy of selling the properties because the deeds were held by the bank. But management of the properties through agents continued.

Group profits, said Sir Dingwall, had been substantially affected by special taxation provisions required during the first years of the subsidiary's trade because the first year's profits provided the basis for assessing tax for the first three fiscal years. The appropriate amounts had been shown separately in the profit and loss account, but the company's taxation affairs were 'extremely complex'.

Under these circumstances the accounts, as we said at the beginning, offer hardly more than a 'glimpse' of the situation.

RELIABLE PROPERTIES LIMITED AND ITS SUBSIDIARY COMPANY

REPORT OF THE AUDITORS
TO THE MEMBERS OF RELIABLE PROPERTIES LIMITED

Attention is drawn to the Notes [below] which contain material reservations concerning the annexed Accounts.

We have audited the annexed Balance Sheet and subject to the reservations in the Notes, have obtained all the information and explanations which we considered necessary. In our opinion proper books have been kept and the Balance Sheet is in agreement therewith.

We have examined the annexed Consolidated Balance Sheet and Consolidated Profit and Loss Account.

No provision has been made in these Accounts for possible liability for the bank loan of £500,000 referred to in Note 1 (b) nor for any resulting loss which may be irrecoverable. Subject to this remark and to the reservations in the Notes, in our opinion the Balance Sheet and Consolidated Accounts comply with the requirements of the Companies Act, 1948, and give a true and fair view of the state of affairs of the Company and of the Group as at 30th June, 1961, and of the profit of the Group for the year ended on that date.

121, Queen Victoria Street,
London, E.C.4.
1st May, 1962.

BINDER, HAMLYN & CO.,
Chartered Accountants.

NOTES ON THE ACCOUNTS

1. (a) **Leasehold Properties**
No provision has been made for amortisation of the leases all of which have 72 years or more to run.
(b) **"Cheque for £500,000"**
On the 24th August, 1959, a cheque for £500,000 was drawn on the Company's bank account in favour of Harewood & Co. The Bank debited this cheque to the Company, and took as security Deeds and documents relating to leasehold properties of the Company's Subsidiary.
The Company contends that the drawing of this cheque and the application of its proceeds were unauthorised and that the security given to the Bank is invalid.
Proceedings to establish the rights and claims of the Company and the Subsidiary arising out of these transactions have been commenced by a writ issued in the High Court of Justice, Queen's Bench Division, on the 16th May, 1961.
Accordingly, the Accounts exclude the transactions which are the subject of the writ, and the whole of which are repudiated by the Company and the Subsidiary.

2. **Premium.** Excess of the cost to the Company (viz. £667,370 paid in cash plus costs) of the share capital of the Subsidiary over the net assets of the Subsidiary taken at book values as at date of acquisition. (See Note 6.)
The Subsidiary is a property dealing Company and its profits less losses on realisations over and above the cost of its properties will be liable to taxation and for this reason the Directors are not able to express an opinion as to the value of the premium.

3. **Bank Balance.** The Company's bank balance of £111,677 is held by the bank as collateral security which is challenged.

4. **Suspense Account.** The items included under this heading comprise the following:—

1960 £		£
	Harewood & Co.	
8,750	Amount paid by cheque, 12th August, 1959	8,750
4,000	Amount paid by cheque, 11th September, 1959	4,000
24,041	**Bank interest and charges** paid in connection with the bank loan of £500,000 referred to in Note 1 (b) above	50,440
36,791	**Parent Company's Balance Sheet**	63,190
	Harewood & Co.	
1,653	Indebtedness in respect of property transactions	1,653
£38,444	**Consolidated Balance Sheet**	£64,843

The Directors are not able to express an opinion as to the value of this account and all the transactions are still under enquiry.

5. **Taxation.** No provision has been made for taxation in respect of any property transactions as the partial realisations to date are regarded as being in reduction of the original cost. The taxation position of the Group is under discussion with the Inland Revenue and has not been agreed since its Subsidiary commenced to trade in 1959.

6. **Shares in Subsidiary.** The cost of the shares was equal to the total of the professional valuations of the leasehold properties and furniture and fittings of the Subsidiary at the time of acquisition in June, 1959, plus the stamp duty paid on the transfers of the shares.

CITY NOTES

THE overall mood of stock-markets still seems to be largely one of 'wait and see'. That is particularly true of the situation on Wall Street. With a clear picture of what a break on this centre can do to London markets, investors naturally have more than a weather eye on the American centre.

Politics continue to play quite an important part. The disenchantment with the Government evidenced at recent by-elections, and some vague talk of a snap election some time before the present administration's term runs its course, all produce uncertainty.

Meanwhile, however, two opposing ends of the market show up well. British funds continue to have an investment following, buyers seeing certain capital appreciation plus yield in good dated issues, while on the other hand gold shares are still being bought, not only as a hedge against the American situation but also on more favourable news from South Africa.

It remains to be seen how long the present uneasy mood will last, but all the time company results tell of reduced profit margins, and emphasize the difficulty of off-setting rising costs – particularly wages – investment will naturally remain selective and any recovery is likely to be somewhat tender.

How to Decimalize the Currency

SIR, – I whole-heartedly support The Association of Certified and Corporate Accountants' recommendation for a one hundred-penny unit. This support is based on personal experience of decimalizing British currency on a similar basis. In the early 1930s I worked as an accountant in Trinidad where the British West Indies dollar of one hundred halfpennies was in common use. At that time the legal currency was British £ *s d*; £1 and 10*s* notes circulated simultaneously with bank-notes for multiples of British West Indies dollars of one hundred halfpennies (or cents, as halfpennies were known locally) and the coins in use were British silver and bronze.

Shop prices, wages and fares were all quoted in British West Indies dollars and cents (i.e. halfpennies), but shop assistants had no difficulty in using British coinage and giving change for it. Accounts were mostly kept in British West Indies dollars but £ *s d* was also used for invoices etc., relating to external transactions and for all Government business. Locally recruited account clerks had no difficulty in rapid conversion of amounts in £ *s d* into British West Indies dollars for making entries in the books nor in converting local dollars to £ *s d*. All these things should be even easier using a hundred-penny unit instead of a one hundred-halfpenny unit.

Since those days, the British West Indies dollar has become the legal currency there, and decimal scale coins have been introduced, but my experience showed clearly that the one hundred-penny unit can be introduced side by side with £ *s d*; can be run in conjunction with it without inconvenience and then can take over from it completely. No real problem arises from the use of old-style coins with the new unit nor, given a little practice, is there any difficulty in associating amounts in £ *s d* with amounts in one hundred-penny units or vice versa.

Yours faithfully.

H. W. FISHER, F.C.A.

London WC2.

Taxation Case

A full report of the case summarized in this column will be published, with a Note on the Judgment, in the 'Annotated Tax Cases'.

Jarrold v. John Good & Sons Ltd

In the High Court of Justice (Chancery Division)
May 25th, 1962
(Before Mr Justice PENNYCUICK)

Income tax – Capital allowances – Machinery or plant – Initial allowance – Annual allowance – Movable partitions in office – Whether plant – War Damage Act, 1943, sections 6 (1) (a), 103 (5) – Income Tax Act, 1952, sections 271, 279, 280.

The respondent, a shipping agent, had a departmentalized business, and the number of employees working in each department varied from time to time. In addition, the gain or loss of an agency involved the setting up of a new department or the closing of an existing one. It was a commercial necessity that the respondent's office accommodation should be flexible, so that the section devoted to any particular department could be increased or diminished as occasion required.

The respondent owned and occupied a steel-frame building, part of which was used as a warehouse and part as offices. Pursuant to his instructions the architect planned a large open floor space in the office part, in which partitioning could be erected in order to sub-divide the space as required. The partitioning consisted of metal ribs with insets of hardboard sheeting and with doors and windows, and the partitioning was screwed to the floor and ceiling, but was not fixed laterally to the building. To extend or diminish the size of any room the partitioning was detached from the floor and ceiling and moved and re-fixed at the place required for adjusting the size of the room. These adjustments could be made by the respondent's normal maintenance staff.

The respondent contended that the partitioning was plant for the purposes of Chapter II of Part X of the Income Tax Act, 1952; and that the cost of the partitioning, £5,618 13*s* 3*d*, qualified for the initial allowance given by section 279 and for the annual allowance given by section 280. The appellant contended that the partitioning was neither machinery nor plant within the meaning of those sections, in that it was part of the building in which the respondent's business was carried on, and not part of the apparatus used in the building. The General Commissioners decided in favour of the respondent.

Held: the General Commissioners' decision was correct.

INTERNATIONAL FISCAL ASSOCIATION

United Kingdom Branch

The report of the United Kingdom Branch of the International Fiscal Association for 1961–62 which was presented at the annual general meeting of the Branch held in London recently, states that membership during the year again showed a further increase.

Annual Congress

A delegation of ten members including the Chairman, Mr A. G. Davies, LL.B., attended the 1961 annual congress at Jerusalem (reported in *The Accountant* of 23rd September 1961). British national reports were made by Mr D. Davidson, A.C.A., and Mr S. H. Robinson, B.COM.(LOND.), F.C.A.

Branch Meetings

During the year, seven discussion meetings were held. At the first of these meetings Mr Davidson gave an account of the Israeli Congress. This was followed by a paper dealing with the 1962 congress to be held in Athens in September next, entitled 'Fiscal problems arising in relation to international investment companies or investment trusts', by Mr R. T. Esam. Other meetings were addressed by Dr Van Hoorn, Jun. (The harmonization of fiscal policy in the Common Market); Professor G. S. A. Wheatcroft (Discussion upon a recently decided case); Mr H. Hudson (Some aspects of Anglo-American fiscal relations); Mr G. R. East, C.M.G. (Variations in United Kingdom comprehensive double taxation agreements from the general pattern); Mr M. H. Bresch, LL.B. (A critical examination of some leading United Kingdom tax cases upon the subject of contingent liabilities); and Mr Taylor-Gooby ('As it seems to me'; some reflections on the Revenue approach).

Attendance at discussion meetings has been extremely good and it is hoped to develop this feature of branch activities. In furtherance of this development it is proposed to hold a tax seminar in the autumn.

1962 Congress

The annual congress will be held in Athens this year from September 10th to 14th. The two subjects for discussion will be 'Fiscal problems arising in relation to international investment companies or investment trusts' and 'Fiscal régime on import and export of merchandise'.

Branch Officers

Mr Charles V. Aston, F.C.A., continues to be President of the Branch.

Mr A. G. Davies was re-elected Chairman and the following were elected to serve on the committee: Mr Douglas A. Clarke, LL.B., F.C.A., Mr A. Dale, F.A.C.C.A., Mr R. T. Esam, Mr C. D. Hellyar, F.C.A., Mr H. J. Hinves, F.C.I.S., Mr E. J. Offord, F.A.C.C.A., Mr D. E. Richards, Mr H. Ward, A.A.C.C.A., and Professor G. S. A. Wheatcroft.

Mr Donald I. Main, F.C.A., of Messrs Pannell, Crewdson & Hardy, 9 Basinghall Street, London EC2, was re-elected honorary secretary from whom further details of activities of the Branch may be obtained.

THE INSTITUTE OF CHARTERED ACCOUNTANTS IN ENGLAND AND WALES

SPECIAL AND ORDINARY MEETINGS OF THE COUNCIL

Election of President and Vice-President

At special and ordinary meetings of the Council held on Wednesday, June 6th, 1962, at the Hall of the Institute, Moorgate Place, London EC2, there were present:

Mr P. F. Granger, President, in the Chair; Mr P. F. Carpenter, Vice-President; Messrs J. F. Allan, W. L. Barrows, T. A. Hamilton Baynes, H. A. Benson, C.B.E., Sir William Carrington, Messrs G. T. E. Chamberlain, D. A. Clarke, J. Clayton, C. Croxton-Smith, W. G. Densem, S. Dixon, W. W. Fea, Sir Harold Gillett, Bt, M.C., G. G. G. Goult, L. C. Hawkins, J. A. Jackson, H. O. Johnson, W. H. Lawson, C.B.E., R. B. Leech, M.B.E., R. McNeil, J. H. Mann, M.B.E., W. Bertram Nelson, C.B.E., W. E. Parker, C.B.E., C. U. Peat, M.C., F. E. Price, L. W. Robson, Sir Thomas Robson, M.B.E., Messrs J. D. Russell, R. G. Slack, D. Steele, J. E. Talbot, A. G. Thomas, A. H. Walton, V. Walton, F. J. Weeks, M. Wheatley Jones, E. F. G. Whinney, J. C. Montgomery Williams, R. P. Winter, C.B.E., M.C., Sir Richard Yeabsley, C.B.E.

ELECTION OF THE PRESIDENT

The President: Gentlemen, the first item on the agenda of the ordinary meeting is to elect a President and Vice-President for the ensuing year. I call upon Sir Thomas Robson.

Sir Thomas Robson: It is my privilege today to be one of the last to address you as 'Mr President', for in a few minutes from now you will have joined those of us who as past Presidents have watched with admiration your conduct in the chair and the way in which you have represented the Institute to the world outside. (*Hear, hear.*)

The days are past when the senior past president would have made a long speech in nominating your successor in the presidency. My duty is to come straight to the point, make some brief comments and ask leave for my seconder to give his tribute to the member whose name I will submit for consideration by the Council.

The Council will not be surprised when I formally propose, as I shall shortly do, that your Vice-President, Mr Percy F. Carpenter, be elected President of the Institute for 1962–63. (*Hear, hear.*)

In proposing his election as Vice-President last year Mr Donald House extolled Mr Carpenter's virtues, qualities and general suitability for the office and gave a summary of his career and his previous work for the Institute. The passage of one further year has merely enhanced his qualifications. We have seen him in action and are fully satisfied that he is in every respect ready and fitted to preside over our deliberations and to represent us in all our external relations, particularly in this year of the International Congress at which he will be the leader of our delegation.

I see that Mr Carpenter passed his Final examination and was admitted to membership of the Institute at the same time as I was myself. He has borne his load of forty years with equanimity and distinction and I have no doubt that, if you elect him as President, he will bear equally well the additional strain of occupying the chair from which all the past Presidents have been so proud to guide the Council.

To him I tender our sincere good wishes and promises of support and I now formally submit the proposition which with your permission will be seconded by Mr Montgomery Williams. (*Applause.*)

Mr J. C. Montgomery Williams: Mr President, I am very happy indeed to be afforded the privilege of seconding the resolution which has just been proposed by Sir Thomas Robson, and I hope it does not sound presumptuous for me to say that I heartily endorse all his comments.

As Mr Donald House remarked when proposing Mr Carpenter's election to the Vice-Presidency last year, it is true to say that he has been continuously a member of some committee or other connected with the Institute's affairs for over forty years. He was elected to the committee of the Students Society of London in 1921, becoming its chairman two years later; and subsequently acted as Hon. Secretary to the Union of Students Societies, whilst he was the first chairman of the London and District Society of Chartered Accountants. He was elected to the Council in February 1947, and since then, gentlemen, he has served on new fewer than twelve of its committees and I have no doubt on numerous sub-committees also, and has acted as chairman or vice-chairman of at least four of them, while for five years he was concurrently a member of the Taxation and Research Committee. Furthermore, he has been nominated to represent the Institute on a number of committees dealing with matters of national importance in the realms of education and commerce. Mr Carpenter has, in addition, numerous outside interests, such as being a Fellow of the Royal Statistical Society, Under-Warden of the Guild of Freemen of the City of London, and a Liveryman of the Worshipful Company of the Makers of Playing Cards. Mr Carpenter is also an Honorary Fellow of the Zoological Society of London.

But, gentlemen, it is not so much for what Mr Carpenter has done in the past as to what we know he is capable of doing in the future, and I say this with the happiest confidence, that we are about to honour him today. I know, as you all know, that he will preside over our deliberations here, and also represent us elsewhere, particularly, as Sir Thomas Robson has said, at the International Congress in New York, with the wisdom, dignity and charm of personality which he has shown in such abundance as our Vice-President and which makes us all so very proud to serve under him. Mr President, it is with the greatest possible pleasure that I second the resolution that Mr Percy Frederick Carpenter be elected President of the Institute for the ensuing year. (*Applause.*)

The motion was carried with acclamation.

Mr Carpenter was then invested with the badge of office, took his seat in the Chair and said:

Sir Thomas, Mr Montgomery Williams, I should like to thank you first of all for the very kind words you have used in proposing my election.

Gentlemen, you have today paid me a very great honour which is in fact the highest honour the members of a profession can give to one of their number.

It would be untrue to say that this is the fulfilment of a life's ambition. I indeed wonder how it has come about. I have now for more than forty years served continuously on one Committee or another connected with the Institute, and I was, I think, fortunate in serving my articles in an office which was always very Institute minded. I also feel I owe a great deal to my father and my elder brother, both of whom were members of the Institute and who both passed on at a comparatively early age.

I was talking to one of our members recently who in some ways I think was typical of our membership, and he told me that he had never taken any active part in Institute

affairs, but that he had always been very proud to be able to call himself a chartered accountant because of the very high standards which the Institute had always maintained. I think that as a Council we merit that compliment, and I feel that in these days when there is a tendency to a lowering of standards, both in public and private life, and where so often expediency takes the place of principle, it is one of the duties of the professions, including our own, to help in the maintenance of standards.

I think the Council can look forward to an interesting and busy year. Apart from our domestic affairs, we have in the international field, the Congress in New York this autumn, and the preparations for the European Congress to be held in Edinburgh in the autumn of 1963. It may well be that we shall also be concerned more and more with the problems of the Common Market.

In home affairs we shall be taking part in the National Productivity Year; we expect that the report of the Jenkins Committee will give us food for thought.

Coming now to our domestic affairs, our ordinary business will continue to include looking after the interests of our 35,000 members, together with some 15,000 articled clerks; we shall have our examinations, our two Summer Courses, our public relations, our library, to say nothing of the matters which the Parliamentary and Law Committee will be putting forward out of the score or so items they have, and always seem to have, under current consideration; the further consideration and implementation in whole or in part of the report of the Education and Training Committee; the Small Practitioner inquiry; the report of the Technical Activities Committee, the Committee on Relations with the Universities, and our Building Development.

I think it is clear from a mere recital of these matters that no one would willingly accept the office of President if he were not assured of the help and support of all his colleagues on the Council.

I think we should remind ourselves from time to time that a resolution to appoint a committee or a subcommittee or even the actual setting up of a committee, does not in itself achieve very much, if anything. It is only when the committee has reported and action taken, or even a decision reached to take no action, that any progress is made, and with many of the difficult problems we have to face this must necessarily involve a very considerable amount of thought and consideration often over a lengthy period.

Our Secretary is retiring in a few months' time, but I am confident that he has built up an organization which will be able to carry the heavy burden which they will have to face during the coming year.

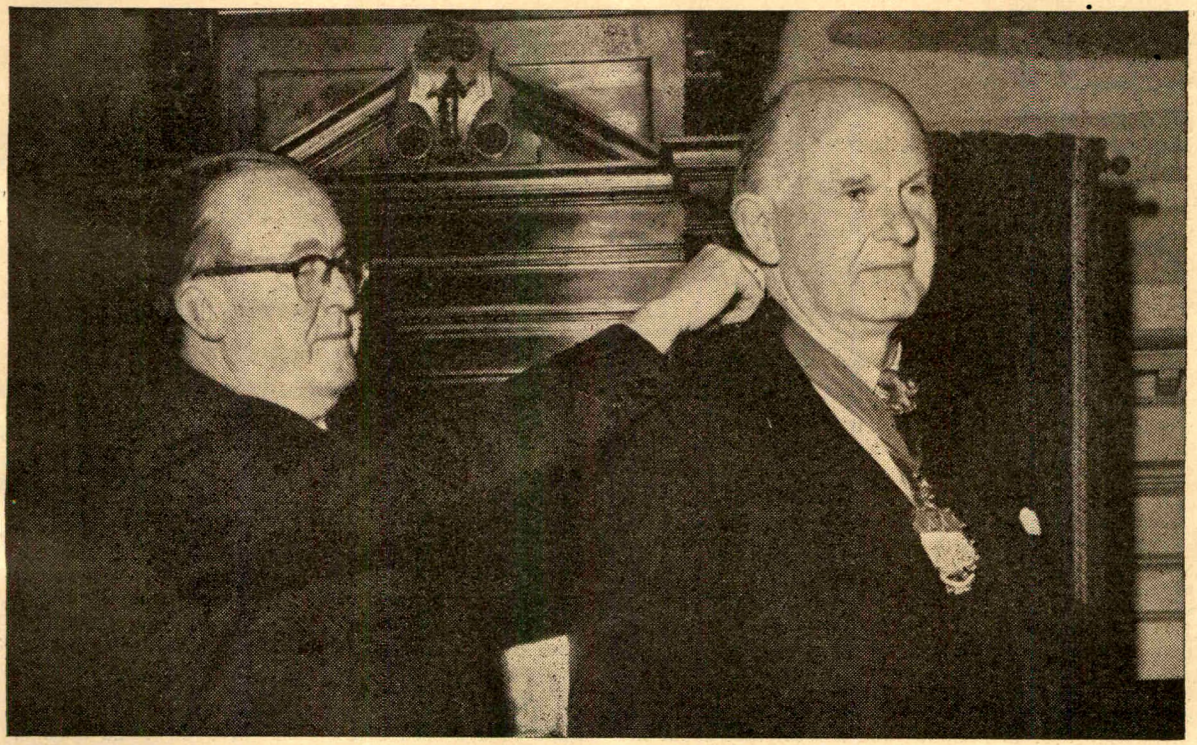
I should like to acknowledge the great help I have had during the past year from my own partners and staff, and which I know will be forthcoming in the future. I hope I may be forgiven if I trespass for a moment on someone else's ground, but I should like to thank Paul Granger and Mrs Granger for the many kindnesses I have received from them. I thank you all. (*Applause.*)

ELECTION OF VICE-PRESIDENT

The President: The next item on the agenda is the election of the Vice-President. I call upon Sir William Carrington.

Sir William Carrington: Mr President, gentlemen, we are enjoined by the Book of Common Prayer that marriage is not to be entered upon lightly and I suggest that a like care and caution should be envisaged in regard to the appointment of a Vice-President of this Institute. No task falling upon the Past Presidents is treated more seriously than that of deciding who shall be proposed for this important office – a bad choice could have such far-reaching consequences whilst a good one can do so much to maintain and enhance the status of the profession and the prestige of the Institute.

The name I am to submit for your consideration is that of one whom I have no hesitation in commending to your full support. It is of one who hails from a part of the country that may be regarded as one of the best breeding grounds for distinguished presidents – you have already heard one of its products this morning in the person of Sir



Mr Percy F. Carpenter, F.C.A. (*right*), is installed as President of the Institute for the ensuing year by Mr Granger, the retiring President

Thomas Robson. My nomination is that of our good friend and colleague Robert Pearson Winter whose record of service to his country, his county and city and to this Institute are such as to identify him most clearly as a man of great courage and integrity who throughout his career has placed service before self.

He was born in 1897, educated at Mill Hill, articled to his father in September 1914, on war service from September 1st, 1915, to February 11th, 1919, during which period he served in France, Belgium and Italy and was awarded the Military Cross for services in the battle of the river Piave in 1918. After that hectic interruption to his articles the then young Winter returned to his father's office in Newcastle upon Tyne and proceeded to qualify by passing his Final examination in November 1920. By 1940 he was President of the Northern Society of Chartered Accountants, which office he held until 1942 and again in 1951; this denotes service of no mean order to his district society.

In 1952 came election to this Council and since then Robert Winter has served on the Applications Committee of which he is presently chairman, and on the District Societies, Library, Disciplinary and General Purposes Committees so that he has had that good all-round experience of the work of this Council and its committees which is one qualification required of a Vice-President of this Institute. Robert Winter also possesses the other requisite qualifications; he has a record of distinguished service to the County of Northumberland and the City of Newcastle which I think may be referred to in great detail by a subsequent speaker, and above all he has a modest and charming personality which endears him to all who have the privilege of being associated with him.

It is therefore with very real pleasure that I propose that Mr Robert Pearson Winter, C.B.E., M.C., T.D., F.C.A., be elected Vice-President of this Institute for the ensuing year. (*Acclamation.*)

Mr M. Wheatley Jones: Mr President, I have very great pleasure in seconding the resolution which Sir William Carrington has just proposed, that Mr Robert Pearson Winter be elected our Vice-President for the coming year.

Sir William has referred in proper detail to Mr Winter's career in this profession and to his services on this Council. He has also mentioned more briefly his war services, but I think I should tell you that Mr Winter's military career has lasted almost as long as his career in the profession. He commanded his regiment from 1934 to 1938 and was a member of the staff for the following four years until 1942, and he is still chairman of the Territorial Auxiliary Forces Association in Northumberland. But that is not all; his services to his native Northumberland have been truly prodigious. He has been a Justice of the Peace since 1948 and Deputy-Lieutenant of the County since 1953; and he still finds time to maintain an interest in boys' clubs, and given his active help to quite a wide range of charities.

Mr President, those of us who have been privileged to serve on committees with Mr Winter know that quiet and unassuming manner masks but by no means hides very great ability, I feel sure that if elected he will make a worthy and charming successor to those very distinguished men who have already held this high office, and it is with full confidence as well as pleasure that I second the resolution. (*Applause.*)

The motion was carried by acclamation.

Mr Winter: Mr President, gentlemen, I must first thank you for the very great honour which you have done me in electing me Vice-President of the Institute, and I would especially thank Sir William Carrington and Mr Wheatley Jones for proposing and seconding my nomination, and for the very kind things they said about me.

As you have heard, I come from the far north and it has been a very great privilege and an experience to serve on this Council during the last ten years. I have learned a lot about the workings of the Council and a great deal about my profession, and now today you have thought fit to elect me to this high office, and I feel very proud and not a little humble. Proud because I like to think that in honouring me you are honouring my own district society to which I owe quite a lot; and humble when I think of those eminent members of Council who are my predecessors in this chair, and I remember my own limitations.

Well, gentlemen, all I can say is I will try my best to justify the confidence you have placed in me and to you, Mr President, may I offer my own congratulations and wish you a very happy and successful year. It will be a great privilege to serve under you and carry out any duties which you may delegate to me. Thank you. (*Applause.*)

Vote of Thanks to the Retiring President

Mr W. G. Densem: Mr President, gentlemen, I have today the pleasant task to perform of moving a vote of thanks to the retiring President, but may I first add my congratulations to you, Mr President, and to you, Mr Vice-President, and wish you both health, happiness and success in your periods of office. It is a privilege to be allowed to express on behalf of the members of the Council something of the regard and affection which we all have for Paul Granger.

This last year has been a heavy one and at times a difficult one. Important matters have been concluded and others initiated and much valuable spade-work done.

During the past two years as Vice-President and then as President, Mr Granger has not shirked the many calls upon his time and energies. Throughout he has displayed the dignity, innate courtesy and sensibility so characteristic of successful holders of high office.

His kindliness and approachability have been very helpful in strengthening links with members as they have found him an understanding listener.

Our grateful thanks are due to Mrs Granger for her gracious presence at many functions. I hope Mr Granger will convey our thanks to her.

I now move that a hearty vote of thanks be accorded to Mr Granger for his valuable services to our Institute as President and I ask Mr Russell to second this motion. (*Acclamation.*)

Mr J. D. Russell: Mr President, I welcome this invitation to second the vote of thanks to Mr Granger. May I first, sir, offer you my congratulations on your appointment and to the Vice-President on his appointment. I wish you the very best of good fortune for the coming year.

It is, though, to the past year that I have been asked to refer and in many different ways 1961–62 has been a memorable one for many of us, but under Mr Granger's presidency the whole Institute has surely had as happy a time as any of us can remember. This has been due not only to the skill and wisdom with which he has guided our affairs but to his warmth of feeling. His efficiency is matched by kindliness and understanding not only for the younger members here but in the country as well.

Mr President, I have much pleasure in seconding this vote of thanks and I have no doubt it will be carried by acclamation. (*Applause.*)

Mr P. Granger: Mr President, I would also like to congratulate Mr Winter on being elected Vice-President. He will have a very happy time with you.

You feel at the end of a year as President as if you had been put through a mangle and have emerged rather straightened, but two things arise. One is gratitude and the other is pride. This Institute is a great Institute, there is no doubt about that, and it is a very proud thing to have been at the head of it for one year. The other thing is the very great kindness you meet wherever you go, and this is what I include in the gratitude, not only from members of the Council but from district society committees and their members, their articled clerks – altogether it has been a wonderful year.

I conclude by thanking you all for the help you gave me while I have been in the chair, in Council and outside. Nobody can do this job without that help. I would also

like to thank Alan MacIver and all the members of the staff in whatsoever capacity they act for the help they also gave. Thank you also for the remarks about my wife and thank you all as members of the Council for entrusting me with such a wonderful job. (*Applause.*)

The Stock Exchange, London

The Council approved, for issue in due course for insertion in the *Members' Handbook*, a statement regarding the responsibilities resting upon accountants under the revised Rule 79A of the Stock Exchange, London.

Church of St Margaret, Lothbury, London EC2

The Council approved of a donation of fifty guineas being made by The Chartered Accountants General Charitable Trust towards the cost of essential renovations to the Church of St Margaret, Lothbury. The Institute's annual church service will be held there on Wednesday, July 4th, 1962, at 12.45 p.m.

Appointments to Committees

The following Committees were appointed for the year 1962–63:

President ex officio *member of all Committees other than the Disciplinary and Investigation Committees.*

Vice-President ex officio *member of all Committees other than the Disciplinary, Investigation and P. D. Leake Committees.*

Applications

E. Baldry, G. T. E. Chamberlain, C. Croxton-Smith, G. G. G. Goult, J. S. Heaton, R. B. Leech, E. N. Macdonald, R. McNeil, J. H. Mann, R. G. Slack, A. G. Thomas, V. Walton, M. Wheatley Jones, R. P. Winter, E. K. Wright.

Articled Clerks

J. F. Allan, T. A. Hamilton Baynes, J. H. Bell, H. O. Johnson, H. L. Layton, R. P. Matthews, Bertram Nelson, C. U. Peat, R. G. Slack, V. Walton, M. Wheatley Jones, E. F. G. Whinney.

Consultative Committee of Members in Commerce and Industry

J. Ainsworth, C. W. Aston (c), J. Cartner (t), E. M. Clayson (c), J. Clayton, E. Hay Davison, S. Dixon, W. F. Edwards (c), W. W. Fea, H. P. Finn (c), L. C. Hawkins, P. D. Irons (c), Sir Joseph Latham (c), A. H. Proud (t), J. C. Walker (c), F. J. Weeks, and the Chairman or Vice-Chairman of the General Purposes Committee.

(c) Co-opted members.

(t) Nominated by Taxation and Research Committee.

Disciplinary

E. Baldry, W. L. Barrows, T. A. Hamilton Baynes, Sir William Carrington, D. A. Clarke, Sir Harold Gillett, J. H. Mann, R. P. Matthews, Bertram Nelson, M. Wheatley Jones, E. F. G. Whinney, R. P. Winter.

District Societies

J. F. Allan, J. H. Bell, G. T. E. Chamberlain, C. Croxton-Smith, G. G. G. Goult, P. F. Granger, H. O. Johnson, R. B. Leech, R. McNeil, J. H. Mann, R. P. Matthews, F. E. Price, J. D. Russell, R. G. Slack, D. Steele, A. G. Thomas, J. C. Montgomery Williams, R. P. Winter, E. K. Wright.

Examination

T. A. Hamilton Baynes, P. F. Carpenter, G. T. E. Chamberlain, D. A. Clarke, E. Hay Davison, W. G. Densem, J. Godfrey, J. S. Heaton, D. V. House, J. A. Jackson, R. McNeil, J. E. Talbot, A. H. Walton, V. Walton.

Finance

J. Ainsworth, W. L. Barrows, J. H. Bell, Sir William Carrington, D. A. Clarke, J. Clayton, S. Dixon, Sir Harold Gillett, L. C. Hawkins, H. L. Layton, R. P. Matthews, F. E. Price, J. D. Russell, A. H. Walton, F. J. Weeks, J. C. Montgomery Williams.

General Purposes

W. L. Barrows, H. A. Benson, Sir William Carrington, Sir Harold Gillett, P. F. Granger, W. H. Lawson, R. McNeil, S. J. Pears, C. U. Peat, L. W. Robson, Sir Thomas Robson, M. Wheatley Jones, R. P. Winter, Sir Richard Yeabsley, and the Chairman or Vice-Chairman of the Finance Committee, the Investigation Committee, the Parliamentary and Law Committee, and the Consultative Committee of Members in Commerce and Industry.

Investigation

Summer Course

T. A. Hamilton Baynes, P. F. Carpenter, W. W. Fea, J. S. Heaton, D. V. House, J. A. Jackson, E. N. Macdonald, J. H. Mann, A. G. Thomas, A. H. Walton.

London and District Society of Chartered Accountants

The following members were appointed by the Council to serve on the Committee of the London and District Society of Chartered Accountants for the ensuing year:

D. V. House, J. H. Mann, J. D. Russell.

Taxation and Research Committee

The following Council appointees on the Taxation and Research Committee were appointed for the year 1962–63:

G. R. Appleyard, L. H. Clark, S. M. Duncan, W. F. Edwards, R. W. Foad, J. W. Margetts, G. P. Morgan-Jones, J. Perfect, D. W. Robertson, C. Romer-Lee, J. G. Vaughan, J. A. P. Whinney.

Registrations of Articles

The Secretary reported the registration of 173 articles of clerkship during the last month, the total number since January 1st, 1962, being 1,022.

Admissions to Membership

The following were admitted to membership of the Institute:

Dean, William John, A.C.A., *a*1962; Pale Farm House, Chipperfield, Kings Langley, Herts.

Knowles, John Edgar, A.C.A., *a*1962; 29 Jubilee Avenue, Whitton, Twickenham, Middlesex.

§Ross, Grant Bannerman, A.S.A.A., *a*1962; 1 Sunnyside, Rennie Place, Berea, Durban, South Africa.

Fellowship

The Council acceded to applications from thirteen associates to become fellows under clause 6 of the supplemental Royal Charter.

F.S.A.A.

The Council acceded to applications from two incorporated accountant members A.S.A.A. to use the letters F.S.A.A. under clause 4 (*b*) of the scheme of integration referred to in clause 34 of the supplemental Royal Charter.

Members Commencing to Practise

The Council received notice that the following members had commenced to practise:

Adams, John Gilbert, B.SC.(ECON.), A.C.A., *a*1961; W. Munro & Co, 7A Abbey Walk, Grimsby.

Alderson, William Ian Rudd, A.C.A., *a*1957; W. T. Walton & Son and Basil L. Denton & Co, 3/7 Scarborough Street, West Hartlepool and at London; also at Liverpool, W. T. Walton & Son, and Stockton-on-Tees, W. T. Walton, Son & Rowland.

Allott, Peter William, B.A.(ECON.), A.C.A., *a*1960; R. W. Allott & Co, 1 South Terrace, Moorgate Street, Rotherham, and at Worksop.

Appleton, George Furness, A.C.A., *a*1957; Harmood-Banner, Cash, Stone & Mounsey, 24 North John Street, Liverpool 2.

Bains, Norman, A.C.A., *a*1959; 83 Strathmore Crescent, Newcastle upon Tyne 4.

Barker, Trevor, A.C.A., *aS*1957; *Dean & Barker, Hill House, Middleham, Leyburn and High Street, Leyburn, Yorkshire.

Barnett, Gerald Nelson, A.C.A., *a*1956; 23 Moresby Road, Upper Clapton, London E5.

Batten, Noel Haydn, A.C.A., *a*1960; Batten & Co, 27 Kirkstone Road West, Liverpool 21.

Batty, Edward, A.C.A., *a*1957; J. F. W. Robinson & Co, Oxford Chambers, New Oxford Street, Workington, Cumberland, and at Whitehaven.

Bell, Maurice Allen, A.C.A., *a*1961; *Fisher, Bell & Co, Richmond House, Fore Street, Teignmouth.

Bowen, William Glyndwr, B.SC.(ECON.), A.C.A., *a*1956; Roe, Potter & Bowen, Westgate Chambers, Commercial Street, Newport, Mon.

Brooks, Brian Norman, A.C.A., *aS*1956; Howell & Hanbidge, 5 Hounsfield Road, Sheffield 3.

Brown, Robert Alfred George, A.C.A., *a*1959; Roberts, Marsden & Co, 17 Carlton Crescent, Southampton.

Brunsden, Peter John, A.C.A., *a*1960; Davies, Watson & Co, 52 Belgrave Road, London SW1.

Burchell, Jeremy Joseph Benjamin, A.C.A., *a*1961; 68 Grove Hall Court, Hall Road, London NW8.

Cawley, John Edward, F.C.A., *a*1932; *Lancaster & Tongue, 73 Lombard Street, Birmingham 12, and at Solihull and Sutton Coldfield.

Chard, Ernest James, F.C.A., *a*1948; Whittaker, Bailey & Co, 3 Portland Street, Southampton.

Cohen, Harry, A.C.A., *a*1962; Harry Cohen & Co, 200 Southend Road, Woodford Green, Essex.

Collins, Bryan, A.C.A., *a*1961; Richard Ormond, Son & Dunn, 24 Windsor Terrace, Jesmond, Newcastle upon Tyne 2.

Collins, Peter Leslie Robert, F.C.A., *a*1951; 41 Debden Road, Saffron Walden, Essex.

Cope, Kenneth, A.C.A., *a*1958; Bartfield & Co, 10 Butts Court, Leeds 1, and at London.

Cullingham, James David Herbert, B.A., A.C.A., *a*1962; Wright, Fairbrother & Steel and Gladstone, Jenkins & Co, 42 Bedford Avenue, and 9 Bedford Square, London WC1.

de Putron, Ronald Anthony, A.C.A., *a*1962; Black, Geoghegan & Till, 10 Lefebvre Street (P.O. Box 20), Guernsey.

Evemy, John Kenneth, A.C.A., *a*1952; A. C. Mole & Sons, Stafford House, 10 Billetfield, Taunton.

Fedrick, William John, A.C.A., *a*1956; Jeffreys, Alfred Henry & Marks, 10 Coleman Street, London EC2.

Foster, Colin, B.COM., A.C.A., *a*1955; Rushton, Toulmin & Foster, 31 Winckley Square, Preston.

Franklin, Howard William, A.C.A., *a*1954; Harmood-Banner, Cash Stone & Mounsey, 24 North John Street, Liverpool 2.

Goulder, Patrick Renshaw, A.C.A., *a*1960; *Sheen, Stickland & Co, 4 Downing Street, Farnham, Surrey, and at Alton.

Hall, Stephen Roderick, A.C.A., *a*1962; Hereward, Scott, Davies & Co, Barclays Bank Chambers, 159 Stoke Newington High Street, London N16, 3 St Helen's Place, London EC3, and Hillside House, 2–6 Friern Park, Finchley, London N12.

Hannah, Peter Roebuck, A.C.A., *a*1954; 230 Perry Road, Sherwood, Nottingham, and at Minstead, Hants.

Harris, Raymond Ian, A.C.A., *a*1962; 13 Redding Close, Mill Hill, London NW7.

Harrison, Arthur Geoffrey, A.C.A., *a*1958; Messenger, Powell & Co, 36 St Ann Street, Manchester 2.

Hawkins, (Mrs) Susan Elizabeth, A.C.A., *a*1953; 35 Kidbrooke Park Road, Blackheath, London SE3.

Heal, John Harris, M.A., A.C.A., *a*1956; W. W. Beer, Aplin & Co, 17 Southernhay West, Exeter.

Henshaw, John, B.COM., A.C.A., *a*1962; Bee, Henshaw & Co, 18 Regent Street, Park Row, Nottingham.

Herring, David, A.C.A., *a*1960; Knowles, Herring & Co, 4 Chapel Walks, Manchester 2.

Hunter, Charles David, A.C.A., *a*1962; Hunter & Gee, 16 Gillygate, York.

Hough, Frederick John, A.C.A., *a*1961; Latham & Taylor, Martins Bank Chambers, Market Place, and 35 King Street, Wigan.

Jacques, Ivan, A.C.A., *a*1962; 16 Richmond Terrace, Blackburn.

Johnson, Michael, A.C.A., *a*1954; Wright, Fairbrother & Steel, 9 Bedford Square, and 42 Bedford Avenue, London WC1.

Johnston, Graham George Fleming, A.C.A., *a*1961; John Mitchener, Bennett & Co and *Mitchener, Fogarty & Co, 58 The Avenue, Southampton.

Jones, Digby Morgan, A.C.A., *a*1955; Wenham, Major & Clarke, Dickens House, 15 Took's Court, London EC4, and 14 Gray's Inn Square, London WC1; also at Birmingham and Walsall.

Jordan, Lawrence Arthur Ward, A.C.A., *aS*1954; Keens, Shay, Keens & Co, 11 George Street West, Luton, and at Leighton Buzzard, London and Stony Stratford.

Keens, Peter Philip, A.C.A., *a*1960; Keens, Shay, Keens & Co, 1A Mill Lane, Stony Stratford, and at Leighton Buzzard, London and Luton.

Kelley, Peter David, A.C.A., *a*1961; Ault & Co, York House, 38 Great Charles Street, Birmingham 3.

Kirkham, William Wade, A.C.A., *a*1961; Howell & Hanbidge, 5 Hounsfield Road, Sheffield 3.

Ledger, Idris Richard, A.C.A., *aS*1952; Read & Thomson, 6 Woodcote Road, Wallington, Surrey.

Levison, Julian Philip, A.C.A., *a*1959; *Jones, Schwartz, Fine, Kane & Co, P.O. Box 1640, Salisbury, Southern Rhodesia.

Macnamara, Patrick Carroll, M.A., A.C.A., *a*1954; Kemp, Chatteris & Co, St Swithin's House, Walbrook, London EC4, and at Blackpool, Bristol, Manchester and Port Louis, Mauritius.

Middle, John Roderick, B.A., A.C.A., *a*1962; Folkes & Campbell, 15–17 Church Street, Stourbridge, Worcs.

Milton, Derek John, A.C.A., *aS*1955; 3 Queensway, Hazlemere, High Wycombe, Bucks.

Admissions Void

The Secretary reported that the admission to membership of the following persons had become void under bye-law 41:

Agballah, Hyacinth Okoli Petrus, P.O. Box 18, Udi, Nigeria.

Moody, Peter Brian, B.A., 11 Alwyne Place, Canonbury, London N1.

Munir, Mohammad, 21 Chepstow Crescent, London W11.

Osborne, John Brian, 175 Westella Road, Westella, near Hull.

Re-admission to Membership

Subject to payment of the amount required by the Council, one former member of the Institute was re-admitted to membership under clause 23 of the supplemental Royal Charter.

It was reported to the Council that the following re-admission, made at the Council meeting on May 3rd, 1962, subject to payment of the amount required, had become effective:

Evershed, Norman William, A.C.A., 244 London Road, St Albans, Herts.

Change of Name

The Secretary reported that the following changes of name have been made in the Institute's records:

Smith, Donald Ferguson, to Ferguson Smith, Donald.

Hodgson, Norman Alan, to Yerbury-Hodgson, Norman Alan.

Mainwaring, John David, to Mainwaring, John David Morgan.

Resignations

The Council accepted the resignations from membership of the Institute of:

Hummel, Harold Victor, M.C., E.D., B.SC.(ECON.), F.C.A., *a*1920; c/o D. M. W. Hummel, 205 Canada Permanent Building, Fort Street, Mt Douglas, Victoria, B.C., Canada.

Leithead, Frank Baillie, F.C.A., *a*1925; 9–10 Grange Terrace, Sunderland.

Deaths of Members

The Council received with regret the Secretary's report of the death of Mr James Collison Parsons, F.C.A., a Member of the Council from January 1938 until November 1950 and Chairman of the Library Committee from 1946 to 1949, and of the following members:

Bibby, Robert, F.C.A., Manchester.
Clark, Harold Bennett, F.C.A., Leigh-on-Sea.
Clegg, Sidney, F.C.A., Pietermaritzburg.
Crossley, Bertram, F.C.A., Manchester.
Dastoor, Hormasji Jamshedji, F.S.A.A., Bombay.
Dodd, Philip Mably, F.C.A., Liverpool.
Drury, John Hamilton, F.C.A., Ibadan, Nigeria.
Elder, Stephen Hill, T.D., F.C.A., Bristol.
French, Herbert Noel, F.C.A., Heswall, Cheshire.
Henley, Norman Percy Gilbert, F.C.A., Karachi.
Hill, John Arnold, F.C.A., London.
Hockey, Stanley George, F.C.A., Newport, Mon.
Horncastle, Leonard Scott, F.C.A., Leeds.
James Reginald William, F.C.A., Nottingham.
Nuttall, Percy, F.C.A., Manchester.
Nye, Ralph, F.C.A., Buxted.
Smith, Jack Ashworth, F.C.A., Lytham St Annes.
Smith, Leonard Francis John, F.C.A., Wallington.
Strickland, Francis, F.C.A., Manchester.
Thompson, Frank Ferguson, F.C.A., Bolton.
Wetton, Frank Thompson, F.C.A., Fordham, Essex.
Wilson, Frank Osborne, F.C.A., Manchester.

FINDINGS AND DECISIONS OF THE DISCIPLINARY COMMITTEE

Findings and Decisions of the Disciplinary Committee of the Council of the Institute appointed pursuant to bye-law 103 of the bye-laws appended to the supplemental Royal Charter of December 21st, 1948, at hearings held on May 2nd, 1962.

A formal complaint was preferred by the Investigation Committee of the Council of the Institute to the Disciplinary Committee of the Council that Harold William Steeper Seward, F.C.A., had been guilty of acts or defaults discreditable to a member of the Institute within the meaning of sub-clause (3) of Clause 21 of the supplemental Royal Charter in that he signed the Accountant's Certificates required by section 1 of the Solicitors Act, 1941, or section 30 of the Solicitors Act, 1957 (*a*) relating to three solicitors, Mr A., Mrs B. and Mr C. for the following accounting periods: Mr A. each of the six calendar years 1954 to 1959; Mrs B. each of the five calendar years 1954 to 1958 and the period January 1st, to March 9th, 1959; Mr C. each of the two calendar years 1954 and 1955; (*b*) relating to two solicitors Mr D. and Mr C. for the following accounting periods: Mr D. each of the six calendar years 1954 to 1959; Mr C. each of the four calendar years 1956 to 1959, which he knew or which he ought to have known were not correct, so as to render himself liable to exclusion or suspension from membership of the Institute. The Committee found that the formal complaint against Harold William Steeper Seward, F.C.A., had been proved under both headings and the Committee ordered that Harold William Steeper Seward, F.C.A., of 18 St David's Drive, Barnsley Road, Doncaster, be suspended from membership of the Institute for a period of two years.

A formal complaint was preferred by the Investigation Committee of the Council of the Institute to the Disciplinary Committee of the Council that Michael Roderick Sturt being a Clerk under Articles to a Fellow of the Institute was at the Adjourned Epiphany Quarter Sessions for Middlesex held on January 10th, 1962, convicted on certain indictments for that he:

(1) On February 26th, 1961, feloniously did steal a motor-car the property of a finance company;
(2) on February 26th, 1961, with intent to defraud did obtain a motor-car and the sum of £40 from a Mrs A. by false pretences;
(3) on February 28th, 1961, with intent to defraud obtained from the said Mrs A. the sum of £20 by false pretences;
(4) on October 5th, 1961, did steal a motor-car the property of a Mr B;
(5) on October 6th, 1961, obtained a valuable security namely a cheque for £300 from a Mr C. by false pretences;
(6) on divers days between July 1st and November 6th, 1961, conspired together with other persons unknown to defraud such persons as should thereafter be induced to part with money to him by false pretences;
(7) on November 12th, 1961, with intent to defraud fraudulently caused a Mr D. to execute a cheque for £15 15*s* by false pretences;
(8) on November 12th, 1961, with intent to defraud obtained from the said Mr D. a cheque for £15 15*s* by false pretences,

so as to render himself liable to be declared unfit to become a member of the Institute. The Committee found that the formal complaint against Michael Roderick Sturt had been proved and the Committee ordered that Michael Roderick Sturt be declared unfit to become a member of the Institute.

MEMBERS' LIBRARY

The Librarian reports that among the books and papers acquired by the Institute in recent weeks by purchase and gifts are the following:

Accounting: (Rowland and Magee); Sixth edition by B. Magee, F.C.A. 1962. (Gee, presented, 20*s*.)

Accounting Manual for Export-Import Companies: systems, control of costs and inventories; by J. Goldner. New York. 1960. (Matthew Bender, 60*s*.)

The Architect and his Office: a survey. . . . (Royal Institute of British Architects.) 1962. (R.I.B.A., 40*s*.)

Budgetary Control and Standard Costs: the practice of accountancy as an aid to management; by J. A. Scott: fifth edition. 1962. (Pitman, 22*s* 6*d*.)

Common Market Law: texts and commentaries; by A. Campbell and D. Thompson. 1962. (Stevens, 70*s*.)

Deutsch-Englisches Glossarium Finanzieller und Wirtschaftlicher Fachausdrücke; by C. A. Gunston and C. M. Corner: fourth edition. Frankfurt/Main 1962. (Fritz Knapp, 90*s*.)

Hire-Purchase and Credit Sales: Law and Practice; by E. Campbell-Salmon. 1962. (Pitman, 45*s*.)

Income Tax for the Clergy: a practical guide; by Rev. J. E. Gilbert, F.C.A. 1962. (S.P.C.K. Presented by the author, 9*s* 6*d*.)

John Isham: mercer and merchant venturer: two account books of a London merchant in the reign of Elizabeth I; edited by G. M. Ramsay. 1962. (Northamptonshire Record Society, presented.)

The Law of Bankers' Commercial Credits; by H. C. Gutteridge: third edition; by M. Megrah. 1962. (Europa, 30*s*.)

The Law of Restrictive Trade Practices and Monopolies; by R. O. Wilberforce, A. Campbell (and others). 1957. First cumulative supplement 1962. (Sweet & Maxwell, 84*s*, 15*s*.)

A Secretary Looks at the Wine and Spirit Trade; by F. W. McGuinness. 1962. (Chartered Institute of Secretaries, presented.)

The Social Credit Movement in Alberta; by J. A. Irving. Toronto. 1959. (University of Toronto Press, 48*s*.)

Statistical Cost Analysis; by J. Johnston. New York. 1960. (McGraw-Hill, 52*s* 6*d*.)

Notes and Notices

PROFESSIONAL NOTICES

MESSRS KIMBERLEY, MORRISON, MOORE & Co, Chartered Accountants, of Midland Bank Chambers, 47 Temple Row, Birmingham 2, announce that they have taken into partnership Mr WILLIAM C. WALTERS, F.C.A., who has been with the firm for many years.

MESSRS H. NORMAN HARRISON & Co, Chartered Accountants, of Copthall House, Copthall Avenue, London EC2, announce that as from June 18th, 1962, the practice will be removed to Newby House, Southgate Circus, London N14. Telephone: Palmer's Green 8717.

MESSRS SLATER, CHAPMAN & COOKE, Chartered Accountants, announce that from June 1st, 1962, Mr LESLIE SYDNEY GRINYER, F.C.A., has been admitted to the partnership.

MESSRS SMALLFIELD, FITZHUGH, TILLETT & Co, Chartered Accountants, of 24 Portland Place, London W1, announce that Mr T. E. GRIMES, A.C.A., who has been with them for a number of years, has been admitted into partnership as from May 1st, 1962.

MESSRS WESTON & Co (S. Z. WESTON, F.C.A.), Chartered Accountants, of 143/144 Holborn, London EC1, announce that they have taken into partnership Mr DAVID FISHER, A.C.A., who has been associated with the practice for some years. The style of the firm will remain unchanged.

IN PARLIAMENT

Income Tax Act, 1952: section 245

Mr SKEET asked the Chancellor of the Exchequer how many cases arising out of section 245 of the Income Tax Act, 1952, have been taken to the Special Commissioners on appeal on the issue of whether a reasonable dividend has been paid; and of these how many have been won by the taxpayer.

Mr BARBER: In the ten years ended March 31st, 1962, the Special Commissioners heard forty-two appeals on the issue mentioned by my hon. friend, of which nineteen were won by the taxpayer.

Hansard, June 1st, 1962. Written Answers. Col. 158.

Income Tax and Insurance Contributions

Mr MCKAY asked the Chancellor of the Exchequer what the total deductions from income are, for a single man with earnings of £400 per year in respect of income tax and national insurance, industrial injuries and national health contributions.

Mr BARBER: £25 0*s* 8*d*, £18 19*s* 2*d*, £1 10*s* 4*d* and £7 0*s* 10*d* respectively, making a total of £52 11*s* a year for an adult male employee not contracted out of the graduated scheme.

Hansard, June 4th, 1962. Written Answers. Col. 26.

Plant and Machinery: Rating

Sir S. McAdden asked the Minister of Housing and Local Government and Minister for Welsh Affairs whether he proposes to make an order under section 5 of the Rating and Valuation Act, 1961, exempting small moveable plant and machinery from rates.

Dr HILL: Yes. I have invited a number of organizations representative of industry and of local government to comment on the draft of an order designed to implement the recommendations made in paragraph 40 of the Report of the Committee on the Rating of Plant and Machinery. I am also ready to consider representations from any other interested bodies. Copies of the draft may be obtained from my department.

Hansard, June 6th, 1962. Written Answers. Col. 74.

Bankruptcy Law and Deeds of Arrangement: Report

Sir D. WALKER-SMITH asked the President of the Board of Trade what action he is taking on the report of the Committee on Bankruptcy Law and Deeds of Arrangement, presented by the then President of the Board of Trade to Parliament in July 1957.

Mr ERROLL: The scope of the changes in the law which may be necessary is under consideration. The introduction of legislation must, however, be deferred until Parliamentary time is likely to be available.

Hansard, June 6th, 1962. Written Answers. Col. 79.

Company Law: Committee's Report

Mr SKEET asked the President of the Board of Trade when the Report of the Jenkins Committee on Company Law will be published.

Mr ERROLL: I shall present the Report to Parliament on June 21st. The Report will be published on the same day.

Hansard, June 8th, 1962. Written Answers. Col. 117.

DEFENCE BONDS: CONVERSION OFFER

The Treasury has announced that a conversion offer will be made to holders of 3½ per cent Defence Bonds purchased between September 1st and 15th, 1952, and maturing on September 15th, 1962, of which £3·3 million are outstanding.

These holders will be invited to exchange their holdings into 5 per cent Defence Bonds (Conversion Issue) on September 15th, 1962. Holders who accept the offer of conversion will receive a final interest payment of six months' interest at 3½ per cent per annum on September 15th, 1962. Acceptance of the offer of conversion will not involve any break in the holder's encashment rights. If the offer is not accepted, interest on the maturing bonds will cease with the payment due on September 15th, 1962. The terms of the new Conversion Issue Bond will be the same as those of the 5 per cent Defence Bonds currently on sale except that interest will be payable on April 1st and October 1st. The full conversion terms will be given in the prospectus and notice which will be posted to individual holders on June 20th, 1962, together with forms of request for conversion and forms of authority for the use of holders who do not accept the conversion offer. The lists of acceptances of the conversion offer will be closed on July 20th, 1962.

SOUTH WALES AND MONMOUTHSHIRE SOCIETY OF CHARTERED ACCOUNTANTS
New President Elected

Mr Harold E. Halliday, F.C.A., a partner in the firm of Parsons & Jolliffe, Chartered Accountants, of Newport, Monmouthshire, was elected President of the South Wales and Monmouthshire Society of Chartered Accountants at the Society's annual meeting on June 14th.

Mr H. E. Halliday

Educated at Newport High School, Mr Halliday served articles with his present firm and was admitted to membership of the Institute in 1931. He has served on the committee of the Society since 1955 and has been a member of the Society's Taxation and Research Committee since its inception.

Outside his professional activities, Mr Halliday is a member of the council and chief steward of the Newport Playgoers Society and a member of the committee of the Newport Literary Club. In his younger days, he was a keen rugby player and represented Wales in a chartered accountant match between Wales and Ireland. Latterly he has turned to golf as a recreation and is also interested in gardening and photography.

Annual Report

The report of the committee for the year 1961–62 records membership of the Society at December 31st, 1961, of 453 – a small increase over the year.

Two lecture meetings were held during the year in Cardiff, one of which took the form of a 'Brains Trust' comprising three members of the Society and three members of the Association of H.M. Inspectors of Taxes. The report goes on to mention that forty-three students were taking the approved accountancy course at the University College of South Wales and Monmouthshire during the academic year 1961–62, and it had been reported to the committee that the percentage of accountancy students who had gained honours compared favourably with that of students in other sections.

The Cardiff and District Luncheon Club formed in 1960 with the object of enabling members of the Society to meet at regular monthly intervals is now firmly established. Meetings have been held throughout the year at the Park Hotel, Cardiff, under the chairmanship of Mr T. W. Pickard, F.C.A. Average attendance has been between fifty and sixty which is a tribute, the report states, to the energy of Mr T. H. Trump, F.C.A., the honorary secretary.

UNION OF CHARTERED ACCOUNTANT STUDENTS' SOCIETIES

Members of students' societies are reminded that all students' societies welcome to their meetings members of other societies who are temporarily in their area.

There is also an arrangement for transfer of membership without additional fee for members who permanently change their district. The interchange should be carried out through the secretaries of the societies concerned.

Students societies hold meetings in the following towns:

Ashford (Kent), Bedford, Birmingham, Blackpool, Bournemouth, Bradford, Brighton, Bristol, Cambridge, Canterbury, Cardiff, Carlisle, Chelmsford, Chester, Colchester, Coventry, Darlington, Derby, Doncaster, Dorking, Dorchester, Eastbourne, Epsom, Exeter, Faversham, Grimsby, Guildford, Halifax, Hastings, Hereford, Huddersfield, Hull, Ilford, Ipswich, Kettering, Leeds, Leicester, Lincoln, Liverpool, London, Luton, Maidstone, Manchester, Middlesbrough, Newcastle upon Tyne, Newport (IW.), Northampton, Norwich, Nottingham, Oxford, Peterborough, Plymouth, Portsmouth, Preston, Reading, Redhill, Salisbury, Scunthorpe, Sheffield, Shrewsbury, Southampton, Southend, Stockton-on-Tees, Stoke-on-Trent, Sunderland, Swansea, Taunton, Torquay, Truro, West Hartlepool, Wolverhampton, Worcester, York.

INCOME TAX PAYERS' SOCIETY MAY CONTINUE

At a meeting of the Income Tax Payers' Society held on June 6th to consider the winding-up of the Society, the chairman, Mr Geoffrey Stevens, F.C.A., M.P., announced that discussions had begun with a 'body of very high standing and repute' on the possibility of amalgamation. There seemed to be no insuperable difficulties to this, Mr Stevens added, and already a committee meeting of the other organization had decided unanimously in favour of the merger. It was hoped that there would be concrete proposals to put to the Society within a month.

Index to *Hansard*

The Income Tax Payers' Society has now issued its annual index of references to *Hansard*, dealing with income tax, surtax, and profits tax during 1961, for private circulation to members of the Society. Extending to twelve pages, the booklet shows the column references and date of the particular issues of *Hansard* with a brief explanatory note of the subject-matter.

CAMPAIGN FOR WIDER SHARE OWNERSHIP

The Wider Share Ownership Committee has been reorganized and expanded in preparation for a campaign to obtain new sources of capital by making

JOHN FOORD & COMPANY
56 VICTORIA STREET, LONDON SWI Telephone: Victoria 2002 (3 lines)
REVALUATION OF ASSETS
WORKS, FACTORIES, PLANT & MACHINERY, Etc.

investment in ordinary shares more popular. This was announced by Mr Maurice Macmillan, M.P., chairman of the committee on Monday of last week.

Eight officers have been elected and the committee now numbers fifty-seven – nineteen more than last year and includes Mr R. W. Hampton, F.C.A.; Mr G. P. S. Macpherson, O.B.E., T.D., M.A.(OXON.), C.A.; Mr David W. Moate, A.C.A.; Lord Polworth, T.D., M.A.(CANTAB.), C.A., and Mr R. T. H. Scott, M.B.E., C.A.

In addition, there are four new subcommittees which will examine specific problems and first reports are expected from them by March of next year. To finance the work of the committee an appeal is being made to the City and industry for a fund of £30,000. Of this £4,000 has so far been raised.

THE BRITISH COMPUTER SOCIETY

National Conference 1962

The third national conference of The British Computer Society will be held in Cardiff from September 4th–7th. A comprehensive programme has been arranged covering recent developments in the origination, processing and transmission of data and in other aspects of the construction and use of computers.

Among topics to be covered are business data processing, including profitability of established installations; problems of large-scale record conversion; operating experience of complex A.D.P. systems; industrial data processing, including real-time process control; data origination and transmission; developments in equipment, including implications of new components, reliability and experience of time-sharing.

Further details regarding the conference may be obtained from the Assistant Secretary, The British Computer Society, Finsbury Court, Finsbury Pavement, London EC2.

BUSINESS EFFICIENCY EXHIBITION

The fiftieth national Business Efficiency Exhibition is to be held at Olympia, London, from October 2nd–10th, and will be opened by the Lord Mayor of London, Sir Frederick Hoare. One hundred and sixty firms will be participating in the exhibition, which is being organized by the Office Appliance and Business Equipment Trades Association.

O.E.C.D. ECONOMIC SURVEYS

Two further booklets in the 1962 series containing economic surveys of Greece and Sweden have recently been published by the Organization for Economic Co-operation and Development. Copies of the booklet are obtainable from H.M. Stationery Office, price 3*s* each.

INSTITUTE OF CHARTERED ACCOUNTANTS IN IRELAND GOLFING SOCIETY

The annual meeting of the Institute of Chartered Accountants in Ireland Golfing Society was held at the County Sligo Golf Club, Rosses Point, during the week-end May 26th–28th, some forty members and students taking part in the competitions. The results were as follows:

SMYLIE CUP (BOGEY)

Winner: J. D. Hollwey (13) – 3 up.
Runner-up: C. K. East (13) – All square (after a tie).
Third prize: J. O'Shaughnessy (5) – All square.
Fourth prize: J. G. Geary (3) – 2 down.

QUIN CUP (STABLEFORD)

Winner: S. H. Polden (14)	39¼ points
Runner-up: G. L. M. Wheeler (16) ..	38 (after a tie)
Third prize: H. Winter (16)	38
Fourth prize: C. K. East (13)	37⅜

VETERAN'S PRIZE

A. E. Dawson (24) .. .. 32 points

The trophy for the best aggregate was won by C. K. East, while the North *v.* South Cup was won by South after a very close contest, the scores being South 215⅜ points, North 212⅛ points.

At the annual business meeting Mr S. H. Laughlin, F.C.A. (Belfast), was elected Captain for the ensuing year. The 1963 meeting was fixed for the week-end May 25th–27th at Rosses Point.

LIVERPOOL SOCIETY OF CHARTERED ACCOUNTANTS

Annual Golf Competition

The annual golf competition of the Liverpool Society of Chartered Accountants was played over the links of Formby Golf Club on May 30th. There were fifty-eight entries, the leading results under the Stableford system of scoring being as follows:

	Points		*Points*
D. Stuttard (20) ..	37	B. Gilpin (4) ..	31
J. H. Worrall (14) ..	36	E. S. Behn (6) ..	31
F. H. Veysey (16) ..	34	J. A. Colvin (7) ..	31
L. D. Hayward (10)	33	K. R. Mackenzie (13)	30
F. M. Frazer (18) ..	33	H. K. Turner (20)	30
W. S. Wicks (11) ..	32	R. H. Weston (23)	30
J. F. Allen (13) ..	32

	Points		*Points*
J. A. Bush (20) ..	31	R. G. Capes (14) ..	27
I. W. Campion (2)..	28	M. Spencer (8) ..	23

The President of the Society, Mr Stanley Morris, F.C.A., presided at dinner in the club-house in the evening when forty-four members and articled clerks were present.

MOTOR — FIRE — CONSEQUENTIAL LOSS
CAR & GENERAL INSURANCE CORPORATION LTD
83 PALL MALL, LONDON, SW1

LAWN TENNIS

In a lawn tennis match played recently at Moor Park Club, a Chartered Accountants' team lost to the Law Society by the narrow margin of five matches to four.

The results were:

		Matches Lost	Matches Won
1st Pair	J. Spence E. J. Ramus	2	1
2nd Pair	J. R. Le P. Power J. M. Batty	2	1
3rd Pair	J. Franklin P. Angus	1	2

ANNOTATED TAX CASES

Part 10 – the concluding part – of Volume XL of the *Annotated Tax Cases*, edited by Mr Peter Rees, of the Inner Temple, Barrister-at-law, is published today and contains reports, with notes on the judgments of the following cases: *Lions Ltd v. Gosford Furnishing Co Ltd and C.I.R.* (C.S.); *Lucy & Sunderland Ltd v. Hunt* (Ch.D.); *British Italian Corporation Ltd v. C.I.R.* (Ch.D. & C.A.). The index of cases and subject-matter for the volume will be published shortly, after which the volume may be bound.

The annual subscription is 50s post free and the publishers are Gee & Co (Publishers) Limited, 151 Strand, London WC2.

BANK HOLIDAY CROSSWORD: SOLUTION

The solution to the Bank Holiday Crossword compiled by Mr Kenneth Tickett, F.C.A., which appeared in last week's issue, is as follows:

New Legislation

All new Acts will be noted in this column, together with those Statutory Instruments which are of interest to the profession. The date given indicates when an Act received the Royal Assent or when a Statutory Instrument becomes effective. Copies of either may be obtained through Gee & Co (Publishers) Limited, 151 Strand, London WC2

The Jenkins Report

THE eagerly awaited Jenkins Report was published on Thursday afternoon as a Blue Book (H.M.S.O. 12*s* 6*d* net). The Report of the Company Law Committee, to give it its full title, is an impressive document of 206 pages and 526 paragraphs, teeming with recommendations. This is all the more significant in that the Report stresses that the Companies Act, 1948, has worked well and that the Committee has approached all suggestions for change with the overriding consideration that it is for those who want change to make out their case. Moreover, the recommendations in the report are only the major ones; there are many more minor ones, not specified in the Report, which the Committee is passing to the Board of Trade with a view to eventual incorporation in the drafting of a new Companies Bill.

Perhaps the most striking and far-reaching recommendations are those for the abolition of special rules for private companies and for exempt private companies. The Committee is unanimous in thinking that all companies which enjoy the privilege of limited liability should file accounts annually so that creditors and prospective creditors can examine them without being put to the trouble or embarrassment of making a special request to the companies themselves. However, in effect the Committee recommends the creation of a new category of company, namely, companies whose securities (shares or stock) have been neither quoted nor offered to the public, and which are not subsidiaries of companies whose securities have been quoted or offered to the public. Companies in this new category would not be bound to show, in the accounts which they filed, either the information about directors' emoluments now required by section 196 of the 1948 Act, or the details of turnover and rents receivable and payable which the Committee recommends should normally be included in accounts. This exemption from disclosure would not apply to accounts circulated among the company's own members and debenture-holders.

Other important recommendations are that shares of no par value be permitted, that the protection of minorities under section 210 be strengthened, that persons acquiring an interest in more than 10 per cent of the issued capital of a company should disclose their interest, that 'voteless' shares should *not* be abolished, and that every company should have at least two directors. A new terror is raised for those anonymous subordinate employees who allow themselves to be made the subscribers of a new company. If no directors are appointed these persons will themselves automatically become directors, with all the responsibilities and duties that the

office carries. The Committee would also abrogate the present ban on partnerships having more than twenty members, provided that the partnership in question is of professional persons subject to their own professional code of conduct.

The Report devotes thirty-six pages to the vexed topic of company accounts, most of one page being taken up with an extensive quotation from the Recommendations on Accounting Principles issued to its members by The Institute of Chartered Accountants in England and Wales, on the primary purpose of annual accounts. The Report says (paragraph 333):

> 'The proper function is admirably explained in the following passage from the Recommendations . . . (which we quote at length because we think that the function of company accounts may not be fully appreciated by those investors unfamiliar with accounting principles and practice).'

After setting out the quotation, the Report goes on:

> 'In our view this "historical cost" basis of accounting, which was endorsed by the Cohen Committee and is used almost universally, should continue to be the basis on which company accounts are prepared. . . . Nevertheless, the law does not and should not insist upon a rigid and uniform application of the historical cost principle in all circumstances.'

It is pointed out that the Act already requires the current value of some assets to be shown and permits a valuation of fixed assets. Historical cost information may need to be supplemented in order to give the statutory 'true and fair view'. This is to some extent a matter of opinion of the directors based on the circumstances of the particular company.

> 'In the last resort the auditor must decide whether he is prepared to state that in his opinion the accounts give a true and fair view; if all the necessary information is not given the auditor is required to qualify his report accordingly. The Recommendations on Accounting Principles periodically issued by The Institute of Chartered Accountants in England and Wales to their members have already done much to ensure that standards of accounting are reasonably uniform and constantly rising. These recommendations are based on close and constant study of the relevant problems, which are ever changing, and it is primarily to the initiative of the professional associations that we must look if the general principles of the Act are to be effectively applied in practice.'

On the question of paying dividends out of surpluses resulting from a revaluation of unrealized fixed assets, the Report records that The Institute of Chartered Accountants in England and Wales, and The Institute of Chartered Accountants of Scotland, were both strongly opposed to such a practice. It concludes that the practice should no longer be permitted. Even where there is a *realized* capital surplus, the Committee thinks that before it is distributed the directors must be satisfied that the net aggregate value of the remaining assets will not be less than the book value, so that the share capital and reserves after the distribution will still be fully represented by the remaining assets. We think that these recommendations are to be welcomed; it is undesirable in any event that there should be uncertainty about these points. We also welcome the recommendation that unrealized capital surpluses thrown up by a bona fide revaluation of all the assets should be available for creating bonus shares, but not bonus debentures or loan stock. The report says nothing about bonus redeemable preference shares, nor about the present requirement of Treasury consent.

The question as to how far current profits can be distributed without making good past losses has given rise to endless discussion, and some of the judicial pronouncements have paid little regard to accountancy principles. The Report contains recommendations which amount to a coherent and sensible code. The Committee thinks that a company should not need to make good unrealized capital losses before distributing current revenue profits. Although it would normally be prudent to make good *realized* capital losses before distributing profit, the Report makes no categorical recommendation for it. As regards past revenue losses, however, the Report thinks that the profit and loss account should be a running account, and that accordingly past revenue losses should be made good before dividends are paid out of current profits.

One of the more baffling problems of company

law is the extent to which it is permissible for a company to pay dividends out of dividends it has itself received on recently purchased shares in other companies. Paragraph 15 (5) of the Eighth Schedule to the 1948 Act seems to proceed on the assumption that dividends received which are fed from profits earned before the shares were acquired cannot in turn be paid out in dividends. The draftsman of that schedule was perhaps confusing good accountancy practice with the requirements of the law, because there is no authority for such a proposition either in the body of the Act or in any reported case. Moreover, the paragraph is so worded that evasion is easy.

The Committee thinks that it should be clearly stated in the body of the Companies Act, as the general rule, that pre-acquisition profits, distributed to the acquiring company after the acquisition of the shares, should not be treated as profits made by the latter. The principle is that a dividend which has been paid for in the purchase price of the shares should not be regarded as distributable profit. However, the Committee thinks that it would be difficult to enforce a legal requirement expressed in such general terms. Accordingly it recommends that the date as from which shares may be deemed to have been acquired should in no case be earlier than the close of the latest accounting period of the acquired company before the contract was entered into.

There would be exceptions from the general rule. What the Committee calls 'inter-group' (presumably it means 'intra-group') acquisitions would be exempt. If the directors are of opinion that the pre-acquisition profit is not significant in amount, they could ignore the prohibition. Sometimes an amalgamation is effected by a new holding company acquiring the shares of two or more companies. The Committee recommends exemption in favour of such a company if it acquires 90 per cent or more of the issued capital of the old companies, in return for shares issued at a premium (or of no par value). However, if it wished to pay dividends out of the pre-acquisition profits of more than one of its newly acquired subsidiaries, it would require the sanction of the Court, on the lines of a petition for a reduction of capital. A company which had acquired 90 per cent or more of the issued capital of one other company would also have the right to apply to the Court for permission to pay dividends out of pre-acquisition profit.

We have dealt in detail with this particular topic to show the thoroughness with which the Committee has dealt with the more complex problems which were put before it. The topic, and the Committee's solution, also illustrates the impossibility of making the Companies Act any simpler.

When examining the problem of the right way to value stock and work-in-progress in the balance sheet, the Report again draws on the accumulated wisdom of the English Institute. It records that the Institute issued a revised recommendation on the topic in November 1960, and observes that the current opinion is well summarized in a part of the Institute's evidence, (reproduced in the Report) expressing its agreement with the Institute's views. The Report recommends that, whatever the basis of valuation used, the shareholders should be concisely but adequately informed about it, and of any departure from a previous basis.

Many people have been unhappy about the definitions of 'revenue reserve' and 'capital reserve' in the Companies Act. We welcome the recommendation that 'capital reserve' should be defined to mean reserves which may not lawfully be distributed.

We have indicated that if the Report's major recommendations are adopted, the exempt private company and the private company, will disappear. The Committee thinks that this change might deprive a number of auditors of exempt companies of their livelihood. Under the present provisions many are not eligible to act as auditors of non-exempt companies. To meet this the Committee would empower the Board of Trade to 'authorize' any person who can satisfy them that, at the time the Report was published, he was mainly occupied in private practice as an accountant and was employed as the auditor of an exempt private company. Such an 'authorized' person would be able to act as auditor of any company in the 'unquoted' category

The provisions for automatic reappointment of auditors do not have the Committee's approval, it recommends that every company must appoint its auditor each year. As the almost universal practice is to appoint a firm in the firm name, the Committee thinks that this should be deemed

to be an appointment of the (qualified) persons who are members of the firm from time to time during the period of the appointment, until either more than half the members at the time of appointment cease to be members; or the new members of the firm, joining it after the appointment, outnumber the members who were members at the time of the appointment. The firm would be under a duty to notify the company of these changes. The new Act would also expressly recognize an auditor's right to resign.

The Committee accepts the criticisms of accountancy bodies as to the length of the statutory auditors' report and recommends a new form based on the form submitted by the English Institute. The Committee's Report will be further reviewed in subsequent issues.

COMPANY LAW COMMITTEE

Members and Terms of Reference

The Company Law Committee was appointed in December 1959 by the then President of the Board of Trade with the following terms of reference:

> 'To review and report upon the provisions and working of the Companies Act, 1948, the Prevention of Fraud (Investments) Act, 1958, except in so far as it relates to industrial and provident societies and building societies, and the Registration of Business Names Act, 1916, as amended; to consider in the light of modern conditions and practices, including the practice of take-over bids, what should be the duties of directors and the rights of shareholders; and generally to recommend what changes in the law are desirable.'

The members of the Committee were:

Lord Jenkins, Chairman.

Mr F. R. Althaus, Deputy Chairman of the Council of the Stock Exchange and partner in Pember & Boyle, Stockbrokers.

Mr E. A. Bingen, Deputy Chairman of Imperial Chemical Industries Ltd.

Mr Leslie Brown, Secretary and Chief Investment Manager, Prudential Assurance Co.

Sir George Erskine, C.B.E., Director of Morgan Grenfell & Co Ltd.

Professor L. C. B. Gower, M.B.E., Professor of Commercial Law in the University of London.

Mr J. A. Lumsden, M.B.E., Partner, Maclay, Murray & Spens, Solicitors, Glasgow.

Mr W. H. Lawson, C.B.E., B.A., F.C.A., Partner, Binder Hamlyn & Co, Chartered Accountants, London.

Mr K. W. Mackinnon, M.B.E., T.D., Q.C., Bencher of Middle Temple.

Mrs M. Naylor, Financial Journalist.

Mr G. W. H. Richardson, Chairman of J. Henry Schroder Wagg & Co Ltd, and Vice-Chairman of Lloyds Bank Ltd.

Mr Hilary Scott, Partner, Slaughter & May, Solicitors, London.

Mr R. Smith, Secretary, Union of Post Office Workers.

Mr William Watson, C.A., Treasurer of the Bank of Scotland.

Our photos show the two members of the profession who served on the Committee – Mr W. H. Lawson, C.B.E., B.A., F.C.A., (*left*) and Mr William Watson, C.A. (*centre*) and Mr K. W. Mackinnon, M.B.E., T.D., Q.C., who is, of course, Chairman of the Panel of Judges for *The Accountant* Annual Awards.

The Housing Act, 1961

by SPENCER G. MAURICE

THE Housing Act, which received the Royal Assent on October 24th last and came into operation a month later, is divided into three parts. Part I is concerned with financial assistance for housing accommodation provided by local authorities and other public bodies. Part II contains amendments of the Housing Act, 1957. Part III contains miscellaneous and general provisions and its most important feature is the new protection which it gives to tenants holding under short leases. The policy embodied in the Act and the main reasons for it are set out in a White Paper, *Housing in England and Wales* (Cmnd. 1290), which was presented to Parliament in February 1961.

Requiring as it does a better standard of accommodation and repair in certain instances where the existing conditions are unsatisfactory (while giving landlords a slightly better return on money spent on improvements), and at the same time extending the payment of subsidies in respect of new houses, the Act is an important one and should prove valuable in ameliorating the present housing shortage, both by enabling better use to be made of existing houses and by encouraging the building of new ones, and should be generally welcome. The purpose of this article is to provide a general survey of its provisions and to consider especially those sections which are likely to prove of particular interest to accountants, who may well in the course of advising clients find it desirable to have some knowledge of those provisions at least which affect private landlords and trustees of housing associations.

New Subsidy Structure

The accountant in private practice will probably not be greatly concerned with Part I of the Act and for this reason it will be considered only briefly here: on the whole it will be of more relevance to the accountant employed in local government. Sections 1 to 6 of the Act make provision for the payment of Exchequer subsidies to local authorities, development corporations and housing associations in respect of new houses which are approved by the Minister of Housing and Local Government. The system of subsidies has been revised, the new structure having two main features.

In the first place, a subsidy is payable in respect of any new dwelling which is approved by the Minister for the purpose of subsidy: under the Housing (Financial Provisions) Act, 1958, subsidies were restricted to dwellings provided for certain specified purposes. Secondly, the amount of subsidy payable varies according to the circumstances in which a dwelling is provided though it is in all cases paid over a period of sixty years following the completion of the dwelling. The annual rate is £28 when the dwelling is provided by a local authority in the course of a scheme of town development, or by a development corporation (as defined) otherwise than in pursuance of authorized arrangements (as defined) made with a local authority (section 3 (1)). The rate is £24 when the local authority provides the house to accommodate persons coming from outside its area to meet the urgent needs of industry, when it is provided by a development corporation in pursuance of authorized arrangements made with a local authority; or when it is provided by a housing association (section 3 (2)). In the case of other dwellings provided by a local authority the rate will usually be either £24 or £8, whether an authority is entitled to the higher or the lower rate of subsidy depending upon the balance of its housing revenue account, arrived at in the manner provided for in the Act (section 4). Supplemental subsidies may be given where expenditure greatly exceeds income when measured by the local yield of a penny rate (Schedule I). Additional subsidies are payable for blocks of flats exceeding four storeys, expensive sites, and agricultural dwellings (section 5).

In a circular on the new Act issued by the Ministry of Housing and Local Government (No. 55/61, Housing Act, 1961), it is explained that the changes in the structure of the subsidies which have been made are designed to make the arrangements more flexible, with the object of securing a better distribution of financial assistance while maintaining the annual additional cost to the Exchequer at about its present level; and, more particularly, to enable local authorities in framing their building proposals to take account

of all urgent housing needs which they alone can meet, while at the same time giving more help to those authorities most in need of it. It is emphasized that the main purposes for which local authorities should continue to build are slum clearance, building for the elderly, and building for 'overspill'. But it is recognized that there are other urgent problems, such as the relief of overcrowding and of the bad living conditions often found in houses let in lodgings or shared by more than one family. It is pointed out that the new arrangements are designed to encourage authorities to pursue rent policies which assure them a total rent income of twice the 1956 gross value of their houses, whilst still enabling them to adjust rents to the needs of tenants.

Advances to Housing Associations

A further circular of the Ministry (No. 12/62, Housing Associations in England and Wales) deals with assistance to housing associations. It is perhaps not widely understood how valuable is the part which housing associations can play in meeting the demand for housing, and it is gratifying that the Minister of Housing and Local Government is anxious to see an expansion of associations' activities, which, as the circular says, could do much to bring about a broadening of the range of housing provision in directions in which it is badly needed at the present time. The circular explains that the provision whereunder 'special arrangements' (as defined in section 11) may be entered into and associations may thereby receive subsidy direct from the Minister is new, and has been introduced primarily to facilitate the payment of subsidy where associations are building for old people with the aid of loans from the Minister under section 7 of the Act of 1961.

Nevertheless, the Minister is not anxious to advance loans under section 7 for building for old people, since association schemes for old people – an important part of the work of associations and one which the Minister hopes to see developed still further – will normally be for the benefit of people for whom local authorities generally provide and should therefore be carried out under 'authorized arrangements' (as defined in section 11) with the authorities, and section 7 really has a different purpose. This is to enable associations registered under the Industrial and Provident Societies Act, 1893, to build for people who want to rent a house and can afford to pay an economic rent, and who do not therefore need to look to a local authority. For this purpose section 7 establishes a loans fund of £25 million. The Minister may make an advance to an association out of this fund to meet the whole or any part of the expenditure incurred by the association in connection with a scheme which he has approved. A loan will carry interest at the rate fixed by the Treasury under section 1 of the Public Works Loans Act, 1897, in respect of loans to local authorities made on the same date and for the same period, and be repayable in each case over a period not exceeding sixty years. One particular form of association which will be eligible to submit a scheme under section 7 is the co-operative or co-partnership association in which the members collectively own the accommodation which they occupy, and the Minister would like to see further schemes of this kind.

Management of Houses in Multiple Occupation

Part II of the Act of 1961 contains amendments of the Act of 1957 and confers important powers on local authorities, in particular to enable them to deal with squalid living conditions in houses in multiple occupation, that is to say, houses let in lodgings or occupied by members of more than one family. Section 13 empowers the Minister by statutory instrument to make regulations to ensure that a person managing such a house observes proper standards of management, and section 12 (1) empowers a local authority by order to direct that the regulations shall apply to any such house which appears to the authority to be in an unsatisfactory state in consequence of failure to maintain proper standards of management. Such regulations (S.I. No. 688 of 1962) made by the Minister became effective on May 22nd.

Notice of the authority's intention to make an order must be served on interested parties (section 12 (2)), and there is a right of appeal to a magistrates' Court on the ground that the making of the order was unnecessary (section 12 (4)). Application may be made to the authority for the revocation of an order, and there is a similar right of appeal against refusal (section 12 (6)). If the authority considers that the condition of a house falls short of the requirements imposed by the management code, it may serve on the person managing the house a notice specifying the works necessary and requiring him to carry them out (section 14 (1)); any other person known to be an owner or lessee of the house must be informed that a notice has been

served (section 14 (4)). Appeal against a notice lies to the magistrates' Court on various grounds, e.g. that the condition of the house did not justify the authority in requiring the execution of the works specified (section 14 (5)).

Section 15 empowers an authority to require the execution of works of other descriptions, namely, to remedy defects with respect to lighting, ventilation, water supply, washing facilities, drainage and sanitary conveniences, or facilities for the storage, preparation and cooking of food, and for the disposal of waste water; while section 16 empowers it to require works to be carried out to provide satisfactory means of escape from fire. Appeal against notices served under sections 15 and 16 lies to the County Court (section 17). In the event of failure to comply with a notice served under sections 14, 15 or 16, the authority may carry out the works itself and recover the costs thereof (section 18). Section 19 enables the authority to make directions to prevent or reduce overcrowding.

Improvements and Repairs

Section 29 increases from 8 per cent to 12½ per cent the rent increase permitted under section 5 (1) of the Rent Act, 1957, on account of improvements undertaken to a dwelling let on a controlled tenancy, the amount of the increase being calculated by reference to the cost borne by the landlord in respect of improvements completed after November 24th, 1961. The same increase is allowed in the case of an uncontrolled dwelling improved with the aid of a discretionary improvement grant or a standard grant. Sections 30 and 31 contain amendments relating to grants for improvements.

Section 32 (1) revolutionizes the law of landlord and tenant by importing into a lease of a dwelling-house to which the section applies a covenant by the lessor to keep in repair the structure and exterior of the house and to keep in repair and proper working order the installations for the supply of water, gas and electricity, and for sanitation and for space-heating or heating water. Any covenant by the lessee for the repair of the premises is of no effect so far as it relates to the matters aforementioned.

The lessor is not required to carry out any works or repairs for which the lessee is liable by virtue of his duty to use the premises in a tenant-like manner, or would be so liable apart from any express covenant on his part; to rebuild or reinstate the premises in the case of destruction or damage by fire, or by tempest, flood, or other inevitable accident; or to keep in repair or maintain anything which the lessee is entitled to remove (section 32 (2)). In determining the standard of repair required by the lessor's repairing covenant, regard is to be had to the age, character and prospective life of the premises and the locality in which they are situated (section 32 (3)). In a lease where the lessor's repairing covenant is implied there is also implied a covenant by the lessee that the lessor or his agent authorized in writing may at reasonable times of the day, and on giving the occupier twenty-four hours' notice in writing, enter the premises to view their condition or state of repair (s. 32 (4)).

Restriction on Contracting Out

Subject to section 33, section 32 applies to any lease of a dwelling-house granted after the passing of the Act, being a lease for a term of less than seven years (section 33 (1)). A lease is treated as being for a term of less than seven years if it is determinable at the option of the lessor before the expiration of seven years from the commencement of the term; if it is not so determinable, it is not so treated if it gives the lessee an option for renewal for a term which, with the original term, amounts to seven years or more (section 33 (2)). If part of the term falls before the grant, that part must be left out of account, and the lease is treated as a lease for a term commencing with the grant (section 33 (5)).

Section 32 does not apply to a new lease granted to a person in possession if the new lease is a tenancy to which Part II of the Landlord and Tenant Act, 1954 (which gives security of tenure to business, professional and certain other tenants), applies and the earlier lease either is such a tenancy or would be such a tenancy but for section 28 of that Act (which relates to voluntary agreements for the renewal of tenancies); nor does it apply if the earlier lease is not within section 32 and, if granted before the passing of the 1961 Act, would not have been within it if granted after that date (section 33 (3)). Section 32 does not apply to a tenancy of an agricultural holding within the meaning of the Agricultural Holdings Act, 1948 (section 33 (4), of the 1961 Act).

The County Court may, with the consent of the parties, authorize the inclusion in a lease of provisions excluding or modifying the repairing obligations imposed by section 32, if it appears to the Court reasonable to do so (section 33 (6)), but it is not otherwise possible to contract out of the lessor's obligations or the lessee's immunities (section 33 (7)).

The Accounting World

TOPICS OF PROFESSIONAL INTEREST FROM OTHER COUNTRIES

CANADA

Inventory Information

THE Canadian Institute of Chartered Accountants has recently published the fourth edition of *Financial Reporting in Canada*, which summarizes financial statements from 1957 to 1960 inclusive. Commenting on the generally acknowledged fact that a proper interpretation of operating results of manufacturing companies necessitates a knowledge of the division of inventories between raw materials, work in progress and finished goods, the journal of the Canadian Institute, in its accounting research section, reports that 87 per cent of the companies surveyed for this publication give an undivided inventory. This shows no change in practice during the past four years.

Most inventories are valued at the lower of cost or market and the journal observes that it is unfortunate, in view of the lack of any accepted meaning for 'market' in Canada, that only a handful of companies explain the sense in which they use the word. There is a wide diversity of practice in Canada, due to uncertainty as to whether 'market' is to be 'replacement cost', as it normally is in the United States, or 'net realizable value' as in Great Britain. It is suggested, therefore, that Canada might well adopt the recommendation of The Institute of Chartered Accountants in England and Wales for the abandonment of the word 'market' and use the descriptive words which are appropriate to the valuation adopted. The fact that fourteen companies out of 300 of the larger public Canadian companies did explain the meaning is seen as a hopeful sign.

BELGIUM

Professional Rules for Accountants

THE *Collège National des Experts Comptables de Belgique* has issued a code of rules for its members. The code calls for an oath to be sworn by all members to emphasize the serious nature of their moral obligations under it.

Accountants must respect professional secrets and only divulge information acquired in a professional capacity if it is the object of criminal proceedings, or of an investigation by the disciplinary body, or where specifically authorized by the client. Professional secrecy extends to the accountants' clerks, and the principal is responsible for seeing that this is observed. The accountant must conduct his affairs on a high moral plane, and any aspects of his private life susceptible of damaging the dignity of the profession are proper subjects for disciplinary action.

The accountant must exercise his profession in complete independence and avoid placing himself in a situation where his freedom could be compromised. He must refuse any assignment, or abandon one already commenced, where he becomes aware of any facts which tend to restrict his freedom of action. The exercise of the following activities are incompatible with his profession: trader, agent or business 'go-between'; any function within a company of which he is auditor; any occupation which restricts his independence. Members are forbidden to take any employment requiring day-to-day management in profit-making business firms, or in the Press, whether remunerated or not, except for publications mainly devoted to matters which concern the accountancy profession.

Advertising of any kind is forbidden, and this extends to personal publicity whether direct or indirect and authorizing a third party to use the name of the accountant for commercial or advertising purposes. Collective advertising may be undertaken if it emanates from the *Collège*. Letter-headings must be sober and contain, besides name and address, only diplomas and university degrees, bank account numbers, hours for consultation and membership of any legal or private body having a relationship with the profession. Name-plates on doors must also be of modest size, and of sober appearance.

It is forbidden to pursue clients by offering commissions or reduced fees, by holding meetings of a publicity-seeking nature, or by revealing political or administrative activities. Accountants must provide each other with assistance and do nothing capable of harming a colleague. Differences between members of the *Collège* should be submitted to the President of the *Collège* for arbitration. If a member dies, the President of the *Collège* can be requested by the heirs to appoint a member of the *Collège* as temporary replacement, to administer the practice of the deceased. If a member is suspended, the President can nominate a successor, with the agreement of the parties affected.

Members should avoid receiving deposits of money or securities from clients or third parties. If such a deposit is unavoidable, it should be effected at a bank and a separate account opened for it. Remuneration must be by fee, no other form of remuneration, direct or indirect, being permitted. Sharing of fees is only permitted where based upon effective collaboration. Fees should be fixed in consideration of the type, importance and complexity of the assignment and responsibility undertaken, as well as the particular competence and reputation of the accountant. Fees may not be calculated on the basis of results to clients. Except in judicial proceedings a member may not pass an opinion, written or oral, on a fee charged by a colleague.

UNITED STATES

Price Indices in Property Accounting

THE use of price indices in property accounting is the subject of a recent article in the *N.A.A. Bulletin* (New York), by Mr Robert H. McCleary, supervisor of the equipment control section of Sylvania Electric Products Inc.

His company's property accounting, states Mr McCleary, has been mechanized for years. Its circumstances require an especially effective system for keeping track of large quantities of productive equipment. There are approximately eighteen thousand pieces of capital equipment and approximately one hundred pieces have to be transferred to meet scheduled production requirements each month. Each capital item has its own tabulating data card, created from input data at the time the item is capitalized. The cards represent an up-to-date inventory control file of capital equipment.

In these demanding circumstances Mr McCleary shows how price index factors can be used to solve problems in three distinct phases of property accounting:

(1) computing year-of-purchase cost of reused parts in machines being rebuilt;

(2) determination of proper selling prices on used equipment;

(3) listing insurable values of capital plant and property.

The author says that the use of price index factors provides a sound, valid, consistent base on which to calculate these values. The company does not use general indices but obtains from an insurance company those needed to reflect the change in replacement value of its particular equipment.

Controllers Institute: Change of Name

AT its annual meeting on April 30th, The Controllers Institute of America changed its name to Financial Executives Institute.

An issued statement says that the new name reflects the change in status of financial management generally. The Institute's President and more than 250 of its members have the title, 'Vice-President (finance)', in their respective companies, and many others are executive vice-presidents or treasurers.

Treasurers who do not have controllership responsibilities are also to become eligible for membership of the Institute.

Long-term Planning

by PROFESSOR A. GOUDEKET
Chief Internal Auditor, N.V. Philips Gloeilampenfabrieken, Eindhoven

A paper presented at the 'Information for Management' Conference of the London and District Society of Chartered Accountants at Oxford on April 13th.

LONG-TERM planning is an outstanding subject in the minds of all those who in one way or another are concerned with trade and industry. They are interested in long-term planning both as a part of the greater entity which is indicated by the term 'management science', as well as a separate object of study. In this paper I hope to substantiate that it is quite logical that long-term planning should have attracted so much interest.

Auditors and Planning

By way of introduction I would like to suggest that the subject is an eminently appropriate one for study by experts; and this automatically gives rise to the question as to what extent the auditor may be regarded as an expert. I am of the opinion that in this respect the auditor has only a general expert knowledge and therefore is not a specific expert. In the fields of accounting, business economics and auditing, the auditor is a specific expert; but in respect of a number of related areas the auditor cannot pretend to be a specific expert. In view of ever-increasing specialization and also of the specific knowledge which the auditor has to acquire for effective execution of his primary function, it is impossible for him to have expert knowledge in all those fields with which he has greater or lesser points of contact.

Bearing this in mind I have, of course, asked myself why I as an auditor should have been given the honour of presenting this paper. I would like to state

Besides his executive position in the Philips Group, Professor A. Goudeket is Professor of Accountancy in the University of Amsterdam and a prominent member of the Nederlands Instituut van Accountants.

first and foremost that I do not consider myself to be a specialist in the field of long-term planning. It would certainly not have been difficult for the organizers of this conference to find someone with greater expert knowledge in this subject. I regarded it as important, therefore, to reflect upon the reasons for the invitation extended to me, because this would also give me an idea of the approach to the problem expected from me.

In the first place I might be expected to say something about the application of long-term planning in the Philips concern, which as a consequence of its diversification, both geographically and product-wise, presents a particularly interesting set of problems.

It could also be that British auditors are particularly interested in the attitude of the members of the profession in the Netherlands towards long-term planning and the extent to which such planning plays a part in Dutch professional practice.

For these reasons I propose to say first a few words on some aspects of the Dutch professional viewpoint, then I will follow with my own views on the problem of long-term planning, and in conclusion will give some idea of its application in the Philips concern.

Dutch Professional Viewpoint

The professional audit in Holland is strongly influenced by business economics, which is evidenced by the concentration of the auditor on the appraisal of the facts behind the figures in addition to the formal routine checking. For this paper, I am restricting myself to what is called, in Holland, the general function of the auditor, namely, the audit directed at certifying the annual accounts. According to Dutch professional views, the fundamental contents of the auditor's report are that the annual accounts give a true and fair view of the results achieved in the period under review and of the net worth at the end of that period, in accordance with economic principles.

Another important aspect of Dutch professional views is that the advice to the management of the enterprise – for instance, in the fields of business economics, organization and finance – constitutes an essential part of the outcome of the work performed by the auditor in his general function.

It will be clear that in this conception of his general function a certain degree of knowledge in the field of long-term planning is indispensable to the auditor. As regards the advisory aspects of the general function this will be quite obvious, but it also holds good for the pure auditing aspects. For instance, there are several valuation problems which can only be satisfactorily solved with an insight into the future utilization of the assets concerned; the creation of provisions will mostly be based on future expectations. Furthermore, with regard to the profit and loss account, it is becoming more generally recognized that in principle this is concerned with a relatively incidental break in the life of the enterprise, which requires not only an insight into the past but also into future possibilities.

Perhaps I may be permitted, as the chief internal auditor of the Philips concern, to conclude my remarks on the Dutch professional viewpoint with a few words regarding the internal audit function.

The Dutch viewpoint in this respect may best be described as follows: the duties of the internal auditor are such that, if he were an external auditor, he could report on the annual accounts without any fundamental modification of or extension to his audit work. The conception of the internal audit function entails that the internal auditor has a wider scope of work than the external auditor.

Therefore, what I have said of the auditor's required knowledge in respect of long-term planning is even more true for the internal auditor. In accordance with this viewpoint, in our function within the Philips concern, we certify the internal annual accounts. This certificate is of importance to our external auditors.

Importance of Long-term Planning

It may be known to you that the International Institute of Administrative Sciences (I.I.A.S.) has selected long-term planning as the topic for its meeting this year. This caused the Netherlands Institute of Efficiency to deal with this same subject at its annual conference last year. In preparing this paper I have used some statements which were made in the papers presented at that conference.

Planning, it was stated, is the formulating of an objective which one wishes to realize in a more or less distant future, the review of the possibilities of realization and the determining and systematic grouping of the measures to achieve this realization. Of course, we have all at some time come across other definitions, the more so since each writer and speaker always believes he has found a better one. A very pointed definition which I once heard and which appeals to me very much is: planning is thinking consciously of the future of the enterprise.

It is a fact that as a consequence of the structure of society, of economic events and of technical production processes becoming increasingly complicated and also of the increasing speed with which changes occur, that planning as such has become increasingly important. The further this development progresses, the further one has to look ahead in planning; in other words, the more important does long-term planning become.

One observes that in literature on this subject there is often more stress on the necessity to direct planning in order to maintain the relative position of the enterprise in its branch of industry, rather than on obtaining maximum profits. I believe that this emphasis is due to a misunderstanding and is like putting the cart before the horse. It appears unrealistic to me not to consider profit-making as the ultimate aim of private enterprise.

Now the point is to decide what this striving after

profit means or should mean. One must find what is the best profit for the enterprise, and this need not be necessarily the highest profit in any particular period. It is far more important to strive after a good level of profits which can be maintained as permanently as possible, rather than to try to achieve a short-term high profit. With this permanently good level of profits, the relative market position is an important factor in maintaining the earning capacity. To this example many others could be added to show that the ultimate purpose, and the essential means required to achieve that purpose, are often confused.

The elements which together constitute long-term planning are markets, production, and investments in capital goods as well as in 'human capital'. At the annual conference mentioned previously, one of the contributors presented this as follows. 'The objective we are concerned with is the achieving of balanced growth, which also includes providing for the need for managerial staff. Even early in my career – and that is a long time ago – one of my bosses expressed the same view in a metaphor – "There may be good and bad generals, but there are no good or bad soldiers". Therefore, by taking care that there is an adequate managerial staff the effective running of the organization is ensured.'

I could continue in this way for quite some time and give you a survey of the principles and techniques of long-term planning. However, I do not think this to be appropriate. If I had wanted to present my paper in this manner, the best way would have been to make a thorough study of all publications, sifting the wheat from the chaff and referring you to the wheat.

Logical Development

I feel the need to approach the significance of long-term planning as one of the 'tools' which management has at its disposal in another way. A way which, in my opinion, penetrates into the principles of internal organization and therefore enables us to see long-term planning not as a separate, newly-created aid, but as a logical development in the field of internal organization. Seen in this perspective, long-term planning has an organic place in the complex of aids which are available to management for decision-making. Approached in this way we are not concerned with the question whether an enterprise should either apply long-term planning or not, but with a self-evident matter with a logical consequence of the efforts to maintain the organization of the enterprise on an up-to-date level.

I arrived at this conclusion last year when I prepared a paper to be presented at an employers' conference on the problems of 'innovation'. In that context I read an interesting reflection in the book, *The Landmarks of Tomorrow*, written by the well-known American author, Peter Drucker. In my opinion the reflections on innovation given in this book have a universal significance and are also applicable to long-term planning. These reflections also carry the interested reader back to the origin, and therefore to the essence of the problem. I consider these reflections to be important enough to put them before you in brief.

In itself, innovation is not a new thing; it has existed since the beginning of time. What has changed is the way in which we think of innovation. If, in the past, progress was seen as an inevitable automatic chain of events, in our present way of thinking it is to be considered as an intentional, co-ordinated, directed change, called innovation. Or expressed in another way: innovation is now seen as the resultant of directed human activities.

In the business field, innovation is no longer something special: it is a normal feature of effective management, its realization has become a normal expense to be calculated in costs; innovation makes planning a necessity. It is also true that planning has been in existence since the memory of man, albeit that in the past planning was effected without any conscious system or pattern but nowadays consciously and systematically.

Risks and Responsibilities

Innovation brings with it three risks: challenge, failure, and success. Taking of risks necessitates the defining and accepting of responsibility. This makes planning, and especially long-term planning, an essential element of management. Planning has to be on a sound basis, that is to say, past achievements should not automatically be its starting point nor should it be based on wishful thinking. No, a rational choice must be made from various possibilities, taking into account the risks inherent in each of them, based on a considered judgment; thus planning must be applied in connection with co-ordinated 'innovation-effort'. Such management is automatically long-term management. It takes into account developments in all aids and techniques, whether realized or anticipated in its support.

It is the specific duty of the expert to see that there is balanced growth in the development of management sciences, techniques and methods. The feed-back effect of the available aids and techniques on the development of management is a remarkable phenomenon. Seen in this way, long-term planning is definitely an indispensable aid to a rational, up-to-date management, as well as being the product of evolution – a product which is complementary to all other aids employed in effective management. Thus long-term planning constitutes a form of budgeting adapted to the changed circumstances. To put it even stronger: it is inseparable from budgeting.

In principle and in technique, long-term planning is identical to budgeting, but deviates therefrom in degree of certainty of outcome due to the characteristics inherent in the 'long-term'. The uncertainty factor in outcome is in direct relationship with the span of time from the present to the end of the period covered by long-term planning. Thus we have

the same principles, the same techniques and also the same degree of indispensability as in budgeting. The essential difference is the period to which the planning relates and accordingly the task-setting element will, dependent upon the length of the period, be of greater or lesser strength. On these grounds I consider the interrelationship of budgeting and long-term planning to be of essential significance and I would go as far as to say that these are an entity.

The most recent period of long-term planning is always absorbed into the budget and a new, more remote period, is added to the long-term planning. It goes without saying that the experience in the last budget period will influence the construction of the long-term plan, and that the analysis of the deviations between the figures of the most recent period appearing in the long-term plan and those absorbed into the budget is of significance to the long-term plan.

Before going into the application of long-term planning in the Philips concern I would like to indicate, briefly, that the elements of which the budget and long-term planning consist are in fact directed at the objective of entrepreneurial activity.

As already mentioned the objective of this activity may be deemed to be the making of the most appropriate profit on a continuous basis, which also implies the maintaining of the relative market position and a permanent co-ordinated innovation effort in which, of course, research plays an essential part.

Scientifically based investigations will then lead to the following planning and budgeting:

Activities

(*a*) *Sales*

Here the investigations comprise specification according to products, types, sales outlets, classes of customers, selling methods, etc. Justified results can only be achieved by an expert application of the most refined modern techniques, including the psychological aspects of consumer behaviour.

(*b*) *Production*

Here the questions 'where' and 'how' play a predominent part; in this respect, the investments involved in each of the possible answers to these questions should also be taken into account.

(*c*) *Purchasing and stock policy*

A rational purchasing and stock policy is only possible if operations research and similar refined statistical techniques are applied. Sales, production, purchasing and stock policy are not activities each forming a separate class, but are interdependent activities which therefore must always be seen in their interrelationship.

(*d*) *Profitability*

Profitability must be estimated on a normative basis for all levels in the organization. For this, realistic task settings, that is to say, task settings which are deemed realizable in practice, must be taken into account. Replacement value and allocation of expenditure and revenue to the period to which they economically relate, are necessary if there is to be a rational basis for the determination and analysis of profits, and a basis for comparison is to be created.

Financing

Since budgeting and long-term planning, each in themselves, should form a closed circuit, the master budget will always have to include a balance sheet as at the end of the budget period, and as at the end of each interim period of the long-term plan. This ensures that the financing, both as regards the total amount required and its sources, is included fully in the plan and that the adjusting effect of the financing possibilities on the activity planning has been duly incorporated.

I would like to emphasize that all these elements constitute one comprehensive whole and that each change in any one of these elements usually involves quite a number of changes in the other elements. It is evident that in larger organizations this will give rise to the problem of flexibility, in which respect a computer may bring relief.

Last, but definitely not least, the plan demonstrates the need for managerial staff commensurate with the planned development. This in its turn also constitutes a task-setting, in this case, for the function within the enterprise which is responsible for the long-term planning of 'human capital'.

Application in the Philips Concern

The foregoing may have explained that long-term planning is not a problem on its own, but a problem interrelated with internal organization. If that internal organization is not built in such a way that the plan or the budget can be segregated into autonomous responsibilities, and if it does not have an accounting organization which makes possible the drawing-up of separate accounts per responsibility, then neither the long-term planning nor the budget will meet expectations. Very rightly Mr Peter Drucker, whom I have already mentioned earlier in this paper, observes:

'Most business men still believe that basic decisions are made by top management. Indeed practically all textbooks lay down the dictum that "basic policy decisions are the prerogative of top management" and at most that "top management delegates certain decisions". But this reflects yesterday's rather than today's reality, let alone that of tomorrow. It is perfectly true that top management must have the final say, the final responsibility. But the business enterprise of today is no longer an organization in which there are a handful of "bosses" at the top who make all the decisions while the "workers" carry out orders. It is primarily an organization of professionals of highly-specialized knowledge, exercising autonomous, responsible judgment. And every one of them – whether manager or individual expert contributor – constantly makes truly entrepreneurial decisions, that is, decisions which affect the economic characteristics and risks of the entire enterprise. He makes them not by "delegation from above" but inevitably in the performance of his own job and work.

'For this organization to be functioning, two things are needed: knowledge by the entire organization what the direction, the goals, the expectations are; and knowledge by top management of what the decisions, commitments and efforts of the people in the organization are. The needed focus can only be provided by a long-range planning.'

It cannot be said that in the Philips organization the most modern techniques are applied throughout; nor can it be said that budgets and long-term plans are prepared to perfection. However, it is definitely true that at the top and at lower levels, both at headquarters and in its subsidiaries, people are budget-minded and therefore also think in terms of long-term planning.

More important than perfectionism is the fact that the philosophy has been accepted throughout and that in all the divisions and departments of Philips, people speak the 'language of planning'. Notwithstanding mistakes and deficiencies, this remains the most important feature. With us, budgeting and planning are not something special, something for which one has to sit and think; no, it is a matter of course.

The Philips Organization

An idea of the way in which planning is operating in the Philips concern may best be obtained from a brief outline of its organization. As regards the elements of which the budgeting and planning activities, as explained in the foregoing, consist, it may be said that in the field of budgeting we are very advanced; while in the field of long-term planning we are rather advanced, but definitely less advanced than in budgeting.

Our innovation efforts are also directed at the composition of budgets and long-term plans as such, in the sense that we are continuously striving after an improvement of the aids and techniques to be applied.

The Philips concern is made up of subsidiaries and central divisions, each with its own board of management having a great degree of independence. Each of these units has its own budget and long-term planning and – according to the degree of independ ence – its own financial rendering of accounts, that is to say, an independent accounting system with its relative balance sheet and profit and loss account.

The Philips management consists of the board of management and staff functions. The latter are functionally concerned with creating the conditions required for an efficient fulfilment of the corresponding functions in all independent units of the concern. Group policy decisions flow from central management to the boards of management of the units. In these units these decisions – adapted to the local circumstances – are taken as a basis for budget and long-term planning (four years). These are submitted to central management for approval.

This approval serves a dual purpose. On the one hand, it is the outcome of the review of the budget or the plan as an independent document checked against group policy. On the other hand, it implies that central management has verified that the consolidated plans and budgets of all units lead to an acceptable result, taking into account considerations of capacity (both financial and quantitative). Summarizing, it may be said that the budgeting and planning-activity within the Philips concern is characterized by being: (*a*) a factor in the management of each unit, and (*b*) a consolidation of the underlying units for each successive level of management.

It should be realized that fully analogous to the budgets each month, a comprehensive profit and loss account per division (both geographically and product-wise) and a consolidated balance sheet are prepared. Thus we have at our disposal a complete entity in the field of planning: individual and consolidated budgets and long-term plans, individual and consolidated accounts at short-term with related analyses concerning the variances from budgets. From the latter data, succinct monthly information is prepared for the board of management.

From the foregoing it may be rightly concluded that we are not dissatisfied with the achievements in the field of planning made in our organization. Of course, we are not completely satisfied, but in view of the 'planning spirit' prevailing we have confidence in future development.

I would like to conclude by bringing the auditor once more to the fore. Activities of the auditor concerning long-term planning mean in my view – as you will understand – activities related to the internal organization of the enterprise. This is the accepted viewpoint of the audit function in the Dutch profession. These views do not imply that the auditor should be an expert in all specific fields of the organization, but it does mean that in these fields the auditor is the person of trust for management; on the strength of his observations in the course of his audit, he will be in a position to draw attention to problems which may arise; he can give advice to management – in some cases as a specific expert, and nearly always as a general expert; and in appropriate cases he will be in a position to advise management to call in a specific expert in a particular field.

As a result of enterprises becoming increasingly complex, management at its various levels becomes ever more dependent on the reliability of information submitted to it. On the basis of that information, decisions are taken which often concern very large amounts and which may considerably affect the results of a number of years. I have already explained in the beginning of this paper that the auditor is also interested in this information in his pure audit function. It is high time that the auditing profession became increasingly conscious of the economic function which it can fulfil in the business community, in addition to its primary function aimed at verifying financial accounts.

Weekly Notes

PROGRESS ON THE COMMON MARKET

FOLLOWING the weekend of discussions in Brussels the Lord Privy Seal, Mr Edward Heath, has come down emphatically on the side of optimism about the time schedule for this country's entry into the European Common Market. He said at the beginning of this week that a great deal of hard work would have to be done but it was now agreed that there may be a basis for agreement by the end of July. It would then be possible to put the draft outline of the scheme to the Commonwealth Prime Ministers' Conference in September.

There has been mild optimism in administrative circles for some weeks that negotiations were making progress. This is the first time that a considered optimistic statement has been forthcoming from the political head of the negotiations on the United Kingdom side. It would seem that the basis of the optimism is the amount of useful progress which has been made on the minutiae of the economics of the problem. Even within the economic context there do not seem to have been outstanding major achievements but the bits and pieces add up to progress.

The political side of the negotiations has always been the most difficult in prospect. It would seem, however, that the recent exchanges between Mr Macmillan and President de Gaulle have temporarily allayed fears that the French Government would be hostile throughout the negotiations. The fact remains, however, that the major manoeuvres on the political side may still have to take place. The French Government has not yet finally shown its hand and there is no reason why it should until the negotiations on the political side reach the point where the French view is decisive. That point may come later in the summer.

F.B.I. ON THE OUTLOOK

THE latest inquiry by the Federation of British Industries covers the period May 23rd to June 1st, and, therefore, pre-dates the recent easing of credit restrictions and the nervous state of world stock exchanges. The inquiry shows a rise in the majority who are more optimistic about general conditions than four months ago and a fall in those less optimistic. The change, however, is not sufficient to bring about a net upward balance of opinion.

In general, the situation does not seem to have changed much since the February investigation. At that time there were reports of a downward or level trend in the major business indicators with expectations of improvement. These expectations did not materialize in the period under review.

An important feature of the latest results is the further rise in the proportion of firms working below full capacity. In February, 59 per cent of firms said they had spare capacity and this has increased to 64 per cent. Shortage of orders is increasingly given as the reason for limited output and the other chronic limitation, shortage of skilled labour, seems to be less significant. A growing majority of firms expect to authorize less investment in the next six months. There is a downward adjustment of stocks of raw materials and work in progress, which was reported in February and subsequently confirmed by official statistics.

There is continuing optimism about the export trade. Thirty-six per cent of firms report an increase in export orders and 26 per cent a decline, an upward balance of 10 per cent against 2 per cent in February. The European Common Market continues to be where prospects are improving most rapidly, while prospects seem to be worsening in Africa, Australasia and India.

THE BANK ADVISES

THE current (June) issue of the *Bank of England Quarterly Bulletin* contains the usual summary of the course of recent economic events which is of particular interest at the present time in view of opinion that an early change in the Government's economic policy is needed. Several critics have averred that there is now a real danger, aggravated by conditions in Wall Street, of deflation in the United Kingdom. Hence it is suggested that some stimulus to both investment and, more especially, consumer spending is now overdue. The Bank's *Bulletin* is more cautious, reminding its readers of the circumstances which led to the raising of Bank rate to 7 per cent last July, and adding that in the process of relaxing restraint it is necessary to ensure that 'the seeds of similar trouble are not sown'. It stresses that a rising level of domestic expenditure cannot be sustained without a much higher level of overseas earnings, i.e. exports. There is, adds the *Bulletin*, a danger that relaxation of the present restrictions could easily lead 'to an excessive concentration (of home demand) in certain periods, to the detriment of the overseas trade balance'.

The latest *Bulletin* continues the series of excellent and informative articles on financial topics. An analysis of the distribution of the national debt, which brings up to date the series published in the Radcliffe Report, reveals that the proportion thereof held by the banking sector fell between 1958–1961 from 22 to 16 per cent. A description of the nature of inflows and outflows of foreign funds and their impact upon the monetary system, a further note on the estimates of United Kingdom overseas portfolio investment, together with the voluminous statistical tables, ensure that the *Bulletin* is rapidly becoming a most valuable addition to current literature on the financial scene.

HIGHER TRADE GAP

THE seasonal adjusted external trade gap for May 1962 was £49 million compared with £45 million for the average month so far this year. Exports at £338 million were nearly 6 per cent higher than the monthly average for the first five months of the year, while imports at £412 million were 9 per cent higher. In the year to date exports have been rising steadily, the markets in Western Europe having been particularly buoyant. In addition, there is no longer a fall in shipments to other sterling countries depressing the total. It will be observed that the latest F.B.I. survey of business expectations, mentioned in a note on the preceding page, also takes an optimistic view of export prospects. Last month's rise in imports is thought to have been accentuated by expectation of a dock strike. Nevertheless, the increase last month, coupled with the sudden jump last January, has put the average level of imports above the corresponding level for 1961.

There seems to be little doubt that the run-down in stocks of raw materials is helping to contain the expansion of the import bill. It seems unlikely that this fall can go on much longer and that by the late summer or early autumn industry must start rebuilding its stocks. The continuing buoyancy of exports and the prospect of higher capacity working by industry for the home market as credit restriction relaxations begin to take effect, are likely to cause a gradual filling of the production pipelines. This will occur at a season of the year when sterling is vulnerable. In other words, the modest buoyancy in exports must build up to a higher level of activity over the next three months if the visible trade gap is to be kept within modest proportions.

EFTA's FOREIGN TRADE

A BOOKLET issued by the Secretariat of the European Free Trade Association called 'EFTA's Foreign Trade' sets out the trading experience of the members of EFTA for the year ended June 30th, 1961. It points out that the United Kingdom accounted for over half of EFTA's world exports, followed by Sweden and Switzerland. Likewise the United Kingdom was the main importer. The net balance of trade showed imports exceeding exports by 24 per cent. About two-thirds of this was with the European Economic Community and about one-third with the United States. All EFTA countries had an individual net trade deficit, the largest import surplus being for the United Kingdom and for Norway.

During the period under review EFTA's world trade balance deteriorated slightly. Taken as a whole, by the end of June 1961 exports covered about 80 per cent of imports. The best performance was by Sweden with 92 per cent and the worst by Portugal with 53 per cent.

So far as trade among members of EFTA was concerned, this expanded over the period by about 12 per cent compared with a 10 per cent increase to the European Economic Community and with 5 per cent to the rest of the world. There was a slump of 20 per cent in trade with the United States.

CREDIT SQUEEZE IN ENGINEERING

THE Engineering Industry's Association has recently circulated its members about the use of trade credit brought about by the conditions of the recent credit squeeze. Although this investigation has been confined to the engineering industry it is of interest to many others, for throughout industry one effect of the credit squeeze was to slow up the payment of bills.

The Association asked members to give their turnover in the last quarters of 1960 and 1961 and also the total of debtors' balances owing to them at the end of each of these quarters so that the ratio could be calculated of the total of debt to the preceding quarter's turnover.

Some 226 firms responded to the questionnaire and the following general conclusions emerged. In the 1960 quarter, smaller firms normally gave somewhat shorter credit terms than larger ones. There was a significant change, however, in 1961. Small firms found themselves granting longer credit terms than the largest firms. The medium-sized firms remained highest in the term of credit granted but the increase of 1961 over 1960 was less than that suffered by the small firms.

The Association points out that at times of credit squeeze it is inundated with complaints from its smaller members, who are least able to cope with the strain imposed, about slow payment of bills. The Association points out that the Government imposed the credit squeeze to regulate the economy and curb inflation and expects the impact to be equitable, a state of affairs which this survey shows is not so. The fact is, of course, that any form of monetary control is rarely equitable. Those most vulnerable and most easily put under pressure to reduce their credit are the ones who are affected first. This is true whether it is professional accounts with the banks or small companies in all industries. The real answer to the credit squeeze to avoid financial embarrassment is to refrain from over-trading and to keep adequate liquid reserves.

INSTITUTE OF ACTUARIES' ANNUAL MEETING

IN his address at the annual general meeting of the Institute of Actuaries last Monday the retiring President, Mr J. H. Gunlake, C.B.E., F.I.A., referring to membership and recruitment, said that for the first time since 1958 the number of students again exceeded 1,000 and that, at over 1,000 and 2,500 respectively, the number of Fellows and the total membership were at the highest levels ever attained. Careful investigation had been made into the future need for actuaries over the next ten years, and it had been decided that the Institute should continue to be

active in the recruitment of new entrants of the right standard of ability, including a high proportion of university graduates.

While the training and examination of students, he said, imposed a heavy burden on the Institute's qualified manpower, the need for research had not been overlooked and in this area it was hoped to make an announcement regarding the future of the Actuaries' Investment Index at an early date. There was, however, a need for more activity by the members both in research and the preparation of original papers for sessional meetings of the Institute.

Turning to the future the President referred to the Institute's booklet appealing for an independent advisory body on National Pensions, and asked whether they dare hope that the National Economic Development Council might take an interest in the subject. He also drew attention to the National Productivity Year planned for 1963 and said that in his opinion even professional men can often increase their contribution to the national output by improved methods of organization and work study.

Mr Gunlake described the one hundred and fourteenth year of the Institute's existence as one of extensive and important achievement. The first international congress of actuaries to be held in the United Kingdom for thirty-seven years was being planned for 1964.

The new President of the Institute is Mr K. A. Usherwood, M.A., F.I.A.

This is My Life . . .

by An Industrious Accountant

CHAPTER 129

I KNOCKED sharply on the door of the sales manager's office, and entered to find him in conference with his senior assistants. Scotty looked up with a wary grin. 'Ye ken the fire in his e'e, laddies', he remarked. 'I'm thinking that loon Browne's at the root of the trouble.'

He was right; Browne was. In fact, that customer has been a thorn in our side for months past. It started when I got a personal letter from him apologising courteously for his account being a little overdue and asking for our esteemed indulgence in connection with the enclosed further order. The said account was very overdue and much too high; the ledger clerk, somewhat inexperienced, had really been caught napping.

Stern measures were taken with Browne, but to little effect. It was necessary to threaten a writ before he yielded far enough to send us a small currently-dated cheque, plus four post-dated ones. Three days before the first of them was due he wrote asking us to hold it for a further fortnight. We replied in outraged protest; after ten days came a letter from his wife saying he was too ill to attend to business. 'He's no fule', said our S.M. approvingly, 'he doesn't miss a trick.'

My private grapevine told me that Browne was hale and hearty; I already knew he had a public house as well as his drapery shop. It was a surprise, therefore, when his cheque was ultimately returned to us by the bank, marked R.D.; this particular morning it had bounced again, hence my indignation. Scotty had interceded for his old friend Browne all along the line; now I had to tell him our solicitors had been instructed to issue a writ. Justice, I had pleasure in pointing out, was about to be seen to be done.

But still Scotty pleaded for time. Why bankrupt a customer by going to extremes and perhaps lose 15*s* in the £? he asked; why not insist on further instalments instead? We knew Browne had resources somewhere; it was a question of strategy at this stage. We finally compromised; we drove off together for a summit ultimatum, to give the old defaulter another chance.

Little good we did, however. Browne proved to be an autocratic, pompous character with marked lack of co-operation; he seemed to regard our threat of foreclosure as tactless bluff. His family had traded with us for generations and were regarded locally as leading citizens; to stoop to sordid business details was clearly distasteful to him. In Mr Pickwick's Club the term 'haberdasher' was an insult; Browne would have felt the same. True, his shop was far from prosperous, but he'd pay shortly; the public house actually belonged to his brother, who'd surely tide him over if really pressed. Browne poured enormous tumblers of whiskey with lordly condescension; our money seemed very remote.

He talked on arrogantly about the changes in social values nowadays; the old estates sold, the grand old families vanished, the influx of strange new immigrants. Scotty agreed dispiritedly; I threw in thoughtlessly what seemed an appropriate couplet:

'But a bold peasantry, their country's pride,
When once destroyed, can never be supplied.'

The result was electrifying. Browne jumped up furiously. 'Who're you calling a peasant?' he roared at me, his face crimson. Scotty, shocked into wakefulness, almost had to hold him down. Some ancient sore spot had clearly been touched; Browne's hands were shaking with emotion.

Well, he calmed down at last; he wrote a big cheque for us with tight-lipped dignity and showed us out like intruders. The bank duly honoured it; we've had no trouble with him since. You know, people are unpredictable. I'd like to know the story behind his injured mask of family pride.

Finance and Commerce

Relay Exchanges

THE reprint this week is from the report and accounts of Relay Exchanges Ltd, a name probably known to readers who may receive their TV and radio through the Rentaset organization or over the 'wired' service. That is the basic business. The company also has Goodmans Industries making loudspeakers and vibration test equipment, Monk Metal Windows, Metal Developments making aluminium lamp-posts, and Recordaphone which provides a telephone answering and dictating machine. Mr J. W. C. Robinson, M.B.E., is at the head and the directors include Mr J. W. Kinsman, F.C.A. (secretary) and Mr B. H. J. Daniel, F.C.A. (controller).

An important point in these accounts is the very substantial provision for renewals. Mr Robinson, for the benefit of new shareholders, gives a 'lengthy explanation of our depreciation policy so that it may be fully understood and the benefit entailed for future profit prospects fully appreciated'. The purpose is as he says, 'to maintain our shareholders' capital now mainly invested in television sets on hire to the public.'

Due to changes in fashion and the evolution of new techniques, the nature of these assets is such that they have a comparatively short life, even when well maintained. Fortunately, many long-standing customers are content to continue using older types of sets to obtain the benefit of the annual reductions in rental allowed by the company.

Heavy Provision

Mr Robinson says the need for the heavy depreciation provisions has been recognized as sound and justified 'even by those responsible for assessing our appropriate allowances for depreciation for taxation purposes'. But, he adds, there has been trade criticism against the form of the allowances by competitors anxious to handicap rental for the benefit of increased retail sales of TV sets by hire-purchase. 'If these taxation arrangements were singled out for discriminatory treatment to mollify competitors, we would naturally object', he says.

Despite the heavy provision of sets already made, absorbing about 75 per cent of the year's surplus, the board is contemplating setting aside in 1962 – out of the balance of profit carried forward – a sufficient sum which, with appropriate tax adjustments involved, would finally write off the remaining cost of TV sets with screen sizes less than seventeen inches. Smaller-screen sets, however, are at present still revenue-earning assets.

What will emerge from the Pilkington Committee and its awaited report is a big uncertainty. It is most desirable, says Mr Robinson, that the company should be able to make provision to write off sets which may not be suitable for conversion to suit new systems of broadcasting that may come. But his view is that none of the possible changes could come so rapidly as seriously to affect the prospect of maintaining earnings. And if drastic changes do come, he believes they would create greater opportunities for rental than ever before.

Competition

Main competition for rental is hire-purchase. In 1961 it was competition on 'uneconomic terms' which arose from the overproduction of TV sets by manufacturers in 1960. Manufacturers and hire-purchase finance companies, says Mr Robinson, 'joined together to persuade the retail trade to rush into rental at panic prices. These rentals were based on purchases of sets at far below normal prices. The fact that television rental is a long-term business in which the main expenses are incurred by the maintenance of service over a number of years, was disregarded'.

It may have served the purpose of manufacturers in so far as the sets were shipped out of the factories, he goes on, but it is resulting in 'painful experiences for the unlucky retailers who were encouraged to over-trade recklessly'; and 'heavy losses will eventually come home to the manufacturers who gave long-term credits indiscriminately and the hire-purchase companies who advanced money on the assumption of the security of this kind of business brought to them by small retailers, based on cut-price rentals'.

The experience of this company, over the years, is that on each hiring, sets do stay out on average for not more than about two years, after which they need an expensive overhaul before re-issue. 'It is completely wrong', says Mr Robinson, 'to equate rental with hire-purchase as one and the same thing'. The essential appeal of rental is the customer's avoidance of responsibility without entry into long commitment and being able to change the set as often as desired.

Disillusioned

Mr Robinson reckons that the severe competition of 1961 and early 1962 will soon be over. He believes that the hire-purchase finance companies which assumed it was possible for comparatively small businesses to embark on a programme of rapid and extensive development in competition with the well-established rental business, on rentals at current levels, and which expect these concerns to pay the cost of hiring money at high rates of interest, high shop rents, advertising and development expenses, will be disillusioned.

Meantime, there remain the control of hiring

orders of the Board of Trade and the underlying effort to equate conditions between rental and a hire-purchase system under Government anti-inflation regulations. The orders require a rental customer to make a down payment of not less than three months' rental before a set is delivered, unless the set is over three years old. But the hire-purchase promoters, Mr Robinson says, resent the fact that the down-payment on a hire-purchase contract is 20 per cent of the selling price, which generally works out at more than the rental down-payment. Remove all controls on rental and hire-purchase, he says, and 'our business would flourish still more'. But, he observes, 'it is worthy of note that we have a growing interest in retailing and hire-purchase trading which we are capable of expanding if the opportunities justify it'.

Running Broker

THE discount market, to the uninitiated, is probably a complicated enough institution anyway without the use of a term which may have puzzled some of our student readers when we referred to Gerrard & Reid, the discount company, in our issue of May 26th. The company, we said, originated in the firm of running brokers, Gerrard & Middleton, established in 1870. What were 'running brokers'?

In fact, they went their rounds of the City making a living as intermediaries between buyers and sellers

RELAY EXCHANGES LIMITED AND SUBSIDIARY COMPANIES

NOTES ON ACCOUNTS FOR THE YEAR ENDED 31st DECEMBER, 1961

Note 1. FIXED ASSETS of Relay Exchanges Limited and subsidiary companies.

As at 31st December, 1960	Relay Exchanges Limited	As at 31st December, 1961 Cost	Depreciation	
£		£	£	£
16,195,595	Television sets and accessories	19,435,193	—	19,435,193
2,286,832	Television aerials	2,962,036	—	2,962,036
9,200	Radio receivers and loudspeakers	196,380	—	196,380
26,527	Plant, trunk wiring and installations	37,445	—	37,445
535,276	Motor vehicles	677,995	356,427	321,568
87,572	Office furniture	165,890	24,505	141,385
600,465	Freehold property	901,131	38,505	862,626
154,005	Leasehold property	236,477	37,582	198,895
99	Goodwill	99	—	99
£19,895,571		£24,612,646		
367,781	Less: Depreciation		£457,019	
£19,527,790	Net book value			£24,155,627

As at 31st December, 1960	The Group	As at 31st December, 1961 Cost	Depreciation	
£		£	£	£
16,421,062	Television sets and accessories	19,801,419	—	19,801,419
2,287,141	Television aerials	3,012,267	—	3,012,267
202,147	Radio receivers and loudspeakers	198,380	—	198,380
655,848	Plant, machinery, trunk wiring and installations	780,210	—	780,210
606,047	Motor vehicles	738,606	393,099	345,507
178,672	Office furniture	242,073	56,295	185,778
1,013,518	Freehold property	1,329,398	56,122	1,273,276
235,593	Leasehold property	268,724	42,608	226,116
£21,600,028		£26,371,077		
474,504	Less: Depreciation		£548,124	
£21,125,524	Net book value			£25,822,953

Note 2. Replacement of certain fixed assets is provided for by the provision for renewals. Details of these provisions are:—

As at 31st December, 1960 The Group	Relay Exchanges Limited		As at 31st December, 1961 Relay Exchanges Limited	The Group
£	£		£	£
6,817,819	6,737,020	Television sets and accessories	8,961,485	9,107,994
1,193,323	1,193,142	Television aerials	1,727,887	1,734,821
190,473	920	Radio receivers and loudspeakers	178,791	180,791
337,340	125,478	Plant, machinery, trunk wiring and installations	143,439	386,405
£8,538,955	£8,056,560		£11,011,602	£11,410,011

The total provision of £11,011,602 in the balance sheet of Relay Exchanges Limited includes £124,838 which relates to plant, trunk wiring and installations of subsidiary companies.

Note 3. The movements on capital reserve are as follows:—

	Relay Exchanges Limited	The Group
	£	£
Share premium account:—		
Balance as at 31st December, 1960	712,091	712,091
Less: Stamp duty on acquisition of new company	226	226
	711,865	711,865
Profit on sale of certain fixed assets:—		
Balance as at 31st December, 1960	—	5,395
Transferred during year	—	3,574
	£711,865	£720,834

Note 4. The amount set aside for equalisation of taxation is calculated at current rates of taxation on the excess of the net book value of fixed assets of the Group eligible for capital allowances over the written down value of such assets for tax purposes.

Note 5. Discounting advances—This sum represents monies received on the sale of a proportion of future rentals receivable.

Note 6. At 31st December, 1961 there were commitments for capital expenditure not provided for in these accounts amounting to approximately £333,000.

of bills of exchange. For various reasons, some houses could be short of maturities for a particular day or days; others could find their bill portfolio possibly a little heavy. The state of the market at any particular time could much depend on whether daily money was 'easy' or in short supply.

In the atmosphere of urgency that can develop as banking hours draw to a close, it is not difficult to imagine running brokers actually running, especially when it is realized that in those days there were no telephones in the City. The first City telephone exchange did not arrive until 1879 – actually at No. 36 Coleman Street. Everything had to be done by personal contact which was largely provided by the running brokers. Such was business life in this mid-Victorian era – with no phones, no motor-cars, no adding machines and hardly a typewriter.

Unclaimed Dividends

A SMALL matter of interest in company administration is provided by the action being taken by The Shanghai Electric Construction Co Ltd in regard to unclaimed dividends. With an issued capital of £670,000 – to give the figure perspective – unclaimed dividends appear in the balance sheet at £3,476.

Action takes the form of a special resolution to insert a new article in the articles of association. It reads: 'The payment by the directors of any unclaimed dividend or other moneys payable on or in respect of a share into a separate account shall not constitute the company a trustee in respect thereof and any dividend or other moneys in respect of a share unclaimed after a period of twelve years from the date when such moneys became or become payable shall be forfeited and shall revert to the company provided that the directors may remit such forfeiture if in any case they shall in their absolute discretion think fit to do so.'

According to Mr H. Ockford, the chairman, the dividends unclaimed go back to a period prior to 1941. The directors feel the company could usefully employ the money and that its liability should be discharged.

The fact that of the board of three, Mr Ockford and Mr F. W. Wills are chartered secretaries and the third director is Mr A. G. Touche, F.C.A., should give absolute assurance that everything is in proper form.

CITY NOTES

STOCK-MARKETS have continued to feel their way in the past few days. The City's weather eye is still on Wall Street, but the shock waves of movements in that centre seem to be damped down to some extent on reaching this side, following the object lesson of the switchback movement of 'Black Monday'.

There is a tendency to look for a slightly improving economy at home. A further cut in Bank rate would occasion no surprise and would be taken largely as an indication that the slight 'ease' was still in progress.

Company news continues to be like the curate's egg, and it is evident that in many instances the pace of growth has slowed considerably. Nevertheless, a number of company chairmen find it possible to be guardedly optimistic as to the future.

Provided the market is spared any heavy political shocks, especially from overseas, selective recovery in prices is to be anticipated. Emphasis, however, must be on selection, for it is not past records but future prospects which must be assessed. Yields based on past dividends can, in some instances, prove most misleading.

Under such conditions, however, new share offers have to be on quite attractive terms and in this sphere, too, careful choice might well provide profitable long-term investment. Stock-markets are not without interest for the shrewd investor.

Current Law

Merchantability in c. & f. Contract

IN *Mash & Murrell Ltd v. Joseph I. Emanuel Ltd*, ([1962] 1 All E.R. 77, note) the Court of Appeal reversed the decision of Diplock, J. (as he then was) ([1961 1 All E.R. 485; *The Accountant*, August 12th, 1961, where the facts are set out). The appeal is not fully reported, but it appears that their lordships took the view that on the facts there was no sufficient ground for inferring that the potatoes when put on board were not fit to travel on a normal voyage so as to constitute a breach of the warranty, which the Court assumed for the purposes of the appeal was implied in the contract, that the potatoes when put on board were in such a state that, after a normal voyage, they would on arrival be in such a condition as to be suitable for the purpose for which the plaintiffs required them. The Court held that the proper inference on the facts proved and on the balance of probability was that the potatoes remained unventilated, probably continuously for five days and nights in hot summer weather while the ship was in Cypriot waters, and that heat asphyxiation resulting was the initial cause of the cargo's deterioration. The voyage was therefore not a normal voyage.

Freeholders Leasing to Themselves

IN *Rye v. Rye* ([1962] 1 All E.R. 146) the House of Lords disapproved on the facts of the decision of the Court of Appeal ([1960] 3 All E.R. 810; *The Accountant*, July 8th, 1961, where the facts are set out), but affirmed it on different legal grounds. Two matters of great importance have been decided by the House of Lords. First, the word 'conveyance', defined in section 205 (1) (ii) of the Law of Property Act, 1925, applies, unless the context of a particular enactment otherwise requires, only to an instrument in writing, as opposed to an oral disposition. Similarly, in the absence of a special context, a person cannot 'convey', within the meaning of that section, by word of mouth. Secondly, section 72 (3) of that Act, which provides that a man may convey land to or vest land in himself, does not enable him to grant a lease to himself, nor several persons to grant a lease to themselves. Viscount Simonds in his speech demonstrated how extraordinary, and indeed meaningless, such a transaction would be, even if the lease granted did not immediately merge in the higher estate out of which it was granted. Lord Denning described as 'a fantastic notion' the proposition that a man could grant a tenancy to himself.

Annulment of Bankruptcy: Revival of Unproved Debt

THE landlord of a farm was indebted to the tenant as the result of an arrangement between them. The tenant died and his personal representatives called on the landlord to render an account of what was due from her. The landlord had been adjudicated bankrupt on the petition of the tenant in respect of another debt, but the bankruptcy was anulled under section 29 (1) of the Bankruptcy Act, 1914, the order reciting that the Court was satisfied that the debtor had paid all her proved debts in full. The tenant had not proved in the bankruptcy for the debtor's liability under the arrangement referred to, and the question was whether the personal representatives were now entitled to sue. Where a proof is rejected by the trustee in bankruptcy, then the claimant is, by virtue of section 29 (2), bound, notwithstanding that the bankruptcy is subsequently annulled.

In *More v. More* ([1962] 1 All E.R. 125) Cross, J., held that the position was otherwise where there had been no proof in the bankruptcy. In so holding he applied a *dictum* of Vaughan Williams, L.J., in *Re Keet* ([1905] 2 K.B. 666, at page 674) to the effect that 'debts' in section 35 of the Bankruptcy Act, 1883 (to which section 29 (1) of the Act of 1914 corresponds), did not extend to provable debts which had not been proved. Accordingly, Cross, J., held that the plaintiffs were entitled to the account for which they asked.

Unpaid Vendor of Shares

IN *Musselwhite and Another v. C. H. Musselwhite & Son Ltd and Others* ([1962] 1 All E.R. 201) the plaintiffs claimed a declaration that the annual general meeting of the company for the year ending May 31st, 1958, was invalid, and hence that every resolution passed at it was irregular and invalid. The plaintiffs' claim was based on the fact that they were shareholders of the company who had not been given notice of the meeting. In fact they had sold their shares to the second defendant, who was one of the only two other shareholders, under an agreement whereby part of the purchase price was to be effected by instalments over a period of five years. Executed transfers had been handed over to a third party, but the plaintiffs remained the registered holders of the shares. They accordingly contended that, as unpaid vendors, they were entitled to exercise the voting powers attached to the shares registered in their names, albeit they were liable to the purchaser if they took, or to challenge by him if they threatened to take, action damaging the subject-matter of the purchase. *Siemens Brothers & Co Ltd v. Burns: Burns v. Siemens Brothers Dynamo Works Ltd* ([1918] 2 Ch. 324) is authority that where shares are transferred to and registered in the name of a mortgagee, he, as owner at law of the shares, has the voting rights in respect of them.

Applying that decision, Russell, J. (as he then was) in the *Musselwhite* case held that an unpaid vendor remaining on the register was not to be regarded as being in a weaker position than a mortgagee and retained *vis-à-vis* the purchaser the prima facie right to vote in respect of the shares registered in his name. It followed that the plaintiffs were entitled to the declaration which they sought.

FOR STUDENTS

JOINT VENTURE ACCOUNTS

'JOINT venture' is defined in *Bell's Principles.* Art. 392, as follows:

> 'Joint adventure or joint trade is a partnership confined to a particular adventure, speculation, course of trade or voyage, and in which the partners, either latent or known, use no firm or social name, and incur no responsibility beyond the limits of the adventure.'

Thus the partnership is no different from an ordinary one, except that it is of a limited nature.

From an accounting viewpoint, there are two main ways in which the financial transactions may be recorded, (*a*) where a separate set of books is opened for the transactions, and (*b*) where a separate set of books is not maintained.

(*a*) Where a Separate Set of Books is Kept

Where the venture is of sufficient importance to warrant the maintenance of a separate set of books, in all probability a joint bank account would be opened, therefore the transactions would be recorded in precisely the same manner as those of an ordinary partnership. Thus, anything paid into or withdrawn from the joint bank account by any of the venturers, would be credited or debited to the relevant capital account of the venturers concerned.

It is not essential, however, for a special bank account to be opened, although a separate set of books may be maintained to record the transactions. In this event, the capital account of each venturer disbursing or receiving cash in respect of the venture would be credited with the disbursements made by him (the appropriate expense accounts being debited), and debited with the amounts collected by him.

At the end of the venture, the profit and loss account of the venture will be prepared, and each venturer's share of the profit or loss will be transferred to his capital account.

We have been considering so far, the entries made in the joint books opened specially for the venture. It must be appreciated, however, that each venturer must also take cognizance of the transactions of the venture in his own individual books, even though a separate set of books is maintained for the venture.

Example

Iron and Steel entered into a joint venture to buy and sell second-hand motor-cars. Profits and losses were shared: Iron as to two-thirds and Steel as to one-third. A separate set of books was kept, but no separate bank account was opened, each venturer paying for his individual purchases and disbursements and receiving the amount due for sales effected.

On August 16th, 1960, Iron purchased two cars for £320 and £480, respectively. He incurred expenditure of £120 on repairs and on September 1st, 1960, sold one of the cars for £400 and on September 10th, the other car for £620.

On September 12th, he purchased a further car for £600 which was sold on September 20th, for £800, which amount was paid to Steel by Iron.

On August 12th, 1960, Steel purchased a car for £400 which he sold for £500 on August 15th, having incurred expenses of £40 on it. This car was returned by the customer on August 20th who was allowed £480 for it. As this car was still unsold on September 30th, it was agreed it should be taken over by Iron at a valuation of £450.

On September 39th, 1960, the sum required in full settlement between the venturers was paid by the party accountable.

(*b*) Where Separate Books are not Kept

If no separate set of books is maintained for the venture, each party will record in his own books his transactions relating to the venture. It is important to appreciate that the venturer only records in his books the transactions that affect him and to which he is a party. The book-keeping entries are as follows:

(1) Each venturer opens in his books an account headed 'Joint venture with . . .'. This account is debited with any payments made on behalf of the venture, cash or creditors being credited. When a sale takes place, the venturer effecting the sale credits his 'Joint venture with . . .' and debits cash or debtors.

(2) A 'Memorandum joint venture account' is then prepared, this account corresponding to the profit and loss account of an ordinary business. It must be appreciated that this account does not appear in the books of either party, but is prepared from the transactions appearing in the books of the individual venturers and combines the items in the joint accounts, except the *contras.*

(3) Once the result is ascertained, each venturer debits or credits his own share of profit or loss to his 'Joint venture with . . . account' and credits or debits his own profit and loss account. The balance on the joint account, if the venture is completed, represents the amount due from or to the other venturer.

It is likely in practice that the venture will not be completed at the time the accounts of one or both of the parties are normally closed, and thus it is necessary for the profit or loss to date to be ascertained. In order to do so, it is necessary for the unsold stock to be valued and the basis of valuation should be similar to that adopted in the case of consignment accounts, viz., at cost plus a proportion of the expenses incurred in getting the stock into its present condition and location, restricted to the market value, if lower.

It is important to realize that the stock is the property of the venture, *not* of the individual venturers, and for the purpose of interim settlements each party should carry forward in his joint account his proportion of the value of the stock in the ratio in which he shares profits.

If an immediate settlement between the parties is not required, it is sufficient for each venturer to balance his Joint venture with . . . account', bringing down the balance disclosed thereon and deferring settlement until completion of the venture.

Example

Kneadle and Thrade entered into a joint venture to buy and sell a quantity of linen goods. Profits and losses were to be shared as to Kneadle two-thirds, and Thrade one-third, and each was to be entitled to a commission of 5 per cent on sales effected by him.

On January 1st, 1961, Kneadle purchased the goods at a cost of £8,200 financed, in part, by a loan of £2,000 obtained from Studd on behalf of the venture.

On January 12th, Kneadle sent to Thrade goods which had cost £6,200 and paid carriage £93. On the following day Thrade paid £3,141 to Kneadle and £31 handling charges.

By March 31st, when the parties agreed to effect an interim settlement between themselves, Thrade had sold the goods sent to him except a quantity which had cost £300 and paid £2,030 to Studd in settlement of his loan and accrued interest. The stock of unsold goods with Kneadle amounted to £900, at cost price. All sales, both by Kneadle and Thrade, were for cash at a uniform price of 40 per cent above the purchase price of the goods.

The remainder of the goods were sold by April 30th, 1961, on similar terms and the venture was finally closed.

Electronics in the Office

National Commercial Bank of Scotland's Progress in Electronic Accounting

FOLLOWING the establishment of a data processing centre by the National Commercial Bank of Scotland in Edinburgh last year, referred to in *The Accountant* of November 11th, 1961, the accounts of thirteen branches of the bank are now being dealt with at the centre. I.B.M. punched-card equipment, including an electronic calculator, has been used to take over the book-keeping for more than 19,000 accounts, together with the attendant interest calculations; branch mergers which will take place shortly will increase that number by a further 3,000 accounts.

The work involves handling between 6,000–7,000 transactions at the centre on a normal day, increasing to 12,000 on busy days. Other tasks already being carried out on these machines include the daily production of a printed report for each branch showing the state of every current account when the branch opens for business, calculations of monthly salaries for over 1,000 staff, and certain administrative work.

The present system, which, it is claimed, is one of the most advanced of its kind, will be extended with the arrival of an I.B.M. 1401 computer later this year. Information now recorded in punched-cards will then be transferred to magnetic tape. A further seventeen branches in Edinburgh and Glasgow have been prepared for transfer of their accounting to the computer, and additional work will continue to be transferred until the computer's capacity is taken up. An I.B.M. 1412 reader/sorter, capable of sorting cheques at a speed of up to 900 documents a minute, will also be linked to the computer system. Already all cheques being supplied to the bank's 400 branches carry the bank and branch codes printed in magnetic ink on paper specially made for high-speed electronic sorting. The reader/sorter will not only sort cheques into branch order for all branches, but in the case of centralized branches, it will read the amount of the cheque (inscribed in magnetic ink at the clearing department) and other information direct on to magnetic tape thus cutting out much of the present manual work.

The work of centralizing these branch operations has gone smoothly. In the case of the first two branches the new method was run in parallel with the old for a period of six weeks – a period that included the end of a month and the bank's annual balance – since new conditions which arise at these times had to be tested. Thereafter, parallel running was for as little as one week, and between November and March a further twelve branches were being taken over, some at intervals of only a week, and over the period two branches were merged. Experience has also been gained in the transmission of information over a distance. Accounting for 350 staff accounts in a London office involves information being sent by teleprinter to Edinburgh where special equipment converts the paper tape into punched cards. When the Glasgow branches are taken over information will be sent likewise in paper tape form for processing by the computer. In the case of Edinburgh branches, paper tape records are produced as a by-product of add-listing operations, and collected by courier daily.

Computer for Atomic Research Establishment

A NATIONAL-ELLIOTT 803 electronic data processing system has been ordered by the United Kingdom Atomic Energy Authority for use at Dounreay Experimental Reactor Establishment. It will produce the Establishment's accounting records and simultaneously provide control over the costs of different research projects.

The computer, to be installed this year, will be equipped with four magnetic file units. Punched-paper tape will be used for input and output, and working documents and reports will be printed on automatic typewriters.

The 803 will provide a fully automatic system of stores accounting and control covering about 17,500 items used by the Establishment's scientists and engineers. Other accounting tasks will include the payment of suppliers and contractors, and the maintenance of the cost and accounting ledger. It is also planned that the computer will eventually produce the pay records for the 1,500 weekly paid staff and 1,000 monthly-paid staff.

Considerable benefits will be achieved through the development of an integrated costing system. The records stored on reels of magnetic film will be regularly up-dated during the accounting and other routines. Every week, the computer will go through these films and automatically extract the data required for costing purposes. Individual items of expenditure will then be allocated to the appropriate cost centres, for eventual reallocation to the actual research projects in hand.

Census by Computer

THE Board of Trade is to install at the Census Office at Eastcote, Middlesex, in September next year a LEO III fully-transistorized electronic computer.

The computer's first main task will be work related to the Census of Production. It will involve the maintenance of a register of all manufacturing enterprises in the United Kingdom, addressing census forms, receiving completed returns and issuing reminders to companies late in submitting returns. Other work will relate to the Census of Retail Distribution, the working out of retail sale and wholesale price indices, and actuarial calculations.

Notes and Notices

THE INSTITUTE OF CHARTERED ACCOUNTANTS IN ENGLAND AND WALES

Annual Church Service

A special service for members of the Institute will be held at St Margaret's Church, Lothbury, London EC2, at 12.45 p.m. on Wednesday, July 4th. The members of the Council of the Institute will be present and the President hopes that as many members of the Institute as possible will also attend.

Examination Results

Candidates for the May Final and Intermediate examinations of the Institute may expect to receive by post on Thursday, July 26th, a notice stating whether they have passed or failed. At the same time, under a new procedure (as already advised to students) lists giving the successful candidates' numbers will be circulated to various centres and candidates who have not received their result on July 26th, may, therefore, make inquiries, during normal office hours, from any of these addresses. A list of successful candidates will be displayed at the offices of the Institute on Wednesday, August 15th, and the full results will be published in *The Accountant* of August 18th.

Members' Library

The first cumulative supplement to the August 1961 *Short List* of books in the library of the Institute has now been issued. Copies, which contain additions to April 1962 will be sent to members by the Librarian, free and post free on receipt of an addressed label.

THE CHARTERED ACCOUNTANTS' BENEVOLENT ASSOCIATION

At a recent meeting of the Executive Committee of The Chartered Accountants' Benevolent Association the chair was taken by Sir William Carrington, F.C.A., the President of the Association, and seven members were present.

Applications for Assistance

Six new applications for assistance were considered. In one case a loan was given to assist while temporarily unemployed; in two cases a donation was given; in two cases a grant was made and one application was refused.

One of the applications was from a member, married with a young son, who had recently become unemployed owing to a take-over and who had been admitted to hospital owing to illness. A donation of £125 was made with a promise of a further donation of £125 three months later if further help was then required.

Twenty-nine applications for further assistance were considered. In fourteen cases the grant was renewed; in six cases the grant was increased; in six cases the grant was reduced; in two cases the grants were not renewed but donations were given and one case was deferred.

Special Fund

One application for further assistance was considered and a grant made.

Matters Reported

Changes in the circumstances of seven beneficiaries were reported and grants were adjusted or donations made in appropriate cases. The death of one beneficiary was reported.

MANAGEMENT ACCOUNTANCY RESEARCH UNIT

A reception was held at Slough College of Further Education, on June 15th, to mark the fourth anniversary of the College's Management Accountancy Research Unit and the completion of a recent case study with A.E.C. Ltd, who were the hosts.

The Unit is the first of its kind in the country and was formed to study at first hand actual industrial problems. The members of the group comprise senior executives from organizations in the district.

The function was attended by representatives of the accountancy bodies and many firms in the district were represented among the members and guests. The principal guest was Dr James M. S. Risk, B.COM., PH.D., C.A., F.C.W.A., F.C.I.S., F.B.I.M., Chairman of the Education Committee and member of the Council of The Institute of Cost and Works Accountants, who gave a short address. Dr Risk pointed out that the work of the Research Unit was of special importance at the present time. He stated that to achieve the objective of greater efficiency, management must become more skilled in the arts and techniques of planning and control. In this process, management accounting can and will play a vitally important part. However, this could be accomplished only if managers understood the techniques of management accountancy and how to use the information provided, and if there were sufficient well trained management accountants available. Dr Risk went on to say that this was the reason he regarded the work of the Research Unit as being of national importance and that he personally would like to see further developments in the field of accounting education along the lines being developed at Slough College. Concluding his address Dr Risk said 'there is no doubt in my mind that there will, in the future, be an

MOTOR — FIRE — CONSEQUENTIAL LOSS
MOTOR UNION INSURANCE COMPANY LTD
10 ST JAMES'S STREET, LONDON, SW1

expansion in the facilities for and status of accountancy education at advanced levels'.

The Director of Studies, who founded the Unit in 1958, is Mr E. C. D. Evans, B.SC.(ECON.), F.A.C.C.A., Principal Lecturer at the College. The value of the Unit's work is that it is able to act as a forum for the exchange of ideas on top level management problems.

Mr Evans is now forming a School of Accountancy Studies as part of the work of the College to cater for accountancy examination and post-graduate courses. This is a further stage in the development of accounting and related courses at Slough College over the past few years.

RETURN OF RATES

Rates this year in England and Wales have increased by an average of *1s 11d* in London boroughs and *1s 8d* in county boroughs. In non-county boroughs the rise has been *1s 10d*; urban districts *1s 8d* and rural districts *1s 6d*. These figures are set out in the sixteenth annual return of rates[1] for England and Wales published recently by The Institute of Municipal Treasurers and Accountants.

The average rate levied for each class of local authority during the current financial year was *23s 5d* for county boroughs; metropolitan boroughs *20s 3d*; non-county boroughs *24s 1d*; urban districts *23s 7d* and rural districts *21s 2d*. Bournemouth enjoys the lowest rate of all at *15s 8d*. The highest rate levied is *32s 2d* at Holyhead.

THE NATIONAL ASSOCIATION OF PENSION FUNDS

At the fortieth annual general meeting of The Association of Superannuation and Pension Funds held in Birmingham on June 6th, a new constitution which had been under consideration by a special committee since 1960 was unanimously adopted and the Association's name has now been changed to the National Association of Pension Funds.

The report of the Council for the year ended December 31st, 1961, presented at the meeting, records a total membership of 1,624, comprised of 1,244 ordinary members and 380 associate members. There was a fall in membership of twenty over the year due mainly to the merging of pension funds resulting from company reorganization and 'take-overs'.

The Association's Investment Co-operation Service, which is at present under review by a committee set up to investigate its future operation and to make recommendations, continues to function in collaboration with the Investment Protection Committee of the British Insurance Association; assistance has also been given by the Association of Investment Trusts. The report mentions that the Service is available only to members who notify the secretary of their wish to participate and who furnish full details of their investments.

During the year the seven local groups of the Association have been particularly active and arrangements are proceding for the formation of further groups. The annual autumn conference in London was attended by some 600 delegates and was addressed by the Rt Hon. John Boyd Carpenter, Minister of Pensions and National Insurance, followed by a most successful conference dinner at the Piccadilly Hotel. The 1962 autumn conference will be held at Harrogate from November 1st–4th.

THE JENKINS REPORT

Company Balance Sheets

IN our preliminary review of the Jenkins Report we devoted a good deal of space to its observations about company accounts, and in particular to the way in which the Report endorses, in many respects, the views put forward on behalf of The Institute of Chartered Accountants in England and Wales. The accounts aspect of company law is so important that we make no apology for returning to it this week.

One begins with the dual obligation imposed by the Companies Act, 1948, on company directors. Section 149 (1) requires every balance sheet to give a true and fair view of the state of affairs of the company as at the end of its financial year, while section 149 (2) requires it to give the detailed information specified in the Eighth Schedule. There are similar requirements for the profit and loss account. The Committee is satisfied with the formula 'true and fair' as an indication of the required standard, and approves of the requirements to include specified matters as the minimum necessary to achieve that standard. The Committee, however, doubts if it is always appreciated that accounts which comply with the requirements of the Eighth Schedule (and of sections 196 and 197) may still fail to give the true and fair view required by the Act. That this is nevertheless required is clear from section 149 (3) which provides that the duty to give detailed information required by the Eighth Schedule is without prejudice to the general duty to give a true and fair view.

We have already said that the Report vindicates the historical cost basis of accounts. It follows that where a fixed asset purchased many years ago is shown at cost less depreciation, the net figure in the balance sheet will often bear no relation to the current value of the asset, estimated on any reasonable basis. The Committee says that this fact has probably given rise to more criticism than any other single feature of the accountancy provisions of the Act. Some witnesses, who think that a balance sheet should state the current value of the company's assets, went so far as to suggest that directors should be required annually to revalue the fixed assets and show the result of the latest revaluation on the balance sheet. This, of course, is not the function of the balance sheet. As the Committee says, valuation is largely a matter of opinion. The Committee think that such a requirement would be most onerous and would require the giving of information which was often worthless and misleading.

The Committee reports fairly general agreement that the proper

value of fixed assets is in most cases their value as an integral part of the undertaking in which they are employed. This is particularly true where they are 'specific' to a particular business. It is usually better to value the fixed assets and the goodwill of a business together, by reference to the earnings. To value the fixed assets separately on the basis of selling them otherwise than as part of a going conern can be a highly theoretical exercise. An example which springs to our mind is that of a bank with branches in various places. Banks are usually built with expensive stone facings to give an air of solidity and respectability. Such buildings are ideal for banking purposes, and while so used their cost is usually commensurate with their value. But for any other purpose bank buildings are usually very unsuitable indeed, and the cost of their demolition with a view, for instance, to building a supermarket, would be higher than the cost of a demolition of a cheaply-built shop, so that the valuation of bank premises, viewed apart from the banking business, would be somewhat pointless.

Annual valuations of plant and machinery would have even less point. Their life is comparatively short, so that any undervaluations are soon worked out. At the same time, the task of valuation would be even more formidable than in the case of buildings. There remain assets consisting of land and buildings which are not 'specific' to the business. For instance, the site of a building may be such as to have a very high development value, which is out of proportion to the cost, and even to the value of the asset as used in the particular business. To show the value in the balance sheet at cost less depreciation can be misleading. Accepting this as a valid criticism of the accounts provisions of the Act, the Committee still had difficulty in meeting it. Not least is the problem of definition of a 'non-specific' asset. It is easy to name obvious examples; a steel works on land unsuitable for other use, on the one hand, which is clearly specific, and a shop in the middle of a town which is ripe for development, on the other. But between these two there are all kinds of intermediate examples. After drawing attention to other difficulties, the Committee comes to the conclusion that the best way of dealing with the problem is not to add to the requirements in the Eighth Schedule but to require the directors, when they consider that the difference between the current market value and the book value is of real significance to the shareholders, to indicate this fact in their annual report. If assets are in fact revalued, the balance sheet should show which assets have been so treated, when it was done, and, on the first occasion on which the new value is shown, by whom the valuation was made and on what basis.

As to the classification of fixed assets in the balance sheet, the Committee recommends that the balance sheet should show freeholds (in Scotland, feus) and leaseholds separately, distinguishing between long and short leases, i.e., between those leases with fifty years or more to run and those with less. There is a recommendation in another part of the Report that where a significant part of a company's income comes from rents, the net amount, after deducting groundrents, rates, and other outgoings, should be shown separately in the profit and loss account. This will, of course, help the investor to form a view about the value of the properties, assuming that let properties and owner-occupied properties are shown separately in the balance sheet.

An odd quirk of the Companies Act is its use of the expression 'trade investments' without defining it. The Committee thinks it covers any investments (other than in subsidiary companies) made to further the company's business, including investments in 'associated companies'. The Act requires the showing of the aggregate amount of trade investments under a separate heading in the balance sheet, and the showing of the income in the profit and loss account. The Committee agrees with critics that this is not enough; that more information about investments should be given. It recommends that the distinction between trade and non-trade investments be dropped but that there should still be a distinction between investments which are fixed assets and those which are current assets.

The aggregate value of investments quoted on a recognized or other reputable stock exchange should be shown. For unquoted investments the balance sheet should either show the directors' estimate of the aggregate value or (in respect of equity share capital) the following information:

(i) the aggregate dividends brought into account in the accounting period;

(ii) the amount of the company's share of the aggregate profit, before and after taxation,

of companies in which the shares are held for financial periods in respect of which those companies issued accounts during the financial year;

(iii) the amount of the company's share of the aggregate undistributed profit (after tax) earned since the acquisition of the shares;

(iv) explanation of how losses incurred by such companies have been dealt with in the 'holding' company's accounts.

We greatly welcome this recommendation which will do a very great deal to lift the veil in cases where companies conceal their affairs from public gaze by the use of shares in other companies which are not technically subsidiaries.

In its written evidence, The Institute of Chartered Accountants in England and Wales pointed out that some companies deduct proceeds of realization of investments from the cost of the investments as a whole, with the result that the amount at which investments are stated in the balance sheet represents the cost of investments actually held, reduced by profits (less losses) on the realization of former investments. There is thus no disclosure of the actual cost of investments held, nor of profits on realization. The Institute suggested that the Act make clear that the cost of investments means the cost of investments actually held, that the profits from realization should be treated as reserves, except to the extent that they have been utilized for some appropriate purpose, and that the movements on such reserves be shown. The Committee thinks that the practice of using profits to write down book values is consistent with paragraph 5 (2) of the Eighth Schedule and should continue to be permitted. This seems to us (by itself) to be a curious way of interpreting the requirements of a 'true and fair view'; the figure on such a basis could be quite meaningless. However, the earlier recommendations of the Committee, reviewed above, as to the valuation etc. of investments, if adopted, should fill the gap.

Balance sheets have already to reveal (usually by a note) material amounts of capital expenditure to be incurred under contracts already entered into, as far as not provided for in the accounts. The Report recommends that where the board of directors has approved capital expenditure but no contract has been entered into, the estimated amount of such expenditure should similarly be shown. Where there are changes in a fixed assets item from one balance sheet to another, it is recommended that the value of additions should be shown separately from the amount in respect of assets sold or scrapped. The Committee does not like the rigid distinction between fixed and current assets; this is not always practical, and could be misleading, e.g., a debt owing for goods sold on extended credit. It recommends that there should be a third category, whose nature should be described.

Notwithstanding the quantity of ink which has flown in the controversy as to the precise distinction between a provision and a reserve, as those words are used in the Companies Act, the Committee thinks that the definition of 'provision' in paragraph 27 of the Eighth Schedule has proved generally satisfactory. The Report makes the point that accounting practice can vary from time to time, and that, therefore, the meaning of 'provision' should not depend on that practice. This is no doubt a reference to the English Institute's submission that the Act should make clear that an amount necessarily set aside in accordance with a regularly employed accounting practice, in order to meet accruing expenditure (such as that on repairs and other maintenance charges) is a 'provision'.

We have already mentioned the problem of companies which own shares in associated companies. The Committee would raise the veil still further by requiring every company to disclose the name of each subsidiary and of each other company in which it is the registered holder of at least 10 per cent of the issued capital. There should also be shown the percentage of each class of share capital held, and the country of incorporation. If this cannot conveniently be shown in the annual accounts, it should be contained in a statement filed with the Companies Registry when the annual accounts are filed. There would be an escape where, in the case of a subsidiary abroad, the directors think that disclosure would be harmful to the company or to the group as a whole. A subsidiary company should, in the Committee's view, disclose in its annual accounts the name and country of incorporation of its ultimate holding company. If it cannot obtain this information, it should say so, and should give the name and country of incorporation of the most senior company known to it in the chain.

Leadership in the Office

by W. R. ANDERSON, F.A.C.C.A., A.C.I.S.

THE increasing use in business of technical processes and the gradual replacement of the lesser skilled employee by the more skilled, has led to an expansion of administrative functions and a consequent growth in clerical staffs. Although this growth has been accompanied by considerable development in office techniques, the very nature of many clerical and administrative duties is such that quality and volume of output are still dependent to a large extent upon the attitude of the staff concerned and their reaction to authority. Because of these personal feelings and the relative ease at the present time in changing employers, good leadership on the part of supervisors and managers now assumes greater prominence in the successful management, and retention, of staff. The application of the qualities inherent in good leadership is discussed below.

Technical Competence

A leader must be technically competent. He may be a specialist operating within a relatively restricted sphere or he may be an executive responsible for the co-ordination of a variety of functions. In this technical age it is quite impracticable to expect holders of senior appointments to be able to carry out the duties of each of their subordinates. In fact, the ability to do so becomes less pronounced as the promotion ladder is climbed. In its place there must be an ability to appraise and measure, and to integrate the efforts of others into an overall plan. The acceptance of subordinates' work without this critical examination is a 'rubber stamping' action unfair to all concerned and particularly so to the subordinates involved who have a right to expect competent technical judgment and guidance from their senior.

Employers, as a matter of course, look for integrity in employees although the degree of integrity required will vary according to the nature of the job and the position to be filled. The minimum is honesty in the sense that the individual is unlikely to defraud his employer. A good leader must be honest not only in this sense but also in his relationships with those with whom he comes into contact. Indiscretions, although a common failing, must forever be guarded against; they can do untold harm to the victims and seriously undermine the integrity of the perpetrator.

Fairness in all staff and business matters is yet another aspect of integrity. Decisions may be unpopular but this can be tempered with the knowledge that they will be implemented in a just manner. Nothing creates greater unrest than the interpretation of an unpopular decision in a manner more favourable to some than to others. The degree of a leader's integrity takes into account the extent of his loyalty to his superiors and to his subordinates. Loyalty is not the practice of the 'yes man' technique or abstention from criticism. It is the recognition of a duty to do no harm to employer, colleagues and staff either directly or by subversive means. Criticism of a policy or decision is all very well, provided that it is made in the correct manner and within the correct context; it must never be permitted to provide grounds for dissatisfaction which when disseminated becomes injurious to morale. The behaviour of leaders when faced with exasperating conditions is a true test of their loyalty and integrity.

Self-control

An individual in authority either as a manager or specialist must be able to earn and retain the respect of staff for whom he is responsible. Popularity, although desirable in some instances, is insufficient and no substitute for this. Respect for a leader arises from the esteem in which he is held by virtue of the standards he attains and the code of behaviour he practises. Self control at all times is a must; many competent and apparently sound individuals have undoubtedly lost the respect and goodwill of others by failing to remember this. Respect has to be earned – it cannot be bought – and once acquired must be treated with care to ensure that it does not diminish. Of all the qualities which make up the ingredients of leadership, this is undoubtedly the most difficult to acquire because it is dependent upon the personal assessment of the other ingredients by those with whom a leader comes into contact.

No leadership will be effective unless there is trust between supervisor and subordinate; a subordinate must be made aware of the trust placed in him by being shown that he is accepted for the position occupied and that a firm belief is held in his ability to carry out all the duties consistent with that position. It is most damaging to the morale of a subordinate for him to be given the impression that he lacks the trust of his superior. There are bound to be instances where such a trust cannot, or does not, exist, but such cases call for a special line of action.

The extent of trust can usually be determined by the nature of the briefing given for a particular task. On the one hand there is the official who, having first determined his course of action, states his requirement clearly and makes available to his subordinate any papers or references relevant to the issue. On the other hand there is the official who restricts his briefing to the barest facts and expects his subordinate to work from notes taken at this briefing. The papers and references are retained under an aura of special importance which is rarely warranted. Further, under the mistaken impression that he is exercising control, such official invariably withholds some piece of information which prevents his subordinate from providing the required result first time. Needless to say the poor subordinate starts off under the impression that he is not trusted, coupled with the frustration of working with the minimum of information, and knowing all the time that a wider appreciation of the problem would enable him to produce a better job and give him greater pride in his work.

Ability to Delegate

The delegation of responsibility and authority is closely allied to trust. Such delegation must be accepted by all concerned, not only on account of the trust implicit on the delegation but also because delegation is invariably part and parcel of the internal procedures and the organization. To attempt to restrict delegated authority and responsibility without first considering the effect on procedures and organization has the result of undermining the position of the subordinate.

Earlier in this article reference was made to the fact that managers and supervisors cannot be expected to carry out the duties of each of their subordinates. This fact becomes evident when for one reason or another a matter is dealt with in isolation by one level of management instead of allowing it to be dealt with in the normal manner by experienced staff at a lower level. Invariably such a matter is handled with less efficiency because the higher official involved has to attend to some detail or specialist function with which he is unaccustomed. Not only is there a waste of time on the part of the executive, but more often than not the staff who would normally be concerned becomes involved on a piecemeal basis. One aspect of delegation must not be overlooked: delegated responsibility should always be accompanied by adequate delegated authority to enable the responsibility to be properly undertaken.

Understanding and Confidence

Because leadership is a personal quality and cannot be based on impersonal relationships, consideration must be made for human weaknesses and strengths, and tolerance shown whenever human emotions are involved. This is important where similar work is undertaken by men and women in a wide age range. The employment of immigrants in particular calls for a wider understanding of human feelings, especially where colour, creed and natural customs are concerned.

Youngsters in all organizations warrant special consideration, and require guidance based upon a sympathetic appreciation of their problems. Leadership of a composite staff calls for a depth of understanding that must be sincere if satisfactory solutions are to be found to the problems which arise. At no time must it be forgotten that a staff consists of a number of individuals each with his own ambitions, hopes, feelings and power of thought.

Confidence in his ability to carry out his assignment is essential in any leader. Outward lack of confidence soon creates doubts, no matter how unfounded they may be; once this occurs it is extremely difficult to instil that optimism of outlook which is so important to good morale. A leader should never flap – an urgent matter should be handled with speed in a calm controlled manner.

Over-confidence and false optimism are both unfair to those who are not so well informed because it is they who will experience the greatest shock when expectations are not realized. In the face of adversity quiet confidence after a reasoned appraisal of the position is the greatest inspiration to staff. This is preferable by far to a wild claim that everything will be all right in the end. Bearing, composure and appearance are invariably an indication of the confidence a leader has in himself. A well groomed person, tidily dressed and at ease, yet having an air of authority, is a greater inspiration to subordinates than the

untidy fellow who always appears to be on edge.

The rank system coupled with enforced discipline facilitates the exercise of command in the military field. In the civilian sphere the enforcement of authority must be made without these aids and thus civilian leaders, if they are to be effective, must have the ability to exercise control under these circumstances. An individual who knows how to accept instructions is usually more qualified to give them because he understands the need to give an instruction correctly. An instruction must be given to the right individual, namely someone competent to execute it within the terms of his appointment and available to carry it out. An instruction must be explicit in its requirement and detail the limits within which the job is to be performed. In this respect it is always advisable to explain the relationship of the assignment to other operations. A subordinate should be left in no doubt as to what is required of him. The supervisor giving the instruction must decide whether he is prepared to consider any comments or proposals from the subordinate, if not he should explain why. No instructions should be given in a manner which leaves the recipient to infer what is wanted; such a practice is grossly unfair as it passes to a lower level decisions which should be made at the more senior level.

In civilian organizations, insufficient attention tends to be given to the briefing of subordinates and in consequence the assignments concerned take longer than they would otherwise take if the briefing was carefully given in the first place. In this respect, leaving aside the obvious differences, an individual can be compared with a computer. No instructions are given to a computer unless they are ones which it can carry out, whilst considerable thought and care always precedes the use of computers for even the most simple of clerical tasks. With this in mind is it not reasonable to expect a little more thought and care to be exercised when giving instructions to their human counterparts?

On Making Decisions

As all instructions arise from decisions, it follows that the ability to make decisions is yet another quality which a leader must possess. Although 'sitting on the fence' is a commendable position to take in certain circumstances, to take up residence there is to hinder progress and impair staff relations. Frustration suffered by a subordinate because of the absence of ability in his supervisor to make decisions is apt to force him, in sheer desperation, to usurp his authority. Snap decisions, right or wrong, can be equally damaging particularly when they are wrong. The quality of decision is surely the ability to resolve a problem after due consideration of the relevant facts.

Because leadership encourages people to do their best together it follows that it must improve productivity and efficiency. Indeed, this point formed the theme of the opening address given by Mr J. Marsh, Director of the British Institute of Management, to the Central London Productivity Association conference on March 22nd last, in which he stressed the necessity of good leadership by top management, particularly leadership by example, to set the tempo of a business and to eliminate waste. In addition, Mr Marsh also commented on the importance of evidence of team work to create a sense of purpose and to overcome the complexities which arise and which will continue to arise as the result of the application of automatic and technical processes to clerical and administrative functions; to this end he advocated more discussion between managers and staff on problems facing them.

Conclusion

In view of the relatively high cost of labour and the difficulty of assessing the output of clerical staff as a whole, anything which improves productivity with no increase in staff numbers must inevitably reduce costs. In areas of full employment, competition between employers increases the movement of staff between them. Working conditions are an important factor in this movement and these conditions include the quality of leadership provided. If the leadership is good, all other things being equal, the staff will be less restless and the additional cost of replacing staff, or getting by without them, is avoided.

Finally, a word on the training of leaders. It is generally accepted that leaders are born and not made, and undoubtedly this is true as far as physique and mentality are concerned. What is required after birth is training so that latent qualities can be developed. The extent to which this takes place before embarking on a business career is dependent upon the type of education received and the nature of other interests and activities. The larger organizations undertake extensive training schemes and some do pay special attention to leadership, usually for specialized appointments. Although the ideal position would be for all supervisors and managers to receive training in leadership appropriate to their levels of responsibility, it must be recognized that the finest training they can receive is to work under a good leader themselves.

The Profession Abroad

II – BELGIUM

by MARY E. MURPHY, Ph.D.(Lond.), C.P.A.

FROM 1831, book-keeping experts in Belgium, with the title of *experts-comptables*, were entrusted by the legal Courts with the investigation of merchants' books in case of litigation. In 1903 the first accounting association was formed – *Chambre Syndicate des Experts-Comptables*. Although it was an independent body, the *Chambre* functioned under the direction of the Brussels Chamber of Commerce. As with some other Continental societies, its members were divided into two classes: *experts-comptables* who had at least ten years' professional experience; and *comptables* of the rank and file. Elections were held in general meeting of the *Chambre*, after a committee had inquired into the professional competency and character of the candidates. After 1903 numerous local associations of accountants were formed.

When the *Collège National* was founded, in May 1950, it proposed to supervise the vocational training of Belgian accountants by requiring all necessary guarantees in connection with ability and professional honesty; to support and extend the professional practice of its members and to promote their professional interests; to encourage and extend all that was suitable to promote the accounting knowledge and its applications; and to obtain its official incorporation. The structure of this national board was such that, at least temporarily, the existing organization remained intact; it was thus, in a certain sense, of a federated nature.

Major Integration

A major integration of the Belgian accounting profession occurred in December 1957, when thirteen mainly regional bodies affiliated to the *Collège National* combined to form the *Association Nationale des Comptables de Belgique* (A.N.C.B.). As a result of this merger, the majority of Belgian accountants, whether in practice or in industry, were brought together in the new association.

A Belgian accountant may only become a member of the *Collège National* when he applies at the same time as one of the affiliated members. As a consequence of these regulations, uniformity has been achieved in the requirements of entry into the profession. The *Collège National* has, in addition to the 'affiliated members', two other types of members – 'effective' and 'adopted' members (*membres effectifs et membres agréés*). The difference in the membership is that only those individuals who practise their profession may become 'effective members'. For the remainder, the requirements are the same, that is, minimum age of 30; a certain period of probation; and the passing of several examinations.

The board's articles of association, include the following provisions:

Restrictions – members may not exercise such occupations which are of a nature to encroach upon the dignity or the incorruptibility of the profession.

Tasks to be entrusted to members – administrative organization; the framing, reorganization or control of all accounts; and justifications of a fiscal nature.

Responsibility – members are responsible for all errors committed in the fulfilment of their work.

Form of professional practice – professional practice may not be carried on in the form of a company.

Professional confidence – except for cases in which they must testify, members are not permitted to reveal facts they learn through their professional occupation.

Professional discipline – there are four chambers of discipline, the president of which is a magistrate. In addition, there is a board of appeal. Penalties which may be adjudged are a warning, blame, and a maximum suspension of one year. Expulsion of a member can only be decided by the general assembly of the chamber of discipline.

Accounting Functions

One of the first moves of the *Collège National* was the establishment of the *Commission Nationale de Défense de la Profession d'Expert-Comptable* (National Commission for the Defence of the Accounting Profession). In one of its publications the Commission summarized its activities as follows:

(1) Periodic or incidental control activities, either as a confidant of shareholders or upon the request of management or other interested parties, such as associates, heirs, moneylenders, bankers, companies, etc.
(2) Advice in the capacity of expert upon request of the Courts, the authorities or other interested parties.
(3) Periodic or incidental judgment regarding the state of affairs of companies.
(4) Examination of the organization of enterprises.
(5) Establishment of administrative organizations.
(6) Examination of annual accounts.
(7) Examination and preparation of cost-price calculations.
(8) Advice relative to the administration of enterprises.
(9) Advice at the time of formation of companies.
(10) Liquidation of companies.
(11) Assistance to trustees in bankruptcies, notaries in heritages and judicial separation, and lawyers in dispute.
(12) Assistance to lawyers.
(13) Arbitrage with or without legal mandate.
(14) Assistance in the management of enterprises.
(15) Assistance to management relative to commercial law, taxes, social legislations and other regulations emanating from the authorities.
(16) Advice relative to the transfer and combination of companies.
(17) Preparation of lectures.
(18) Preparation of articles and books of a professional nature.

Weekly Notes

SNUBBING THE COMMUNITY?

SOME recent pay awards, not least those granted by arbitrators, were severely criticized by Mr Selwyn Lloyd in his recent address to the Association of British Chambers of Commerce. In his opinion, awards which exceeded the permitted level must be regarded as 'snubs to the community'. This is not the first occasion since the war when wage arbitration has been criticized, and in the latest and most opportune Hobart Paper[1], a well-known arbitrator, Mr Henry Smith, Vice-Principal of Ruskin College, puts the arbitrators' case.

The basic problem confronting the arbitration tribunal is to determine the 'rate for the job' and to this end it is necessary to compare jobs. Unfortunately 'job comparability' may have little to do with the economics of the industries involved. Likewise, the doctrine of 'fair wages', not least when applied to unremunerative nationalized industries, often becomes practicable only on the basis of a political decision that the community shall subsidize the industry.

Mr Smith's most significant contribution to this vital debate is his opinion that the Government cannot seek to avail itself of arbitration in determining the incomes of public service employees, yet at the same time tell the arbitrators what they must award. Such a policy would merely signal the end of arbitration since no labour representative could accept its decisions under such conditions. The author does well to stress that the Government can choose any method it likes of regulating incomes, provided the public accepts it as fair. For good reasons the public does not believe that the policies of the 'pay pause' or the 'guiding light' are fair. It is for the Government to produce the acceptable alternative.

AUSTERITY IN CANADA

THE austerity programme announced by the Canadian prime minister will affect British exporters in two ways. The cuts in Government spending of about $250 million are likely to reduce total demand while the graduated surcharges on imports are designed to reduce imports of luxuries and non-essentials and also of products for which there is at present surplus manufacturing capacity in Canada or for which substitutes could be produced in Canada.

The maximum surcharge of 15 per cent is applicable mainly to luxuries, including potable spirits, jewellery, silverware, fans, leather goods and similar products; the 10 per cent rate will apply to some engineering products, radio and television equipment and cars, clothing, furniture and pottery. A 5 per cent surcharge will apply to metal manufactures, most classes of machinery and electrical apparatus, plastics and textiles. The total revenue derived from these surcharges is expected to amount to about $200 million and together with the direct cuts in Government spending will reduce the budgetary deficit by about $450 million in a full year.

The Canadian Government is counting on these measures, together with a doubling of the official reserves as a result of international aid of some $1,050 million, to protect the value of the dollar without the need for exchange control. If the normal inflow of capital into Canada can be revived the Government hopes to introduce longer-term constructive measures designed to improve the country's balance of payments.

IMPROVED SALES OF CONSUMER DURABLES

ALTHOUGH the index of industrial production as a whole obstinately refuses to rise, there were a number of signs last week that reductions in purchase tax and relaxation of hire-purchase restrictions are beginning to affect demand for motor vehicles and some consumer durable goods such as refrigerators. Spring and early summer, however, normally see a revival in demand for these products, which was delayed this year and manufacturers are still uncertain as to whether the modest improvement which is now taking place represents a true upswing in demand or merely a concentration of demand into a shorter peak selling season.

In the case of cars, the revival in home demand has been accompanied by a substantial improvement in exports compared with last year, though there is still a long way to go to regain the level of two years ago. However, if production of cars in May had not been hit by strikes, output would probably have established a new production record. In fact, output was running at the rate of 27,667 vehicles per week, a rise of over 4,000 vehicles compared with April 1962, and the highest figure for nearly two years. Exports in May at 45,935 showed a fall from the 51,266 vehicles exported in April but were still over 50 per cent higher than in May 1961.

In the first four months of the year sales of refrigerators were particularly affected by the prolonged cold weather and for the first four months of the year were 13 per cent below the corresponding figure for 1961. However, manufacturers have reported a considerable improvement, though this may, of course, merely represent deferred buying from the

[1] *The Wage Fixers*, a study of arbitration in a free society. Hobart Paper 18. Institute of Economic Affairs. 5s.

earlier months. Sales of radio sets have been consistently above the good 1961 figures but those of television sets have continued to fall and will probably continue to do so until the Government's reactions to the recommendations of the Pilkington Committee can be assessed.

LIQUIDATION SURPLUS TAXED AS SHAREHOLDER'S INCOME

BY a majority of two to one the Court of Appeal, on June 20th, allowed the Crown's appeal against the decision of Plowman, J., in *Brogan v. Stafford Coal and Iron Co Ltd* (40 A.T.C. 279). The company was a member of a mutual insurance company, North Staffordshire Collieries Mutual Indemnity Co Ltd, which accepted its members' liability to compensate injured workmen. Contributions by the company to the insurance company had been allowed as deductions, but, of course, the insurance company was not taxed on any surplus. A member company could transfer its membership to a successor in return for a money payment. The nationalization of coal-mines made the insurance company redundant and it was wound up, paying to the Stafford Coal and Iron Co Ltd its share of a surplus on liquidation amounting to £58,000, which the Revenue sought to tax as a trading receipt.

Mr Justice Plowman had held that the £58,000 was not taxable since it was capital, on the principle established by *C.I.R. v. Burrell.* His decision was supported by the dissenting judgment of Lord Justice Pearson who stressed that membership of the insurance company was something of a permanent character which was terminated only by the nationalization legislation. However, Lord Denning (according to *The Guardian* of June 21st) distinguished the case from *Burrell.* The surplus had arisen because there had been an overpayment of premiums which had been allowed as deductions, so the case was analogous to the recovery of a bad debt. To reject the Crown's appeal would open the way to easy avoidance. Lord Justice Donovan agreed with Lord Denning. The decision is in line with the well-known Revenue attitude that a lump sum is capital if it is paid, but income if it is received.

TAX ON BENEFITS IN KIND

SECTION 161 (1) of the Income Tax Act, 1952, imposes Schedule E tax on benefits in kind, provided by employers for directors and certain highly-paid employees. Section 161 (3) provides an exemption for expenses 'in or in connection with the provision of living accommodation' for an employee, provided that certain conditions laid down in the subsection are satisfied. In *Butter v. Bennett* (*The Times,* June 27th) the question arose whether the expenses of providing coal, electricity, and the part-time services of a gardener, were 'in or in connection with' the provision of the living accommodation at the house where these benefits were provided. The Special Commissioners decided that they were but their decision was reversed by Mr Justice Cross. His decision in favour of the Crown was on Tuesday upheld by the Court of Appeal, who refused to give the taxpayer leave to appeal to the House of Lords. However, the Inland Revenue could well find this restrictive meaning which they have induced the Courts to attach to 'in connection with' recoiling on their own head.

PROFITS TAX DISTRIBUTIONS

THE Court of Appeal on Monday dismissed the taxpayer's profits tax appeal in *E.Y.L. Trading Co Ltd v. C.I.R.* The company had sold its business on February 19th, 1955, and decided in March 1955 to carry on the business of an investment company, at the same time depositing £297,341 in a private bank, with a view to its investment. On April 1st, 1955, the company declared a tax-free dividend of £288,327 on its ordinary shares, out of the profits of its former business. It claimed that on that day it was chargeable to profits tax as an investment company, and that the dividend could not be related back to the last chargeable accounting period of its former business, April 1st, 1954, to February 19th, 1955. The Court held (according to *The Financial Times* of June 26th) that the company had not commenced its investment business by April 1st, 1955, and upheld an assessment which treated the dividend as a gross relevant distribution of the previous chargeable accounting period. It also held that the Inland Revenue had properly determined that the period April 1st, 1954, to February 19th, 1955, was a chargeable accounting period. The decision of Mr Justice Cross was upheld on both points. The company's application for leave to appeal to the House of Lords was refused.

THREEPENCE OFF MANX INCOME TAX

PRESENTING his Budget to Tynwald, the Manx Parliament, on June 19th, the Governor announced a reduction from 4*s* 6*d* to 4*s* 3*d* in the rate of income tax. Surtax was already abolished last year and there are no death duties. The single person allowance goes up to £250 and the married person allowance to £425 (formerly £225 and £350 respectively). Widows' and ex-servicemen's allowances are to be made free of tax, and national assistance allowances to retirement pensioners go up by 5*s* a week.

The issue of the Manx Government's own bank-notes has been such a success that it is now proposed to have a special Manx coinage.

BUDGET ESTIMATES AND THEIR VARIATIONS

THE Sixth Report of the Estimates Committee for Session 1961–62 has now been published entitled *Variations in Estimates*. (H.M.S.O. 8*s* net.) The scope of the committee's inquiry was to consider the variations between the estimates for the public services of the current year and those of previous years, with special reference to the trend of expenditure during the last two years, with a view to supplying the House of Commons with information when considering the estimates. Various departments submitted memoranda to the committee and much oral evidence was given by officials of the departments. It is interesting to note that the rate of increase in civil expenditure this year, as las tyear, is more than double the rate of increase in defence expenditure. The estimates for 1962–63 show an increase of £425 million, or 8·2 per cent over last year, and an increase of £1,082 million, 23·9 per cent over what was required three years ago. The Report devotes a good deal of space to the melancholy tale of the losses incurred by British Railways.

This is My Life . . .

by An Industrious Accountant

CHAPTER 130

OUR departmental accountant is a plumply placid type, unaspiring in achievement, but by dint of long experience in our trading procedures, meticulous in accuracy and timing. He has always supervised his busy section efficiently, so when he collapsed, green in the face, with peritonitis, we were much perturbed. Fortunately, he pulled through, but it will be some weeks before he returns to work.

It was accordingly necessary to review the replacement problem. All was well, I felt. Dave, the number two in the department, was fully competent to carry on temporarily; in fact, he was just then entering to report progress to date.

Indeed, Dave had all the competence required, and other assets in addition. Everything was going fine, he beamed, not to worry, thumbs up. His only concern was about his best pal, the D.A.: how *was* the poor old chap, anyhow? Any hope of his ever making the grade again? On hearing that the D.A. was well on the mend, according to the doctor, Dave breathed a long deep sigh of relief. He'd been so worried about his pal recently, he explained; these last several months the D.A. had been well below par, only just ticking over, all he could do to keep up with things, in fact.

I commented that the section's work had been beyond reproach, and Dave was very pleased. Actually, they were a great bunch of boys there, it seemed; they'd pulled their weight, every man, they wouldn't let down the D.A. In fact, knowing that he wasn't up to it, they'd been coming to Dave for instructions and rulings and so on. Very fortunately for them, Dave had served terms in all the subsections and knew the problems. He had it all at his finger tips; it was just no trouble at all for him to ease the load on his old pal; he was glad to help.

I expressed appreciation of our luck in having Dave available, and Dave nodded quietly. His mood had suddenly changed a little, I felt. He'd been worried about the D.A.'s drinking, he confided; all that gin and tonic couldn't have done him any good. Not that it was really excessive, of course, far be it from him to wrong his pal; in fact, the liquor intake was much less than it used to be. There had been a time – boy, oh boy – when the D.A. was really hitting the bottle, but that was all over, thank heavens. It was just that sometimes in the afternoons the D.A. had been rather muzzy, speech thick, eyes glassy. Not really much, and anyhow Dave and the boys had always covered up for him. In fact, he grinned boyishly, I probably had hardly noticed.

I admitted that in fact I hadn't, and Dave was tickled. His eyes shone with some intensity, doubtless pleasure at saving his pal's reputation. His concern had been for the chaps in the department, you see, he'd always tried to ensure they wouldn't notice anything either. It was bad for chaps to be ashamed of their boss. But they were a loyal bunch, they probably wouldn't admit anything even if questioned, they'd always stick by the D.A.

Dave became alert and dynamic again. He had some new projects under review, it appeared, streamlining of operations and pruning of costs. The D.A. had been rather conservative in the past, you know, not keen on innovations, had rather held Dave back. Now that Dave had some weeks to himself, he aimed to set his sights higher, really go to town. Just wait and we'd see some improvements, there'd be a new look in the section.

I congratulated Dave and he took things modestly. After all, it was nothing; in the long run it would help his pal. Though, if he might just make a suggestion, he hoped the D.A. wouldn't try to get back into harness too soon. Perhaps we could ease him into some less demanding position first. In absolute confidence, he'd had some domestic trouble recently, a police inspector had been calling . . . it was very hush-hush, naturally, but the D.A. might be below par for a while.

I didn't tell Dave that I knew the said policeman was courting the D.A.'s daughter. I just mused quietly on the virtue of loyalty.

Finance and Commerce

Missing £2

IF the ordinary capital of The Projectile & Engineering Co Ltd is £600,000 and the company pays an interim dividend of 4 per cent on account of the year to December 31st, 1961, followed by a final dividend of 6 per cent, what amount should be entered for the interim payment, less tax, and what sum provided for the proposed final payment?

The answer, of course, should be in the company's accounts, and so it is; £14,698 for the interim and £22,050 for the final – or is it? Someone at the annual meeting worked it out and asked what had happened to the £2. And it proved to be one of those questions, in its way utterly simple and seemingly involving no really vital point, for which no one had the answer. Rather was there an undercurrent of merriment that an odd £2 should have posed such a conundrum.

Profits Down

The Projectile accounts, which are the subject of this week's reprint, show 1961 to have been an unfortunate year. Group net trading profit before depreciation and tax was down from £289,591 to £90,143. The figures can be seen in a four-year context in the table extracted from the report and included in the reprint.

One thing – probably *the* thing – which has fundamentally changed the business is the motor manufacturers' adoption of the chassis-less car. Projectile used to produce chassis for the car industry. Now its chassis work is practically confined to heavy lorries, and a move has been made into other and smaller components and products. But change can be costly, especially in competitive fields. As was said at the meeting: 'Customers almost tell you the price at which business is to be placed.' In some cases, work was actually undertaken at a loss in the full expectation that in due time the connection would prove valuable. That's often the case in business.

What finally tilted the scale downwards in 1961 was an increase in costs: a matter of 5 per cent, but vital if your customer is a motor manufacturer with enough troubles of his own without carrying the rising costs of his component makers.

The company is now on the point of issuing a £300,000 first mortgage debenture for placing with institutional investors. In this connection, a revaluation of freeholds and leaseholds has produced a figure of £1,008,000. The factory is in the Battersea, London, area.

Profit 'Breakdown'

'THE board considers that some breakdown of total profit will be helpful to an understanding of the position', says Mr K. S. Peacock to shareholders in Guest, Keen & Nettlefolds Ltd in commenting on a drop in total group profits from £30·6 million to £21·4 million last year.

The breakdown shows trading surplus after depreciation, but excluding investment income, under three heads: United Kingdom steel companies where profits fell from £11·8 million to £6·4 million; United Kingdom engineering and distributing companies where profits were down from £11·4 million to £10·4 million; and overseas companies – down from £7·4 million to £4·6 million. The 1960 figures were all records.

Figures under the same heads are also provided for 1957, 1958 and 1959 so that shareholders can see at a glance the build-up to 1960 peaks and the 1961 decline which turned mainly on the United Kingdom steel companies through over capacity and restricted margins, and in the overseas earnings where the John Lysaght (Australia) company was the culprit.

Engineering and overseas earnings may improve this year but the steel outlook remains bleak, and Mr Peacock goes so far as to say that 'whether the expansion which has been made in recent years will be justified in the near future is problematical.'

Dairy Goodwill

THERE is an intriguing paragraph in the statement by Mr E. B. King, chairman of Clover Dairies Ltd, with the accounts to March 31st, 1962. Mr King draws attention to the goodwill item in the balance sheet, now £723,000 as compared with £545,567 following an acquisition during the year.

Mr King explains that goodwill in the milk industry is generally the most marketable asset of a dairyman and is expressed in terms of gallons of milk sold daily. 'In the opinion of your directors', he says, 'the value of the company's daily turnover is considerably in excess of the sum shown in the accounts'.

What was the value of the daily turnover? 'Considerably in excess' of £723,000? What is 'considerably in excess'?

Turnover publication is as yet by no means general; more the exception than otherwise. In America, it is the kind of information that a company would probably be proud to emphasize. It is extraordinary, this 'done' and 'not done' in company reporting – as in other spheres of life. But the accounting climate here has changed very much in the last thirty years, and the urge is still towards 'more information'. A point which the Jenkins report has fully appreciated. In a year's time Mr King may show exactly what 'considerably in excess' really means. Considerably, substantially, satisfactorily and other adjectives are poor substitutes for actual figures.

THE PROJECTILE AND ENGINEERING COMPANY LIMITED AND SUBSIDIARY COMPANIES
CONSOLIDATED BALANCE SHEET, 30th DECEMBER, 1961

CITY NOTES

THERE is still little relief for the stock-markets. With Wall Street still under pressure, the London market has continued to react with lower prices throughout most sections of the equity market.

At times prices look like touching bottom, but any rally proves short-lived. Meanwhile the majority of company reports continue to point to pressure on profit margins with a slowing down in the volume of new orders being placed. Aligned with the slow volume of new business is a still declining margin of profit on new contracts achieved. It is this pressure on profit margins and, as a result, on earnings and dividends which is the root cause of the decline in share prices. Until there are signs of an improvement in earnings conditions, as distinct from industrial production volume, there is unlikely to be any true and reliable basis for a recovery in industrial equity share prices.

Inevitably the decline in values will attract support at varying stages. There were periods this week when equities looked distinctly brighter for a while, particularly following the first quarter balance-of-payments figures.

A rally under extremely thin market conditions, however, is a different matter from a rally based on true investment demand and it is doubtful whether the equity market has, as yet, reached a basis at which true investment demand can be attracted on any broad scale.

Taxation Cases

Full reports of the cases summarized in this column will be published, with Notes on the Judgments, in the 'Annotated Tax Cases'.

Jennings v. Barfield and Barfield

In the High Court of Justice (Chancery Division)

May 23rd, 1962

(Before Mr Justice PENNYCUICK)

Income tax – Profession – Solicitors – Guarantee of client's overdraft – Payment under guarantee – Whether deductible – Income Tax Act, 1952, sections 122, Schedule D, paragraph 1 (a) (ii), 126, 137 (a), (e), (f).

The respondents, carrying on a practice as solicitors, had a client who had arranged to sell his house and to buy a piece of adjoining land for facilitating the sale and to acquire a motor showroom and a new house. Contracts for the purchase of the additional land were exchanged, and contracts for the sale of the house and the piece of land were signed but not exchanged, and the sale went off. Negotiations were in progress for the acquisition of the showroom and the new house, and the respondents were making preliminary inquiries in relation to these transactions. A contract relating to the showrooms was entered into, before the signing of the guarantee about to be mentioned, and a contract for the purchase of the house was made in April 1957.

The respondents were informed by the client's bank that he needed an overdraft to complete the acquisition of the showroom, and to pay a deposit on a house, and to provide funds for carrying on his business, and the respondents were asked whether they would guarantee the overdraft. The respondents agreed to do so up to £500, and a form of guarantee was later signed by them at a branch of the same bank near the address of their practice. The client was subsequently adjudicated bankrupt, and the respondents had to pay £412 under the guarantee.

For thirty years it had been the practice of the respondents to guarantee loans to clients during such a transaction, but this appeared to be the first occasion that they had been called upon to pay under a guarantee. Evidence to the same effect was given by a partner in another firm of solicitors, and evidence from a second firm of solicitors was tendered, but was not adduced, because the appellant was satisfied that that evidence would not carry the matter further. In the previous two or three years the respondents had acted in about twelve other transactions in which the client in question was concerned.

It was contended on behalf of the appellant that the £412 was not laid out or expended for the purposes of the respondent's profession within the meaning of section 137 (*a*) of the Income Tax Act, 1952; and that the deduction of that sum was prohibited by section 137 (*e*) and (*f*). It was contended on behalf of the respondents that the giving of financial assistance of that type was a part of the usual practice of solicitors; and that the £412 was expended wholly and exclusively for the purposes of the respondent's profession. The General Commissioners decided that the £412 was deductible.

Held: the General Commissioners' decision was correct.

C.I.R. *v.* Verdon-Roe

In the High Court of Justice (Chancery Division)

May 30th, 1962

(Before Mr Justice PENNYCUICK)

Surtax – Deed of covenant for seven years – First payment at date of deed – Second payment within twelve months – Whether payment period cannot exceed six years – Income Tax Act, 1952, section 392.

The respondent, on March 14th, 1958, executed a deed whereby he covenanted with trustees to pay, during the period of seven years from the date of the deed (or during joint lives), the yearly sum of £2,000. The first payment was to be made at the date of the deed, and subsequent payments were to be made on March 1st.

It was contended for the appellants that the deed had to be read so as to require one payment for each of the seven years, that is to say, that the payment due on March 1st, 1959, was referable to the second of the seven years and the payment due on March 1, 1964, was referable to the seventh year, which would begin on April 12th, 1964; and that no payment at all was due in that year. It was contended for the respondent that the expression 'every year' referred to calendar years; and that the deed did not infringe section 392 of the Income Tax Act, 1952. The Special Commissioners decided in favour of the respondent.

Held: the Special Commissioners' decision was correct.

Musker *v.* English Electric Co Ltd

In the High Court of Justice (Chancery Division)

June 5th, 1962

(Before Mr Justice PENNYCUICK)

Income tax – Engineering manufacturer – Supplying of 'know-how' under agreement with Government department – Whether sums received were trade receipts – Income Tax Act, 1952, Schedule D, Case I.

The respondent company, an engineering manufacturer, made land turbines and aircraft. In 1949 the Admiralty wished to have marine turbines made by other manufacturers to a prototype prepared by the respondent; and the respondent entered into an agreement with the Admiralty to provide manufacturing technique, engineering data and other information to the other concerns for that purpose and in consideration of lump-sum payments. In 1950, at the request of the Ministry of Supply, the respondent made a similar agreement with the Commonwealth of Australia in order to enable a type of aircraft to be manufactured there. The consideration in this agreement was expressed as a number of annual sums for the use of designs, drawings and information, and one lump sum for the supply of manufacturing technique, engineering data and other information. In 1951 the respondent, again at the request of the Ministry of Supply, made a similar agreement with a United States concern.

The Case I assessments on the respondent for 1951–52 and 1952–53 included the lump sums received under the three agreements. The company appealed against the inclusion of those sums, and the appeal was heard by the Special Commissioners after the decision of the House of Lords in *Evans Medical Supplies Ltd v. Moriarty*, but before *Commissioners of Inland Revenue v. Rolls-Royce Ltd* was heard in the Courts. The Special Commissioners decided in favour of the respondent.

Held: the sums in question were trade receipts of the respondent, and were properly included in the assessments under appeal.

Reviews

A Summary of Auditing Case Law

Eighth edition by E. MILES TAYLOR, F.C.A. (Textbooks Ltd, 20 Milton Road, Harpenden, Herts. 8*s* 6*d* net; 9*s* by post.)

This book has without doubt served as the basis of many an articled clerk's studies in the law as it affects professional accountants according to the interpretation of the Courts.

In this, the eighth edition, some of the older cases have been omitted and a number of more recent ones added. There is also a chapter on current trends in auditing itself, which would be better based on the English Institute's own memorandum than on the 1939 booklet of the American Institute. If we are indeed to pass from a consideration of the effect of case law on auditing to the arrangement of auditing tests themselves (a perfectly proper move) then surely it would be more helpful to do so in the context of a book on auditing unless it is merely intended to illustrate the background of the now famous *McKesson and Robbins* case; and one would certainly have expected from a chapter entitled 'Trends in auditing' some reference to what is generally known as 'auditing in depth'. There is good sense in the American Institute's booklet, but it is now, surely, of historical interest rather than a trend.

Apart from some page errors in the 'Contents' list (due, no doubt, to final revisions) the book otherwise remains a sound, helpful and concise handbook for students and practitioners wishing to refer to case law simply and speedily.

Of the ninety or so cases dealt with, only ten were before the Courts during the last decade and none of these deals with the broad principles that exercised the Courts in those cases arising at the end of the last century. It would be interesting at least, to see what today's Courts would say in the same circumstances as those of the older cases, and students might indeed give thought to this before applying older decisions too literally.

Income Tax Law and Practice

Twenty-ninth edition by H. G. S. PLUNKETT and C. A. NEWPORT, F.A.C.C.A., F.T.I.I. (Sweet & Maxwell Ltd, London. £2 10*s*.)

Some three years have elapsed since the last edition of this well-known standard text appeared. The main features of the new edition are a new chapter on the anti-avoidance legislation contained in the Finance Act, 1960, as well as a long revised chapter on the penalty provisions following the *Hinchy* decision. The discussion of Schedule E has been revised and includes a review of the 'golden handshake' legislation also introduced in the Act of 1960.

A new chapter on back duty, with the emphasis on the actual workings and negotiation of a settlement, has been prepared and an especially useful addition is a new chapter on settlements from the aspect of 'tax-saving'. The tax effects of the National Insurance Act, 1959, are discussed in a new section, which also includes an exposition of the Revenue viewpoint on the question of approving pension funds.

The Typists' and Private Secretaries' Guide to Practical Office Methods

by DEREK HENRY, A.C.W.A., M.I.O.M., F.INST.D. (Colin Venton Ltd, The Uffington Press, 22 High Street, Melksham, Wilts. 18*s* 6*d* net.)

Many of us have become accustomed, if not resigned, to the fact that the average girl who describes herself as a secretary has few qualifications other than an approximate mastery of the arts of shorthand-writing and typing. This useful little book provides some of the background information without which no secretary can adequately live up to her title.

The book falls into two sections. The first few chapters are devoted to a general description of the duties of the various kinds of executive to be found in the average commercial organization. The author, while making it clear that the precise division and scope of these responsibilities varies widely in individual firms, still gives an informative and concise general outline of the sort of tasks a secretary to any of these can expect her boss to perform.

Chapters 6 to 10 comprise general notes on office procedures and outline some of the equipment available. 'Ins and outs', for example, goes into mailroom routines and machinery; 'Dear sirs' covers styles and layouts used in correspondence, the uses of dictating machines and telephone manners and equipment. Other subjects include accounting machines and systems, duplicating machines and filing systems. Six appendices cover correct forms of address, printers' proof marks, and titles of some commonly-used reference books and journals devoted to office management.

For providing an easily assimilated and not too detailed comprehensive general background for the secretary, this book should be very useful. It should not, however, be regarded as a primer of private secretarial practice. The style is admirably lucid and the author mercifully avoids the coyness which afflicts some male authors when writing for women. It is illustrated with twenty-one good, clear photographs of office equipment.

Money in Britain

by C. R. JOSSET. (Frederick Warne & Co Ltd, London. 15*s* net.)

This history of the currencies of the British Isles, which is handsomely produced with eight photograph plates, traces the development of the British coinage and currency since Roman times. In this

respect it impresses the general reader as a comprehensive and conscientious study. The author includes what he describes as a 'background of political history' against which the evolution of Britain's currency may be seen, but this is not particularly successful. Any British accountant, however, who is interested in the development of his country's currency will find this work readable and highly informative.

Ranking, Spicer & Pegler's Executorship Law and Accounts

Twentieth edition by H. A. R. J. WILSON, F.C.A. (H.F.L. (Publishers) Ltd, London. 40*s* net.)

In the field of executorship law the branch which changes most frequently is that concerned with estate duty liability. It is in this respect that this standard work has been most altered. As usual the book is very clear and has been handsomely produced; indeed, for such a dull subject it is quite attractive. We would suggest that the table of cases would be improved if all appropriate references to the *Annotated Tax Cases* were included – not merely some of them. Moreover, the table of abbreviations might well explain the abbreviation 'A.T.C.'. We can only speak with approval of the text.

Book-keeping for Builders and Surveyors

by S. M. BELL, A.I.O.B., and M. STEWART, A.C.I.S. (Sir Isaac Pitman & Sons Ltd. 15*s*.)

This short work deals, in simple terms, in half its pages with the basic book-keeping knowledge required of all students, and a review of the more widely-met commercial documents. Thereafter follow a short chapter on building contracts, an example of a sole trader's accounts involving contract ledger accounts, and some discussion of partnerships and non-trading concerns.

It cannot fail to meet with success among students for the various examinations in the building and surveying fields, while the chapters on contracts and examples of contract ledger entries will be helpful to accountants seeking to know more of the underlying business. If further knowledge is needed by accountants of the demands imposed by the business of building on 'long-term' contract ledger entries, the accuracy of the examples and definitions in this book can be confirmed at leisure by re-reading those classic studies on the Honeywood File recorded many years ago by Mr Creswell. It is pleasant to meet so many of those phrases again.

In the present work, too, for the student reader, there are many exercises on each point discussed.

SHORTER NOTICE

THE INDIAN INCOME TAX ACT, 1961, by A. N. Aiyar, B.A., B.L., Senior Advocate, Supreme Court, and Chief Editor *Income Tax Reports and Company Cases*, and T. A. Ramachandran, B.A., B.L., Advocate, High Court, Madras, and Editor *Income Tax Reports and Company Cases*, published by Company Law Institute of India Private Ltd. This Act which came into effect from April 1st, 1962, amends and consolidates the law relating to income tax. Copies may be obtained from Gee & Co (Publishers) Limited, 151 Strand, London WC2, through their agents in India, Charles Lambert & Co, of Bombay.

DEBT SERVICING PROBLEMS OF LOW-INCOME COUNTRIES 1956–1958, by D. Avromovic and R. Gulhati. (Johns Hopkins University Press and Oxford University Press, London, 20*s* net.) Much is heard nowadays about the need for aid to the under-developed countries; rather less is heard about the problems which may arise in their efforts to repay the loan or even to service the debt charge out of their annual overseas earnings. This little book by two staff economists of the World Bank provides an authoritative account of the difficulties of three post-war years when world commodity prices, and thus the overseas earnings of the under-developed nations, were at low levels. Although intended for the specialist reader, this informative study will be appreciated by the intelligent lay reader for its insight into a particularly intractable international problem.

New Offic

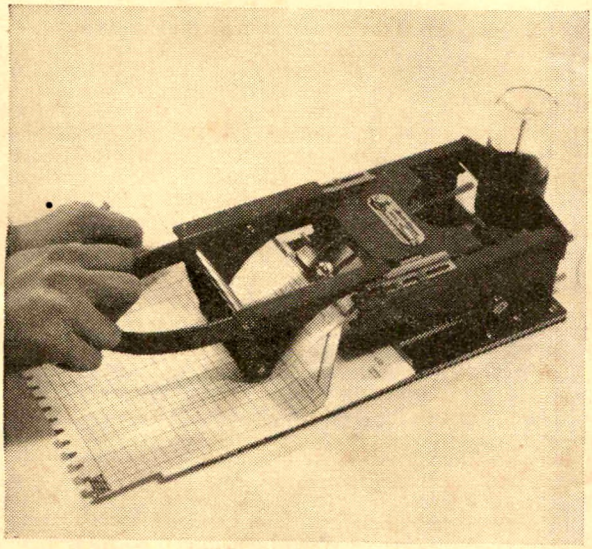
Low-Cost Addressing

IN the *Master Addresser* system, addresses are typed on small, self-adhesive patches, supplied in strips for easy handling and backed by a sheet of hecto carbon. Finger pressure fixes the patches on index, ledger, hand-punched or other types of card which deviate from the standard only by the inclusion of a small aperture over which the patch is placed.

Addressing is done direct from these record cards which are placed in a spirit duplicator little larger than a telephone together with envelopes or other stationery. Imprinting is done with a single movement so the system, although hand-fed, is quite fast.

The user of any card record system is, by this method, provided with an extremely economical address file which forms part of his original system. No new method need be evolved, no new file created. The *Master Addresser* system is excellent for any application where constant amendments are needed and/or where random selection of addresses, too widely spaced in the file to make automatic selection feasible, is needed. The machine costs £35.

Master Addresser Agency Ltd, 8 Botolph Lane, London EC3.



Master Addresser

Automated Mailing

THAT tedious job, envelope stuffing, is completely automated by the newest machine in the *Inserta* series. It folds and inserts documents from $5\frac{1}{2} \times 3\frac{1}{4}$ in. to $8\frac{1}{2} \times 13$ in. in size at speeds up to 3,600 enclosures per hour in envelopes measuring $6 \times 3\frac{1}{4}$ in. to 9×4 in.

Enclosures are transported by automatic suction feed to the dual folder mechanism which is easily adjusted to make single, wallet, accordion, letter, short flap or double folds. From thence they pass to the inserting unit which places them in envelopes it subsequently seals or not, as required. Safety devices stop the machine if incorrect feeding occurs.

Prolonged preliminary trials have proved the machine's reliability, the makers say, and have demonstrated that it can be used without special training. It is said to be so accurate that window envelopes can be used with confidence.

Base measurement is 5×4 ft; weight 520 lb.

Price: £825.

Adrema Ltd, Telford Way, London W3.

Multi-Purpose Cabinet

SURPRISINGLY drastic savings in floor and table space can be achieved by combination cabinets which provide facilities for a number of different kinds of filing and storage. Such a one is the new *Vertilec*, made of steel, which can accommodate suspended or shelf filing, card index drawers and shelves with movable vertical dividers.

Six feet high, 3 feet wide and measuring 18 inches from back to front, the *Vertilec* is basically a shell into which any permutation of interior fittings can be placed. It can therefore not only be supplied to suit individual requirements but can, if necessary, subsequently be rearranged inside. An unique feature is the design of its flexible, pull-down front blind which cannot be pulled aside, once in position. Alternatively, a heavy-duty roller shutter can be supplied. Either type of cover is lockable.

Price: From £25.

Peter Williams (Filing Systems) Ltd, 18–21 Charterhouse Square, London EC1.

Centralized Machine Reporting

UP to sixty factory machines automatically record their idle and running time and the duration of stoppages on a single electric typewriter by a system known as *Damsel*. A manually-operated key allows the machine operative to supplement this basic detail with a code number indicating the reason for a stoppage.

Each machine is provided with a control pack which causes it to report on the central typewriter at regular predetermined intervals. These, which may vary at fixed lengths in a range from one to sixty minutes, are determined by the operator. The print-out signal may be a colon in the appropriate column of a sheet of continuous stationery sprocket-fed through the typewriter, or a vertical stroke. Down time is indicated by a figure 0 in red.

The fault coding switch, which the operative uses to designate the stoppage reason just before restarting his machine, doubles as a summons for aid, since it can employ a second code to indicate the type of help needed. If desired, the times of the maintenance engineer's arrival and departure can also be indicated on the print-out.

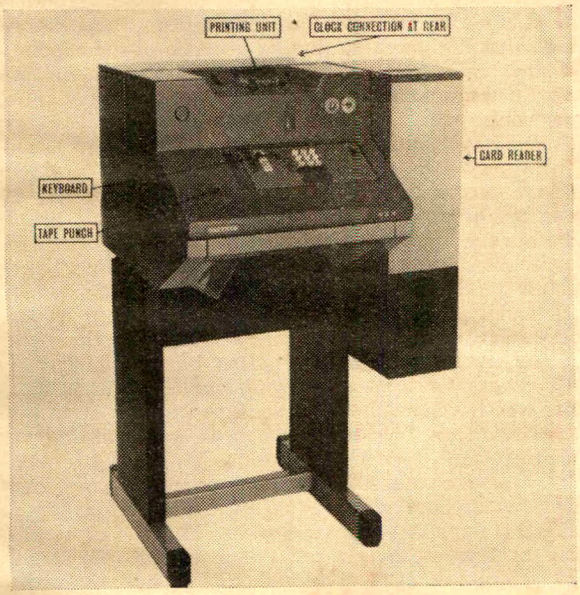
When demonstrated at the recent Production Control Exhibition, *Damsel* used an *IBM* electric typewriter with a 20-in. carriage. The makers believe that, by fitting a 30-inch carriage, they could record the performance of up to 150 machines on a single sheet.

The Digital Engineering Co Ltd, Brighton 7, Sussex.

Equipment

Data Collection System

THERE are several interesting points about the British Olivetti *RP* data collection system – a non-electronic method for recording details of operations on the factory floor. First, since there is no automatic transmission to a central point, the cabling which is normally such an expensive feature of such systems, is eliminated. Second, it provides a printed record on the spot; third, it can incorporate local calculating facilities of the type provided by a book-keeping machine.



British Olivetti RP System

The system, which records on perforated paper tape, provides facilities for automatic reading from standard punched cards and for making manual entries via a conventional adding-machine-type keyboard. Individual assemblies are made from any required number of independent units – of which there are three types. It is thus completely flexible.

Component parts of the collector unit are: a cable connection for automatic time registration from a central clock system; a punched-card reader with a speed of 850 columns per minute; a ten-key keyboard for manual entry of variable data; an internal 'memory' for storing constant data; a printing unit with a capacity of up to twelve digits, the date and an alphabetical transaction symbol on each machine cycle; a twelve-digit register (with credit balance) for adding, subtracting and totalling; manual control keys for recording out-of-the-way items or correcting; the built-in paper tape punch.

Variations which make up the different models comprise the inclusion or exclusion of the clock connection, the credit balance register and the manual keyboard.

Already in use by a number of European companies in several countries, the *RP* system is probably most valuable in applications where the proportion of fixed data is high and therefore the bulk of recording is done by automatic reading of pre-punched cards. It is suitable for use by organizations who have their own punched-card installations (and would employ a tape-to-card converter), or an electronic computer, or employ either of these through a service bureau.

Price: From £500.

British Olivetti, 30 Berkeley Square, London W1.

Extra Carriage for Typewriter

A FIFTEEN-INCH carriage is now available for the Beaucourt *Style* standard typewriter to fill the gap between the 12 and 18 in. lengths supplied until now. Like many Continental typewriters, this French machine has a completely detachable self-contained carriage mechanism, so that the operator can substitute one length for another within a few moments.

Other features include a built-in sound absorbent base and a decimal or single bar tabulator. There is a range of eight typefaces from which to choose.

Price: £69; carriage only £32.

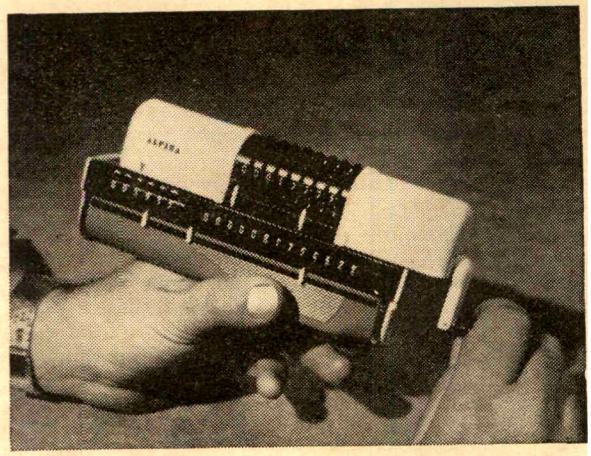
B.M.J. (Beaucourt) Ltd, 27 Chancery Lane, London WC2.

Miniature Calculator

ENGINEERS, surveyors and others who feel as unhappy without a calculating machine as a journalist feels without his typewriter will appreciate the *Alpina*, a West German machine now available here. This little calculator, which has a capacity of $8 \times 6 \times 13$ with setting register and full tens transmission, is completely portable since it measures only $6\frac{1}{2} \times 2\frac{7}{8} \times 1\frac{1}{4}$ in. and weighs $19\frac{1}{2}$ oz.

Described by its British distributors as a precision instrument, the *Alpina* does all four arithmetical operations. Its price of £45 includes a standard carrying case. An extra £3 10*s* will buy a desk stand or a leather carrying case with shoulder strap.

Lows Calculators Ltd, 180–182 Tottenham Court Road, London W1.



Alpina Calculator

THE INSTITUTE OF CHARTERED ACCOUNTANTS OF SCOTLAND

Special General Meeting of Members

A special general meeting of members of The Institute of Chartered Accountants of Scotland was held at Chartered Accountants' Hall, Glasgow, last Monday, June 25th, with Mr J. C. Stewart, C.A., the President of the Institute, in the chair.

Mr Stewart explained the Council's plans for initiating an accountancy research programme and for adjusting the Institute's deficit in its educational activities. In the course of his speech he referred to recruitment of apprentices generally and in particular to the proposed new scale of apprentices' remuneration; to research and communications; to professional fees and charges; and to the value of the Institute's relations with other accountancy bodies at home and overseas. The full text of Mr Stewart's address is reproduced below.

PRESIDENT'S ADDRESS

As is apparent from the circular accompanying the notice calling this meeting, the meeting has its genesis in the Report of the Policy Committee appointed by the Council in 1957. Excerpts from that Report and a summary of the Council's conclusions thereon were circulated to all members in March of this year. This was done so that members might have an opportunity to consider the Report before any specific proposals arising from it were laid before them for their approval. The Report was the product of a great deal of hard work by Sir Ian Bolton and the Committee and sub-committees working with him and I would take this opportunity of acknowledging the debt which members owe them for their labours.

No adverse criticism of the Report has been received, on the contrary the document has produced more favourable comment (some of it indeed enthusiastic) than is normally accorded to official documents issued from Queen Street. This is a happy experience for those responsible.

The circulars accompanying the notice calling this meeting set out the general background against which the proposals which you are to consider this morning are made, but it is desirable that some details should be filled in.

Recruitment and Training

First of all I should like to deal with the educational side of the Institute's activities. The costs involved, which were always known to be substantial, have for the first time been clearly set before the members in the new form of the Institute's accounts. The costs, of course, are not entirely educational in the strict sense, and are, perhaps more properly described by the rubric used in the accounts, viz. 'Recruitment, training and examination of apprentices'. Nevertheless these costs are incurred for the benefit of students and, so far as the employment of apprentices still continues to be a benefit to masters, for the benefit of those masters who employ apprentices. The net costs under this heading, as shown in the accounts, amount to something over £18,000, and as we have about 2,000 apprentices or time-expired apprentices in course of training, this means an annual cost to the Institute of approximately £9 per student. The continuation of the educational work of the Institute as one of its main activities is not in question, nor is any curtailment of that work contemplated. On the contrary, methods of making it more effective are always being sought, but other activities must be developed also. The Council considers, therefore, that it is fair that instead of meeting the expense of such developments by additional levies on members, a greater proportion of the educational costs should be recovered from those for whose benefit they are incurred. The Council and its Committees concerned have given very careful thought to the methods by which this might be done, and the proposals now before you are considered to be fair and reasonable, and to spread the burden equitably.

Before passing from this subject, may I say a word about recruitment of apprentices generally, and in particular about the proposed new scale of apprentices' remuneration. There is increasing competition to secure the services of the brighter boys – and girls – who possess the necessary educational qualifications and who have by school-leaving age shown their ability to benefit from further education. If our Institute is to secure a fair share of the country's youthful ability, entry into a chartered accountancy apprenticeship must be shown to have at least equal attractions to entry upon training for any other profession. This, of course, is not by any means entirely a question of the initial salary scale or even of the amount of studying to be done, or the difficulty of the examinations to be passed. Nevertheless there is to a youth leaving school an apparent attraction in whole-time as against part-time study added to practical daytime work, which under the existing system of grants for university students weighs the scales seriously against an open profession such as ours for which a university degree is not essential. I remain convinced that an apprenticeship system lays the best foundation for that professional outlook which it is essential to preserve and fosters the correct attitude in mind towards the client and that independence of judgment which in addition to adequate technical skill and knowledge are necessary for the proper exercise of our profession. The high standing of the profession will undoubtedly suffer if the only criterion of success in it and the only attraction to the new recruit becomes a monetary one. The suggested scale of apprentices' remuneration which is put forward after very careful study by the Committee concerned, does, in the opinion of the Council, hold the balance as fairly as possible, in that it is not so high as to be likely to attract anyone looking only for quick rewards, while, on the other hand, it does not make entry to the profession impossible to those of limited means.

Research and Communications

I pass now to the subject of research and communications. Personally I find the word 'research' in this connection rather a confusing one forced on us by the mode of thought of our scientific age. It seems almost impossible to describe the process of detached thought about the fundamentals of any trade, profession or whatever it may be otherwise than as research. As I am sure you will agree, time to think is not only something we all earnestly seek; it is also one of the most difficult things to find. In encouraging accounting research, the Council has in mind that by this means and through communal effort some time for thought may be found for the general benefit. The ways in which the Institute can most easily help seem to be by providing assistance for the necessary accumulation of data which must precede any constructive thought and by the provision of a framework within which members may collaborate to devote some time to research even though individually no one of them can on his own spare sufficient time to carry a research project through to its conclusion. It is envisaged that a large part of the work done with the encouragement of the newly-established Research and Publications Committee will be voluntary, but, without the assistance which the Council proposes to provide by way of a research assistant and certain secretarial services, it is doubtful if any useful activity of this kind could be carried on at all. The Council quite properly feels that, if the Institute is to maintain its standing among the professional accounting bodies, it must do something to encourage those who are prepared to think about accounting principles and to lead the way in the development of accounting thought. The Council also feels that, both in order to facilitate the dissemination of the results of the research which it proposes to encourage and to foster closer links with all members, *The Accountants' Magazine* should be issued to all members as one of the services covered by the normal membership subscription. It has been a great source of gratification to the Council to find that members, both those practising and those engaged in industry and commerce, who have attended the Summer Schools, Electronic Data Processing Courses, and other similar activities almost unanimously express the opinion that (apart from such direct benefit as they have gained from attendance) they have also gained through their attendance there a feeling of belonging to a live body and of sharing in a community life. The general issue of the magazine should stimulate this feeling and it is to be hoped that members will not regard the magazine as merely a superior kind of circular, which 'they' at Queen Street, send out, but as 'our' magazine, in which all may take an interest and in the production of which all can at some time and in some way have a part.

Professional Fees

I turn now to the subject dealt with in another of the circulars which accompanied the notice of this meeting namely, the question of professional fees. It is axiomatic that without a proper standard of remuneration for those engaged in practice, whether as principals or assistants, the profession will languish and eventually die. The Council is aware, from information made available in connection with the survey made when the question of doctors' and dentists' remuneration was under review, and by a small pilot survey which it recently made privately, that there is an undue disparity between the earnings of those in the offices of practising accountants and the earnings of those members who are engaged in industry and commerce. This has two serious and unfortunate effects. It leads many to consider from the very start of their apprenticeship the attainment of membership merely as a stepping-stone to employment in industry and commerce instead of as an entry into a profession, and it diverts to other means of entry into the accounting posts in industry and commerce a number who would otherwise train in professional offices and eventually become members of the Institute. In both these ways the profession in its public practice aspect is weakened.

In the opinion of the Council any direct action for the regulation of fees would involve so many rules an such a complicated apparatus for their enforcement that it is neither practicable nor desirable. While this means that members must use their own initiative in dealing with the problem and must largely look after themselves the Council is anxious to encourage them in doing so, and to give a lead such as is provided by the circular just issued which it is hoped may result in raising the general level.

On the subject of fees generally there are one or two observations which I would wish to make.

It is no longer true that accountants' offices can be run, if they ever could, on cheap apprentice labour. As a corollary to this, however, the practising accountant should always have in mind that many auditing procedures which may have been appropriate in more leisurely times and when accounting standards in clients' offices were low are no longer appropriate and that he cannot expect to be paid full professional rates for doing unnecessary work and unintelligent repetitive checking. On the other hand, clients – I speak now mainly of the smaller type of client – should not expect their accountants or auditors, often without any, and almost always without adequate, additional remuneration, to provide extra professional services to make good deficiencies in their own accounting arrangements. Again I would ask our own members employed in industry and commerce, who are so often involved in considering fees charged by practising members to bear in mind that they should be willing to pay rates for outside professional accounting services which would enable the practising accountant to employ staff at the same level of remuneration as these members in industry are obviously willing to pay their full-time assistants.

The publication of the Policy Report and the proposals now before you do, I think, show that the Council is active in promoting the interests of members. A great deal of work is done by the Council and its Committees, much of which is unknown to the majority of members, and I should like to take the opportunity to comment on two other matters which are not directly before you this morning.

Relations with Other Accountancy Bodies

One is that increasingly the Council finds itself involved in discussions with other bodies both at home and overseas. The results may often seem to be only of indirect significance to members generally. For instance at the present time much of our thought is devoted to the possible consequences to the profession if this country enters the Common Market and I would

emphasize that those consequences could be far-reaching and affect every one of us, however domestic we believe our concerns may be. It is impossible to measure directly the value of work of this kind, any more than that of submitting evidence to Royal Commissions and departmental committees but the part played by the Institute is important in preserving the standing and influence of the Institute in the general accounting and financial field and in the business world at large. The Institute's relations with other accountancy bodies at home and overseas are close and friendly and, I am glad to say, show every sign of becoming more close and if possible more friendly, and its standing, as I have found from the personal contacts I have been privileged to make, is in keeping with our position as the oldest organized body of accountants in the world – still first.

The other matter concerns the increasing number of members who are engaged in industry and commerce and who at present do not play, and indeed do not have an opportunity to play, a part in the general work of the Institute commensurate with their numbers. I am glad to say that more of these members are taking an active interest in the affairs of the Institute and are working on various committees, and the question of additional representation on the Council is under consideration. It is to be hoped that before long means will be found to increase the number of so-called non-practising members who are members of the Council and who otherwise share in the Institute's work.

I trust that members will show their approval of the Council's activities on their behalf by adoption of the resolutions which are about to be put to them. Apart from the resolutions concerned with the matters about which I have spoken, the others are matters of routine and do not, I think, require any comments other than the explanations given in the notice and accompanying circulars, but there will be an opportunity for questions before the resolutions are put.

The meeting approved a resolution to increase the fee payable on admission to membership of the Institute and also approved amendments to the Institute's rules which, among other things, increased the fee payable on registration of indenture of apprenticeship.

Notes and Notices

THE ACCOUNTANT

Index to Vol. CXLVI: January–June 1962

The general index to this volume – January to June 1962, Vol. CXLVI – will be published with the issue dated July 7th, 1962.

The parts of this volume should therefore not be sent for binding until the index has been added.

PROFESSIONAL NOTICES

MESSRS BLACKBURNS, ROBSON, COATES & CO, Chartered Accountants, announce the removal of their London office to 4 Copthall Avenue, London EC2.

MESSRS CHENNELL & CO, Certified Accountants, of 3 St Peter's Place, Brighton 1, announce that they have taken into partnership Mr GEOFFREY GILBODY, A.A.C.C.A., and Mr JULIAN JOURNEAUX, A.A.C.C.A., both of whom have been with the firm for many years. They also announce that they will shortly open a branch office at 45 Church Road, Burgess Hill, Sussex, with Mr H. F. H. SHARP, F.A.C.C.A., as resident partner, although he will not be severing his connection with the present office.

MESSRS COOPER BROTHERS & CO and COOPERS & LYBRAND, of Lagos, Nigeria, and Accra, Ghana, announce that Mr JOHN JEFFREY CLEE and Mr GUY WILLIAM FARNELL PIDGEON have been admitted to partnership.

MESSRS ELLIS GOODMAN & CO and Messrs LAURENCE MYERS & CO of 4 Blenheim Street, New Bond Street, London W1, announce the amalgamation of their practices under the style of GOODMAN MYERS & CO as from June 1st, 1962. The partners of the new firm will be Mr ELLIS GOODMAN, A.C.A., and Mr LAURENCE MYERS, A.C.A. They also announce that the new firm will move to new premises at 47 Albemarle Street, London W1, on June 30th, 1962.

MESSRS RAWLINSON & HUNTER, Chartered Accountants, of 51 Green Street, London W1, announce that they are taking into partnership Mr RONALD BERTRAM BEXLEY, F.C.A., and Mr PETER ANDREW HETHERINGTON, A.C.A., as from July 1st, 1962.

Appointments

Mr Patrick G. Corbett, T.D., F.C.A., has been elected a director of Amalgamated Stores Ltd.

Mr H. Cresswell, F.C.A., accountant of Turner & Newall Ltd, has been appointed financial controller of the company.

Mr F. J. A. Mangeot, F.C.A., has been appointed joint managing director of E-A Flight Automation Ltd.

Mr T. Bruce Roberts, M.B.E., F.C.A., has been appointed deputy chairman of Imperial Typewriters Co Ltd.

Mr S. B. Smith, F.C.A., has been elected deputy chairman of Banister Walton & Co Ltd.

JOHN FOORD & COMPANY
56 VICTORIA STREET, LONDON SWI Telephone: Victoria 2002 (3 lines)
REVALUATION OF ASSETS
WORKS, FACTORIES, PLANT & MACHINERY, Etc.

Ir Malcolm G. Thomas, A.C.A., secretary of G. F. ell & Co Ltd, has been appointed a director of the ıpany.

OBITUARY

John Haydock, C.A.

s with regret that we record the death at the age of at his home in Whitecraigs, Glasgow, of Mr John dock, C.A., former secretary of Alexander Stephen ons Ltd.

dmitted a member of the former Institute of ountants and Actuaries in Glasgow in 1909, Mr dock joined Alexander Stephen in 1917 and was ointed secretary of the company in 1925. His rement in 1954 followed thirty-seven years of active ice with the company, although his association nded back to 1904 when, as a member of a Glasgow of chartered accountants, he was concerned with company's audit.

Walter Percy Gill, F.C.A.

HIRE-PURCHASE FINANCE COMPANIES

atistical Inquiry into Assets and Liabilities

art of the programme to implement the recom-dations on statistics included in the Radcliffe rt on the Working of the Monetary System, the d of Trade is to seek further statistical information the hire-purchase finance companies which con-te to its inquiry into hire-purchase turnover and

ıe additional information will be collected quarterly and will throw light on the sources on which the companies depend for their finance, and on their assets other than those relating to hire-purchase business.

The Board of Trade has consulted the Finance Houses Association, the Hire Purchase Trade Association and the Industrial Bankers Association about the details of the questionnaire to be sent out. Information relating to an individual company will be treated in strict confidence and will be used only for compiling statistics of the assets and liabilities of hire-purchase finance companies as a group.

BRISTOL AND WEST OF ENGLAND SOCIETY OF CHARTERED ACCOUNTANTS

At the recent annual meeting of the Bristol and West of England Society of Chartered Accountants, Mr T. B. Pritchard, F.C.A., financial director of Bristol Aircraft Ltd, was elected President of the Society for the year 1962–63.

Mr T. B. Pritchard

Educated at Magdalen College School, Oxford, Mr Pritchard was admitted as an Associate of the Institute in 1936, having obtained second place in the November 1935 examinations.

During the Second World War Mr Pritchard served with the Royal Artillery retiring with the rank of Lieutenant-Colonel, subsequently joining Messrs Thomson, McLintock & Co as manager of their Cardiff office. In 1952 he joined the Bristol Aircraft Company as chief accountant, and was appointed to his present position in 1956.

Mr Pritchard has been a member of the committee of the Society since 1959, and has served as Vice-President and also as Chairman of the Bristol Branch. He has been a member of the Society's Regional Taxation and Research Committee since 1956, and of the Institute Taxation and Research Committee since 1961.

Other new officers of the Society for the ensuing year are as follows:

Vice-President: Mr S. Edgcumbe, J.P., F.C.A.
Hon. Secretary: Mr R. C. Bassett, A.C.A., Ware, Ward & Co, 7 Unity Street, College Green, Bristol 1.
Hon. Dinner Secretary: Mr Gordon Henby, F.C.A.
Hon. Treasurer: Mr W. E. Dewdney, F.C.A.
Hon. Librarian: Mr R. A. Chermside, J.P., F.C.A.

Annual Report

The annual report of the committee for the year 1961 shows that membership of the Society on December 31st totalled 716.

Meetings were held during the year at the Society's

MOTOR — FIRE — CONSEQUENTIAL LOSS
CAR & GENERAL INSURANCE CORPORATION LTD
83 PALL MALL, LONDON, SW1

four area branches. The annual dinner of the Society held in Bristol on November 2nd was attended by over 200 members and guests; the President of the Institute; Mr Ted Leather, M.P., and the Lord Mayor and Sheriff of Bristol were among the principal guests. In addition, branch dinners were held in Exeter and St Ives.

Referring to students' activities, the report expresses satisfaction on the completion of another successful year. Revision courses for the Institute's Intermediate and Final examinations provided by Bristol College of Commerce were once again oversubscribed. Student membership in the Cornwall and Plymouth area increased in 1961. Five lectures and a two-day course were held at Plymouth and four lectures at Truro were all well supported. The report mentions that it is hoped to form a students' society at Gloucester in the near future.
